Foreword

In 2012, the Infrastructure Delivery Management System (IDMS) was adopted as the chosen government wide system for infrastructure delivery in South Africa. In the same year (2012), the National Treasury, together with the eight metropolitan municipalities, initiated the customisations of the IDMS for implementation by municipalities. The product of that engagement became the Cities Infrastructure Delivery Management Toolkit (CIDMT), focusing mainly on cities or metros.

In order to establish a common approach to infrastructure delivery across all organs of state, the Standard for Infrastructure Procurement and Delivery Management (SIPDM) was issued for adaptation and adoption by municipalities in terms of Circular 77.

In the process of implementing and institutionalising the SIPDM, institutions expressed concerns regarding the operational challenges imposed by aspects of the SIPDM. This constraint was further compounded when the Preferential Procurement Regulations, 2017 were promulgated and effected, resulting in conflict between the SIPDM and the Regulations.

The National Treasury, in consultation with relevant stakeholders, initiated the SIPDM review process, which resulted in the development of the Local Government Framework for Infrastructure Delivery and Procurement Management (LGFIDPM). The LGFIDPM provides for minimum requirements for effective governance of infrastructure delivery and procurement management. It also recognises the different capacities in the various categories of municipalities and therefore requests municipalities to review their institutional and capacities before adapting and adopting this model.

Introduction

- a) The Integrated Development Plan (IDP) is the principal strategic planning instrument for municipalities. The IDP process requires a robust process of gathering and synthesising information related to the medium to long-term management of the municipality's infrastructure needs.
- b) The preparation of Roads and Storm Water Services, Water and Sanitation Services, Waste Disposal Services, Electricity Services and Community Facilities and Municipal Buildings, Infrastructure Asset Management Plans (IAMPs) enables municipalities to rank projects and determine budgets, based on a holistic view of local needs and priorities; and serves as a source of valuable information in preparing the IDP.
- c) Through the Infrastructure Delivery Management System, Cities Infrastructure Delivery Management System was developed to provide a holistic system for the management of infrastructure based on the requirements of SANS 55001: Asset management tailored for application in South African metropolitan spaces and specifically in support of the country's spatial transformation agenda.
- d) There is need to develop an infrastructure delivery management system tailor-made for all municipalities (excluding cities) which should integrate asset management strategy, policy to guide infrastructure planning, delivery management and decision making. The LGFIDPM introduces the initial process focusing on the project processes of the infrastructure delivery management and infrastructure procurement.
- e) The Framework for Infrastructure Procurement Management should be implemented together with the project management processes, to ensure alignment, integration and efficient and effective service delivery.

1. Scope

- 1.1. The Local Government FIDPM applies to organs of state which are subject to the Municipal Finance Management Act (MFMA).
- 1.2. The Framework provides minimum requirements for the implementation of Infrastructure Delivery and Procurement Management through the:

 - b) Infrastructure procurement gates.
- 1.3. The Framework specifies the allocation of responsibilities for performing activities and making decisions at project stages and procurement gates.

5. FRAMEWORK FOR INFRASTRUCTURE DELIVERY

5.1 The Infrastructure Delivery Management Project Processes

- a) The project process of infrastructure delivery management contains control stage deliverables at the end of each stage. Table 1 outlines the stage deliverables that must be approved. The control stages are specific to project management processes; and outline and describe the stages in the life of a project from start to end. The specific stages are determined by the specific project's governance and control needs. The stages follow a logical sequence with a specified start and end. The deliverable is considered to have passed through the relevant stage when it is approved and signed off. The project then moves on to the next sequential stage. It is expected that the municipality's organisation reflects an engagement between the Budget Treasury Office, Engineers and Planners when developing and approving projects. It is also expected that there should be engagements with the National and Provincial Treasury where appropriate or where projects dictate so.

Contract activities would, in many instances, be contingent upon the requirements of the specific contract being used.
- d) For project progress using the project stages, reporting must be for the deliverable achieved in the stage immediately prior to the 'in progress' stage. For example, if a project is shown as being at Stage No. 3 (Design Development), it implies that the deliverable for Stage No. 2 (i.e. the Concept Report) has been achieved; and that the deliverable for Stage 3 (i.e. the Design Development Report) is in the process of being prepared.

All deliverables must be developed and signed off in compliance with the specific service delivery agreement.

5.2 Gateway Reviews

5.2.1 Gateway reviews for mega capital projects

- (i) The MFMA (Act 56 of 2003), section 19 (2) states: "Before approving a capital project in terms of subsection (1)(b), the council of a municipality must consider the projected cost covering all financial years from the start until the project is operational; and the future operational costs and revenue on the project, including municipal tax and tariff implications."
- (ii) The LGFIDPM prescribes the Gateway Review at the end of stage 2, as the minimum requirement to comply with section (i) above.
- (iii) The focus of such a review must be on the quality of the documentation in the first instance, and thereafter on:
 - a) Deliverability: the extent to which a project is deemed likely to deliver;
 - b) Expected benefits: within the declared cost, time and performance area;
 - c) Affordability: the extent to which the project's level of expenditure and financial risk can be accepted, given the organisation's overall financial position, both singly, and when considering its other current and projected commitments; and

- d) Value for money: The optimum combination of whole life costs and quality (or fitness of purpose), to meet the user's requirements.
- (iv) A gateway review team must comprise of not less than three persons who are neither involved, nor associated with the project, but have a broad understanding of the subject matter.
- (v) A gateway review must be led by a person who has experience in the planning of infrastructure projects and is registered as a professional with a statutory council under the built environment professions. The members of the team must, as relevant, have expertise in the key technical areas, cost estimating, scheduling and implementation of similar projects.
- (vi) It is the duty of the institution's Accounting Officer or Authority to appoint a team responsible for the gateway review of his or her institution.
- (vii) The gateway review team must base its findings primarily on:
 - a) The information contained in the end-of-stage deliverable;
 - b) Supplementary documentation, if any, provided by key staff and obtained during an interview process; and
 - c) Interviews with key staff members and stakeholders.
- (viii) The gateway review team must issue a report at the conclusion of a gateway review, which reflects the team's assessment of the information at the end of a stage; and provides findings or recommendations on areas where further work should be undertaken to improve such information.
- (ix) The gateway review findings must be classified by the gateway review team as:
 - a) Critical: Findings that pose adverse effect to the project or package. Critical findings are findings related to the stage deliverable that are wholly unacceptable.
 - b) Major: Findings that pose a potentially adverse effect to the project or package. Major findings are serious findings and are in direct violation of key legislation, e.g. The Constitution of the Republic of South Africa, the MFMA or the PPPFA.
 - c) Minor: Findings that do not pose any adverse effect to the project or package. Minor findings indicate the need for improvement of practices and processes.
- (x) A Stage 2 deliverable must not be approved until such time that all findings have been resolved.

NATIONAL TREASURY

MFMA Circular No 106

Municipal Finance Management Act No. 56 of 2003

LOCAL GOVERNMENT FRAMEWORK FOR INFRASTRUCTURE DELIVERY AND PROCUREMENT MANAGEMENT

PURPOSE

In order to establish a common approach to infrastructure delivery across all organs of state, the Standard for Infrastructure Procurement and Delivery Management (SIPDM) was issued for municipalities and communicated in MFMA Circular 77.

In the process of institutionalising the SIPDM municipalities experienced challenges with some aspects thereof. The reforms to the Preferential Procurement Regulations, 2017 which was promulgated and effected also had an impact on the earlier reform.

The National Treasury, in consultation with relevant stakeholders, initiated the SIPDM review process which resulted in the development of the Local Government Framework for Infrastructure Delivery and Procurement Management (LGFIDPM). The LGFIDPM introduces minimum requirements for effective governance of infrastructure delivery and procurement management.

BACKGROUND AND DISCUSSION

In 2012, the Infrastructure Delivery Management System (IDMS) was adopted as the chosen government wide system for infrastructure delivery in South Africa. In the same year (2012), the National Treasury, together with the eight metropolitan municipalities, initiated the customisation of the IDMS for implementation by municipalities. The product of that engagement became the Cities Infrastructure Delivery Management Toolkit (CIDMT), focusing mainly on metropolitan municipalities.

The Planning Commission's National Development Plan 2030: *Our future-make it work* proposes that the following five areas be focused on in designing a procurement system that is better able to deliver value for money, while minimising the scope for corruption:

8. differentiate between the different types of procurement which pose different

challenges and require different skills sets;

9. adopt a strategic approach to procurement above the project level to balance competing objectives and priorities rather than viewing each project in isolation;
10. build relationships of trust and understanding with the private sector;

11. develop professional supply chain management capacity through training and accreditation; and
12. incorporate oversight functions to assess value for money.

National Treasury's 2015 Public Sector Supply Chain Management Review expressed the view that supply chain management (SCM) is one of the key mechanisms enabling government to implement policy which traditionally has been misunderstood and undervalued. This Review, which identified the need for SCM reform, suggests that if such reforms are implemented as envisaged in terms of section 217 of the Constitution, the benefits will be enormous and include, amongst others:

- f) good quality service delivery will be increasingly possible, with significant improvements in the welfare of citizens, especially the poor who rely heavily on government for support;
- g) the economy will grow as economic infrastructure is expanded and efficiently maintained;
- h) goods, services and infrastructure will be bought at lower costs;
- i) innovation will result in different approaches to the commodities used in some sectors; and
- j) for suppliers, the cost of doing business with the state should decrease substantially.

There is a need to develop an infrastructure delivery management system tailor-made for municipalities and municipal entities which integrate asset management strategy, policy to guide infrastructure planning, delivery management and decision-making. The LGFIDPM introduces this and focuses on the implementation of project processes and infrastructure procurement that forms part of the infrastructure delivery management.

Due care and focus must be given to addressing institutional arrangements, internal controls, and gaps to ensure value is extracted from this reform.

CONCLUSION

This MFMA Circular provides the basis for municipalities and municipal entities to establish an appropriate system for implementation of the project process and infrastructure procurement in the infrastructure delivery management value chain.

Accounting officers of municipalities and municipal entities are therefore advised to bring the contents of this Circular and the LGFIDPM annexure to the attention of their respective municipal councils, board of directors of municipal entities, and to expedite the process to amend and align their SCM policies accordingly. This will require undertaking a proper assessment of its ability to implement the content of the Framework and to only insert those parts that is practically implementable into the SCM Policy, to be approved by the municipal council.

Therefore, municipalities and municipal entities are advised to customise the model policy to suit the specific needs of its environment before tabling it in the municipal council and municipal entity board for adoption.

It is envisaged that a phase-in process will be considered by municipalities and municipal entities, however, it is expected that this be implemented as soon as possible.

This Circular replaces MFMA Circular 77.
