Hi Sonja

Issues i raised at the end of your meeting:

- 1) Is there communication between the landfill closure plans and the municipal planners in respect of potential routing of the Stellenbosch western bypass as this could influence your process?
- 2) Are the monitoring sites adequate to measure groundwater pollution (particularly from Cell 1) and are there limits placed on the acceptibility levels prior to alleviation measures being introduced and what would these be?
- 3) Is the long-term accumulation of heavy metal pollution in biota being monitored and have limits been put in place to trigger alleviation measures?

Thank you for arranging and leading the process this evening at Devon Valley.

Regards

Charlie
