PART B – SPECIFICATIONS AND PRICING SCHEDULE

14. SPECIFICATIONS

1. INTRODUCTION AND BACKGROUND

The Stellenbosch Municipality is committed to ensuring efficient, reliable, and sustainable waste management services in line with its mandate to protect public health, safeguard the environment, and maintain a clean and liveable community. Waste collection is one of the Municipality's critical service delivery functions and directly impacts the quality of life of residents, businesses, and visitors.

In recent years, the demand for waste collection services has grown due to population growth, urbanisation, and the expansion of service delivery areas. This growth has placed significant pressure on the existing fleet of waste collection vehicles, many of which have exceeded their optimal operational life. As a result, the Municipality has experienced rising maintenance costs, reduced fleet reliability, and periodic service disruptions, all of which undermine the efficiency of waste management operations.

To address these challenges and enhance operational efficiency, the Municipality seeks to procure refuse compaction units (for existing trucks). The compaction units are designed to maximize the volume of waste collected per trip, improve route efficiency, reduce fuel consumption, and promote safe working conditions for waste collection personnel. This investment will strengthen the Municipality's fleet capacity, reduce service backlogs, and contribute to improved cleanliness and environmental management across its jurisdiction. This procurement initiative forms part of the Municipality's broader fleet renewal programme and its commitment to delivering sustainable, cost-effective, and high-quality waste management services to the community.

2. SCOPE
