The municipality has adopted the interpretation for the first time in the 2020/2021 annual financial statements.

GRAP 110 (as amended 2016): Living and Non-living Resources

The objective of this Standard is to prescribe the:

- recognition, measurement, presentation and disclosure requirements for living resources; and
- disclosure requirements for non-living resources

It furthermore covers Definitions, Recognition, Measurement, Depreciation, Impairment, Compensation for impairment, Transfers, Derecognition, Disclosure, Transitional provisions and Effective date.

The subsequent amendments to the Standard of GRAP on Living and Non-living Resources resulted from editorial changes to the original text and inconsistencies in measurement requirements in GRAP 23 and other asset-related Standards of GRAP in relation to the treatment of transaction costs. Other changes resulted from changes made to IPSAS 17 on Property, Plant and Equipment (IPSAS 17) as a result of the IPSASB's Improvements to IPSASs 2014 issued in January 2015 and Improvements to IPSASs 2015 issued in March 2016.

The most significant changes to the Standard are:

- General improvements: To clarify the treatment of transaction costs and other costs incurred on assets acquired in non-exchange transactions to be in line with the principle in GRAP 23; and to clarify the measurement principle when assets may be acquired in

exchange for a non-monetary asset or assets, or a combination of monetary and non-monetary assets

- IPSASB amendments: To clarify the revaluation methodology of the carrying amount and accumulated depreciation when a living resource is revalued; To clarify acceptable methods of depreciating assets; and to define a bearer plant and include bearer plants within the scope of GRAP 17 or GRAP 110, while the produce growing on bearer plants will remain within the scope of GRAP 27

The effective date of the standard is for years beginning on or after 01 April 2020.

The municipality has adopted the standard for the first time in the 2020/2021 annual financial statements.

The impact of the standard is not material.

IGRAP 1 (revised): Applying the Probability Test on Initial Recognition of Revenue

The amendments to this Interpretation of the Standard of GRAP clarifies that the entity should also consider other factors in assessing the probability of future economic benefits or service potential to the entity. Entities are also uncertain of the extent to which factors, other than the uncertainty about the collectability of revenue, should be considered when determining the probability of the inflow of future economic benefits or service potential on initial recognition of revenue. For example, in providing certain goods or services, or when charging non-exchange revenue, the amount of revenue charged may be reduced or otherwise modified under certain circumstances. These circumstances include, for example, where the entity grants early settlement discounts, rebates or similar reductions based on the satisfaction of certain criteria, or as a result of adjustments to revenue already recognised following the outcome of any review, appeal or objection process.

The consensus is that on initial recognition of revenue, an entity considers the revenue it is entitled to, following its obligation to collect all revenue due to it in terms of legislation or similar means. In addition, an entity considers other factors that will impact the probable inflow of future economic benefits or service potential, based on past experience and current facts and circumstances that exist on initial recognition.

A municipality applies judgement based on past experience and current facts and circumstances.

The effective date of the amendment is for years beginning on or after 01 April 2020.

The municipality has adopted the interpretation for the first time in the 2020/2021 annual financial statements.

GRAP 18 (as amended 2016): Segment Reporting

Segments are identified by the way in which information is reported to management, both for purposes of assessing performance and making decisions about how future resources will be

allocated to the various activities undertaken by the municipality. The major classifications of activities identified in budget documentation will usually reflect the segments for which an entity reports information to management.

Segment information is either presented based on service or geographical segments. Service segments relate to a distinguishable component of an entity that provides specific outputs or achieves particular operating objectives that are in line with the municipality's overall mission. Geographical segments relate to specific outputs generated, or particular objectives achieved, by an entity within a particular region.

The subsequent amendments to the Standard of GRAP on Segment Reporting resulted from editorial and other changes to the original text have been made to ensure consistency with other Standards of GRAP. The most significant changes to the Standard are:

- General improvements: An appendix with illustrative segment disclosures has been deleted from the Standard as the National Treasury has issued complete examples as part of its implementation guidance.

The effective date of the standard is for years beginning on or after 01 April 2020

The municipality has adopted the standard for the first time in the 2019/2019 annual financial statements

The adoption of this standard has not had a material impact on the results of the municipality but has resulted in more disclosure than would have previously been provided in the annual financial statements.

2.2 Standards and interpretations issued, but not yet effective

The municipality has not early adopted any GRAP standard that is not effective.

2.3 Standards and interpretations issued, but not yet effective

The municipality has not applied the following standards and interpretations, which have been published and are mandatory for the municipality's accounting periods beginning on or after 01 July 2021 or later periods:

GRAP 104 (amended): Financial Instruments

Following the global financial crisis, a number of concerns were raised about the accounting for financial instruments. This included that (a) information on credit losses and defaults on financial assets was received too late to enable proper decision-making, (b) using fair value in certain instances was inappropriate, and (c) some of the existing accounting requirements were seen as too rules based. As a result, the International Accounting Standards Board® amended its existing Standards to deal with these issues. The IASB issued IFRS® Standard on Financial Instruments (IFRS 9) in 2009 to address many of the concerns raised. Revisions were also made

to IAS® on Financial Instruments: Presentation and the IFRS Standard® on Financial Instruments: Disclosures. The IPSASB issued revised International Public Sector Accounting Standards in June 2018 so as to align them with the equivalent IFRS Standards.

The revisions better align the Standards of GRAP with recent international developments. The amendments result in better information available to make decisions about financial assets and their recoverability, and more transparent information on financial liabilities. The most significant changes to the Standard affect:

- Financial guarantee contracts issued
- Loan commitments issued
- Classification of financial assets
- Amortised cost of financial assets
- Impairment of financial assets
- Disclosures

The effective date of the is not yet set by the Minister of Finance.

The municipality expects to adopt the standard for the first time when the Minister sets the effective date for the standard.

1. PREAMBLE

- Section 63 of the Municipal Finance Management Act Number 56 of 2003 governs Asset and Liability Management and states the following:

Asset and liability management

63. (1) The accounting officer of a municipality is responsible for the management 10
of—

- (a) the assets of the municipality, including the safeguarding and the maintenance of those assets; and
- (b) the liabilities of the municipality.

(2) The accounting officer must for the purposes of subsection (1) take all reasonable 15
steps to ensure—

- (a) that the municipality has and maintains a management, accounting and information system that accounts for the assets and liabilities of the municipality;
- (b) that the municipality's assets and liabilities are valued in accordance with 20
standards of generally recognised accounting practice; and
- (c) that the municipality has and maintains a system of internal control of assets and liabilities, including an asset and liabilities register, as may be prescribed.

The Municipal Finance Management Act Number 56 of 2003 will be the legislative framework for the Asset Management Policy whilst Generally Recognised Accounting Practice (GRAP) will be the accounting framework.

- The Municipal Council of Stellenbosch is in terms of the MFMA and GRAP obliged to adopt an Asset Management Policy to regulate the effective management of all council's assets.
- **And whereas** the municipal manager as accounting officer of municipal funds, assets and liabilities is responsible for the effective implementation of the asset management policy which regulates the acquisition, safeguarding, maintenance of all assets and disposal of assets where the assets are no longer used to provide a minimum level of basic service as regulated in terms of section 14 of the MFMA.
- **And whereas** these assets must be protected over their useful life and may be used in the production or supply of goods and services or for administrative purposes in meeting the municipality's operational requirements.
- **Now therefore** the municipal council of the Stellenbosch Municipality adopts this asset management policy:

2. DEFINITIONS

In this Policy, unless the context indicates otherwise

An **asset** means a resource

- a) controlled by Stellenbosch Municipality
- b) as a result of a past event
- c) it is probable that future economic benefits or service potential associated with the assets will flow to the municipality

Property, Plant and Equipment (PPE) refers to tangible, identifiable assets that:

- a) are held for-
 - i. use in the production or supply of goods or services
 - ii. rental, or
 - iii. administrative purposes, and
 - iv. are expected to be used for more than one year.

PPE should be classified according to the following definition groups:

- a) **Infrastructure assets** which are defined as assets that usually display some or all of the following characteristics:
 - i. they are part of a system or network,
 - ii. they are specialised in nature and do not have alternative uses
 - iii. they are immovable, and
 - iv. they may be subject to constraints on disposal
 - v. examples are road networks, sewer systems, water networks etc.
- b) **Community assets** which are defined as assets that contributes to the communities' well-being. Community assets are disclosed in accordance with its nature.
- c) **Heritage assets** which are defined as cultural significant resources.
- d) **Investment Properties** are defined as properties (land or buildings) that are acquired for economic and capital gains or held by Stellenbosch Municipality as finance lease to earn rentals. Examples are office parks and undeveloped land acquired for the purpose of resale in future years.
- e) **Other assets** which are defined as assets utilised in normal operations.
- f) **Intangible assets** which are defined as being assets without physical

substance.

g) **Biological assets** are assets acquired for agricultural purposes.

Capitalization of assets means the recording of assets in the Fixed Asset Register with its historical financial cost in accordance with GRAP.

Carrying amount means the amount at which an asset is recognized after deducting any accumulated depreciation and accumulated impairment losses.

Classification of assets means the grouping of assets of a similar nature of functionality in an entities operation that is shown as a single item for the purpose of disclosure in the financial statements.

Cost means the amount of cash or cash equivalents paid or the fair value of the other consideration given to acquire an asset at the time of its acquisition or construction or, where applicable, the amount attributed to that asset when initially recognized in accordance with specific requirements of other Standards of Generally Recognized Accounting Practices (GRAP).

Contributed assets means items received by the municipality as a donation.

Depreciation means the systematic allocation of the depreciable amount of an asset over its useful life.

Depreciable amount means the cost of an asset, or other amount substituted for the cost less its residual value.

Fair value means the amount for which an asset could be exchanged or a liability settled, between knowledgeable, willing parties in an arm's length transaction.

Fixed Asset Register means a register for recording assets in accordance with GRAP

Impairment of an asset

- An impairment loss of cash - generating assets is the amount by which the carrying amount of an asset exceeds its recoverable amount.
- An impairment loss of non - cash generating assets is the amount by which the carrying amount of an asset exceeds its recoverable service amount.

Recoverable amount means the amount that the municipality expects to recover from the future use of an asset, including the residual value on disposal.

Residual value means the estimated amount that Stellenbosch municipality would currently obtain from disposal of the asset, after deducting the estimated cost of disposal, if the asset were already of the age and in the condition expected at the end of its useful life.

Useful life means the period over which an asset is expected to be available for use by the municipality.

Contributed Assets means items received by the Stellenbosch Municipality in the form of a donation.

3. ACRONYMS

PPE:	Property, Plant and Equipment
AMC Form:	Asset Movement Capture Form
MFMA:	Municipal Finance Management Act
GRAP:	General Accepted Accounting Practice
DIR:	Departmental Inventory Register
SCM:	Supply Chain Management
FAR:	Fixed Asset Register
NARC:	New asset receipt capture form
AT:	Asset transfer form

4. AIM

This policy will lay down broad guidelines for consistent, effective and efficient asset management principles of Stellenbosch Municipality

5. OBJECTIVES

- Specifying Council's practice regarding accounting for assets
- Ensure consistency in accounting treatment.
- To assist officials in understanding their legal and managerial responsibilities with regard to key asset functions such as:
 - safeguarding of assets,

- maintaining assets,
- establishing and maintaining a management, accounting and information system
- that accounts for the assets of the municipality.
- asset valuation principles in accordance with GRAP.
- establishing and maintaining systems of internal controls over assets.
- establishing and maintaining asset registers.
- clarifying responsibilities and accountabilities for the asset management process.

6. STATUTORY AND REGULATORY FRAMEWORK

This policy must comply with all relevant legislative requirements including:

- The Constitution of the Republic of South Africa, 1996
- Municipal Structures Act, 1998
- Municipal Systems Act, 2000
- Division of Revenue Act (enacted annually)
- Municipal Finance Management Act of 2003

Also, this policy must comply with the standards specified by the Accounting Standards Board. The relevant currently recognized accounting standards include:

- GRAP 17 Property, plant or equipment
- GRAP 16 Investment property
- GRAP 31 Intangibles
- GRAP 103 Heritage Assets
- GRAP 27 Agriculture
- GRAP 21 & 26 Impairment
- GRAP 12 Inventories

7. RESPONSIBILITIES AND ACCOUNTABILITIES

The purpose of this section is to prescribe the responsibilities of the various functionaries within Stellenbosch Municipality.

7.1 The Accounting Officer (Municipal Manager)

The Accounting Officer (Municipal Manager) or his/ her duly delegated

representative is responsible to ensure implementation and compliance with the responsibilities prescribed in section 63 of the MFMA.

- The municipality has and maintains a management, accounting and information system that accounts for the assets of the municipality;
- The municipality's assets are valued in accordance with standards of generally recognized accounting practice;
- The municipality has and maintains a system of internal control of assets, including an asset register; and
- The senior managers and their teams comply with this policy.
- In consultation with the asset managers, he approves the temporary or permanent transfer of a movable asset between departments as determined in the "Delegation of Authority to officials of the Stellenbosch Municipality".

7.2 The Chief Financial Officer (Director: Finance)

The Chief Financial Officer is responsible to the Municipal Manager to ensure that the financial investment in the municipality's assets is safeguarded and maintained.

The Chief Financial Officer must take reasonable steps to ensure that:

- i. Appropriate systems of financial management and internal control are established and carried out diligently;
- ii. The financial and other resources of the municipality are utilized effectively, efficiently, economically and transparently;
- iii. Any unauthorized, irregular or fruitless or wasteful expenditure and losses resulting from criminal or negligent conduct are prevented;
- iv. The systems, processes and registers required to substantiate the financial values of the municipality's assets are maintained at standards sufficient to satisfy the requirements of the Auditor-General.
- v. Financial processes are established and maintained to ensure that the municipality's financial resources are optimally utilized through an appropriate asset plan, budgeting, purchasing, maintenance and disposal decisions.
- vi. The managers and asset champions are appropriately advised on the exercise of their powers and duties pertaining to the financial administration of assets;
- vii. The policy and supporting procedures or guidelines are established, maintained and effectively communicated;
- viii. The Chief Financial Officer may delegate or otherwise assign

responsibility for performing the functions but he/she will remain accountable for ensuring these activities are performed.

7.3 Managers/ Directors

- a) The manager referred to in Section 56 of the municipal systems act being someone reporting directly to the Municipal Manager and has the functional accountabilities for the physical management of a particular set of assets in order to achieve the municipalities strategic objectives relevant to their directorate.
- b) Directors shall be directly responsible for the physical safeguarding of any fixed asset controlled or used by the directorate in question. In exercising this responsibility, directors shall adhere to the stipulations of this policy as well as any other written directives issued by the municipal manager to the directorate in question, or generally to all directorates, in regard to the control of or safeguarding of the municipality's fixed assets.

Managers should:

- i. ensure that employees in their departments adhere to the approved Asset Management Policy;
- ii. ensure that all assets are procured in terms of the SCM Policy;
- iii. ensure that council are properly informed about any contributed (donated) assets and that approval from council is obtained timeously
- iv. ensure that the contributed asset is recorded on the NARC form and communicated with the Financial Asset Management Department.
- v. ensure that employees with delegated authority have been nominated to implement and maintain physical control over assets in their departments. Although authority has been delegated, responsibility remains with the respective Managers of the departments and overall accountability with the Directors of relevant directorates;
- vi. ensure that the termination of service asset verification form for staff, is duly completed and submitted to the Strategic and Corporate Services Directorate;
- vii. ensure that assets are properly maintained in accordance with their respective asset maintenance policy;
- viii. ensure that, where applicable, all their movable assets as reflected on the Fixed Asset Register are barcoded to exercise control;
- ix. ensure that the Financial Asset Management Section is notified via the AT form within 10 working days of any changes in the status of assets

- under the department's control;
- x. ensure that transfers between departments within directorates are administered internally;
- xi. ensure that a complete asset verification of all inventory and asset items is performed annually;
- xii. ensure that all obsolete, damaged and unused assets, supported by relevant asset and condemnation forms, are handed in at the Financial Asset Management Department without delay;
- xiii. be responsible for maintaining and managing their own DIR;
- xiv. ensure that all assets are safeguarded against loss/theft and that they are adequately insured; and
- xv. ensure that location changes are made timeously and location/room information are updated and reported on the relevant form to the Asset Management Section regularly.

7.4 Asset Champions

Asset Champions are senior officials appointed by the Financial Asset Manager in the different Directorates.

The Asset Champion must:

- i. Assist the Financial Asset Manager/ Director in performing his/her functions and duties.
- ii. Ensure that all new assets (purchased or donated) are recorded on the NARC form.
- iii. Ensure that the NARC forms are completed in full and send with copies of the relevant documentation to the asset control department within 7 working days after receipt of the assets.
- iv. Ensures that all their movable assets, where applicable, are barcoded.
- v. Ensure that asset listings are verified and kept up to date in collaboration with the Finance Directorate.
- vi. Assist the Financial Asset Department with the annual verification of movable assets by making sure that the assets, as per asset listing, are at the correct locations, that these locations are accessible when the verification of assets takes place and provides a full report on any missing assets to the Financial Asset Manager.
- vii. Notify the Financial Asset Department when he/she identifies obsolete

and redundant assets so that these assets can be moved to the Write-off Store.

- viii. Report all changes affecting asset listing sheets to the Director: Finance and the Manager: Financial Asset Management within 7 days of occurrence.

The following require the written recommendation of the Financial Asset Manager and approval of Municipal Manager on the prescribed form:

- a) The temporary or permanent transfer of all movable assets between departments.
- b) The writing off or disposal of obsolete or redundant assets.

7.5 Financial Services Directorate: Financial Asset Management

- i. Is the asset registrar of the municipality and shall ensure that a complete, accurate and up to date asset register is maintained that conforms to the GRAP specifications.
- ii. Ensures that physical asset verification is performed annually by all departments to verify the assets on the asset register. The results of this verification must be reported to the Municipal Manager and Council.
- iii. Will perform reconciliations between the asset register and the General Ledger on a monthly basis.
- iv. Ensures adequate bar codes and equipment to exercise the function relating to asset control is available at all times.
- v. Will ensure that all audit queries are resolved in a timely manner.
- vi. Dispose of asset in accordance with the SCM policy
- vii. Handles the administrative functions with regards to the transfers received.

7.6 The responsibility of the Budget and Costing

- i. Ensure that a clear description is provided with each project and the appropriate funding source is identified.
- ii. Release capital funds only after receiving written authority and a clear and concise description of the item to be purchased.
- iii. Ensure that any changes in the capital budget, with regards to funds transferred or project description changes are communicated to the Financial Asset Management department.

7.7 The Strategic and Corporate Services Directorate

The Strategic and Corporate Services directorate shall ensure that no monies are paid out to the staff on termination of their service prior to receiving the relevant asset resignation form signed off by the relevant directorate- refer to Termination of Service Asset Confirmation form.

8. SAFEGUARDING OF ASSETS

Custody and Security

- i. All barcoded assets shall be tracked by physical location through the Fixed Asset Register.
- ii. A physical asset verification process shall be performed every year and all directorates will be verified simultaneously.
- iii. The coordination of the process and verification of the assets will rest with the Financial Asset Management Section and all directorates are responsible to see that the assets under their control are available during the verification process.

Communication

- i. Directorates are responsible to report any stolen or damage property to the Financial Asset Management Section.
- ii. All changes must be accurately recorded on the AT forms and reported to the Financial Asset Management Section within 10 working days.
- iii. Any discrepancies between the Fixed Asset Register and the physical inventory must be reconciled and motivated by the relevant directorates.

9. PROCEDURE WITH REGARD TO CONTRIBUTED ASSETS

Governance

- i. The authority to endorse and approve acceptance of assets contributed to the Stellenbosch Municipality vests with Council as such assets have an impact on future operational costs.
- ii. A report including the fair value/cost price of the contributed asset as well as the financial implications of acceptance of the contributed asset must be submitted to Council, so that acceptance of the asset can be confirmed.

Procedures

- i. Once Council has approved the donation, the departments must:
- ii. Notify the Financial Services Directorate of any assets contributed, by submitting the Council approved report including the cost/fair value of the contributed asset so that the asset can be recorded and capitalized at the appropriate value.

10. FINANCIAL MANAGEMENT

Pre-Acquisition Planning

Before a capital project is included in the draft municipal budget for approval, the Manager/ Director must prove that they have considered:

- The projected acquisition and implementation cost over all the financial years until the project is operational;
- The future operational costs and revenue on the project, including tax and tariff implications;
- The financial sustainability of the project over its economic life span including revenue generation and subsidization requirements;
- The physical and financial stewardship of the asset through all stages in its economic life span including acquisition, installation, maintenance, operations, disposal and rehabilitation; and
- The inclusion of the capital project in the Integrated Development Plans and future budgets.

The Chief Financial Officer is accountable to ensure that the Managers/ Directors receive all reasonable assistance, guidance and explanation to enable them to achieve their planning requirements.

Approval to acquire Property, Plant and Equipment:

Funds can only be invested with a capital project if:

- The funds have been appropriated in the capital budget;
- The project, including the total cost and funding sources, has been approved by the Council;
- The Director: Finance confirms that funding is available for that specific project; The Supply Chain Management prescripts/procedures have been adhered to.
- Any contract that will impose financial obligations more than two years beyond

the budget year is appropriately disclosed.

The funding sources of Assets:

Within the municipality's ongoing financial, legislative or administrative capacity, the Chief Financial Officer will establish and maintain the funding strategies that optimize the municipality's ability to achieve its Strategic Objectives as stated in the Integrated Development Plan.

Four main sources of finance are utilized to acquire Property Plant and Equipment for the municipality, namely:

- The Accumulated Surplus/Deficit (Capital Replacement Reserve)
- The External Financing Fund (EFF).
- Grants, Subsidies and Public
- Contributions. Fair value

The sources of finance that may be utilized to finance assets are utilized in accordance with the provisions of S19 of the Municipal Finance Management Act.

a) Accumulated Surplus/Deficit (The Capital Replacement Reserve)

The Council must annually approve the basis and the amounts for which contributions should be appropriated to the Accumulated Surplus/Deficit in conjunction with the availability of funds and the requirements of the capital program for that financial year.

The funds in the Accumulated Surplus/Deficit are accumulated by: An annual contribution from revenue

The cash backed profit on the sale/disposal of assets

When an amount is advanced to a borrowing service to finance the acquisition of an asset, the money must be transferred to the Accumulated Surplus created for the purpose of acquiring a specific asset and the accumulated funds in the Accumulated Surplus/Deficit must be reduced by the amount of the advance.

The balance of the accumulated funds in the Accumulated Surplus/Deficit will therefore represent the amount that is available to finance assets in future periods. This balance must be cash backed at all times.

The balance in the Accumulated Surplus is transferred to the income statement over the estimated life of assets financed by the Accumulated

Surplus/Deficit to offset the depreciation charge included in the income statement relating to fixed assets.

b) The External Financing Fund (EFF)

When loans are obtained from external sources, they must be paid into the EFF. The corresponding cash should be invested until utilized for the purpose of acquiring assets. When the external loan is utilized to finance assets in a service entity it should be recorded in an “advances” account in the EFF.

Where a loan has a fixed period the instalments should be calculated to determine the cash that should be set aside in the EFF. This is done so that there will be sufficient money to repay the loan when it matures as well as any interest charges as they occur.

When the loan is an annuity loan, the cash required to be paid into the EFF should be based on the actual loan repayments. Once the money has been received by the EFF, the cash would be used to repay the loan.

When the EFF is consolidated with the various services, the “advances made” account in the EFF will contra with the “advances received” account in the various service entities.

Loan finance option

A municipality should ensure that a loan satisfies the requirements of legislation on incurring debt. In particular, municipalities should ensure that long-term debt is:

- Incurred only for the purposes of capital expenditure for the purpose of achieving the objectives stated in section 152 of the Constitution (MFMA S46);
- incurred in line with its capital budget (MFMA S19 and S46(2));
- Is incurred only after the anticipated debt repayment schedule has been submitted to council (MFMA S46(3)(b)(i));
- Included in the liabilities register and
- Satisfies the other requirements of sections 19, 46 and 63 of the MFMA, the MSA and the Constitution.

c) Grants, Subsidies and Public Contributions (Capital Receipts)

Unutilized conditional grants are reflected on the Balance Sheet as a Creditor called Creditor (Unspent and Receipts). They represent unspent government grants, subsidies and contributions from the public. This creditor always has

to be backed by cash.

The following provisions are set for the creation and utilization of this creditor:

- The cash which backs up the creditor is invested until it is utilized.
- Interest earned on the investment is treated in accordance with grant conditions. If it is payable to the funder it is recorded as part of the creditor. If it is the council's interest it is recognized as interest earned in the income statement.
- Whenever an asset is purchased out of the unutilized conditional grant an amount equal to the cost price of the asset purchased is transferred from the Unutilized Capital Receipts into the income statement as revenue. Thereafter an equal amount is transferred on the statement of changes in equity to a reserve called an Accumulated Surplus/Deficit (Future Depreciation Reserve). This reserve is equal to the remaining depreciable value (book value) of assets purchased out of the Unutilized Capital Receipts. The Future Depreciation Reserve is used to offset depreciation charged on assets purchased out of the Unutilized Capital Receipts to avoid double taxation of the consumers.
- If a profit is made on the sale of assets previously purchased out of Unutilized Capital Receipts the profit on these assets sold is reflected in the notes to the income statement and is then treated in accordance with Council policy.

The acquisition of assets will not be funded over a period longer than the useful life of that asset.

Disposal of assets

- The municipality may not transfer ownership as a result of a sale or other transaction or otherwise permanently dispose of an asset needed to provide the minimum level of basic municipal services, unless such asset is obsolete or surplus to requirements or beyond a state of good repair or being replaced and provided that the delivery of the minimum level of basic municipal services must not be compromised as a result of the disposal of the asset.
- The decision that a specific asset is not needed to provide the minimum level of basic municipal services, may not be reversed by the municipality after that asset had been sold, transferred or otherwise disposed of.
- The disposal of an item of property, plant or equipment must be fair, equitable, transparent, competitive and cost effective and comply with a prescribed regulatory framework for municipal supply chain management and the Supply Chain Management Policy of the municipality.
- The transfer of assets to another municipality, municipal entity, national department or provincial department is excluded from these provisions,

provided such transfer is being done in accordance with a prescribed regulatory framework. Directors shall report in writing to the Director: Finance on 31 May of each financial year on all fixed assets controlled or used by the directorate concerned which such Director wishes to alienate by public auction or public tender. The Director: Finance shall thereafter consolidate the requests received from the various directorates, and shall promptly report such consolidated information to the council or the Municipal Manager of the municipality, as the case may be, recommending the process of alienation to be adopted.

- Once the fixed assets are alienated, the Director: Finance shall de-recognize the asset from the accounting records and the fixed asset register.

Loss, theft, destruction or impairment of fixed assets

The different directorates shall ensure that any incident of loss, theft, destruction, or material impairment of any fixed asset controlled or used by the directorate in question is promptly reported in writing to the Director: Financial Services, to the internal auditor, and in cases of suspected theft or malicious damage, also to the South African Police Service.

11.ACCOUNTING FOR ASSETS

Capitalization of Assets

Stellenbosch Municipality does not capitalize an asset based on a capitalization cost threshold, but recognizes an asset when it complies with the definition of an asset as stipulated in GRAP 17 and the cost of the asset to the municipality can be measured reliably.

Where an asset is acquired at no cost, or for a nominal cost, its cost is its fair value as at the date of acquisition (GRAP 17.22).

Assets will only be capitalized in the asset register on completion or finalization of the project.

Multi Year projects

Projects to be completed over more than one financial year will be initially disclosed in the asset register and financial statements as “Work in Progress” thereafter only on completion the asset will be capitalized and depreciated.

Assets will be recorded in the asset register continuously on completion thereof and bar-coded with an aluminium label where appropriate for identification.

Only expenses incurred in the enhancement of a fixed asset (in the form of improved or increased services or benefits flowing from the use of such asset) or in the material extension of the useful operating life of a fixed asset shall be capitalized (GRAP 17.19-.20):

- Parts of some items of property, plant and equipment may require replacement at regular intervals. For example, a road may need resurfacing every few years, a furnace may require relining after a specified number of hours use, or aircraft interiors such as seats and galleys may require replacement several times during the life of the airframe. Items of property, plant and equipment may also be required to make a less frequently recurring replacement, such as replacing the interior walls of a building, or to make a non-recurring replacement. Under the recognition principle in an entity recognizes in the carrying amount of an item property, plant and equipment the cost replacing part of such an item when that cost is incurred if the recognition criteria are met. The carrying amount of those parts that are replaced is derecognized in accordance with the de-recognition provision of this Standard (GRAP 17.19).
- A condition of continuing to operate an item of property, plant and equipment (for example, an aircraft) may be performing regular major inspections for faults regardless of whether parts of the item are replaced. When each major inspection is performed, its cost is recognized in the carrying amount of the item of property, plant and equipment as a replacement if the recognition criteria are satisfied. Any remaining carrying amount of the cost of the previous inspection (as distinct from physical parts) is derecognized. This occurs regardless of whether the cost of the previous inspection was identified in the transaction in which the item was acquired or constructed. If necessary, the estimated cost of a future similar inspection may be used as an indication of what the cost of the existing inspection component was when the item was acquired or constructed (GRAP 17.20)

Computer software will be capitalized and classified as intangible assets.

MAINTENANCE

Maintenance Strategy

Each directorate must develop a maintenance strategy that will ensure that the assets of Stellenbosch Municipality are maintained at an adequate operational level or standard by ensuring that all statutory, technical and operational objectives are achieved. This strategy must ensure that tangible assets under the custody and control of the relevant directors are properly maintained and repaired so that their

possible maximum useful lives are realised.

Rehabilitation/Enhancements/Renewals of Capital Assets

Expenditure to rehabilitate, enhance or renew an existing capital asset (including separately depreciable parts) can be recognised as capital if:

- That expenditure satisfies the recognition criteria.
- That expenditure is enhancing the service provision of that capital asset beyond its original expectation (i.e., not maintenance) and either that expenditure:
 - Increases the useful life of that capital asset (beyond its original life).
 - Increases that capital asset capacity (beyond its original capacity).
 - Increases the performance of the capital asset (beyond the original performance).
- Increases the functionality of that capital asset.
- Reduces the future ownership costs of that capital asset significantly; or
- Increases the size of the asset or changes its shape.

The following points are important to note:

- Approval through the budget process for these improvements may require a business case.
- It must be probable that the expenditure will lead to the level of benefits expected.
- The expenditure to restore the functionality of the capital asset to its original level is a maintenance/refurbishment expense and not a capital expense. Maintenance/ refurbishment will not be capitalised to the capital asset.

The rehabilitated or renewed separately depreciable part will be derecognised and the replacement will be recognised. Where the separately identifiable asset is rehabilitated or renewed, the amount incurred will be added to the carrying value of the asset.

Renewals have the same meaning and treatment as rehabilitation/enhancements and are different from refurbishment, which is seen as maintenance.

Directorates Responsibilities

Each Directorate is responsible for ensuring:

- i. That all tangible assets under their control are maintained in a good working condition. The directorates must take adequate care that the working environments for the various assets are appropriate and suitable for such types of tangible assets.
- ii. That their assets are not misused or used for personal use or benefit.

- iii. That repair and maintenance costs incurred is reviewed and properly controlled.
- iv. The development of a maintenance program according to their operating budget resources. The program must provide a schedule of the repairs and maintenance to be done. The program must also consist of planned and unplanned repairs and maintenance to be performed.
- v. The following matrix will assist in distinguishing capital expenditure from maintenance expenditure:

CAPITAL EXPENDITURE	MAINTENANCE
• Acquiring a new asset	• Restoring an asset so that it can continue to be used for its intended purpose
• Replacing an existing asset	• Maintaining an asset so that it can be used for the period for which it was initially intended
• Enhancing an existing asset so that its use is expanded	
• Further developing an existing asset so that its original useful life is extended	

When assets are capitalized a distinction should be made on whether the new asset is purchased to replace an existing asset or whether it is a total new asset that is purchased.

Assets held under leases

- **Finance leases** are leases, which in effect transfer all risks and rewards associated with the ownership of an asset from the lessor to the lessee. Assets held under finance leases are capitalized by the municipality and reflected as such in the fixed asset register. It will be capitalized at its leased value at commencement of the lease, which will be the price stated in the lease agreement. The asset is then depreciated over its expected useful life.
- **Operating leases** are those leases which do not fall within the scope of the above definition. Operating lease rentals are expensed as they become due. Assets held under operating leases are not accounted for in the asset registers of the municipality.

INVESTMENT PROPERTY

- An item shall be recognised as investment property if it meets the definition. Investment property is recorded at cost.
- Disclosable value measured at recognition:
 - Initially at acquisition cost plus transaction cost, or nominal value
 - Where acquired at no cost or nominal value, fair value at acquisition is deemed to be cost for disclosure
 - If held under a lease and classified as Investment Property, is the lower of fair value and the present value of the minimum lease payments
- Cost value is determined according to the requirements of the GRAP standard on Investment Property.
- Assets classified as Investment Property shall be re-defined once such assets usage changes

Cost Model

Investment property is, subsequent to initial measurement, carried at cost less accumulated depreciation and any accumulated impairment losses

Depreciation is provided to write down the cost, less estimated residual value by equal instalments over the useful life of the property, which is as follows:

Item	Useful life
Property – buildings	30-99 years
Property – land	indefinite

Investment property is derecognised on disposal or when the investment property is permanently withdrawn from use and no future economic benefits or service potential are expected from its disposal.

Gains or losses arising from the retirement or disposal of investment property is the difference between the net disposal proceeds and the carrying amount of the asset and is recognised in surplus or deficit in the period of retirement or disposal.

Compensation from third parties for investment property that was impaired, lost or given up is recognised in surplus or deficit when the compensation becomes receivable

Depreciation

- Depreciation will be done in accordance with the GRAP frame work
- The depreciable amount of an item of property, plant or equipment should be allocated on a systematic basis over its useful life.
- Stellenbosch Municipality's depreciation method will be the straight-line method for all assets of the Council unless otherwise agreed to in writing by the Director: Financial Services.
- Depreciation shall be calculated from the day the fixed asset is available for use (commissioning date) (GRAP 17.65).
- If the cost of land includes the cost of site dismantlement, removal and restoration, the portion of the land asset is depreciated over the period of benefits or service potential obtained by incurring those costs. In some cases, the land itself may have a limited useful life, in which case it is depreciated in a manner that reflects the benefits or service potential to be derived from it (GRAP 17.69).

Review of residual value and useful life

- The municipality should assess whether there is any indication that the expected useful life of the asset has changed based on whether the condition of the asset has improved or declined. This is based on any condition assessments undertaken by the entity on its assets during the reporting period. Paragraph .60(f) of GRAP 17 should not be read as requiring a condition assessment at each reporting date. Condition assessments will be undertaken by entities on selected or identified assets as part of its on-going asset management. Instead, any information available from any condition assessments undertaken during the reporting period should be used to assess whether the useful life of particular assets should be changed.
- All movable assets with a useful life of two years or less will be reviewed on an annual basis to ensure adherence to GRAP 1757 (c) if no other indicators are present or detected during the year under review.
- If the review indicates that a change has taken place and expectations differ from previous estimates, the changes should be accounted for as a change in the accounting estimate in accordance with the Standard of GRAP on Accounting Policies, Changes in Accounting Estimates and Errors.
- The remaining useful life of capital assets should be reviewed annually and, if expectations are significantly different from previous estimates, the depreciation charge for the current and future periods should be adjusted.
- This review should be done by the asset manager in conjunction with the impairment review.
- The review of useful life is a check to see if there is any evidence to suggest that expected life should be changed.
- The Table of Useful Lives is provided in the MFMA Local Government Capital

Asset Management Guideline (Refer to Annexure A). These should be used as a guide to the minimum useful lives only because actual asset lives experienced greatly exceed those recommend lives.

- The residual value of an asset may increase to an amount equal to or greater than the asset's carrying amount. If it does, the asset's depreciation charge is zero unless and until its residual value subsequently decreases to an amount below the asset's carrying amount (GRAP 17.65).

Impairment of assets

The accounting treatment relating to impairment losses is outlined as follows in GRAP 17:

- The carrying amount (Book value) of an item or a group of identical items of property, plant and equipment should be reviewed periodically in order to assess whether or not the recoverable amount has declined below the carrying amount.
- Recoverable amount is the higher of a cash – generating asset's net selling price and its value in use.
- When such a decline has occurred, the carrying amount should be reduced to the recoverable amount. The amount of the reduction should be recognized as an expense immediately.
- The recoverable amount of individual assets, or groups of identical assets, is determined separately and the carrying amount reduced to recoverable amount on an individual asset, or group of identical assets, basis.
- However, there may be circumstances when it may not be possible to assess the recoverable amount of an asset on this basis, for example when all of the plant and equipment in a sewerage purification work is used for the same purpose. In such circumstances, the carrying amount of each of the related assets is reduced in proportion to the overall decline in recoverable amount of the smallest grouping of assets for which it is possible to make an assessment of recoverable amount.

The following may be indicators that an item of PPE has become impaired:

- The asset has been damaged.
- The asset has become technologically obsolete.
- The asset remains idle for a considerable period either prior to it being put into use or during its useful life.
- Land is purchased at market value and is to be utilized for subsidized housing developments, where the subsidy is less than the purchase price.

Procedure to identify, budget and account for impairment losses:

- The following needs to be done to ensure that impairment losses that are identified by the above indicators are budgeted for during the operating budget cycle and are accounted for in the next financial year. The following steps will have to be performed during the operating budget cycle:

Financial Services Directorate - Financial Asset Management Section shall issue a memo to all directorates requesting them to identify assets that:

- a) Are in a state of damage at the start of the operating budget cycle;
- b) Are technologically obsolete at the start of the operating budget cycle; This can be facilitated if directorates require that Financial Services Directorate – Financial Asset Management - section to supply them with a Fixed Asset Register printout pertaining to major assets showing the remaining useful lives of assets. The directorates can then assess and indicate cases where the assessed remaining useful life is shorter than the remaining useful life on the printout.
- c) Have remained idle for a considerable period either prior to them being put into uses at the start of the operating budget cycle or during their useful life;
- d) Are subject to impairment losses because the subsidies to be received in exchange for assets are less than the carrying amounts. An example of this is Land that is purchased at market value and is to be utilized for subsidized housing developments;
 - The recoverable amounts of these assets need to be calculated by calculating the Net selling Price per asset as defined above.
 - The impairment loss per asset needs to be calculated as the difference between the Net selling price and the book value of the asset.
 - The impairment loss needs to be budgeted for.
 - The following steps will have to be performed regularly during the year to account for impairment losses:

Directorates will identify and inform Financial Services Directorate – Financial Asset Management section of assets that:

- a) Are in a state of damage at year-end,
- b) Are technologically obsolete at year-end. This can be facilitated if directorates require Finance Directorate – Financial Asset Management section to supply them with a Fixed Asset Register printout pertaining to major assets showing

the remaining useful lives of assets. The directorates can then assess and indicate cases where the assessed remaining useful life is shorter than the remaining useful life on the printout.

- c) Have remained idle for a considerable period either prior to them being put into uses at year-end or during their useful life
- d) Are subject to impairment losses because the subsidies to be received in exchange for assets are less than the carrying amounts. An example of this is Land that is purchased at market value and is to be utilized for subsidized housing developments. The recoverable amounts of these assets need to be calculated by calculating the Net selling Price per asset as defined above.

The impairment loss per asset needs to be calculated as the difference between the Net selling price and the book value of the asset.

The impairment loss needs to be accounted for by identifying the relevant funding source.

Disclosure requirements relating to impairment losses:

All material impairment losses need to be disclosed in the notes to the income statement as a separately disclosed item. They are normally disclosed as part of the note on the amounts that are included in the calculation of the Net Surplus or Deficit for the year.

DISPOSAL AND RETIREMENTS

Governance

Section 14 and 90 of the MFMA governs the disposal of assets. This section provides inter alia:

- The council may not dispose of assets that are utilized to provide minimum level of basic municipal services.
- Assets other than those utilized to provide minimum level of basic service may be disposed of subject to Council approval.
- An item of property, plant or equipment should be eliminated from the Statement of Financial Position, on disposal or when the asset is permanently withdrawn from use and no future economic benefits or potential service delivery is expected from its disposal, in accordance with GRAP 17.
- Gains or losses arising from the retirement or disposal of an item of property,

plant or equipment should be determined as the difference between the actual or estimated net disposal proceeds and the carrying amount of the asset and should be recognized as revenue or expense in the Statement of Financial Performance.

Procedures

- a) Any items declared obsolete or damaged will be handed in to the Finance department – Financial Asset Management department for safekeeping.
- b) No items will be received by the Financial Services Directorate, Financial Asset Management section without a completed AT form and attached condemnation forms, counter signed by Finance Directorate – Financial Asset Management section, describing the status of the item and the reason for writing-off the item.
- c) Directorates must ensure that assets are disposed of in terms of the SCM policy.
- d) It is the responsibility of each directorate to ensure that all such assets to be disposed of are delivered to and received at the Finance Directorate – Financial Asset Management section.
- e) Approval for the disposal of assets is considered by the Municipal Manager only after a recommendation has been obtained from the following persons:
 - i. Vehicles and Plant – Manager: Financial Asset Management and applicable Directorate;
 - ii. Computers - Information Technology Manager.
 - iii. Other Items – Directors/ Managers within the different directorates.
- f) After the approval of the Municipal Manager has been obtained, any vehicle written off must be deregistered immediately.
- g) All asset items lost, stolen or damaged must be reported to the Financial Services Directorate – Insurance section as well as Finance Directorate – Financial Asset Management section by completing the AT form.
- h) All asset items lost or stolen also need to be reported to the SAPS by the relevant department.

An item of property, plant and equipment should be eliminated from the balance sheet on disposal or when the asset is permanently withdrawn from use and no future economic benefits or potential service delivery is expected from when it is disposed of.

Gains and losses arising from the retirement or disposal of an item of property, plant

and equipment should be determined as the difference between the actual or estimated net disposal proceeds and the carrying amount of the asset and should be recognized as revenue or expense in the Statement of Financial Performance.

The accounting treatment relating to the profit or loss on the sale of property, plant & equipment is outlined in GRAP 17. The following is a summary of the relevant aspects:

Profits and losses, which are disclosed in total in the financial statements, are *calculated by use of the following formula: -*

<i>Proceeds</i>	Sales value, trade-in value or proceeds received from insurance if the asset was damaged or stolen.
<i>Less: Carrying value</i>	Cost, or if valued, revaluation amount, less accumulated depreciation up to the date of sale or when asset can no longer be used for its intended purpose.
<i>Equals PROFIT or</i>	If proceeds greater than carrying value, or
<i>Equals LOSS</i>	If proceeds less than carrying value.

12. INTERNAL CONTROL OVER ASSETS

- Establishment and Management of the Financial Asset Register:

The Chief Financial Officer will establish and maintain the Asset Register containing key financial data on each item of Property, Plant or Equipment that satisfies the criterion for recognition as per the accounting standards.

Each Asset Manager is responsible to ensure that sufficient controls exist to substantiate the quantity, value, location and condition of all assets in the asset register.

Each Asset Manager must appoint an Asset Champion in each Directorate/Section which will be responsible to ensure that the asset listings are verified and kept up to date in collaboration with the Directorate: Finance Services.

- Contents of the Fixed Asset Register

The fixed asset register shall be maintained in the format determined by the Director: Financial Services, which format shall comply with the requirements of generally recognized accounting practice (GRAP) and any other accounting requirements which may be prescribe Directors under whose control any fixed asset falls shall promptly provide Director: Financial Services in writing with any information required to compile the fixed asset change which may occur in respect of such information. Contents of the Financial Asset Register:

The details included in the Asset Register will include:

- The depreciation methods used
- The useful live
- Depreciation charge
- The carrying amount
- The accumulated depreciation
- Additions
- Disposals and transfers
- Date of acquisition
- Date of disposal (if relevant)
- Asset description
- Historical cost of the asset
- Asset classification
- Asset ID
- Residual value

Internal Controls over the Financial Asset Registers

- Controls around their asset register should be sufficient to provide an accurate, reliable and up to date account of assets under their control to the standards specified by the Chief Financial Officer and required by the Auditor-General.
- Controls around the asset registers should be sufficient to provide Directors with an accurate, reliable and up to date account of assets under their control to the standards specified by the Director: Finance and required by relevant legislation.

These controls will include the physical management and recording of all acquisition, assignments, transfers, losses and disposals of assigned assets as well as regular asset counts and systems audits to confirm the adequacy of controls.

Identification of fixed assets:

The Municipal Manager shall ensure that the municipality maintains a fixed asset identification system which shall be operated in conjunction with its computerized fixed asset register.

Transfers, Reallocation or Reassignment of Property, Plant or Equipment

- a) An Asset Manager retains management accountability and control for a particular asset until another Asset Manager in writing does accept responsibility for that asset, and the Chief Financial Officer endorses the transfer.
- b) The Asset Manager must advise the Chief Financial Officer on the prescribed form whenever an asset is permanently or temporarily reallocated or reassigned from one location to another.
- c) The form must be completed and signed by both the sender and receiver
- d) The Manager: Financial Asset Management will appropriately amend the Asset Register with all approved transfers.
- e) Assets must solely and exclusively be used for the purpose of the
- f) Council's business.

Verification of fixed assets

- a) Financial Services Directorate: Financial Asset Management Section shall at least once during every financial year undertake a comprehensive verification of all fixed assets controlled or used by the directorate concerned.
- b) Finance Directorate: Financial Asset Management Section shall promptly and fully report in writing to the Director: Financial Services in the format

determined by the Director: Financial Services, all relevant results of such fixed asset verification, provided that each such asset verification shall be undertaken and completed as closely as possible to the end of each financial year, and that the resultant report shall be submitted to the Director: Financial Services not later than 30 June of the year in question.

Asset listings

- a) The Chief Financial Officer must submit within six months after each financial year, asset listings of capitalised assets to all Asset Managers.
- b) At all times these asset listings should indicate the assets in particular location and should be easily accessible.
- c) When employees get appointed or resign from any specific post the relevant asset listings must be verified and accordingly endorsed by the Asset Champion for the specific workplace.
- d) All changes on asset listing sheets must be reported in writing to the Director: Financial Services within 7 days of when change took place.

13. FINANCIAL DISCLOSURE

Assets must be disclosed in respect of each class of property, plant and equipment, in accordance with Generally Recognized Accounting Practice.

14. CLASSIFICATION OF ASSETS

Any asset recognized as an asset under this policy will be classified according to categories as per the Fixed Asset Register. All fixed assets should be classified under the following headings in the Asset Register:

Property, plant and equipment:

Computer Equipment

Furniture and office equipment

Infrastructure: Electricity

Infrastructure: Network and Communication

Infrastructure: Roads, pavements, bridges

Infrastructure: Storm water

Infrastructure: Waste Management

Infrastructure: Waste Water Management

Infrastructure: Water

Machinery and Equipment

Transport Assets

Other Assets

Other Assets shall be recorded under the following main categories;

- Operational Buildings: Municipal Offices
- Housing: Social Housing

Heritage Assets

A Heritage Asset is an asset that has historical, cultural or national importance and needs to be preserved. The following is a list of some typical heritage assets encountered in the municipal environment:

- Archaeological sites;
- Conservation areas;
- Historical buildings or other historical structures (such as war memorials);
- Historical sites (for example, historical battle site or site of a historical settlement);
- Museum exhibits;
- Public statues; and
- Works of art (which will include paintings and sculptures).

Intangibles Assets

- Computer Software
- Databases

Community Assets

Community Assets shall be recorded under the following main categories;

- Recreational Facilities;

- Sporting Facilities; and
- Other Facilities.

Land and Buildings

Land and buildings shall be treated using the cost model.

Land shall be accounted for at cost and shall not be depreciated. Land on which infrastructure and community assets are located shall be identified as land and buildings and not disclosed together with the infrastructure and community assets. Land not registered in the name of the municipality but controlled by the municipality by virtue of owner-occupied buildings thereon, shall be recognised at cost.

Buildings shall be accounted at cost, less any accumulated depreciation and any accumulated impairment losses.

Investment property

The classification of an investment property is based on management's judgement; the following criteria will be applied to distinguish investment properties from owner-occupied property or property held for resale:

Investment property	PPE	Non-current assets held for sale
the asset generates its own cash flows in the form of rentals (on a commercial basis)	rental income earned is below market value, and the asset is held for service delivery rather than to generate a commercial return	land and other properties held for sale within the next 12 months, if the criteria in GRAP 100 are met
the asset is held for capital appreciation	the asset is held to achieve service delivery objectives rather than to earn rental or for capital appreciation	
investment property that is being redeveloped for continued use as an investment property	property that is being constructed or developed for future use as investment property (until the asset meets the definition of investment property it is accounted for as PPE)	
Land held for an undetermined use	owner occupied-property such as office buildings and residential buildings occupied by staff members (assets used by employees, irrespective of whether or not the employees pay rent at market rates, are owner-occupied)	

The judgement of the Management of Stellenbosch Municipality is that the following classes of Municipal Property will be classified as Investment Property:

- Land held for long-term capital appreciation rather than for short-term sale in the ordinary course of operations which council intends to sell at a beneficial time in the future.
- Land held for a currently undetermined future use.
- A building owned by the municipality (or held by the municipality under a finance lease) and leased out under one or more operating leases on a commercial basis.
- A building that is currently vacant but is held to be leased out under one or more operating leases on a commercial basis to external parties.

ANNUAL REVIEW ON THE POLICY

This policy will be reviewed and updated annually or whenever legislative or accounting standards amendments significantly change the requirements pertaining to asset management in general and the administration of property, plant and equipment at a sooner event.

GENERAL

This policy does not overrule the requirement to comply with other policies like supply chain management, tendering or budget policies. The Chief Financial Officer will provide guidance or recommend an amendment to this policy to comply with the essence and understanding of the policies, regulations or legislation being conflicted.

1. **DEFINITIONS**

“*Act*” means the Local Government: Municipal Finance Management Act, 2003 (Act No. 56 of 2003);

“*Consultant*” means a professional person, individual partnership, corporation, or a company appointed to provide technical and specialist advice or to assist with a design and implementation of projects or to assist the municipality to achieve its objectives of local government in terms of section 152 of the Constitution;

“*Cost containment*” means the measures implemented to curtail spending in terms of this policy;

“*Credit Card*” means a card issued by a financial services provider, which creates a revolving account and grants a line of credit to the cardholder;

“*Debit Card*” means a card issued by a financial services provider allowing the cardholder to transfer money electronically from any bank account held by the Municipality when making a purchase;

“*Municipality*” means Stellenbosch Local Municipality;

“*Persons in the employ of the municipality*” means any employee of the municipality whether employed on a permanent or temporary basis and any public office bearer serving on the Council;

“*Procurement Documentation*” means any documentation used for the procurement of consultants, whether it is documentation used for tenders or formal quotations;

2. **PURPOSE**

The purpose of the policy is to regulate spending and to implement cost containment measures at Stellenbosch Local Municipality.

3. **OBJECTIVES OF THE POLICY**

3.1 The objectives of this policy are to:

3.1.1 To ensure that the resources of the municipality are used effectively, efficiently and economically;

3.1.2 To implement cost containment measures.

4. **SCOPE OF THE POLICY**

4.1 This policy will apply to all:

4.1.1 Councillors'; and

4.1.2 Municipal employees.

4.2 In the event of any conflict between a provision of this policy and any other policy of council, the provision of this policy shall apply.

5. **LEGISLATIVE FRAMEWORK**

5.1 This policy must be read in conjunction with the -

5.1.1 The Municipal Finance Management Act,

5.1.2 MFMA Circular 97, published on 31 July 2019;

5.1.3 Municipal Cost Containment Regulations, 2019; and

5.1.4 Travelling and subsistence policy.

6. **POLICY PRINCIPLES**

6.1 This policy will apply to the procurement of the following goods and/or services:

- 6.1.1 Use of consultants
- 6.1.2 Vehicles used for political office-bearers
- 6.1.3 Travel and subsistence
- 6.1.4 Domestic accommodation
- 6.1.5 Credit cards
- 6.1.6 Sponsorships, events and catering
- 6.1.7 Communication
- 6.1.8 Conferences, meetings and study tours
- 6.1.9 Any other related expenditure items

7 **USE OF CONSULTANTS**

7.1 Consultants may only be appointed after an assessment of the needs and requirements has been conducted to support the requirement of the use of consultants.

7.2 The assessment referred to in 7.1 must confirm that the municipality does not have requisite skills or resources in its full time employ to perform the function that the consultant will carry out.

7.3 Procurement documentation for the appointment of consultants must include a clause that remuneration rates will be subject to negotiation and will not exceed the applicable rates stated below:

- 7.3.1 Rates determined in the “Guideline on fees for audits undertaken on behalf of the Auditor-General of South Africa” issued by the South African Institute of Chartered Accountants;
- 7.3.2 Rates set out in the “Guide on Hourly Fee Rates for Consultants” issued by the Department of Public Service and Administration;
- 7.3.3 Rates prescribed by the body regulating the profession of the consultant.

- 7.4 When negotiating cost effective rates for international consultants, the Accounting officer may take into account the relevant international and market determined rates.
- 7.5 When consultants are appointed the following should be included in the Service Level Agreements:
 - 7.5.1 Consultants should be appointed on a time and cost basis that has specific start and end dates;
 - 7.5.2 Consultants should be appointed on an output-specific basis, with specified deliverables and the associated remuneration;
 - 7.5.3 Ensure that cost ceilings are included to specify the contract price as well travel and subsistence disbursements and whether the contract price is inclusive or exclusive of travel and subsistence;
 - 7.5.4 A clause ensuring that skills transfer is done by the consultant to the relevant Municipal officials. This requirement must also be specified in Procurement Documentation.
 - 7.5.5 All engagements with consultants should be undertaken in accordance with the municipality's supply chain management policy and Supply Chain Regulations.
- 7.6 The travel and subsistence costs of consultants must be in accordance with the national travel policy issued by the National Department of Transport as updated periodically.
- 7.7 Consultancy reduction plans should be developed to reduce the reliance on consultants.
- 7.8 All contracts with consultants must include a retention fee or a penalty clause for poor performance.
- 7.9 The specifications and performance of the service provider must be used as a monitoring tool for the work that is to be undertaken and performance must be appropriately recorded and monitored.

8. VEHICLES USED FOR POLITICAL OFFICE-BEARERS

- 8.1 Should the approved capital budget of the municipality include the purchase of vehicles for official use by political office bearers, the threshold limit for such vehicle purchases may not exceed seven hundred thousand rand (R700 000) or 70% (VAT inclusive) of the total annual remuneration package for the different grades, whichever is greater.
- 8.2 The procurement of vehicles must be undertaken using the national government transversal mechanism unless it can be procured at a lower cost through other procurement mechanisms.
- 8.3 Before deciding on the procurement of a vehicle as contemplated in 8.2, the chief financial officer must provide the council with information relating to the following criteria which must be considered:
 - 8.3.1 Status of current vehicles;
 - 8.3.2 Affordability, including options of purchasing vs. renting;
 - 8.3.3 Extent of service delivery backlogs;
 - 8.3.4 Terrain for effective usage of vehicle; and
 - 8.3.5 Any other policy of council.
- 8.4 If the rental option is preferred, the Accounting officer must review the costs incurred on a quarterly basis to ensure that value for money is obtained.
- 8.5 Regardless of their usage, vehicles for official use by public office bearers may only be replaced after completion of 120 000 kilometres.
- 8.6 Notwithstanding 8.5, a municipality may replace vehicles for official use by public office bearers before the completion of 120 000 kilometres only in instances where the vehicle experiences serious mechanical problems and is in a poor condition, and subject to obtaining a detailed mechanical report by the vehicle manufacturer or approved dealer.

9 TRAVEL, SUBSISTENCE AND ACCOMMODATION

Air Travel

- 9.1 The Accounting officer in respect of all officials or political office bearers and the Executive mayor in respect of the Accounting officer may only approve the purchase of economy class tickets for air travel.

International Travel

- 9.2 International travel for any official or political office bearer can only be approved by the municipal council in a council meeting open to the public with a supporting vote of the majority of the members of the municipal council present.

- 9.3 The report to council for approval of international travel must include:

- 9.3.1 A motivation why the international travel is seen as critical and fully setting out the anticipated benefit that the municipality will derive from attending the event, meeting or function;
- 9.3.2 If international travel to the destination or event was previously undertaken, state what benefits if any derived from the previous attendance;
- 9.3.3 The full cost of the international travel including travel allowances to be paid; and
- 9.3.4 The proposed officials and political office bearers, not exceeding three, to travel and why they have been identified.

- 9.4 The following events will not be considered critical to justify international travel whether the full cost of the travel is paid by another institution or not:

- 9.4.1 Attendance of international sporting events;
- 9.4.2 Attendance of international social events;
- 9.4.3 Attendance of international party-political events;
- 9.4.4 The opening of another country's parliament or any other country's government's celebration events.

- 9.5 The accounting officer or delegated official must ensure that requirements for international travel by officials or political office bearers are not inserted into bid documents, whether it is for inspection of products at source of construction/assembly or for any other reason.

Domestic Accommodation

- 9.6 Overnight accommodation may only be booked where the return trip exceeds 500 kilometres.
- 9.7 Notwithstanding the provision in paragraph 9.6 overnight accommodation, where the return trip is 500 kilometres or less, may be booked where in the view of the accounting officer or delegated official the limitation may be impractical and any of the following instances are present:
- 9.7.1 The road or any other conditions could jeopardise the safety, health and security of officials or political office bearers;
 - 9.7.2 The trips are to be undertaken over a number of consecutive days provided that a return trip is in excess of 200 kilometres;
 - 9.7.3 The starting time of the meeting or event would require the official or councillor to leave his/her place of residence before 05:00 in order to be punctual; and
 - 9.7.4 Overnight accommodation is cheaper than the travelling expenses payable under council policy on travel and subsistence.
- 9.8 Any request for overnight accommodation in compliance with paragraph 9.6 or 9.7 must be motivated on a prescribed form and approved by the municipal manager or delegated official prior to the arrangement for overnight stay;
- 9.9 The written approval in terms of paragraph 9.8 must be filed with the relevant supply chain documents for the accommodation booking; and
- 9.10 A copy of such written approval in terms of paragraph 9.8 must also accompany the request for travel and subsistence.

10. **CREDIT CARDS**

- 10.1 The accounting officer must ensure that no credit card or debit card linked to a bank account of the municipality is issued to any official or public office-bearer.
- 10.2 Where officials or public office bearers must incur expenditure in relation to approved official municipal activities, such officials and public office bearers may use their personal bank cards or cash, and may request reimbursement from the municipality in accordance with approved policies and processes.

11 **SPONSORSHIPS, EVENTS & CATERING**

- 11.1 The municipality may not incur catering expenses for meetings that are only attended by persons in the employ of the municipality, unless prior written approval is obtained from the accounting officer.
- 11.2 Catering expenses may be incurred by the accounting officer for the following, if they exceed five (5) hours:
 - 11.2.1 Hosting of meetings;
 - 11.2.2 Conferences;
 - 11.2.3 Workshops;
 - 11.2.4 Courses;
 - 11.2.5 Forums;
 - 11.2.6 Recruitment interviews; and
 - 11.2.7 Council proceedings
- 11.3 Entertainment allowances of officials may not exceed two thousand rand (R2 000.00) per person per financial year, unless otherwise approved by the accounting officer.
- 11.4 Expenses may not be incurred on alcoholic beverages.

- 11.5 The regulations require *inter alia* that the accounting officer must ensure that social events are not financed from the municipality's budget however, this provision is not intended to impede on the constitutional obligation of the municipality as particularly set out in section 152, 153, 195(1)(h) and Schedule 4 Part B of the Constitution to promote and cultivate social development, economic development, good human-resource management and local tourism.

□

- 11.6 Social events exclude the following events linked to the strategic objectives of the municipality:

11.6.1 Economic development events;

11.6.2 Cultural festivals;

11.6.3 Local tourism festivals;

11.6.4 Youth, aged, disable and other vulnerable persons developmental events;

11.6.5 Civic honours events;

11.6.6 Staff recognition or achievement awards and functions;

11.6.7 Town centennial or other significant municipal commemorating events;

11.6.8 Opening of facilities and buildings;

11.6.9 Strategic planning sessions;

11.6.10 Non-recreational team building events; and

11.6.11 Non-recreational staff wellness functions.

- 11.7 Expenditure may not be incurred on corporate branded items like clothing or goods for personal use of officials, other than uniforms, office supplies and tools of trade, unless the costs thereto are recovered from the affected officials or is an integral part of the business model of a specific project or drive.

- 11.8 The accounting officer must ensure that any sporting events, and expenditure directly or indirectly related to sporting events such as travel and accommodation cost, sporting gear and sporting regalia are not financed from the budget of the municipality or by any suppliers or sponsors. This provision does not prohibit the municipality to incur

expenditure on municipal sport facilities as per its constitutional function.

- 11.9 The accounting officer or delegated official may incur expenditure not exceeding the limits for petty cash as per the municipal Petty Cash Policy for one transaction usage, to host farewell functions in recognition of officials who retire after serving the municipality for ten or more years or retire on grounds of ill health.

12 **COMMUNICATION**

- 12.1 Stellenbosch Municipality may, if matters are not required to be notified through the media to the local community in terms of section 21 of the Municipal Systems Act or any other applicable legislation, advertise municipal related events on its website instead of advertising in magazines or newspapers.
- 12.2 The accounting officer must ensure that allowances to officials for private calls and data costs are limited to the amounts as determined in Council's Cellular Telephone Policy or any other applicable policy that regulates cellular calls and data cost.
- 12.3 Newspaper and other related publications for the use of officials and political office bearers must be discontinued on expiry of existing contracts; unless, authorised by the accounting officer for officials and by the executive mayor for political office bearers that it is required for professional purposes.
- 12.4 Stellenbosch Municipality may participate in the transversal term contract arranged by the National Treasury for the acquisition of mobile communication services provided that the municipality cannot procure it at cheaper rates.

13 **CONFERENCES, MEETINGS & STUDY TOURS**

- 13.1 Cost containment measures with regards to conferences, meetings and study tours are dealt with in the approved Travel and Subsistence Policy.

14 **OTHER RELATED EXPENDITURE ITEMS**

- 14.1 All commodities, services and products covered by a transversal contract by the National Treasury must be procured through that transversal contract before approaching the market, in order to benefit from savings and lower prices or rates that have already been negotiated.
- 14.2 Municipal resources may not be used to fund elections, campaign activities, including the provision of food, clothing and other inducements as part of, or during the election periods.
- 14.3 Procurement of elaborate and expensive office furniture must be avoided.
- 14.4 If considered a requirement, only the services of the South African Police Service may be used to conduct security threat assessments of political office bearers and key officials. A report must be submitted to the Office of the Speaker.

15 **ENFORCEMENT PROCEDURES**

- 15.1 Failure to implement or comply with this policy may result in any official of the municipality or political office bearer that has authorized or incurred any expenditure contrary to those stipulated herein being held liable for financial misconduct or a financial offence in the case of political office bearers as defined in Chapter 15 of the Act read with the Municipal Regulations on Financial Misconduct Procedures and Criminal Proceedings, 2014.

16 **DISCLOSURES OF COST CONTAINMENT MEASURES**

- 16.1 Cost containment measures applied by the municipality must be included in the municipal in-year budget report and annual cost savings must be disclosed in the annual report.

16.2 The measures implemented and aggregate amounts saved per quarter, together with the regular reports on reprioritization of cost savings, on the implementation of the cost containment measures must be submitted to the municipal council for review and resolution. The municipal council can refer such reports to an appropriate council committee for further recommendations and actions.

16.3 Such reports must be copied to the National Treasury and relevant provincial treasuries within seven calendar days after the report is submitted to municipal council.

17 **REVIEW PROCESS**

17.1 This policy is a budget related policy and will be reviewed at least annually or when required by way of a council resolution, or when an update is issued by National Treasury.

18 **SHORT TITLE AND IMPLEMENTATION**

19.1 This policy is called the Cost Containment Policy and takes effect on 1 October 2019.

9. POLICY ADOPTION	12

1. DEFINITIONS

1.1 In this Policy, unless the context indicates otherwise, the following definitions are applied:

<i>“Accounting Officer”</i>	means the Municipal Manager for the Municipality as contemplated in section 60 of the Local Government: Municipal Finance Management Act, 56 of 2003
<i>“CFO”</i>	means the Chief Financial Officer designated in terms of section 80(2) (a) of the Local Government: Municipal Finance Management Act, 56 of 2003
<i>“Cost”</i>	shall comprise costs of purchase, costs conversion and other costs incurred in bringing the inventories to their present location and condition
<i>“Delegated authority”</i>	means the official who is given the authority for relevant functions in terms of the municipality’s written delegations;
<i>“Good received note”</i>	means a document which is used to acknowledge the receipt of goods in good condition and correct quantities
<i>“Inventories”</i>	are assets: In the form of material or supplies to be consumed in the production process, In the form of materials or supplies to be consumed or distributed in the rendering of services Held for sale or distribution in the ordinary course of operations, or In the process of production for sale or distribution
<i>“Municipality”</i>	shall mean the Stellenbosch Municipality;
<i>“Net Realisable”</i>	Is the estimated selling price in the ordinary course of operations less the estimated costs of completion and estimated costs necessary to make the sale exchange or distribution.

<i>“Obsolete inventory”</i>	means items that have expired, are redundant or damaged;
<i>“Re-order level”</i>	means the level of inventory at which inventory is re-ordered;
<i>“Requisition form”</i>	means a written request to supply specified inventory;
<i>“Store”</i>	means a place where inventory is stored and reserved for future use, or a source from which supplies may be drawn;
<i>“Inventory Controller”</i>	means an official responsible for the requisition, receipt, issue, recording, safeguarding of inventory and cost-effective and efficient management of inventory.
<i>“Stock Issue Register”</i>	means a document which is used to authorize the removal or issue of stock items from stores.

2. OBJECTIVE OF THE POLICY

2.1 The policy aims to achieve the following objectives which are to:-

- a) Provide guidelines that employees of the Municipality must follow in the management and control of inventory, including safeguarding and disposal of inventory.
- b) Procure inventory in line with the established procurement principles contained in the Municipality's Supply Chain Management Policy.
- c) Eliminate any potential misuse of inventory and possible theft.

3. SCOPE

3.1 This policy applies to Stellenbosch Municipality's inventory received by the Inventory Controller and issued to users.

3.2 This policy specifically excludes:

- a) Pharmaceutical inventory, livestock and face value forms; and
- b) Equipment and other assets not defined as inventory;

4. LEGAL FRAMEWORK

4.1 In terms of the MFMA, the Accounting Officer for a municipality must:

- a) Be responsible for the effective, efficient, economical and transparent use of the resources of the municipality as per section 62 (1)(a);
- b) Take all reasonable steps to prevent unauthorised, irregular and fruitless and wasteful expenditure and other losses as per section 62(1)(d);
- c) Be responsible for the management, including the safeguarding and the maintenance of the assets, and for the management of the liabilities, of the municipality as per section 63 (1)(a) and (b).

4.2 In terms of GRAP 12:

4.2.1 Inventories shall be recognized as an asset if, and only if,

- a) it is probable that future economic benefits or service potential associated with the item will flow to the entity ,and
- b) the cost of the inventories can be measured reliably.

4.3 MEASUREMENT AT RECOGNITION

4.3.1 Inventories that qualify for recognition as assets shall initially be measured at cost,

- 4.3.2 Where inventories are acquired at no cost, or for nominal consideration, their costs shall be their fair value as at the date of acquisition.

4.4 MEASUREMENT AFTER RECOGNITION

- 4.4.1 Inventories shall be measured at the lower of cost and net realization value, except where paragraph .18 of GRAP 12 applies.
- 4.4.2 Inventories shall be measures at the lower of cost and current replacement cost where they are held for:
- a) distribution at no charge or for a nominal charge ,or
 - b) consumption in the production process of goods to be distributed at no charge or for a nominal charge.

4.5 RECOGNITION AS AN EXPENSE

- 4.5.1 When inventories are sold, exchanged or distributed, the carrying amount of those inventories shall be recognized as an expense in the period in which the related revenue is recognized. If there is no related revenue, the expense is recognized when the goods are distributed, or related service is rendered. The amount of any write-down of inventories to net realizable value and all losses of inventories shall be recognized as an expense in the period the write-down or loss occurs. The amount of any reversal of any writes –down of inventories arising from an increase in net realizable value, shall be recognized as a reduction in the amount of inventories recognized as an expense in the period in which the reversal occurs.
- 4.5.2 Some inventories may be allocated to other assets accounts, for example, inventory used as a component of self-constructed property, plant or equipment. Inventories allocated to other assets in this way are recognized as an expense during the useful life of that asset.

5. INVENTORY PROCEDURES

- 5.1 The procedures for inventory must be followed to ensure that:
- a) Inventory is safeguarded at all times;
 - b) There are accurate records of quantities on hand at all times;
 - c) Optimum inventory levels are maintained to meet the needs of users;
 - d) Only authorised issues of inventory are made to users; and
 - e) Items placed in store are secured and only used for the purpose for which they were purchased.

5.2 APPOINTMENT OF RESPONSIBLE OFFICIALS

- 5.2.1 The CFO must appoint, in writing, officials to perform the duties of an Inventory Controller in terms of this Policy.
- 5.2.2 Adequate segregation of duties between the requisition, receipt, recording, storage and safekeeping of inventory and the management and control thereof must be maintained to avoid the potential occurrence of errors and fraud.

5.3 ORDERING OF INVENTORY

Standard Supply Chain Management procedures as per approved Supply Chain Management policy are to be implemented.

5.4 RECEIPT OF INVENTORY

All inventory must be received by the completion of a goods received note and processed on the financial management system.

5.5 STORAGE OF INVENTORY

- 5.5.1 Inventory must be stored in a secured, exclusive use area, under lock and key, furthermore the inventory must be insured in terms of the Risk Management Policy of the municipality.
- 5.5.2 The area must be used exclusively for the storage of inventory, with limited authorised access only.
- 5.5.3 Inventory must be positioned to facilitate efficient handling and checking.
- 5.5.4 All items must be stored separately, with proper segregation.
- 5.5.5 Inventory must be clearly labeled for easy identification. Inventory tag/bin cards or inventory labels may be used to identify each item and to aid in the physical verification of the items.
- 5.5.6 Where practically possible, all items of the same type and reference must be stored together as per the description on the inventory records.
- 5.5.7 Items with limited shelf life must be rotated on a first in first out basis, in accordance with paragraph .35 of GRAP, to reduce the occurrence of expired or obsolete stocks.
- 5.5.8 Due diligence and care must be exercised to prevent damage of, or deterioration of inventory.

- 5.5.9 Due regard must be given to any safety standards which may apply to the storage of certain inventories.
- 5.5.10 Steps must be taken to ensure safe custody of items, including precautions against loss or theft.
- 5.5.11 The Inventory Controller or Delegated Official responsible for the custody and care of inventory must ensure that in his/her absence such items, where applicable, are securely stored.
- 5.5.12 The responsibility for the custody of the storeroom keys must be allocated by the delegated authority to an official who is accountable for its use.
- 5.5.13 No unauthorised persons/officials shall obtain entry to premises, buildings or containers where inventory is kept, unless accompanied by the responsible official.
- 5.5.14 Whenever a change in the Inventory Controller occurs, an inventory count must be conducted.
- 5.5.15 An independent official shall be nominated in writing by the delegated authority to assist the official handing and taking over with the checking of the inventory and any discrepancies.
- 5.5.16 Should the above not be complied with, the official taking over shall be liable for any discrepancies.
- 5.5.17 A handing-over certificate as prescribed by the CFO, must be completed by the handing and taking over officials and a copy retained for record purposes.
- 5.5.18 The following fire protection precautions must be adhered to:
- a) Inventories of an inflammable or dangerous nature shall be stored and handled in such a manner that persons or property are not endangered and in compliance with the requirements of any local authority;
 - b) The area must be clearly signposted; and
 - c) Fire extinguishing equipment must be placed in the area where inventories are held and must be serviced regularly.

5.6 ISSUE OF INVENTORY

- 5.6.1 Only the Inventory Controller is authorised to issue inventory from the storeroom.
- 5.6.2 Inventory must only be issued in terms of the approved requisition form of the Municipality.
- 5.6.3 All requisition forms must be ruled off immediately below the last item to prevent items being added once the requisition is authorised by the responsibility manager.

- 5.6.4 The Inventory Controller must prepare the Stock Issue Register once stock items to be issued have been picked up from the shelves
- 5.6.5 The official receiving the inventory must acknowledge the receipt of stock items requested, by signing the Stock Issue Register prepared by the Inventory Controller.
- 5.6.6 Inventories must be issued and used for official purposes only.

5.7 OBSOLETE INVENTORY

- 5.7.1 The preparatory work for the disposal of obsolete inventory must be undertaken by the Inventory Controller and verified by the Assets Accountant.
- 5.7.2 The Accounting Officer or delegated authority must convene a Disposal Committee for the disposal of obsolete inventory.
- 5.7.3 The Disposal Committee should consist of at least three officials, one of whom must act as the chairperson.
- 5.7.4 The delegated authority may approve the write-off of inventory, if satisfied that: -
 - a) The inventory has expired and is redundant;
 - b) The inventory is of a specialised nature and has become outdated due to the introduction of upgraded and more effective products;
 - c) The inventory cannot be used for the purpose for which it was originally intended; or
 - d) The inventory has been damaged and is rendered useless.
- 5.7.5 All disposed of items must be updated in the inventory records/register/database for the purposes of proper management and control.

5.8 INVENTORY COUNT

- 5.8.1 Items may be subject to an inventory count on a quarterly basis.
- 5.8.2 Where the quantity of inventory is too large for the count to be completed on a single occasion, inventory counts may be carried out on a rotational basis with a full inventory count at the end of each financial year.
- 5.8.3 All approved Municipal procedures and processes must be complied with during the inventory count.

- 5.8.4 The Inventory Controller must submit a report to the CFO after investigating any discrepancies between the inventory records/register/database, bin/tag cards or inventory labels and the physical inventory.
- 5.8.5 The CFO must submit a report with the findings to the Accounting Officer, in order to have the matter reported to the Council of the Municipality for the write-off of any inventories losses, or the write –up of surpluses.
- 5.8.6 The appropriate disciplinary action must be instituted when applicable.
- 5.8.7 The inventory record, register, database or system must be updated accordingly.

6. INVENTORY RECORDS

- 6.1. An inventory record/register/database must be maintained for all inventory items, either manually and / or electronically.
- 6.2 All relevant information must be included for the proper management and control of all inventory items. It is recommended that details include but are not limited to:
 - a) Order number/date;
 - b) Item description;
 - c) Quantity and value of stock on hand;
 - d) Quantity and value of stock received;
 - e) Quantity and value of stock issued;
 - f) Re-order level;
 - g) Optimum inventory level;
 - h) Quantity and value of obsolete stock; and
 - i) Opening/closing balance.
- 6.3 An inventory register/database must be printed monthly and the hard copy filed in a chronological order to maintain a proper audit trail.

7. REPORTING

- 7.1 A report must be submitted at least quarterly to the Chief Financial Officer and/or the Assets Manager detailing the following:
 - a) Any inventory shortages or surpluses and the reasons for such;
 - b) Any inventory deficits proposed to be written-off; and
 - c) Any obsolete inventory items.

- 7.2 Inventories purchased during the financial year must be disclosed at cost or net realizable value in the disclosure notes of the Financial Statements of the Municipality.
- 7.3 In terms of GRAP the financial statements shall disclose:
- a) the accounting policies adopted in measuring inventories, including the cost formula used,
 - b) the total carrying amount of inventories and the carrying amount in classifications appropriate to the entity,
 - c) the carrying amount of inventories carried at fair value less costs to sell,
 - d) the amount of inventories recognized as an expense during the period,
 - e) the amount of any write-down of inventories recognized as an expense in the period in accordance with paragraph .43,
 - f) the amount of any reversal of any write-down that is recognized as a reduction in the amount of inventories recognized as an expense in the period in accordance with paragraph .43,
 - g) the circumstances or events that led to the reversal of a write-down of inventories in accordance with paragraph .43, and
 - h) the carrying amount of inventories pledged as security for liabilities.

8. CLASSIFICATION OF INVENTORY

As per National Treasury Standard Chart of Accounts, inventory shall be classified as follows:

Inventory Categories	Consumable Categories
Ammunition & Security Supplies	Consumable Supplies (level 4)
Clothing Material & Accessories	Agricultural Supplies (level 5)
Farming & Gardening Supplies	Gifts & Awards
Fuel, Oil & Gas	Fuel Supplies
Crockery & Linen	Media Collections
Learning & Teaching Support Material	Building & Construction
Assets for Distribution	Contraceptives
Materials & Supplies	First Aid Kit
Medical Supplies	Laboratories
Medicines	Security Accessories
Military Stores	Bags & Accessories
Laboratory Chemicals & Supplies	Stationary

9. POLICY ADOPTION

This policy has been reviewed and approved by the Council of Stellenbosch Municipality and is applicable with effect from 1 July 2023.

ANNEXURE 1	8

1. INTRODUCTION

The documented Liquidity Policy sets out the minimum risk management measures that Stellenbosch Municipality has to implement and adhere to in order to ensure that its current and future liquidity position is managed in a prudent manner.

Liquidity is the amount of cash and / or “near cash” (which refers to assets or security that can easily and quickly be converted to cash), available to be utilized to meet obligations and / or pay commitments. The marketability or ability to buy or sell an asset without incurring unacceptable large losses thus determines the liquidity of an asset or defines it as near cash.

This Policy is implemented to provide guidance on the minimum liquidity level that Stellenbosch Municipality has to maintain in order to comply with required legislative and / or National Treasury directives and within the overall financial management objectives as approved/reviewed by the Council from time to time.

2. BACKGROUND AND APPROACH

Various policies and procedures exist that direct the way in which the business of Stellenbosch Municipality is or should be conducted in a prudent manner. Generally these policies and procedures flow from the prescription made in Legislation i.e. the Municipal Finance Management Act (“MFMA”) and/or directives issued by a national department such as National Treasury.

Guidelines provided by National Treasury indicate that an acceptable level of cash resources needs to be available for working capital requirements (see below).

It is for this reason that the need to have an official Liquidity Policy was identified.

3. LEGISLATIVE REQUIREMENTS

3.1. The MFMA circular 71 stipulates the following two prescribed ratios to manage liquidity:

Cash/Cost Coverage Ratio (Excluding Unspent Conditional Grants) is calculated as:

$$\frac{((\text{Cash and Cash Equivalents} - \text{Unspent Conditional Grants} - \text{Overdraft}) + \text{Short Term Investment})}{\text{Monthly Fixed Operational Expenditure excluding (Depreciation, Amortisation, Provision for Bad Debts, Impairment and Loss on Disposal of Assets)}}$$

Criteria: 1 – 3 times

Current Ratio Current Assets / Current Liabilities

Criteria: 1.5 - 2:1

The above guidelines are noted but the proposed policy is more conservative to ensure that the municipality secures its strong financial position thereby providing comfort to investors.

4. LIQUIDITY POLICY

This policy provides guidance on the determination of the minimum liquidity requirement and the calculation of the liquidity available of Stellenbosch Municipality from time to time (see **Annexure 1**).

Notwithstanding the requirements as reflected in this policy, Stellenbosch Municipality should ensure that its Current Assets (excluding debtors older than 90 days) cover all of its Current Liabilities at least two times.

The policy encapsulates certain key aspects and considerations which have been outlined below:

4.1. KEY COMPONENTS OF MINIMUM LIQUIDITY REQUIRED:

The following constitutes the key elements to take into consideration when determining the liquidity requirement of Stellenbosch Municipality:

- 4.1.1. To comply with statutory requirements it is proposed that the following funds, reserves and provisions be fully covered by unencumbered cash and investments:
 - 4.1.1.1. *All earmarked or conditional grant transfers from spheres of Government or from Public Contributions made to Stellenbosch Municipality that have not yet been utilized;*
 - 4.1.1.2. *All commitments resulting from the legally entrenched rights and benefits employees have, with specific reference to the Council's short term commitment to staff retirement benefits and medical fund claims payable;*
 - 4.1.1.3. *All funds not yet been utilized in relation to agency services provided on behalf of Provincial or National Government should also be treated as earmarked funds;*
 - 4.1.1.4. *All reserves stated by Stellenbosch Municipality on its Statement of Financial Position that have been established for the purposes of making provisions for a defined purpose.*

- 4.1.2. Cognisance also needs to be taken of the external loan commitments and the servicing of capital and interest on these loans. Therefore provision should be made that Stellenbosch Municipality can meet its external loan/financial commitments together with the normal operational expenditure, as well as its liabilities to staff.
- 4.1.3. All investments ceded as security against long term loans need to be excluded from total cash and investment balances for calculation of the minimum liquidity level required.
- 4.1.4. In addition, a level of cash available for normal operational expenditure needs to be held in cash to ensure that, notwithstanding fluctuations in the monthly income levels of Stellenbosch Municipality, Stellenbosch Municipality will be in a position to meet its financial requirements. In this respect, the average monthly operational expenditure needs to be used as a guide of the minimum buffer required. One month's operational expenditure excluding debt impairments, depreciation and other non-cash expenses should be available for liquidity cover.
- 4.1.5. The "golden rule" should be to ensure that Stellenbosch Local Municipality will have adequate liquid assets (those that can be made into cash within 24 hours, weekly or monthly as the requirement might be) to meet its short term financial commitments.

4.2. CALCULATION OF AVAILABLE LIQUIDITY

The amount of liquidity available should be determined from time-to-time. The following, should be regarded as cash and or near cash in calculating the available liquidity:

- 4.2.1. *All cash held in a bank account or invested with a money market fund;*
- 4.2.2. *95% of the value of all NCD's or other tradable instruments issued by a bank that are not already ceded;*
- 4.2.3. *90% of the market value of all listed bonds on the JSE in which Stellenbosch Municipality is allowed to invest in;*
- 4.2.4. *Consumer debtors aged current to 60 days;*
- 4.2.5. *Amount of unspent conditional grants and public contributions excluded from own funds held in bank accounts;*
- 4.2.6. *Funds provided to Council for expenditure on activities executed on behalf of other spheres of Government (Provincial and / or National) as part of an agency function, excluded from own funds held in bank accounts;*
- 4.2.7. *Funds ring-fenced for cash backed reserves that are excluded from own funds held in bank accounts;*
- 4.2.8. *Cash amounts that need to be held by Council resulting from loan covenants' that are part of the conditions of loans extended, but not ceded outright to lenders;*

4.2.9. *The undrawn portion of unconditional bank overdraft facility or liquidity facility available to Stellenbosch Municipality.*

The aforementioned in paragraphs 4.1. and 4.2. can schematically be reflected as follows:

4.3. IMPLEMENTATION AND MONITORING OF COMPLIANCE WITH LIQUIDITY POLICY:

Once the policy is approved, the CFO is to be tasked to ensure that the required cash has to be maintained to continue meeting the requirements as set out in this policy.

Firstly, the minimum required liquidity level should be calculated based on audited annual financial statements. This level of liquidity required needs to be specifically budgeted for and on a quarterly basis be reported to the Finance Committee and / or other Committees as might be stipulated by Council as well as to Council.

Notwithstanding National Treasury's three months operational expenditure guideline and the one month operational expenditure buffer proposed as a minimum by the liquidity policy, it is recommended that Council set a target of one month's operational expenditure liquidity buffer to be achieved at the end of the transitional period (reference paragraph 6).

The cash provisions made to repay external loan commitments, if specifically earmarked, should also be added to this minimum working capital liquidity, to prevent

fluctuations in the working capital reserve that could put the minimum level of liquidity levels under pressure.

5. CORPORATE GOVERNANCE (OVERSIGHT)

Compliance with this policy will be monitored by the Chief Financial Officer. The Chief Financial Officer must present the liquidity compliance reports to the Finance Committee and the Audit Committee of the municipality.

Where compliance has been breached the Chief Financial Officer must present an action plan to correct the non-compliance. The Finance Committee must monitor the successful implementation of the corrective action plans and report progress to Council.

6. POLICY MANAGEMENT

The Liquidity Policy forms part of Stellenbosch Municipality overall financial objectives and therefore forms part of approved Budget Policies. The policy must be reviewed at least annually during the budget revision and presented to Council for approval.

The policy is effective from the date it is approved by Council.

ANNEXURE 1Liquidity Requirement as per Liquidity Policy

Financial Year End: _____

Liquidity Requirement Calculation [as stipulated in Paragraph 4.1.]

All earmarked and/or conditional grants received but not yet utilised	
Value of legally entrenched short term rights and benefits of employees related to Medical benefits & Retirement benefits	
Funds held for agency services not yet performed	
Reserve funds reflected in Statement of Financial Position that are assumed to be held in cash	
Capital redemption and interest payments on external loans not reflected as part of normal operational expenditure	
Onemonth operational expenditure excluding non-cash items	
Commitments resulting from contracts concluded as part of Capex Programme, not reflected in operational budget	
TOTAL LIQUIDITY REQUIREMENT	

Actual available liquidity held [reference paragraph 4.2.]

Bank Balance at e.g.:	
- ABSA, FNB, Standard Bank, Nedbank, Investec, Money Market	
Bank balance sub total	
95% of all other term investments with Banks	
90% of Market value of all Bonds on the JSE that are held	
Consumer debtors (current – 60 days)	
Other reserves held in cash not reflected in bank balances mentioned above for e.g.:	
- Unspent conditional grants	
- Payments received for agency functions not yet performed	
- The cash value of reserves held	
- Cash deposits held as part of loan covenants or ceded	
- Undrawn bank overdraft facility or committed liquidity lines available	
TOTAL LIQUIDITY AVAILABLE	

LIQUIDITY SURPLUS (SHORT FALL)

SURPLUS TO BE APPROPRIATED TO CAPITAL REPLACEMENT RESERVE

1. Definitions

In this policy, unless the context indicates otherwise, any word or expression to which a meaning has been assigned in the Act must bear the meaning so assigned—

"Acceptable Tender" mean any tender which, in all respects, complies with the specification and conditions of tender as set out in tender document

"Black designated groups" has the meaning assigned to it in the codes of good practice issued in terms of section 9 (1) of the BBBEEA.

"Black people" has the meaning assigned to it in section 1 of the BBBEEA.

"Designated group" means black designated groups, black people, women, people with disabilities; or small enterprises which are enterprises, owned, managed, and controlled by previously disadvantaged persons and which is overcoming business impediments arising from the legacy of apartheid.

"Disability" means in respect of a person, a permanent means, in respect of a person, a permanent impairment of a physical, intellectual, or sensory function, which results in restricted, or lack of, ability to perform an activity in the manner, or within the range, considered normal for a human being.

"EME" means

(1) exempted micro enterprise in terms of a code of good practice on black economic empowerment issued in terms of a code of good practice on black economic empowerment issued in terms of section 9(1) of the BBBEEA.

(2) an entity with an annual turnover of R10 000 00.000 (ten million Rand) or less

"Historically disadvantaged individual (HDI)" means a South African citizen –

(1) who, due to the apartheid policy that had been in place, had no franchise in national elections prior to the introduction of the Constitution of the Republic of South Africa, 1983 (Act No 110 of 1983); and / or

(2) who is a female; and / or

(3) who has a disability:

Provided that a person who obtained South African citizenship on or after the coming to effect of the Interim Constitution, is deemed not to be an HDI.

"highest acceptable tender" means a tender that complies with all specifications and conditions of tender and that has the highest price compared to other tenders;

"lowest acceptable tender" means a tender that complies with all specifications and conditions of tender and that has lowest price compared to other tenders;

"Locality" means the local suppliers and/or service providers that business offices are within the Municipal area.

"Large Enterprises" is a company with an annual turnover in excess of R50 million.

“Market Analysis” means a technique used to identify market characteristics for specific goods or services

“Municipal Area” means the Stellenbosch Municipality Municipal area (WC024)

“National Treasury” has the meaning assigned to it in section 1 of the Public Finance Management Act, 1999 (Act No. 1 of 1999);

“Objective Criteria” for the purpose of section 2(1)f of the procurement Act must be criteria other than the additional to criteria relating to equity ownership by HDI's or whether or not a bidder was located in a particular province or municipal area

“price” means an amount of money tendered for goods or services, and includes all applicable taxes less all unconditional discounts;

“Proof of B-BBEE status level of contributor” means the B-BBEE status level certificate issued by an authorized body or person

- 1) a sworn affidavit as prescribed by the B-BBEE Codes of Good Practice; or
- 2) any other requirement prescribed in terms of the Broad-Based Black Economic Empowerment Act.

“Qualifying Small Enterprise (QSE)” “is a company with a turnover between R10 million and R50 million

“Rand value” means the total estimated value of a contract in Rand, calculated at the time of the tender invitation;

“Region” means the district and/or Cape Winelands District Municipality.

“Rural area” means-

- 1) a separately populated area in which people farm or depend on natural resources, including villages and small towns that are dispersed through the area; or
- 2) an area including a large settlement which depends on migratory labour and remittances and government social grants for survival and may have a traditional land tenure system.

“Specific goals” means specific goals as contemplated in section 2(1)(d) of the Act which may include contracting with persons, or categories of persons, historically disadvantaged by unfair discrimination on the basis of race, gender and disability including the implementation of programmes of the Reconstruction and Development Programme as published in Government Gazette No. 16085 dated 23 November 1994;

“SMME” means small, medium and micro enterprises namely Exempted Micro Enterprises and Qualifying Small Enterprises

“Tender” means a written offer in the form determined by a Municipality in response to an invitation to provide goods or services through price quotations, competitive tendering process or any other method envisaged in legislation;

“tender for income-generating contracts” means a written offer in the form determined by an organ of state in response to an invitation for the origination of

income-generating contracts through any method envisaged in legislation that will result in a legal agreement between the organ of state and a third party that produces revenue for the organ of state, and includes, but is not limited to, leasing and disposal of assets and concession contracts, excluding direct sales and disposal of assets through public auctions;

“The Act” means the Preferential Procurement Policy Act, 2000 (Act No. 5 of 2000).

“Youth” has the meaning assigned to it in section 1 of the National Youth Development Agency Act, 2008 (Act No. 54 of 2008).

2. Introduction

The Constitution of the Republic of South Africa, 1996, provides in sections 152(1)(c) and 152(2) that local government must promote social and economic development and that the municipality must strive within its financial and administrative capacity, to achieve the objects set out in subsection 152(1).

The Constitution provides in section 217 that an organ of state must contract for goods or services in accordance with a procurement system which is fair, equitable, transparent, competitive, and cost effective and to implement a policy to grant preferences within a framework prescribed by National Legislation.

The Broad-Based Black Economic Empowerment Act, 2003 requires: “ (1) Every organ of state and public entity must apply any relevant code of good practice issued in terms of this Act in (b) developing and implementing a preferential procurement policy

The Preferential Procurement Policy Framework Act, 2000 (Act 5 of 2000)-[PPPFA] was promulgated by the Minister in response to the Constitutional provision and allow for a Municipality to develop a preferential procurement policy and to implement such policy within the PPPFA framework.

Section 2 (1) (d) (i) and (ii) of the Preferential Procurement Policy Framework Act, 2000 refers to specific goals which may include:

- (i) contracting with persons, or categories of persons, historically disadvantaged by unfair discrimination on the basis of race, gender or disability;
- (ii) implementing the programmes of the Reconstruction and Development Programme (RDP) as published in *Government Gazette* 16085 dated 23 November 1994.

The RDP (1994), as basis for development in South Africa, was meant to provide a holistic, integrated, coherent socio-economic policy that is aimed at mobilising people and resources to work towards the upliftment of the material and social conditions of local communities to build sustainable livelihoods for these communities.

In terms of Section 2 (1)(d)(ii), the following activities may be regarded as a contribution towards achieving the goals of the RDP, in addition to the awarding of preference points in favour of HDIs (published in *Government Gazette* No. 16085 dated 23 November 1994):

- (i) The promotion of South African owned enterprises;

- (ii) The promotion of export orientated production to create jobs;
- (iii) The promotion of SMMEs;
- (iv) The creation of new jobs or the intensification of labour absorption;
- (v) The promotion of enterprises located in a specific province for work to be done or services to be rendered in that province;
- (vi) The promotion of enterprises located in a specific region for work to be done or services to be rendered in that region;
- (vii) The promotion of enterprises located in a specific municipal area for work to be done or services to be rendered in that municipal area;
- (viii) The promotion of enterprises located in rural areas;
- (ix) The empowerment of the work force by standardising the level of skill and knowledge of workers;
- (x) The development of human resources, including by assisting in tertiary and other advanced training programmes, in line with key indicators such as percentage of wage bill spent on education and training and improvement of management skills; and
- (xi) The upliftment of communities through, but not limited to, housing, transport, schools, infrastructure donations, and charity organisations.

3. Purpose, and Objectives

- a) The purpose of this policy is to:
 - i) Provide for categories of preference in awarding of bids;
 - ii) Provide for the advancement of persons or categories of persons disadvantaged by unfair discrimination; and
 - iii) Clarify the mechanisms how the above items in par 1.1 (a) (i) and (ii) will be implemented.
- b) Objectives
 - a) Promote Black-Based Black Economic Empowerment (B-BBEE) - enterprises providing services and goods.
 - b) Promote Small Medium and Micro Enterprises (SMME's), Joint Ventures, Consortiums, and partnerships in the municipal area.
 - c) Implement recognised best procurement practises through effective planning, strategic purchasing, and contract management.

The policy rests upon certain core principles of behaviour as set out in the Constitution and ratified by the Constitutional Certification Judgements. In this context, the policy will be applied in accordance with a system, which is fair, equitable, transparent, competitive, and cost-effective in terms of Section 217 of the Constitution.

This policy strives to ensure that the objectives for uniformity in the supply chain management systems between Municipalities/Municipal entities, is not undermined and that consistency with the SCM and LED policies in line with sections 152(1)(c) and 152(2).

4. Application of preference point system

- 4.1 The Municipality will, in the tender documents, stipulate —
 - (a) the preference point system applicable; and

- (b) any specific goal as envisaged in section 2(1)(d) and (e) of the Preferential Procurement Act.

- 4.2 If it is unclear whether the 80/20 or 90/10 preference point system applies—
- (a) an invitation for tender for income-generating contracts, that either the 80/20 or 90/10 preference point system will apply and that the highest acceptable tender will be used to determine the applicable preference point system; or;
 - (b) any other invitation for tender, that either the 80/20 or 90/10 preference point system will apply and that the lowest acceptable tender will be used to determine the applicable preference point system..

5. 80/20 preference point system for acquisition of goods or services with Rand value equal to or below R50 million

- 5.1 The following formula must be used to calculate the points out of 80 for price in respect of a tender with a Rand value equal to or below R50 million, inclusive of all applicable taxes:

$$P_s = 80 \left(1 - \frac{P_t - P_{\min}}{P_{\min}} \right)$$

Where-

P_s = Points scored for price of tender under consideration;

P_t = Price of tender under consideration; and

$P_{\min}$ = Price of lowest acceptable tender.

- 5.2 A maximum of 20 points may be awarded to a tenderer for the specified goals for the tender.
- 5.3 The points scored for the specific goal must be added to the points scored for the price and the total must be rounded off to the nearest two decimal places.
- 5.4 Subject to section 2(1)(f) of the Act, the contract must be awarded to the tendering scoring the highest points.

6. 90/10 preference point system for acquisition of goods or services with Rand value above R50 million

- 6.1 The following formula must be used to calculate the points out 90 for price in respect of a tender with a Rand value above R50 million, inclusive of all applicable taxes:

$$P_s = 90 \left(1 - \frac{P_t - P_{\min}}{P_{\min}} \right)$$

Where-

P_s = Points scored for price of tender under consideration;

P_t = Price of tender under consideration; and

$P_{\min}$ = Price of lowest acceptable tender.

6.2 A maximum of 10 points may be awarded to a tenderer for the specified goals for the tender.

6.3 The points scored for the specific goal must be added to the points scored for price and the total must be rounded off to the nearest two decimal places..

6.4 Subject to section 2(1)(f) of the Act, the contract must be awarded to the tenderer scoring the highest points.

7. 80/20 preference points system for tenders to for income-generating contracts with Rand value equal to or below R50 million

7.1 The following formula must be used to calculate the points for price in respect of an invitation for tender for income-generating contracts, with a Rand value equal to or below R50 million, inclusive of all applicable taxes:

$$P_s = 80 \left(1 + \frac{P_t - P_{\max}}{P_{\max}} \right)$$

Where-

P_s = Points scored for price of tender under consideration;

P_t = Price of tender under consideration; and

$P_{\max}$ = Price of highest acceptable tender.

7.2 A maximum of 20 points may be awarded to a tenderer for the specific goal specified for the tender.

- 7.3 The points scored for the specific goal must be added to the points scored for price and the total must be rounded off to the nearest two decimal places.
- 7.4 Subject to section 2(1)(f) of the Act, the contract must be awarded to the tenderer scoring the highest points.

8. 90/10 preference point system for tenders for income-generating contracts with Rand value above R50 million

- 8.1 The following formula must be used to calculate the points for price in respect of a tender for income-generating contracts, with a Rand value above R50 million inclusive of all applicable taxes:

$$Ps = 90 \left(1 + \frac{Pt - Pmax}{Pmax} \right)$$

Where-

- Ps = Points scored for price of tender under consideration;
- Pt = Price of tender under consideration; and
- Pmax = Price of highest acceptable tender.

- 8.2 A maximum of 10 points may be awarded to a tenderer for the specific goal specified for the tender.
- 8.3 The points scored for the specific goal must be added to the points scored for price and the total must be rounded off to the nearest two decimal places.
- 8.4 Subject to section 2(1)(f) of the Act, the contract must be awarded to the tenderer scoring the highest points.

9. Specified contract participation goals

- 9.1 The tendering conditions will stipulate the specific goals, as contemplated in section 2(1)(d)(ii) of the Preferential Procurement Act, be attained.
- 9.2 A maximum of 20 points (80/20 preference points system) or 10 (90/10 preference points system), must be allocated for specific goals. These goals are :
- (a) contracting with persons, or categories of persons, historically disadvantaged by unfair discrimination on the basis of race, gender or disability;
 - (b) Promotion of enterprises located in the municipal area (WCO24)

- 9.3 Regarding par 9.2 (a) at least 50% of the 20/10 points must be allocated to promote this goal and points will be allocated in terms of the BBEE scorecard as follows.

B-BBEE Status Level of Contributor	Number of Points for 80/20 Preference Points System	Number of Points for 90/10 Preference Points System
1	20	10
2	18	9
3	16	8
4	12	5
5	8	4
6	6	3
7	4	2
8	2	1
Non-compliant contributor	0	0

- 9.4 A tenderer must submit proof of its BBEE status level contributor.
- 9.5 A tenderer failing to submit proof of BBEE status level of contributor –
- 9.5.1 may only score in terms of the 80/90-point formula for price; and
- 9.5.2 scores 0 points out of 10/5 BBEE status level of contributor, which is in line with section 2 (1) (d) (i) of the Act, where the supplier or service provider did not provide proof thereof.
- 9.6 Regarding par 9.2(b) a maximum of 50% of the 20/10 points must be allocated to promote this goal. Maximum points will be allocated as follows.

Locality of supplier	Number of Points for 80/20 Preference Points System	Number of Points for 90/10 Preference Points System
Within the boundaries of the municipality	20	10
Outside of the boundaries of the municipality	0	0

- 9.7 The policy should not include Pre-qualification goals.
- 9.8 Any specific goal for which a point may be awarded, must be clearly specified in the invitation to submit a tender.
- 9.9 A tenderer failing to submit proof of required evidence to claim preferences for other specified goals, which is in line with section 2 (1) (d) (ii) of the Act.
- (i) may only score in terms of the 80/90-point formula for price; and
- (ii) scores 0 points out of 10/5 of the relevant specific goals where the supplier or service provider did not stipulate.
- 9.10 The preference points scored by a tenderer must be added to the points scored for price.

- 9.11 The points scored must be rounded off to the nearest two decimal places.
- 9.12 The contract must be awarded to the tenderer scoring the highest procurement points.

10 Application of Specified contract participation goals in Various thresholds

- 10.1 The preference point scoring system will be applicable for all procurement in excess of R 30 000,00.
- 10.2 If the specific goal of locality is identified for a specific procurement, the delegated official/committee must approve the specific goal (locality), and the point scoring must be specifically indicated in the invitation to tender and scored accordingly.
- 10.3 If the specific goal of locality is not identified for a specific procurement, the maximum points for the specified goals for the tender must be allocated to BBBEE points.

11. Criteria for breaking deadlock in scoring

- 11.1 If two or more tenderers score an equal total number of points, the contract must be awarded to the tenderer that scored the highest points for specific goals.
- 11.2 If two or more tenderers score an equal total number of points, the objective criteria in addition to those contemplated in paragraphs (d) and (e) justify the award to the tenderer that scored the highest points in terms in accordance with section 2(1)(f) of the Act.
- 11.3 If two or more tenderers score equal total points in all respects, the award must be decided by the drawing of lots.

12. Award of contracts to tenderers not scoring highest points

- 12.1 A contract may be awarded to a tenderer that did not score the highest points only in accordance with section 2(1)(f) of the Act.

13. Remedies

- 13.1 If a Municipality is of the view that a tenderer submitted false information regarding a specific goal, it must—
 - a) inform the tenderer; accordingly, and
 - b) give the tenderer an opportunity to make representations within 14 days as to why the tender may not be disqualified or, if the tender has already been awarded to the tenderer, the contract should not be terminated in whole or in part—

13.2 After considering the representations referred to in par 13 (1)(b), the Municipality may—

- (a) if it concludes that such false information was submitted by the tenderer—
 - (i) disqualify the tenderer or terminate the contract in whole or in part; and
 - (ii) if applicable, claim damages from the tenderer;

14. Performance Management

The specific goals achieved through the application of the Preferential Procurement Framework Act, 2000 will be monitored in terms of the elements embedded in the Supply Chain Management Policy.

15. Reporting

The Accounting Officer must align its reporting requirements to the Council as per SCM Regulation 6 to also report on progress with the implementation of this Policy

16. Repeal of regulations

16.1 Subject to this regulation, the Preferential Procurement Regulations, 2017 published in Government No. 40553 of 20 January 2017, are hereby repealed with effect from the date referred to in subsection 17.

16.2 Any tender advertised before the date referred to in subsection 17 must be dealt with in terms of the Preferential Procurement Regulations, 2017.

17. Short title and commencement

This Policy is called the Stellenbosch Preferential Procurement Policy, 2022/23 and take effect on 16 January 2023.

STELLENBOSCH MUNICIPALITY

PETTY CASH POLICY

2023/2024

STELLENBOSCH MUNICIPALITY

PETTY CASH POLICY

TABLE OF CONTENTS

	PAGE
1. INTRODUCTION	1
2. REGULATORY FRAMEWORK.....	1
3. OBJECTIVES	1
4. RESPONSIBILITY AND ACCOUNTABILITY	1
5. PETTY CASH FRAMEWORK.....	2

1. INTRODUCTION

The accounting officer of a municipality is responsible for the management of the expenditure of the municipality in an effective and controlled manner. Therefore the Stellenbosch Municipality adopts the following petty cash policy.

2. REGULATORY FRAMEWORK

- a) The Municipal Finance Management Act (56 of 2003);
- b) Section 15 of the Municipal Supply Chain Regulations;
- c) Treasury regulations in terms of Section 13(1) of the Act;
- d) MFMA Circular 97 (Cost Containment Measures);
- e) Cost Containment Policy;
- f) Municipal Cost Containment Regulations, 2019; and
- g) Any subsequent MFMA Circulars relevant to Petty Cash or Cost Containment in general that may be issued By National Treasury from time to time.

3. OBJECTIVES

Compliance with the regulatory framework in terms of the relevant legislation is required.

4. RESPONSIBILITY AND ACCOUNTABILITY

The key responsibilities in terms of the MFMA (Section 65) are:

Accounting Officer (Municipal Manager)-

- (1) The accounting officer of a municipality is responsible for the management of the expenditure of the municipality.
- (2) The accounting officer must for the purpose of subsection (1) take all reasonable steps to ensure—
 - (a) That the municipality has and maintains an effective system of expenditure control, including procedures for the approval, authorisation, withdrawal and payment of funds;
 - (b) That the municipality has and maintains a management, accounting and information system which—

- (i) recognises expenditure when it is incurred;
 - (ii) accounts for creditors of the municipality; and
 - (iii) accounts for payments made by the municipality;
- (c) that the municipality has and maintains a system of internal control in respect of creditors and payments;
- (d) that payments by the municipality are made—
- (i) directly to the person to whom it is due unless agreed otherwise for reasons as may be prescribed; and
 - (ii) either electronically or by way of non-transferable cheques, provided that cash payments and payments by way of cash cheques may be made for exceptional reasons only, and only up to a prescribed limit;

The Municipal Manager delegates authority to the Chief Financial Officer to ensure compliance and adherence to the principles established by this policy.

5. PETTY CASH FRAMEWORK

5.1 General Policy

- a. The use of petty cash floats is strictly confined to individual cash purchases of:
- i) up to a maximum of R500, where the petty cash floats in other departments are used to make purchases,
 - ii) up to a maximum of R2 000, when claimed from the Financial Services Petty Cash Float.

All Petty Cash expenditure must be in compliance with this Policy, the Municipal Cost Containment Regulations 2019, Cost Containment Policy and MFMA Circular 97 (Cost Containment Measures).

- i) The municipality may not incur catering expenses for meetings that are only attended by persons in the employ of the municipality, unless prior written approval is obtained from the accounting officer.
- ii) Catering expenses may be incurred by the accounting officer for the following, provided they exceed five (5) hours in duration:
 - Hosting of meetings
 - Conferences

- Workshops
 - Courses
 - Forums
 - Recruitment interviews
 - Council proceedings
- iii) Expenses may not be incurred on alcoholic beverages.
- iv) The accounting officer must ensure that expenses are not incurred on social events. This provision is not intended to impede the constitutional obligation of the municipality, therefor the following events are excluded:
- Economic development events
 - Cultural festivals
 - Local tourism festivals
 - Youth, aged, disabled and other vulnerable persons development events
 - Civic honours events
 - Staff recognition or achievement awards and functions
 - Town centennial or other significant municipal commemorating events
 - Opening of facilities and buildings
 - Strategic planning sessions
 - Non-recreational team building events
 - Non-recreational staff wellness functions.
- v) Expenditure may not be incurred on corporate branded items like clothing or goods for personal use by officials, other than uniforms, office supplies and tools of trade, unless the costs thereto are recovered from the affected officials or is an integral part of the business model of a specific project or drive.
- vi) The accounting officer must ensure that any sporting events, and expenditure directly related to sporting events such as travel and accommodation cost, sporting gear and sporting regalia are not financed from the budget of the municipality or by suppliers or sponsors. This provision does not apply to sporting events that are held in terms of the municipality's constitutional function.

The accounting officer may incur expenditure not exceeding the limits of this Policy for one transaction usage, to host farewell functions in recognition of officials who retire after serving the municipality for ten or more years or retire due to ill health.

Under no circumstances may Petty Cash be abused for purposes of avoiding Supply Chain Management procedures. It is not acceptable for one receipt or a number of receipts, in respect of the same event, which have been obtained by the same person, to be split over multiple cash purchase claims.

- d. The Directorate making use of Petty Cash for smaller purchases is responsible for ensuring that sufficient budget is available on the relevant votes.
 - e. A petty cash float is not to be used for any of the following:
 - i) loans to any person whatsoever;
 - ii) payment of personal remuneration to any employee whatsoever, whether for fees, salaries, wages, travel allowance as part of remuneration, honorarium or other reason; or
 - iii) Purchase of capital items.
 - iv) Any item or service that does not fall within the ambit of the Cost Containment Policy and –Regulations.
 - f. Examples of permissible Petty Cash Expenditure may include, but is not limited to:
 - i) Toll Fees
 - ii) Parking Fees
 - iii) Postage
 - iv) PDP and Licence fees
 - v) Keys
 - vi) Car Wash
 - vii) Fire Arm Licencing
 - g. Should there be any uncertainty, the relevant Director may exercise discretion and approve a requisition for Petty Cash, or in the case of an own Petty Cash Float, approve such expenditure provided that all such approvals remain within the confines of the Cost Containment Policy and –Regulations..
- Other cash floats may also be established for the purpose of providing change, for a cash register, or any other purpose approved by the Chief Financial Officer. Use of such floats is restricted to the purpose for which they were established.
- i. The Chief Financial Officer may approve the use of petty cash for specific use, based on practical reasons or cost-benefit reasons. Such an authority will be done on a case by case basis for the purposes of considering merit.
 - j. The CFO may determine and approve the maximum amount to be held in any individual petty cash float.

5.2 Purchases through Petty Cash Float – Supply Chain Management Office

- a. Purchases from SCM database suppliers shall be allowed in the following instance, provided that a monthly submission are made to the CFO of all purchases and the respective director confirming the enforcement of rotation of suppliers:
 - i) When the amount of the individual purchase / event is less than R250.00, irrespective of it being an emergency or not.
- b. Purchases from SCM database suppliers are NOT allowed for capital items or fuel.
- c. Petty claims will be dealt with on a first come, first serve basis and it is subject to the monetary limit of the petty cash.

5.3 Establishing and Operating a Petty Cash Float

- a. To establish a new petty cash float or increase an existing advance, a written application is to be made to the Chief Financial Officer by the relevant Department, motivating the need for such petty cash float.
- b. The total value of the advance requested will be an amount which would normally necessitate reimbursement approximately once a fortnight. This level of advances keeps to a minimum the overall cash in the buildings on municipal property and ensures regular inclusion of information regarding expenditure in financial reports and for budget control purposes.
- c. A request for the establishment of an advance will indicate the name and status of senior administrative or clerical staff to be held responsible for the operation of the petty cash float. The staff member's specimen signature must also be submitted by the Department to the Chief Financial Officer, together with the application documentation.
- d. The application will indicate the security arrangement in place to ensure safe custody of funds in the office. The minimal security arrangement that will be acceptable is that the float will be kept in a locked box which will be kept in a locked filing cabinet or safe.
If an advance is approved, the Accountant: Creditors will advise the Department accordingly and request that the responsible staff member collect the advance. This establishing advance will be charged to a "Petty Cash Advances - ...Name/Dept..." in the General Ledger and not against any expenditure votes. A register of advances is thus maintained per Ledger Account for the purpose of accounting for all petty cash floats.

5.4 Security of Petty Cash Floats

- a. The cash on hand and used petty cash vouchers are to be kept in a locked box for which there should be two keys. One key is to be retained by the officer (on their person) normally responsible for the petty cash and the other to be kept in a sealed envelope in the office safe or other secure place, to be used only in an emergency.
- b. The locked petty cash box must be kept in a secure place when not in use and should be removed and returned by the responsible staff member only. At no stage should staff other than the responsible administrative/clerical staff member have access to the storage place of the petty cash box.
- c. Under no circumstance are keys to be left in the lock to the petty cash box, cabinet or safe.
- d. If the responsible officer is either going on leave or is leaving the Municipality's employment, the petty cash float is to be reconciled and signed by the departing- as well as replacement staff members, to indicate their agreement as to its balance. The replacement staff specimen signature must also be submitted to the Chief Financial Officer.

5.5 Completing a Cash Purchase Claim Form

- a. Petty cash stationery is available from the Expenditure Section (Financial Services). The form consists of two parts:
 - (i) Cash Purchase Claim page
 - (ii) Cash Purchase Record page
 - (iii) Receipt for cash advance (Only when appropriate, refer paragraph on Advances).
- b. All details entered on the Cash Purchase Claim appear on the Cash Purchase record page.
- c. The Cash Purchase Claim must be completed as follows:
 - (i) description and cost of the goods/services purchased
 - (ii) purchaser's signature
 - (iii) vote number to be charged
 - (iv) Signature of the Officer in Charge of Petty Cash.
- d. Original receipts or other valid documentation as required must be attached as proof of payment, with the signature of an appropriate financial delegate on this documentation.

A financial delegate cannot authorise a cash purchase claim where she or he is the purchaser.

5.6 Sub-Advances to staff members

- a. If it is necessary to make an initial sub-advance to a staff member for various needs, a receipt for cash advance must be completed. The receipt for Cash Advance Form must be completed as follows:
 - (i) description and *estimated* cost of the goods/services purchased
 - (ii) purchaser's signature
 - (iii) vote number to be charged
 - (iv) Signature of the Officer in Charge of Petty Cash.
- b. On completion of the purchase, the recording-, documentation- and authorization requirements will be as stated in the above paragraph: Completing a Cash Purchase Claim Form.

All such sub-advances will be accounted for within 24 hours, by submitting original receipts and other applicable documentation required, attached as proof of payment (with the approval signature on the documentation). Where this cannot be achieved, the buyer will be liable to pay back the advance without any delay or the money will be deducted on his/her next salary irrespective of consent being given or noted. Not more than one advance will be made to any one person at a time.

5.7 Out-of-Pocket Payments

- a. Where a staff member has made purchases from their own funds and now seeks reimbursement from the petty cash, supporting documentation must be provided to substantiate the claim.
- b. The supporting documentation is to be attached to the Claim.
- c. The recording-, documentation- and authorization requirements will be as stated in the above paragraph (**Completing a Cash Purchase Claim Form**).

5.8 Reimbursement of Petty Cash Floats

- a. A petty cash float is operated on the basis that expenditure from the float is periodically reimbursed. Such reimbursement-
 - (i) returns the cash level of the petty cash float to its original level and
 - (ii) Charges the expenditure which has been made, to the correct expenditure vote.
- b. Accordingly, at any point of time, the sum of the cash on hand, i.e. remaining unspent, plus the cash advances for un-finalised purchases, plus the completed cash purchase claim forms, will equal the level of the petty cash advanced to the Department.
- c. Completed Cash Purchase Claim forms, with attached cash register slips, etc., must be taken by the officer in charge of the Petty Cash in a Directorate/Department, to the ~~Assistant~~ Accountant: Accounts Payable for reimbursement, after the Summary Claim Cover Page and attached documentation have been authorised by a financial delegate at least once in 14 days. Reimbursement of claims where supporting documentation is missing will not be entertained.
- d. The prescribed Summary Cash Purchase Claim form as well as other relevant forms attached to it must be completed in full.
- e. The most recently completed Cash Purchase Claim form must record the reconciliation of the petty cash float. The Accountant: Accounts Payable will refuse reimbursement of claims where this is not supplied.
- f. A petty cash float must never be reimbursed with funds derived from any other source whatsoever.

5.9 Shortages

- a. Any shortages in respect of a petty cash float must be paid in immediately.
- b. Where a petty cash float is stolen the incident must be reported promptly to the Chief Financial Officer in the required format, after which same needs to be reported to the South African Police Services and a case number provided to the Accountant: Accounts Payable.

5.10 Procedure applicable when a Petty Cash Float is repaid/cancelled

When an advance is no longer required, a statement in a form of a memorandum is to be completed and signed by the Head of the relevant Department and submitted to the Accountant: Accounts Payable, with the balance of cash on hand and completed and authorized Cash Purchase Claim forms. The most recently completed Cash Purchase Claim form will record the reconciliation of the petty cash float, where after a cheque will be issued to the relevant person to effect completion of the transaction..

The Cashier will issue a receipt to the affected department.

5.11 Financial year-end procedures

Reconciled petty cash registers (cash slips attached), accompanied with the cash balance must be returned to the Senior Accountant: Expenditure a week before the financial year end.

STELLENBOSCH MUNICIPALITY

CREDIT CONTROL AND DEBT COLLECTION BY-LAW

Effective from 01 July 2023

PREAMBLE

To give effect to the Municipality's Credit Control and Debt Collection Policy and/or

to regulate its implementation and enforcement in the Stellenbosch Municipal Area (WC024) in terms of section 156(2) of the Constitution of the Republic of South Africa (Act 108 of 1996) and sections 96 and 98 of the Municipal Systems Act (Act 32 of 2000);

to provide for the collection of all monies due and payable to the Municipality; and

to provide for matters incidental thereto.

1. Definitions

- (1) In this By-law, any word or expression to which a meaning has been assigned in the Local Government: Municipal Systems Act, 32 of 2000, has that meaning, unless the context, indicates otherwise-

"account" means a municipal account rendered specifying an amount or amounts payable for assessment rates, metered services, municipal charges, levies, fees, fines, taxes or any other amount or amounts payable arising from any other liability or obligation due to the Municipality;

"arrangement" means a written agreement entered into between the Council and the debtor in terms of which specific repayment parameters are agreed to;

"arrears" means any amount due and payable to the Municipality and not paid by the due date;

"Council" means the Municipal Council of Stellenbosch Municipality as referred to in section 157 of the Constitution;

"Credit Control and Debt Collection Policy" means the Credit Control and Debt Collection Policy adopted by the Council in terms of Section 96 of the Local Government: Municipal Systems Act, 32 of 2000;

"customer" means any occupier of any premises to which the Municipality has agreed to supply or is actually supplying services, or if no occupier can be identified or located, the owner of the premises and includes any debtor of the Municipality;

"day/days" means calendar days, inclusive of Saturdays, Sundays and public holidays;

"debtor" means any person owing money to the Municipality;

"due date" in relation to-

- (a) *When paying an annual account, that account shall be paid and received by the Municipality in full not later than the date as specified on the account; and*
- (b) *when paying a monthly account, that account shall be paid and received by the Municipality in full not later than the date as specified on the account.*

Should such day fall on a Saturday, Sunday, or public holiday the due date shall be the next working day.

"Electricity By-law" means the Stellenbosch Municipality: Electricity Supply By-law as promulgated in the *Provincial Gazette*;

"estimated consumption" means the deemed consumption of a customer, that was not measured for the specific period, but estimated by taking into account factors that are considered relevant by the Municipality and which may include consumption data for a specific time in its possession and where applicable, having made due allowance where possible for seasonal or other variations which may affect consumption;

"immovable property" includes-

- (a) an undivided share in immovable property, and
- (b) any right in immovable property.

"Indigent Policy" means the Indigent Policy adopted by the Council of the Municipality;

"interest" means a charge levied on all arrear monies as stipulated in the Municipality's Credit Control and Debt Collection Policy;

"month" means a calendar month;

"monthly average consumption" means the monthly average consumption in respect of that property calculated on the basis of consumption over the preceding twelve months taking seasonal variances and exceptional circumstances into consideration;

"Municipality" means Stellenbosch Municipality (WC024);

"Municipal Manager" means the person appointed as such in terms of section 54A of the Local Government: Municipal Systems Act, 32 of 2000;

"municipal pay point" means those payment facilities set out in the Credit Control and Debt Collection Policy;

"municipal service" means a "municipal service" as defined in the Systems Act;

"occupier" means any person who occupies any premises or part thereof without regard to the title under which the person occupies, and includes -

- (a) any person in actual occupation of those premises;
- (b) any person legally entitled to occupy those premises;
- (c) in the case of those premises being subdivided and let to lodgers or various tenants, the person receiving the rent payable by such lodgers or tenants whether on the person's own account or as agent for any person entitled thereto or interested therein;
- (d) any person having the charge or management of those premises, and includes the agent of any such person when the person is absent from the Republic of South Africa or his or her whereabouts are unknown; or
- (e) the owner of those premises.

"official" means an "official" as defined in section 1 of the Local Government: Municipal Finance Management Act, 56 of 2003;

"owner" means:

- (a) a person in whom the legal title to a premises is vested;
- (b) in a case where the person in whom the legal title is vested is insolvent or dead, or is under any form of legal disability whatsoever, the person in whom the administration of and control of such premises is vested as curator, trustee, assignee, executor, administrator, judicial manager, liquidator or other legal representative, as the case may be;
- (c) in the case where the Municipality is unable to determine the identity of the person in whom the legal title is vested, the person who is entitled to the benefit of such premises or a building thereon;
- (d) in the case of premises for which a Municipal lease has been entered into, whether the lease is registered or not, the lessee thereof;
- (e) the occupier of immovable property occupied under a service servitude or right analogous thereto
- (f) in relation to -
 - (i) a piece of land delineated on a sectional plan registered in terms of the Sectional Titles Act, 1986, and without restricting the above, the developer or the body corporate in respect of the common property; or
 - (ii) a section or unit as defined in the Sectional Titles Act, the person in whose name such section or unit is registered under a sectional title deed and includes the lawfully appointed agent of such a person;
 - (iii) a right as contemplated in section 25 or 27 of the Sectional Titles Act, the holder of such right.
- (g) any legal person including, but not limited to -
 - (i) a company registered in terms of the Companies Act, 71 of 2008 noting the transitional arrangements as per Schedule 5 of said Act, Trust *inter vivos*, Trust *mortis causa*, a close corporation registered in terms of the Close Corporations Act, 69 of 1984, a voluntary association;
 - (ii) any Department of State;
 - (iii) any Council or Board established in terms of any legislation applicable to the Republic of South Africa; and
 - (iv) any Embassy or other foreign entity; and
- (h) a lessee of municipal property who will be deemed to be the owner for the purposes of rendering a municipal account;
- (i) Upon any contradiction of this definition to the definition of "owner" as per section 1 of the Rates Act, the Rates Act definition of "owner" shall prevail.

"paid by the due date" means actual receipt of the funds paid in the bank account of the Municipality before or on the due date and **"payable by the due date"** shall have a corresponding meaning;

"person" means natural and juristic persons, including any state department and

statutory bodies;

"premises" includes any piece of land, the external surface boundaries of which are delineated on:

- (a) a general plan or diagram registered in terms of the Land Survey Act, 8 of 1997 or in terms of the Deed Registry Act, 47 of 1937; or
- (b) a sectional plan registered in terms of the Sectional Titles Act, 95 of 1986, which is situated within the area of jurisdiction of the Municipality;

and includes any other land and any building or structure above or below the surface of any land;

"rates" means the rate imposed on property by the Municipality; including but not limited to the municipal property rate envisaged in section 229(1) of the Constitution of the Republic of South Africa, 108 of 1996;

"Rates Act" refers to the Local Government: Municipal Property Rates Act, 2004.

"Rates Policy" means the Rates Policy adopted by the Council in terms of section 3 of the Local Government: Municipal Property Rates Act 6 of 2004 and as amended from time to time;

"responsible person" means any person other than the owner of an immovable property who is legally responsible for the payment of municipal service charges;

"service charges" means the fees levied by the Municipality in terms of its Tariff Policy for any municipal services rendered and includes any penalties, interest or surcharges levied or imposed;

"service delivery agreement" means an agreement between the Municipality and an institution or persons provided for in section 76(b) of the Local Government: Municipal Systems Act, 32 of 2000;

"sundry debtor accounts" means accounts raised for miscellaneous charges for services provided by the Municipality or charges that were raised against a person as a result of an action by a person and which was raised in terms of the Municipality's policies, By-laws and decisions;

"Systems Act" refers to the Local Government: Municipal Systems Act, 2000.

"tariff" means any rate, tax, duty and levy or fee which may be imposed by the Municipality for services provided either by itself or in terms of a service delivery agreement;

"Tariff Policy" means a Tariff Policy adopted by the Council in terms of section 74 of the Local Government: Municipal Systems Act 32 of 2000;

"user" means the owner or occupier of a property in respect of which municipal services are being rendered;

"working day" means a calendar day excluding Saturdays, Sundays and public holidays,

- (2) The headings and titles in this By-law are for reference purposes only and shall not affect the construction thereof.
- (3) In this By-law, a word or expression derived from a word or expression defined in subsection (1) has a corresponding meaning unless the context indicates that another meaning is intended.

2. Duty to collect debt

All debt owing to the Municipality must be collected in accordance with this By-law and the Credit Control and Debt Collection Policy.

3. Applications for provisions of municipal services and service agreements

- (1) All applications for the provision of Municipal services in respect of any immovable property shall be made by the owner of the said immovable property in writing and on the prescribed form.
- (2) The owner of an immovable property in respect of which application for the provision of municipal services has been made, shall prior to the date on which the services are required to be connected, enter into a written agreement with the Municipality on the prescribed form.
- (3) The written agreement referred to in subsection (2) shall, amongst others, make provision for the following:
 - (a) an undertaking by the owner/tenant that he or she will be liable for collection costs including administration fees, interests, disconnection and reconnection costs, and any other legal costs occasioned by his or her failure to settle accounts by the due date;
 - (b) an acknowledgement by the owner/tenant that accounts will become due and payable by the due date notwithstanding the fact that the owner did not receive the account; and
 - (c) that the onus will be on the owner/tenant to ensure that he or she is in possession of an account before the due date.
- (4) The Municipality may, upon the written request of the owner of an immovable property, enter into a written agreement with both the owner and occupier of the immovable property in respect of which application for the provision of municipal services has been made. The agreement shall be on the prescribed form.
- (5) The Municipality shall cause a reading of the applicable credit-meters to be taken on the working day preceding the date of occupation of the property so as to facilitate the correctness of the prior and new owner's accounts.

- (6) The Municipality may require owners or occupiers of immovable properties in respect of which municipal services are being rendered, to enter into written agreements with the Municipality in accordance with the form referred to in subsection (2).

4. Deposits and guarantees

- (1) An applicant for the provision of municipal services may be required to pay a consumer deposit prior to the provision of any municipal services. Payment of the applicable consumer deposit will be the primary means to cover said contract obligation. Any deviation from the payment of the consumer deposit will be directed by the sole discretion and due consideration/approval of an accountant or more senior official in the Municipality's Revenue Department.
- (2) The Municipality may, in its sole discretion, and upon written notice to the owner of a property and after the conclusion of the agreement referred to in section 3(2) and subject to subsection (3), either increase or decrease the deposit payable. Deposits/Bank guarantees may be increased by an amount up to three times or more of a monthly average consumption as determined by the Municipality.
- (3) The Municipality shall before any decision to increase the deposit, give an owner or responsible person notice of any intention to increase the minimum deposit payable by the owner or responsible person, and shall, in the aforesaid notice, state full reasons for the envisaged increase and allow the owner or responsible person an opportunity to make written representations in this regard.
- (4) On termination of the supply of services the amount of such deposit, less any payments due to the Municipality, may be refunded.
- (5) The Municipality may, in its sole discretion accept a bank guarantee in lieu of a deposit .

5. Accounts and billing

- (1) The Municipality shall provide every person who is liable for municipal charges, fees levies, property rates or taxes, with an account in respect of such municipal charges, fees levies, property rates or taxes.
- (2) Accounts will be rendered on a monthly basis in cycles of approximately 30 (thirty) days.
- (3) All accounts rendered by the Municipality shall be payable before or on the due date as indicated on the account.
- (4) Any amount which remains due and payable after the due date shall attract interest as more fully set out in section 11.
- (5) Payments shall be deemed to be late unless received on or before the due date.
- (6) Electronic payments or payments made through agents must be received and reflected in the municipal bank account on or before the due date.

- (7) All accounts shall be payable by the due date regardless of the fact that the person responsible for the payment of the account has not received it and the onus shall be on such person to make the necessary inquiries to obtain a copy of the account before the due date.

6. Restriction or disconnection of supply of services

- (1) The Municipality may restrict or disconnect the supply of any municipal service in any manner including but not limited to blocking the purchase of electricity on the prepayment system and/or restricting or disconnecting the supply of water if a user of any such service:
- (a) fails to make full payment on the due date or fails to make an acceptable arrangement for the repayment of any amount due in respect of an account rendered;
 - (b) fails to comply with an arrangement;
 - (c) is placed under provisional sequestration, liquidation or judicial management, or commits an act of insolvency in terms of the Insolvency Act 24 of 1936 or any other applicable law but fails conditions of same;
 - (d) becomes subject to an order granted in terms of section 74 of the Magistrates Court Act, 32 of 1944 but fails adherence thereto.
- (2) The Municipality shall, before limiting or discontinuing any municipal services to any premises or user ensure that a fair and equitable procedure is followed, and the Municipality shall provide reasonable notice of its intention to limit or discontinue services and grant the affected person an opportunity to make written representations.
- (3) The right to restrict, disconnect or terminate a service pertains to all municipal services and shall not be limited, in the case of arrears, by the fact that payment may have been made in respect of any specific municipal service or the fact that the person who entered into an agreement for the supply of services with the Municipality and the owner are different persons, as the case may be.
- (4) After disconnection for non-payment of an account the prescribed fees may be required for payment before reconnection is effected.

7. Measurement of metered municipal services

- (1) Refer to the Stellenbosch Municipality: Electricity Supply By-law for the purposes of determining the criteria or provisions of any matter related to electricity.
- (2) Refer to the Stellenbosch Municipality: Water Services By-law for the purposes of determining the criteria or provisions of any matter related to water.

8. Payments and settlement of amounts due

- (1) Payments on accounts rendered may be effected at/via approved municipal payment facilities.

- (2) The Municipality may at its discretion, designate certain payment methods which will be acceptable to the Municipality.
- (3) Any payments made to the Municipality will be allocated by the Municipality entirely within its discretion; provided that any part payment on an account shall be allocated firstly to reduce any penalty charges which may have accrued on the account.
- (4) The Municipality will appropriate payments received in respect of any municipal services provided by the Municipality in accordance with the Credit Control and Debt Collection Policy.
- (5) Where the amount due and payable to the Municipality has not been paid in full, any lesser amount tendered to and accepted by any municipal official, shall not be deemed to be in final settlement of such an amount unless the Municipality in writing consents to or confirms that such amount is accepted in full and final settlement of a debt.
- (6) The acceptance of a lesser payment in full and final settlement shall be in terms of the Irrecoverable Debt Policy.

9. Procedures for and matters relating to the recovery of debt

- (1) Annual rates and service charges are levied during July of each year and the annual account shall be paid in full not later than the date specified on the account.
- (2) Rates and service charges which are paid on a monthly basis shall be paid in full not later than the date specified on the account.
- (3) Accounts rendered by the Municipality in respect of electricity and water shall be paid in full not later than the date specified on the account.
- (4) Interest on arrears may accrue on all amounts not paid by the due date and where applicable, not received and reflected in the Municipality's bank account on the due date.
- (5) In the event of an account not paid in full by the due date, the Municipality shall take the necessary steps including any legal action to collect the arrears in accordance with the debt recovery procedures prescribed in terms of the Credit Control and Debt Collection Policy.
- (6) When the Municipality restricts or disconnects the supply of any municipal services in any manner including but not limited to blocking the purchase of electricity on the prepayment system and/or restricting or disconnecting the supply of water in respect of an account which has not been paid by the due date, this shall be done with due regard for any mandatory minimum levels of supply of municipal services.
- (7) Any additional charges or costs incurred by or on behalf of the Municipality with regard to the recovery of debt as outlined in this By-law and the Credit Control and Debt Collection Policy including but not limited to legal and administration costs shall be debited to the account of the defaulting debtor. The latter charges may include a revisit of deposits paid.
- (8) Owners who concluded arrangements to settle their annual rates accounts on a monthly

basis shall ensure regular payments..

- (9) The Municipality may recover outstanding rates after the due date as provided for in sections 28 and 29 of the Local Government: Municipal Property Rates Act, 6 of 2004.
- (10) The Municipal Manager may, in order to recover debt, institute the necessary proceedings in a competent court and attach a debtor's movable and immovable property.
- (11) In the event that a juristic person including but not limited to a company, close corporation, trust or body corporate in terms of the Sectional Titles Act, 95 of 1986 is liable for the payment of any arrear rates and service charges to the Municipality, the liability of such entity is extended to its directors, members and trustees, as the case may, jointly and severally in their personal capacity.
- (12) The Municipality may notwithstanding the above and upon good cause shown, allow any defaulting owner or occupier of a property, to enter into a written agreement for the payment of the outstanding balance by way of instalments, on such terms and conditions as determined by the Credit Control and Debt Collection Policy and when such an agreement has been entered into, all actions against the defaulting owner or occupier of a property in terms of the Credit Control and Debt Collection Policy and in respect of such outstanding balance shall be suspended provided that the terms of this written agreement is strictly complied with.

10. Rates clearance certificates

- (1) Applications for the issuing of certificates required for the transfer of immovable property in terms of section 118 of the Local Government: Municipal Systems Act, 32 of 2000 must be lodged with the Municipality in the prescribed manner.
- (2) The certificate mentioned in subsection (1) will only be issued if all amounts that became due in connection with that property for municipal service fees, surcharges on fees, property rates and other municipal taxes, levies, and duties during the 2 (two) years preceding the date of application for the certificate have been fully paid, irrespective of whether such amounts have been accumulated by the owner or not.
- (3) Nothing in this section precludes the subsequent collection by the Municipality of any amounts owed to it in respect of such immovable property at the time of transfer.

11. Interest

- (1) The Municipality may charge and recover interest in respect of any arrears, as prescribed in this By-law and the Credit Control and Debt Collection Policy.
- (2) No interest shall be charged on any outstanding amounts in respect of which an arrangement has been made as envisaged in section 9(8) provided that the debtor complies with the terms of the arrangement.
- (3) For the purposes of this section the interest shall be calculated for each month for which such arrears remain unpaid, and a portion of a month shall be deemed to be a full month.

12. Consolidation of accounts

- (1) The Municipality may-
 - (a) consolidate any separate accounts of a debtor;
 - (b) credit a payment by a debtor against any account of that debtor;
 - (c) implement any of the measures provided for in this By-law and the Credit Control and Debt Collection Policy, in relation to any arrears on any of the accounts of such debtor.
- (2) The provisions of subsection (1) do not apply where there is a dispute between the Municipality and the debtor referred to in that subsection concerning any specific amount claimed by the Municipality from such debtor.

13. Agreements with employers

- (1) The Municipal Manager may -
 - (a) with the consent of a debtor enter into a written agreement with that person's employer to deduct from the salary or wages of that debtor:
 - (i) any outstanding amounts due by the debtor to the Municipality; or
 - (ii) such regular monthly amounts as may be agreed; and
 - (b) provide special incentives for –
 - (i) employers to enter into such agreements; and
 - (ii) debtors to consent to such agreements.

14. Indigents

An indigent consumer shall be dealt with as prescribed in the Indigent Policy and if required and after reasonable alternatives have been exhausted, processes in terms of the Credit Control and Debt Collection Policy will be implemented.

15. Right of access to premises

- (1) A duly authorised representative of the Municipality shall for any purpose related to the implementation or enforcement of this By-law, at all reasonable times or in an emergency at any time, have access to and enter any premises, request information and carry out any inspection and examination as he or she may deem necessary, and for purposes of reading, installing or repairing any meter or service connection for reticulation, or to disconnect, stop or restrict the provision of any service.
- (2) If the Municipality considers it necessary that work needs to be performed to enable an official to perform a function referred to in subsection (1) properly and effectively, it may:
 - (a) by written notice require the owner or occupier of the premises at his own expense to do specific work within a specified period; or
 - (b) if in its opinion the situation is a matter of urgency, without prior notice do such work

or cause it to be done at the expense of the owner.

- (3) If the work referred to in subsection (2) above is carried out for the sole purpose of establishing whether a contravention of this By-law has been committed and no such contravention has taken place, the Municipality shall bear the expenditure connected therewith together with the expense of restoring the premises to its former condition provided that in the event that it is established that a contravention of this By-law has taken place the owner or occupier shall, in addition to the loss or damage referred to in section 18(2), also be liable for the expenditure connected therewith.

16. Process for grievances and queries

- (1) An aggrieved person may lodge a grievance or query regarding service charges to the Municipality in writing and which may be on a prescribed form.
- (2) The aggrieved person shall clearly state the basis of his or her dissatisfaction and the desired outcome.
- (3) The lodging of a grievance or query shall not relieve the aggrieved person of the responsibility to settle the account, provided that the Municipal Manager may, on application in writing and in his or her sole discretion, direct that interim payments may be made pending the finalisation of the grievance or query.
- (4) The Municipality shall respond to such grievance or query in writing within 30 (thirty) days from the date of the lodgement of the grievance or query.

17. Appeal

- (1) A person aggrieved by any decision taken in terms of this By-law and in terms of a power or duty delegated or sub-delegated, may appeal against such decision in terms of section 62 of the Local Government: Municipal Systems Act, 32 of 2000 by giving written notice of the appeal and the reasons to the Municipal Manager within 21 (twenty-one) days of the date of the notification of the decision.
- (2) The Municipal Manager shall consider the appeal and confirm, vary, or revoke the decision.
- (3) The Municipal Manager must commence with an appeal within 6 (six) weeks and decide the appeal within a reasonable period.

18. Offences

- (1) Any person who
 - (a) fails to give the access required by an official in terms of this By-law;
 - (b) obstructs or hinders an official in the exercise of his or her powers or performance of functions or duties under this By-law;
 - (c) uses or interferes with Municipal equipment or consumption of services supplied;

- (d) tampers or breaks any seal on a meter or on any equipment belonging to the Municipality, or for any reason as determined by the Municipal Manager causes a meter not to properly register the service used;
- (e) fails or refuses to give an official such information as he or she may reasonably require for the purpose of exercising his or her powers or functions under these By-laws or provides the Municipality or such an official with false or misleading information knowing it to be false or misleading;
- (f) fails to comply with the terms of a notice served upon him or her in terms of this By-law;
- (g) contravenes or fails to comply with any provision of this By-law -

shall be guilty of an offence and be liable upon conviction to a fine or imprisonment or both such a fine and imprisonment and, in addition, may be charged for usage, as estimated by the Municipality.

- (2) Every person committing a contravention or breach of the provisions of this By-law shall also be liable to compensate the Municipality for any expenditure incurred and any loss or damage suffered or sustained by the Municipality in consequence of such breach.

19. Notices and documents

- (1) A notice or document issued by the Municipality in terms of this By-law, shall be deemed to be duly issued if signed by an official duly authorised by the Council.
- (2) If a notice is to be served on a person in terms of this By-law, such service shall be effected by:
 - (a) delivering the notice to such person personally or to the duly authorised agent of such person or:
 - (b) by delivering the notice at such person's residence or place of employment to a person apparently not less than 16 (sixteen) years of age and apparently residing or employed there;
 - (c) if such person has nominated an address for legal purposes, by delivering the notice to such an address; or
 - (d) by registered or certified post addressed to such person's last known address;
 - (e) in the case of a body corporate, by delivering it to the registered office or the premises of such a body corporate; or
 - (f) if service cannot be effected in terms of the aforesaid subsections, by affixing it to the principal door of entry to the premises, or displaying it on a conspicuous place on the premises to which it relates.

20. Authentication of documents

- (1) Every order, notice or other document requiring authentication by the Council shall be sufficiently authenticated, if signed by the Municipal Manager or by a duly authorised official of the Municipality;

- (2) Delivery of a copy of the document shall be deemed to be delivery of the original.

21. Certificate of indebtedness

- (1) A certificate under the hand of the Municipal Manager certifying the amount due and payable to the Municipality shall be binding upon the debtor; shall be *prima facie* proof of the amount of the debtor's indebtedness and shall be valid as a liquid document against the debtor in any competent court for the purpose of obtaining provisional sentence or judgment against the debtor in respect thereof.
- (2) Should the debtor at any time in defence of any action based on this By-law allege that there is no reason or cause for the debtor's obligations to the Municipality or that errors have been made in the calculation of the amount claimed, then the onus of proving such a defence will rest on the debtor.

22. Conflict of By-laws

- (1) The provisions of the Electricity Supply By-law and Water Services By-law in force immediately before the commencement of this By-law continue in force regarding the application of service tariff matters and insofar as they are not inconsistent with the provisions of this By-law.
- (2) Subject to subsection (1), in the event of any conflict between this By-law and any other By-law of the Municipality, this By-law will prevail.

23. Partial invalidity

In the event of any one or more of the provisions of this By-law being declared invalid by a final and unappealable order, decree or judgment of any court after being found to be inconsistent with any provision of the Constitution of the Republic of South Africa, 108 of 1996, such inconsistency or invalidity shall not affect the remaining provisions of this By-law and this By-law shall be construed as if such provisions had not been inserted.

24. Repeal of By-laws

The provisions of any By-laws relating to credit control debt collection by the Municipality are hereby repealed insofar as they relate to matters provided for in this By-law.

25. Application

This By-law shall be binding on all persons who own and/or occupy immovable property or any premises within the area of jurisdiction of the Municipality, or to whom a Municipal account is rendered.

26. Short title

This By-law is called the Stellenbosch Municipality: Credit Control and Debt Collection By-law.

1. DEFINITIONS

In this Policy, words or expressions shall bear the meaning assigned to them and, unless context otherwise indicates: –

“additional rate” means an additional rate contemplated in sections 19(1)(d) and 22(1)(b) of the Property Rates Act and in section 12(2) of the By-Law;

“applicant” means any owner who makes an application for the determination of a special rating area in accordance with provisions of Chapter 1 of the By-Law, or if a management body is established in terms of section 10 of the By-Law, any reference to **“the Applicant”** means the management body;

“By-Law” means the Stellenbosch Municipality’s Special Rating Area (SRA) By-Law;

“CFO” means the Chief Financial Officer of Stellenbosch Municipality, or his or her nominee;

“Council” means Council of Stellenbosch Municipality;

“implementation plan” means an Implementation Plan as contemplated in section 6 of the By-Law;

“majority” means the majority of properties represented by the members of the local community in the proposed special rating area who will be liable for paying the additional rate;

“management body” means the management body of a special rating area to be established in accordance with the provision of section 10 of the By-Law;

“motivation report” means a motivation report as contemplated in section 6 of the By-Law;

“the Municipality” means Stellenbosch Municipality (WC024),

“owner” has the meaning assigned to it in section 1 of the Property Rates Act;

“Policy” means the policy for the determination of special rating areas and will be referred to as this Policy;

“Property Rates Act” means the Local Government: Municipal Property Rates Act, 2004 (Act No.6 of 2004);

“rateable property” has the meaning assigned to it in section 1 of the Property Rates Act;

“special rating area” means a special rating area approved by the Council in accordance with the provisions of section 22 of the Property Rates Act and section 8 of the By-Law.

2. INTRODUCTION

2.1. This policy for the establishing of special rating areas must be read together with the Local Government: Municipal Property Rates Act, 2004 (Act 6 of 2004) and the Municipality’s Special Rating Area (SRA) By-law, as in force from time to time.

- 2.2. This policy is strictly applicable to Special Rating Areas that have been established in terms of sub-sections 22(1) to 22(4) of the Property Rates Act. Therefore, this policy does not deal or apply to internal municipal service districts as envisaged in section 85 of the Local Government: Municipal Systems Act, 2000 (Act 32 of 2000) and in sub-section 22(5) of the Property Rates Act.
- 2.3. All words and phrases defined in the Property Rates Act and the By-Law have the same meaning in this Policy.
- 2.4. In the event of any conflict between the provisions of the By-Law and the provisions of this Policy, the By-Law prevails.
- 2.5. This Policy needs to be read together with the Municipality's Rates Policy.

3. **AIM OF THE POLICY**

This Policy aims to –

- 3.1. Set out Council's position on special rating areas and the factors that will influence Council's decision whether or not to institute a particular Special Rating Area.
- 3.2. Provide guidance to members of the local community and to decision-makers within the Municipality in relation to the establishment of special rating areas; and
- 3.3. Strike an appropriate balance between facilitating self-funded community initiatives that aim to improve and/or upgrade neighbourhoods by –
 - (a) making use of Council resources and structures; or
 - (b) making use of a Non-Profit (previously known as a Section 21) company structure (refer paragraph 8.12.5 of this Policy); and to
 - (c) ensure commitment to good, fair and transparent governance by the managing body, by implementing a transparent process when appointing service providers to improve and/or upgrade the special rating area in the public areas and ensuring that these improved and/or upgraded services are not provided on private properties.

4. **POLICY STATEMENT**

- 4.1. The special rating area model is aimed at preventing the degeneration of towns and the consequential urban decay, and facilitating their upliftment, economic growth and sustainable development.
- 4.2. The purposes of a special rating area are to –
 - (a) enhance and supplement the municipal services provided by Stellenbosch Municipality;
 - (b) facilitate investment in the special rating area;
 - (c) facilitate a cooperative approach between Stellenbosch Municipality and the private sector in the provision of municipal services;

- (d) halt the degeneration and facilitate the upliftment of distressed business and mixed-use areas; and
 - (e) promote economic growth and sustainable development and in this way, assist the Council in the fulfilment of its objects and developmental duties as set out in its Integrated Development Plan ("IDP").
- 4.3. Stellenbosch Municipality regards special rating areas as a potential tool for allowing it to fulfil its constitutional and statutory obligations to promote;
- (a) social and economic development; and
 - (b) a safe and healthy environment in a way which balances the guiding principles underlying its Rates Policy.
- 4.4. Special rating areas allow property owners within an explicitly defined geographical area to improve and upgrade their area by means of a property rate in addition to the standard property rate.
- 4.5. Special Rating Areas do not give property owners or the management structures of the Special Ratings Area the right to infringe on any of the constitutional rights as enshrined in the Bill of Rights, Chapter Two of the Constitution of South Africa, 1996 of any juristic or natural person in any way. Specifically, the right to freedom of movement and residence of any juristic or natural person referred to in Section 21 of the Constitution must be guaranteed by the Special Rating Area as a pre-requisite for approval by the municipality.

5. FACTORS CONSIDERED WHEN DETERMINING A SPECIAL RATING AREA

The Council will consider instituting a special rating area where the requirements of Section 22 of the Property Rates Act are complied with, including that –

- 5.1. the purpose of the special rating area is to allow an additional rate to be levied on property in the defined area to raise funds for improving or upgrading the area;
- 5.2. the special rating area will not be used to reinforce existing inequities in the development of the Stellenbosch Municipality's (WCO24) area of jurisdiction;
- 5.3. the determination of the special rating area is consistent with Stellenbosch Municipality's IDP;
- 5.4. residential special rating area refers to an area in which more than 40% (forty percent) of the rates based municipal valuation consists of Residential Property as defined in the Rates policy.
- 5.5. any residential special rating area must comply fully with the provision of the By-Law, save that, with reference to the majority support the applicant must provide written proof to the Council that owners of rateable property within the boundary of the special rating area who own not fewer than 60% (sixty percent) in number of such properties, approve the formation of the special rating area. Subject to paragraph 6.3, municipal-owned properties will be excluded from such voting procedures.
- 5.6. the majority of members of the local community who will be liable for paying any additional rate in the special rating area, other than residential special rating areas, have consented to its

establishment. Subject to paragraph 6.3, municipal-owned properties will be excluded from such voting procedures.

- 5.7. the procedural requirements of Section 22 of the Property Rates Act as well as the By-Law and this Policy are complied with, which include the community consultation requirement as determined by the Municipality's Chief Financial Officer (CFO);
- 5.8. the proposed improvement or upgrade has been clearly and fully defined;
- 5.9. the proposed improvement or upgrade can be clearly and logically linked to a geographical area, the boundaries of which must be clearly determined;
- 5.10. there is evidence that it will be financially viable to use a special rating area to raise funds for the proposed improvement or upgrade;
- 5.11. Stellenbosch Municipality is satisfied with the institutional arrangements proposed in respect of the special rating area; and
- 5.12. Ultimately, the decision whether or not to determine a special rating area rests with the Council in its sole discretion.

6. APPLICABILITY OF STELLENBOSCH MUNICIPALITY'S RATES POLICY AND OTHER POLICIES

- 6.1. When Stellenbosch Municipality grants any measure of relief to Senior Citizens, Disabled Persons and Non-Profit Organisations in terms of the Rates Policy, or registered indigents in terms of the Indigent Policy, the relevant property owner will be granted a full (100%) discount in relation to the additional special rating area rate.
- 6.2. The granting of the above discount as per paragraph 6.1 will however not in any way modify the voting rights in relation to said property as described in paragraphs 5.5 and 5.6.
- 6.3. Subject to paragraph 6.4, municipal-owned properties will be exempted from the additional special rating area rates and will not participate during any voting procedures as described in paragraphs 5.5 and 5.6.
- 6.4. The occupants of municipal-owned properties which are leased in terms of a lease agreement or the occupants of those properties which are allocated to beneficiaries but not yet transferred will be liable for the additional special rating area rates and will retain the voting rights as described in paragraphs 5.5 and 5.6.

7. PROCESS

This Policy sets out –

- (a) the institutional arrangements for special rating areas (paragraph 8 of this Policy)
- (b) the establishment requirements which must be followed (paragraph 9 of this Policy);

- (c) the information which needs to be submitted to Stellenbosch Municipality in order to motivate a request for determination of a special rating area (paragraph 10 of this Policy);
- (d) the annual requirements which must be followed (paragraph 11 of this Policy);
- (e) the amendments and/or extension of term for a special rating area (paragraph 12 of this Policy);
- (f) the dissolution requirements which must be followed (paragraph 13 of this Policy)
- (g) financial arrangements (refer paragraph 14 of this Policy).

8. INSTITUTIONAL ARRANGEMENTS

Section 22 of the Property Rates Act is not prescriptive as to the structural arrangements which need to be put in place to administer a special rating area. The structural arrangement that will be considered by the municipality is the following:

8.1. Administration by a Non-Profit Company

- 8.1.1. Stellenbosch Municipality will require the ratepayers within the special rating area to establish and participate in an appropriate structure to carry out planning, contracting, financial control and administrative functions within the special rating area.
- 8.1.2. This does not entail ratepayers setting the additional rate, which under law can only be done by Stellenbosch Municipality (paragraph 14 of this Policy).
- 8.1.3. This places funds collected by government in the hands of the private sector, thus the requirements set out in this Policy must be met.
- 8.1.4. The functions of the Non-Profit Company would include:
 - (a) Determining the funding required each year (refer paragraph 14.2 of this Policy);
 - (b) Appointing contractors or service providers to effect the improvement/s or upgrade/s;
 - (c) Receiving the additional rate collected by Stellenbosch Municipality and expending the funds in accordance with the approved Business Plan.
- 8.1.5. Structural requirements of the Non-Profit company:
 - (a) Before Stellenbosch Municipality will consider allowing ratepayers in a special rating area to carry out administrative and other functions in relation to the area, the Steering Committee must establish a Non-Profit company (company not for gain) as per the Companies Act, Act 71 of 2008 (as amended or replaced) ("the Companies Act") for that purpose. The provisions of the Companies Act must be complied with, particularly those relating to non-profit companies (which effectively replaced Section 21 companies as per the old Companies Act, Act 61 of 1973), subject to the transitional provisions contained therein;
 - (b) The founding documentation ("the Memorandum of Incorporation") in relation to the structure established by ratepayers (this is equivalent to the Memorandum and Articles

of Association, as per the old Companies Act, Act 61 of 1973), must be as per the prescribed format determined by the CFO;

- (c) The Non-Profit company must be managed under the Companies Act, and also comply with any other legislation as a result of the financial connections to Council; and
- (d) The Non-Profit company must give a written notice by the most effective manner to all the property owners within the special rating area of the intention to hold an Annual General Meeting (AGM) on the date stated in the notice;
- (e) A Special General Meeting ("SGM") must be called within 6 months of the establishment of the Non-Profit Company. The purpose of the SGM is to:
 - (i) Accept new members;
 - (ii) Appoint directors;
 - (iii) Amend the Memorandum of Incorporation if required; and
 - (iv) Approve the following year's Budget and Implementation Plan (refer paragraph 14.2 of this Policy).

9. APPLICATION FOR THE ESTABLISHMENT OF A SPECIAL RATING AREA

- 9.1. The process for establishing special rating areas as set out in Chapter 1 of the By-Law must be followed.
- 9.2. The special rating area application must be submitted by end of September of the financial year preceding the establishment of the special rating area.
- 9.3. Further to section 7.2 of the By-Law the applicant must hold another public meeting within 30 days after submitting the application to confirm that it was lodged and to discuss details with the community.

10. MOTIVATING A SPECIAL RATING AREA

The Motivation Documentation must comprise of the following:

10.1. Business Plan –

The Business Plan must clearly define and indicate all the required improvements or upgrades and must contain -

10.1.1. Introduction;

- (a) an executive summary of the improvement or upgrade proposed for the special rating area as set out in the Implementation Plan;
- (b) An explanation of how the proposed improvement or upgrade is linked to the geographical area of the proposed special rating area;
- (c) An explanation of why the proposed special rating area will not reinforce existing inequities in the development of Stellenbosch Municipality;

- (d) An explanation of how the special rating area, if instituted, will be consistent with Stellenbosch Municipality's IDP as per the Service Departments' Business Plans;
- (e) An explanation of the institutional arrangements proposed in relation to the special rating area.

10.1.2. Vision;

10.1.3. Mission;

10.1.4. Goal;

10.1.5. A diagram clearly indicating the boundaries of the proposed special rating area;

10.1.6. Management;

- (a) Administrative policies of the Non-Profit company;
- (b) Proposed management structure:
 - Composition of the management body including allocation of portfolios and;
 - Operational Arrangements

10.1.7. Services;

Service providers must be appointed as per paragraph 3.3(c) and 10.1.1(d) of this Policy.

10.1.8. Financial Impact;

- (a) Provide details regarding the calculation of the cent-in-the-rand and as acted on the municipal valuation value of each property;
- (b) Provide details of criteria to qualify for exemption of additional rate;

10.1.9. A list of all rateable properties within the proposed special rating area, contact details of owners and the value of each property as set out in the Council's municipal valuation role. Differentiation between categories of properties, as provided for in Section 8 of the Property Rates Act and used in the valuation role, must be considered;

10.1.10. Proof of the consent of the majority of the members of the local community as per paragraph 5.5 of this Policy, in the proposed special rating area who will be liable for paying the additional rate;

10.1.11. Proof of the notice of the public meeting or meetings contemplated in the By-Law;

10.1.12. Minutes of the public meeting or meetings; and

10.1.13. Compilation date.

10.2. Implementation Plan

The Implementation Plan is a schedule of goals to implement improvements or upgrades as per the motivation report and must at least address the following:

- 10.2.1 Milestones;
 - 10.2.2 Tasks per milestone;
 - 10.2.3 Start and finish date per task;
 - 10.2.4 Assign responsibility per goal, milestone & task; and
 - 10.2.5 Performance indicators per milestone.
- 10.3. Budget Plan

The Budget Plan for the proposed improvements or upgrades must at least address the following:

- 10.3.1 a budget line item should be set for each milestone or task and grouped in such a way that there is a clear indication how the Implementation Plan is financially structured;
- 10.3.2 an annual budget per line item commencing on 01 July of the first year and end on 30 June of the last year of the term; and
- 10.3.3 a budget split for the provision of improvements or upgrades between the different categories of properties.

11. ANNUAL REQUIREMENTS

- 11.1. Confirm property data base (Register of properties and owners in the special rating area);
- 11.2. Submit an audited financial Statement and Trail Balance as approved/accepted at a SGM called for that purpose and
- 11.3. Submit an annual budget and an Implementation Plan as approved at the Annual General Meeting (AGM) by 31 January (refer paragraph 14.2 of this Policy).

12. AMENDMENT AND/OR EXTENSION OF TERM

In the event that a special rating area seeks to extend the term over which it will operate or amend the goals as per its Implementation Plan, then the procedures set out in Chapter 3 of the By-Law must be followed and submitted by the end of October.

13. DISSOLUTION

The special rating area may be cancelled by resolution of the Council, subject to the provision of section 16 of the By-Law.

14. FINANCIAL CONTROL

- 14.1. As stated in the By-Law, the amount of any additional rate levied in a special rating area is determined by the Council. The additional rate as imposed by the Council, is debt owing to

Stellenbosch Municipality and is payable and collected in the same manner as other property rates imposed by the Council.

- 14.2. The management structure must recommend the annual budget amount of the additional rate to the Stellenbosch Municipality by 31 January, with appropriate motivation including an Implementation Plan and a Budget Plan for the next financial year, and the Council will consider the recommendation during its budgeting process.
- 14.3. Before Stellenbosch Municipality will pay over any additional rate collected to the management structure, the management structure and Stellenbosch Municipality must have concluded a written finance agreement regulating, amongst other things;
 - (a) the mechanisms and manner of payment;
 - (b) how the additional rate is to be held by the management structure;
 - (c) any parameters relating to expenditure; and
 - (d) any obligations on the management structure to take out and maintain appropriate insurance.
- 14.4. The financial year of the Municipality shall be deterministic and shall be applied to the Budget plan and all financial transactions.

15. COMMENCEMENT AND IMPLEMENTATION

- 15.1. Implementation of this Policy will commence on 01 July 2020.
- 15.2. Where Stellenbosch Municipality is legally empowered to do so, requirements set out in this Policy may be imposed as conditions attached to the determination of a special rating area.
- 15.3. This Policy and its implementation will be reviewed annually.

16. COST

Stellenbosch Municipality shall not be liable for any costs incurred by ratepayers within the relevant proposed special rating area in respect of the implementation of the steps set out in this Policy and in the By-Law.

17. SHORT TITLE

This policy is the Special Rating Area Policy of the Stellenbosch Municipality.

STELLENBOSCH MUNICIPALITY

To provide for the establishment of special rating areas; to provide for additional rates; and to provide for matters incidental thereto.

BE IT ENACTED by Stellenbosch Municipality as follows:-

CHAPTER 1

ESTABLISHMENT OF SPECIAL RATING AREAS

1. DEFINITIONS

In this By-law words or expressions shall bear the meaning assigned to them and, unless context otherwise indicates.

In addition to the definitions contained in the Property Rates Act, the following definitions apply for the purpose of the application of this By-law.

“additional rate” means an additional rate contemplated in sections 19(1)(d) and 22(1)(b) of the Property Rates Act in section 12(2) of this By-Law;

“applicant” means any owner who makes an application for the determination of a special rating area in accordance with provisions of Chapter 1 of this By-Law, or if a management body is established in terms of section 10 of this By-Law any reference to **“the Applicant”** means the management body;

“CFO” means the Chief Financial Officer of Stellenbosch Municipality, or his or her nominee.

“Council” means Council of Stellenbosch Municipality;

“implementation plan” means an Implementation Plan as contemplated in section 6 of this By-Law;

“limited special rating area” means a limited special rating area approved by the Council in terms of section 9 of this By-Law;

“majority” means the majority of properties represented by the members of the local community in the proposed special rating area who will be liable for paying the additional rate;

“management body” means the management body of a special rating area to be established in accordance with the provision of section 10 of this By-Law;

“motivation report” means a motivation report as contemplated in section 6 of this By-Law;

“owner” has the meaning assigned to it in section 1 of the Property Rates Act;

“Policy” means the Policy for the determination of special rating areas named the Special Rating Area Policy of the Stellenbosch Municipality;

“Property Rates Act” means the Local Government: Municipal Property Rates Act, 2004 (Act No.6 of 2004);

“rateable property” has the meaning assigned to it in section 1 of the Property Rates Act;

“special rating area” means a special rating area approved by the Council in accordance with the provisions of section 22 of the Property Rates Act and section 8 of this By-Law.

2. INTERPRETATION

In the event of any conflict with the Afrikaans or isiXhosa texts the English text prevails.

3. DETERMINATION OF SPECIAL RATING AREAS

Stellenbosch Municipality may by resolution of the Council determine special rating areas.

4. APPLICATION

- (1) Any owner located within the area of jurisdiction of Stellenbosch Municipality and who owns property within the proposed special rating area, may lodge an application to the Stellenbosch Municipality for the determination of a special rating area.
- (2) All costs incurred by the applicant in respect of the establishment of a special rating area shall be for his or her own account, provided that after implementation of the implementation plan the management body may reimburse the applicant for some or all of those costs.
- (3) Any application contemplated in subsection (1) above must –
 - (a) be in writing and be in the form as the CFO may determine;
 - (b) be submitted not more than nine months after the date on which the public meeting referred to in section 5 of this By-Law is held, or if a second public meeting is held as provided for in section 6(2) of this By-Law, nine months after the date of the second public meeting;
 - (c) be accompanied by –
 - (i) a motivation report and an implementation plan;
 - (ii) the written consent submitted by the members of the local community in the proposed special rating area who will be liable for paying the additional rate. All

owners of each property in the proposed special rating area must sign the consent form. The majority shall be determined by the number of properties in the proposed special rating area for which duly preformed consent forms were received in relation to the number of properties in the proposed special rating area. Under specific conditions, aimed at a more inclusive approval process, the majority may be set at a higher percentage as determined in the Special Rating Area policy. The format of the consent may be determined by the CFO;

- (iii) payment of such fee as the Council may determine.

5. PUBLIC MEETINGS

- (1) An application for the determination of a special rating area must be preceded by the holding of a public meeting.
- (2) The purpose of the public meeting is to enable the applicant to consult with those owners within the proposed special rating area regarding the proposed boundaries of the area and the proposed improvement or upgrading of the area.
- (3) Prior to the holding of the public meeting, the applicant must –
 - (a) give notice in a manner approved by the CFO in terms of this By-law owners of rateable property, who will be liable for payment of the additional rate, of the applicant's intention to apply for the determination of a special rating area
 - (b) in the notice referred to in subsection (3)(a) above, give notice of a public meeting, which notice must –
 - (i) state the purpose of such meeting; and
 - (ii) contain details of the place, date and time when such meeting is to be held.
- (4) The public meeting must be held not less than seven days and not more than 30 days after the date of the notice.
- (5) The public meeting must be held at such place, date and time as stated in the notice, provided that it must be held at a place which is within the boundaries of the proposed special rating area unless the CFO approves another venue in writing before the public meeting is held.
- (6) The public meeting must be chaired by a suitable qualified and experienced person appointed by the CFO.
- (7) Any interested person must, at the public meeting, be –

- (a) Furnished with all relevant information relating to the proposed special rating area, including the information to be set out in the motivation report and implementation plan; and
- (b) given an opportunity to ask questions, express their views and make representations.

6. MOTIVATION REPORT AND IMPLEMENTATION PLAN

- (1) Any application for the establishment of a special rating area must include a motivation report and an implementation plan covering a period commencing on 1 July of a year and ending on 30 June of the fifth year or covering such lesser period as may be determined by the CFO.
- (2) If the motivation report or the implementation plan are materially amended, as determined by the CFO, after the public meeting referred to in section 5 of this By-Law, the applicant must call a second public meeting for approval of the special rating area as amended.
- (3) The provision of section 5 of this By-Law applies with the necessary changes to the second public meeting.

7. ADVERTISING OF APPLICATION AND OBJECTIONS

- (1) The applicant must within 14 days after the application is lodged in accordance with section 4 of this By-Law, or within such further period which the CFO may approve –
 - (a) Cause a notice of the application to be published in a manner approved by the CFO; and
 - (b) Either before or up to seven days after the date of publication of the notice, give written notice of the application to all owners within the proposed special rating area, who will be liable for payment of the additional rate. Such notice must be served by pre-paid registered post, hand delivery or in any other manner approved of in writing by the CFO.
- (2) Every notice contemplated in terms of subsection (1) above must state that written objections to the determination of a special rating area or the provisions of the motivation report and implementation plan may be lodged with the Stellenbosch Municipality by a date specified in the notice, which shall not be less than 30 days after the date of publication in terms of subsection (1)(a) above, and must state where the documentation specified in subsection (5) below will be available for inspection.
- (3) Any owner of rateable property who will be liable for paying the additional rate may submit written objections to the determination of the special rating area, which objections must be

received by the Stellenbosch Municipality not later than the date stipulated in the notice referred to in subsection (1) above.

- (4) Any objector to the application who owns property within the proposed special rating area may make oral representation to the CFO.
- (5) The application, including the motivation report and the implementation plan, and all objections must be available for inspection at the office of Stellenbosch Municipality and at a venue determined by the CFO within the proposed special rating area, for the period referred to in subsection (2) above.

8. DECISION

- (1) After the provision of sections 4 and 7 of this By-Law have been complied with, the Council must, at a meeting of the Council held within 90 days after the last date for the submission of objections in accordance with section 7(2) of this By-Law, consider the application and –
 - (a) determine a special rating area which must be implemented in accordance with the motivation report and implementation plan;
 - (b) determine a special rating area with such amendments or conditions as the Council considers to be in public interest;
 - (c) determine a special rating area in respect of a limited area in terms of section 9 of this By-Law;
 - (d) refuse the application, in which event the Council must, within 30 days, furnish the applicant with written reasons for not approving the determination of a special rating area; or
 - (e) refer the application back to the applicant for amendments in such manner as the Council may direct.
- (2) If an application is refused by the Council in accordance with the provisions of subsection (1)(d) above or referred back to the applicant in accordance with the provisions of subsection (1)(e) above, the applicant may, within six months of the Council's decision, re-apply to the Council for the determination of the special rating area, provided that such re-application has been appropriately amended in the light of the reasons for refusal or referral, as the case may be.
- (3) If the motivation report or implementation plan is amended in any material respect at any time before the determination, the Council may require that the amended application be re-advertised in accordance with the provision of section 7 of this By-law, with the necessary changes.

9. DETERMINATION OF A LIMITED SPECIAL RATING AREA

If an application in terms of section 4 of this By-Law is not accompanied by the majority of the members of the local community in the proposed special rating area required by section 4(3)(c) of this By-Law, but the applicant can demonstrate to the satisfaction of the Council, that –

- (a) there are such confirmations from owners of rateable properties in a limited geographical area within the proposed special rating area that would meet the requirements of section 4(3)(c) of this By-Law if they were to be applied to that area; and
- (b) the level of services to be provided will not be reduced and the budget will be reduced accordingly as a result of the provision of those services in the limited area alone, as compared to the provision of those services in the whole of the proposed special rating area,

then the Council may, subject to the other provisions of this By-Law, determine a limited special rating area.

CHAPTER 2

SPECIAL RATING AREAS – STRUCTURES AND FINANCES

10. COMMENCEMENT OF THE IMPLEMENTATION PLAN

Once the Council has approved the establishment of the special rating area, the implementation plan may only be implemented after the management body has been established in accordance with section 11 of this By-Law.

11. ESTABLISHMENT, COMPOSITION, POWERS AND DUTIES OF MANAGEMENT BODY

- (1) The applicant must establish a management body for the purposes of implementing the provisions of the implementation plan.
- (2) The management body must be a company incorporated in accordance with the provisions of a Non-Profit company (company not for gain) as per the Companies Act, Act 71 of 2008 (as amended or replaced).
- (3) Stellenbosch Municipality shall monitor compliance by the management body with the applicable provisions of this By-Law, any guidelines or policies adopted by Stellenbosch Municipality and any agreements entered into with the management body and Stellenbosch Municipality.

- (4) The Council must nominate the relevant ward councillor and one other person, as representatives to attend and participate, but not vote, at the meetings of the management body.
- (5) Within two months after receipt of the first payment of the additional rate, the management body must begin carrying out the objectives of the implementation plan.
- (6) Within two months of the end of each financial year, the management body must provide the CFO with –
 - (a) Its audited financial statements for the immediately preceding year; and
 - (b) an annual report on its progress in carrying out the objectives of the implementation plan in the preceding year to improve and upgrade the special rating area.
- (7) Within two months after the Annual General Meeting, the management body must provide the Finance Portfolio Committee with –
 - (c) Its audited financial statements for the immediately preceding year; and
 - (d) An annual report on its progress in carrying out the objectives of the implementation plan in the preceding year to improve and upgrade the special rating area.

12. FINANCES

- (1) The financial year of the management body must coincide with the financial year of the Stellenbosch Municipality.
- (2) Where a special rating area has been determined, the Council must levy in accordance with the provisions of the Property Rates Act, a property rate in addition to the rates that it already charges on the owners of rateable property in the special rating area for the purposes of realizing the implementation plan. Provided that the Council may in terms of the Property Rates Act, Stellenbosch Rates Policy, Stellenbosch Credit Control and Debt Collection By-Law and the Stellenbosch Credit Control and Debt Collection Policy, exempt the indigent, senior citizens, disabled persons or any other category of owners from the additional rates.
- (3) When determining the additional rate referred to in subsection (2) above, the Council may consider imposing differential additional rates on one or more of the categories set out in section 8 of the Property Rates Act or any category as set out in the Stellenbosch Rates Policy.
- (4) The additional rate due in terms of this By-Law is a debt due to the Council and is payable and must be collected in the same manner as other property rates imposed by the Council.

- (5) The Council may, for the purpose of carrying out the provisions of the implementation plan of special rating area and subject to section 67 of the Local Government: Municipal Finance Management Act, 2003 (Act No. 56 of 200), make payment to the management body of a special rating area.
- (6) The payment contemplated in subsection (5) above is conditional upon the conclusion of a finance agreement to be entered into between the Council and the relevant management body, and such agreement must regulate, among other things –
 - (a) the mechanisms and manner of payment; and
 - (b) terms on which payment to the relevant management body is to be made.
- (7) Subject to the provisions of its memorandum and articles of association, the management body is entitled to raise its own funds through commercial activities, donations or any other lawful means.
- (8) The Council, may determine and impose on the management body an administrative charge.

13. THE ROLE OF THE CFO

In addition to the other responsibilities and obligations of the CFO as set out elsewhere in this By-Law, the CFO must –

- (a) Establish separate ring-fenced budget votes and other record-keeping systems regarding the revenue generated by the additional rate and the improvement and upgrading of the special rating area;
- (b) Monitor compliance with the applicable legislation, including this By-Law and the Policy, by –
 - (i) receiving and considering the audited financial statements and reports regarding the carrying out of duties laid out in the implementation plan;
 - (ii) nominating, if he or she elects to do so, representatives to attend and participate but not vote at meetings of the management body.

CHAPTER 3

AMENDMENT AND EXTENSION OF IMPLEMENTATION PLANS

14. AMENDMENT TO IMPLEMENTATION PLANS

- (1) An implementation plan, including the geographical boundaries of the special rating area, may be amended by the Council on written application by the management body at any time after the formation of the special rating area.
- (2) The council may approve an application for an amendment referred to in subsection (1) above where the Council considers it not likely to materially affect the rights or interests of any owner, provided that the Council may require the management body to cause a notice of the application for such amendments to be published as approved by the CFO.
- (3) The Council may only approve an amendment in terms of subsection (1) above, with the changes required by the context, in accordance with the provisions of Chapter 1 of this By-Law, which the Council considers is likely to –
 - (a) materially affect the rights or interests of any person;
 - (b) affect the approved budget for the special rating area; and
 - (c) change the boundaries of the special rating area.
- (4) The Council may, for good reason, on written application by the management body, exempt the management body from complying with the provisions, or condone any non-compliance with any provisions, of Chapter 1 of this By-Law.

15. EXTENSION OF IMPLEMENTATION PLANS

A management body must, if it elects to extend the term of the implementation plan for a further period, on or before January in the year in which the implementation plan is due to terminate, submit an application to Stellenbosch Municipality for approval of extension of the term of the implementation plan, provided that –

- (a) the extension of the implementation plan may only be approved by the Council in accordance with the provisions of Chapter 1 of this By-Law, with the changes required by the context, and the Council may, for good reason, on written application by the management body, exempt the management body from complying, or condone any non-compliance, with any such provisions;
- (b) the provisions of section 14 of this By-Law shall apply to any amendment of an implementation plan which has been extended in terms of this section.

CHAPTER 4

DISSOLUTION OF A SPECIAL RATING AREA

16. DISSOLUTION

- (1) The Council may terminate the municipality's business relationship (connection and commitment) to a management body of a specific special rating area –
 - (a) Upon written application signed by owners of the majority of properties within the boundaries of the special rating area who are liable for paying the additional rate; or
 - (b) After prior consultation by the CFO with the management body or the community, whereupon for any good cause he or she may cause the necessary steps or processes to terminate the business relationship with the management body.
 - (c) Upon the decision by the CFO to terminate the business relationship to the specific special rating area, notices shall be forwarded to the management body and to all the property owners of the specific special rating area presenting the reasons for the proposed termination and any other pertinent details.
- (2) Upon the approval by Council to terminate the business relationship with the management body the additional rates applicable to said special rating area will no longer be raised and the associated payments to the management body shall cease.

CHAPTER 5

MISCELLANEOUS PROVISIONS

17. REPEAL

The provisions of any By-laws relating to special rating areas by Stellenbosch Municipality are hereby repealed insofar as they relate to matters provided for in this By-law.

18. SHORT TITLE AND EFFECTIVE DATE

- (1) This By-Law is called the Special Rating Area By-Law of Stellenbosch Municipality and shall take effect on 01 July 2021.
- (2) No new special rating area determined in terms of this By-Law may implement its implementation plan prior to 01 July 2020.

1. PREAMBLE

- (1) Section 229(1) of the Constitution authorizes a municipality to impose:
 - (a) rates on property and surcharges on fees for services provided by or on behalf of the municipality; and
 - (b) if authorized by national legislation, other taxes, levies and duties.
- (2) In terms of section 75A of the Systems Act a municipality may:
 - (a) levy and recover fees, charges or tariffs in respect of any function or service of the municipality; and
 - (b) recover collection charges and interest on any outstanding amount.
- (3) In terms section 74(1) of the Systems Act, a municipal council must adopt and implement a tariff policy on the levying of fees for a municipal service provided by the municipality or by way of service delivery agreements and which complies with the provisions of the Systems Act, the Municipal Finance Management Act and any other applicable legislation.
- (4) In terms of section 75(1) of the Systems Act, a municipal council must adopt by-laws to give effect to the implementation and enforcement of its tariff policy.
- (5) In terms of section 75(2) of the Systems Act, by-laws adopted in terms of section 75(1) of the Systems Act may differentiate between different categories of users, debtors, service providers, services, service standards and geographical areas as long as such differentiation does not amount to unfair discrimination.
- (6) In furtherance of reusable energy, Council may determine tariffs pertinent to the purchase of surplus energy from consumers, subject to regulations issued and approved by the National Electricity Regulator of South Africa (NERSA).

2. DEFINITIONS

"Municipality" means the Stellenbosch Municipality (WC024).

"Tariff Policy" means the Tariff Policy adopted by the Municipality in terms of this By-Law.

"Constitution" refers to the Constitution of the Republic of South Africa, 1996.

"Council" means the Council of the Municipality.

"Credit Control and Debt Collection Policy" means the Municipality's Credit Control and Debt Collection Policy as stipulated by sections 96(b) and 97 of the Systems Act.

"Systems Act" means the Local Government: Municipal Systems Act, (Act 32 of 2000).

"Finance Management Act" means the Local Government: Municipal Finance Management Act, (Act 53 of 2003).

"Tariff" means fees, charges or any other tariffs levied by the Municipality in respect of any function or service provided, or surplus energy purchased, by the Municipality including rates levied by the Municipality in terms of the Local Government: Property Rates Act, (Act 6 of 2004).

"Tariff List" or **"Tariff Schedule"** means the list of the Tariffs applicable and in respect of any function or service provided, or surplus energy purchased, by the Municipality. This list, effective for a specific financial year, is approved by Council during the annual budget process.

3. OBJECTIVES

The objective of this By-Law is to give effect to the implementation of the Tariff Policy as contemplated in section 74(1) of the Systems Act, and of the Tariff Schedule for a given financial year as approved by Council during the Municipality's annual budget process.

4. ADOPTION AND IMPLEMENTATION OF TARIFF POLICY

- (1) The Municipality shall adopt and implement a Tariff Policy on the levying of fees for a municipal service provided by the Municipality or by way of service delivery agreements which complies with the provisions of the Systems Act, the Municipal Finance Management Act and any other applicable legislation.
- (2) The Municipality shall not be entitled to impose tariffs other than in terms of the valid Tariff Policy.

5. CONTENTS OF TARIFF POLICY

The Municipality's Tariff Policy shall, inter alia:

- (1) Apply to all the tariffs fees (as per the Tariff List) imposed by the Municipality pursuant to the adoption of the Municipality's annual budget.
- (2) Reflect the principles referred to in section 74(2) of the Systems Act and specify any further principles for the imposition of Tariffs which the Municipality may wish to adopt.
- (3) Specify the manner in which the principles referred to in paragraph 2 above are to be implemented in terms of the Tariff Policy.

- (4) Specify the basis of differentiation, if any, for tariff purposes between the different categories of users, debtors, service providers, services, service standards and geographical areas as long as such differentiation does not amount to unfair discrimination.
- (5) Include such further enforcement mechanism, if any, as the Municipality may wish to impose in addition to those contained in the Credit Control and Debt Collection By-Law.
- (6) Provide tariffs for the export of surplus energy from approved and certified consumers, within the jurisdiction of the Municipality, into the Municipality's distribution network.

6. ENFORCEMENT OF TARIFF POLICY

The Tariff Policy shall be enforced through the Credit Control and Debt Collection By-Law and any further enforcement mechanisms stipulated in the Municipality's Tariff By-Law.

7. REPEAL

The provisions of any by-laws relating to Tariffs by the Municipality are hereby repealed insofar as they relate to matters provided for in this By-Law.

8. INTERPRETATION

If there is a conflict of interpretation between the English version of this By-Law and a translated version, the English version prevails.

9. SHORT TITLE and EFFECTIVE DATE

This By-law is the Tariff By-Law of Stellenbosch Municipality and shall take effect on 01 July 2022.

7. SHORT TITLE	10

PREAMBLE

In accordance with Section 74 of the Local Government Municipal Systems Act, Act 32 of 2000, Stellenbosch Municipal Council must adopt and implement a tariff policy on the levying of tariffs for municipal services which complies with the provisions of the Municipal Systems Act and with any other applicable legislation.

Tariffs represent the charges levied by Council on consumers for the utilization of services provided by the Municipality and rates on properties. Tariffs will be calculated in various ways, dependent upon the nature of the service being provided.

In furtherance of reusable energy, Council may consider tariffs pertinent to the purchase of surplus energy from consumers.

1. OBJECTIVE

The objective of this Tariff Policy is to ensure the following:

- (a) Tariffs must conform to acceptable policy principles;
- (b) Municipal services must be sustainable;
- (c) Tariffs must comply with the applicable legislation; and
- (d) Tariffs should take indigent consumers into consideration.

2. LEGAL FRAMEWORK

The following legislation is applicable for the determination of tariffs for municipal services delivered or for the purchase of surplus energy:

The Constitution of the Republic of South Africa, 1996 (Act 108 of 1996)

Local Government: Municipal Finance Management Act, 2003 (Act 56 of 2003)

Local Government: Municipal Systems Act, 2000 (Act 32 of 2000)

Water Services Act, 1997 (Act 108 of 1997)

Electricity Regulation Act, 2006 (Act 4 of 2006)

Local Government: Municipal Property Rates Act, 2004 (Act 6 of 2004)

3. TARIFF PRINCIPLES

The following principles will apply in the Stellenbosch Municipal Area of jurisdiction (WC024):

- (a) Users of municipal services are treated equitably in the application of tariffs;
- (b) The amount individual users pay for services are generally in proportion to their use of that service;
- (c) Indigent households have access to basic services through:
 - (i) Special or lifeline tariffs for low levels of use or consumption of services or for basic levels of service; or
 - (ii) Any other direct or indirect method of subsidisation of tariffs for poor households.
- (d) Tariffs reflect the costs reasonably associated with rendering the service, including capital, operating, maintenance, administration, replacement costs and interest charges;

- (e) Tariffs are set at levels that facilitate the financial sustainability of the service, taking into account subsidisation from sources other than the service concerned. A service is financially sustainable when it is provided in a manner that would ensure its financing from internal and external sources is sufficient to cover the costs of the initial capital expenditure required, operating the service, maintaining, repairing, and replacing the physical assets used in its provision;
- (f) Provision is made in appropriate circumstances for a surcharge or a rebate on the tariff for a service;
- (g) Provision is made for the promotion of local economic development through special tariffs for categories of commercial and industrial users;
- (h) The economical, efficient, and effective use of resources, the recycling of waste and other appropriate environmental objectives are encouraged;
- (i) The extent of subsidisation of tariffs for poor households and other categories of users are fully disclosed; and
- (j) The safeguarding of the integrity of the electrical distribution network and the continued economic viability for the purchasing of surplus energy from consumers.

It is further stated that tariffs, rates, and the employment of resources, in general, take into account the Council's Integrated Development Plan (IDP) principles and goals.

4. CLASSIFICATION OF SERVICES

Traditionally, municipal services have been classified into five groups based on how they are financed. The five groups are as follows:

- (a) Trading services Water and Electricity Services

These services must generate a surplus which will be used to subsidize community services other than economical services.
- (b) Economical services Refuse Removal and Sewerage Services

These services' charges must cover the cost of providing the services, i.e. it must at least break even. In the event of the latter not being possible within a period, the shortfall will be financed from the Municipal Property Rates revenue.

- | | | |
|-----|------------------|---|
| (c) | Rates Services | The revenue from Municipal Property Rates is utilized for Rates related services. |
| (d) | Housing Services | <p>Housing Schemes</p> <p>These services are ring-fenced in the Housing Development Fund and the net operating balance is set off as a contribution to/from the Housing Development Fund.</p> |
| (e) | Sundry Services | <p>Various Services</p> <p>All Services not defined in paragraphs (a) to (d) above.</p> |

5. CALCULATION OF TARIFFS FOR MAJOR SERVICES

5.1 Water Tariffs

Although a fairly large proportion of the water needs is supplied from own sources, water is also purchased from external suppliers, such as the City of Cape Town. The increase in water tariffs is largely influenced by the changes in the Consumer Price Index (CPI), the purchase price of water and the need for financing bulk water infrastructure expansion.

Water is bought at a one-part tariff expressed in Rand per kilolitre. For this reason, it is found that water tariff structures for end-users follow the same trend. In order to manage consumption, an inclining block rate tariff structure is applied in the Stellenbosch Municipal area of jurisdiction.

The first block rate for domestic consumers represents the Lifeline volume in kilolitres (kl) per month (considered to be the lowest sustainable water volume per household), which is supplied at a rate targeted to be below cost. Losses incurred in this tariff category may be recovered by contributions from the higher tariff categories, conforming to the principle of cross-subsidisation.

Tariff structures for water supply are applied in the form of a sliding scale or a flat tariff in the area of jurisdiction of Stellenbosch Municipality. This is reflected in the Tariff Schedule approved by Council.

The specific sliding scale(s) linked to each consumer group, or the service charge types and the applicable tariffs, including any specific tariffs that would be applicable when Council adopts water restriction strategies, are reflected in the Water Tariff Schedule as approved by Council.

The following table illustrates the principals for tariff charges applied to various consumers or the specialised water service charge types for water consumption in the Stellenbosch Municipal Area:

(a) Domestic:

Includes residential erven, Sectional Title Units, as well as residential erven managed by legal entities, each being served by an individually metered water connection.

(b) Domestic Cluster:

Refers to a cluster (block of flats) served by a single water connection.

(c) MASO:

A MASO tariff for the affected parties will be applied.

(d) Bulk Users:

A sliding scale tariff will be applied on water consumption for irrigation of sports grounds of schools, irrigation of Council property by sports clubs, as well as irrigation of parks and other grounds or properties serviced by Council's Parks and Recreation Department.

(e) Business, Commercial and Industrial:

A single tariff for all business, commercial and industrial consumers will apply.

(f) All other consumers and Miscellaneous cases:

A single tariff for all other consumers and miscellaneous cases including schools, sport bodies, charity organizations and churches or any other user as determined by the relevant Director, may apply.

(g) Leakages:

Different tariffs may apply to Municipal, Domestic, Business, Commercial or Industrial consumers.

(h) Basic Charge:

A Basic (a fixed monthly) charge will be applied to each domestic consumer, a domestic cluster consumer and all other non-domestic consumers, irrespective whether a gated/non-gated development is supplied via a bulk meter.

The Basic charge will be applied to Indigent Households as per the Indigent Policy of the Municipality.

(i) Availability Fee:

An availability fee may be charged on properties not connected to the water network, should it be available. This fee aims to recoup capital and

maintenance costs of networks as well as certain fixed administrative costs in respect of such properties. The applicability of such fee shall be determined by the relevant directorate.

5.2 Electricity Tariffs

In addition to general cost factors, the following is taken into account when determining a tariff structure for electricity:

- (i) Electricity is primarily supplied by Eskom and distributed by the Municipality.
- (ii) Minimum standards for distribution are determined nationally and must be adhered to in order to conform to both safety and continuity of supply norms.
- (iii) Due to the fact that a large part of the operating expenditure consists of bulk electricity purchases, tariff structures and levels are very sensitive to any change in the cost of supply by Eskom.
- (iv) Electricity is supplied under a distribution license, granted by the National Electricity Regulator of South Africa (NERSA) for a specific area of jurisdiction. All tariff structures and tariffs must be approved by NERSA prior to application thereof by a distributor on an annual basis.

Electricity is distributed by Stellenbosch Municipality in the areas of Stellenbosch, Johannesdal, Pniel and Franschhoek.

Eskom distributes electricity in the areas of Jamestown, Raithby, Kylemore, Klapmuts and the rural areas. In these areas, the distribution is managed, operated, and controlled by the applicable service provider.

Export of surplus energy from an approved and certified consumer to the Municipality's distribution network shall be subject to special and specific agreements embracing in broad terms the operational and financial imperatives for a sustainable and economically viable alliance.

In order to manage consumption, inclining block rate tariff structures are applied in the Stellenbosch Municipal areas of distribution, or any part or area incorporated where due course was followed. In these areas, different tariff structures may be implemented for consumers using renewable energy for own use and/or where the export of surplus energy is approved under the proviso of specific conditions, limits on energy export and reimbursement of exported energy.

Additional fees may be levied on consumers for which maximum demand charges are in effect and who have exceeded specific limits.

The specific inclining block rate(s), any other charges linked to the tariff structure and the applicable tariffs are reflected in the Electricity Tariff Schedule as approved by Council.

The following table illustrates the principals for tariff charges applied to various consumers or the service charge types for electricity consumption or export in the Stellenbosch Municipal Area:

(a) Domestic Lifeline (PP):

Domestic Lifeline Tariffs will apply to prepaid Indigent consumers in order to promote the affordability of the service. A fixed monthly charge will not be applied to this category of consumers.

(b) Domestic Regular:

Domestic Regular tariffs will apply, in various service charge types, to other domestic consumers other than Indigent consumers on either conventional or prepaid metering systems. A fixed monthly charge may be applied to this category of consumers.

(c) Commercial Lifeline Low energy rate:

A Commercial Lifeline energy rate tariff will apply in respect of prepaid commercial low consumers. A fixed monthly charge will not be applied to this category of consumers.

(d) Commercial Low energy rate:

Commercial Low energy rate tariffs will apply, in various service charge types, in respect of conventional and prepaid commercial low consumers. A fixed monthly charge will be applied to this category of consumers.

(e) Commercial Regular energy rate:

Commercial Regular energy rate tariffs will apply, in various service charge types, in respect of conventional and prepaid commercial regular consumers. A fixed monthly charge is applied to this category of consumers.

(f) Agricultural energy rate:

Agricultural energy rate tariffs will apply, in various service charge types, in respect of agricultural use. A fixed monthly charge is applied to this category of consumers.

(g) Industrial energy rate:

Industrial energy rate tariffs as well as various types of energy demand tariffs will apply, in various service charge types, in respect of Industrial use. A fixed monthly charge is applied to this category of consumers.

(h) Municipal energy rate:

Municipal energy rate tariffs will apply, in various service charge types, for municipal consumption for street and traffic lights and for municipal buildings. A fixed monthly charge will not be applied to this category of consumers.

(i) Non-profit Organisations (NPO) energy rate:

Non-profit organisation's tariffs will apply, in various service charge types, to Non-profit Organisations in order to promote the affordability of the service for Non-profit Organisations. A monthly fixed charge will not be applied for this category of consumers.

(j) Sport Organisations energy rate:

Sport energy rate tariffs will apply, and a Maximum Demand Charge may apply on sports fields as per approved contracts being classified as either Low Consumers or High Consumers. A fixed monthly charge will not be applied to this category of consumers.

(k) Time-of-Use energy rate:

Different fixed monthly tariffs as well as various types of energy demand tariffs will apply during the low demand and the high demand tariff periods (also referred to as the summer and winter periods respectively) in respect of low and medium voltage consumers. For the purpose of these tariffs the low demand period shall be defined as being the summer period and the high demand period as the winter period.

(l) Availability fee:

An availability fee may be charged to properties not connected to the electricity network, where it is available. This fee aims to recoup capital and maintenance costs of networks as well as certain fixed administrative costs. The applicability of such fee shall be determined by the relevant directorate.

5.3 Refuse (Solid Waste) Removal Tariffs

The specific services rendered, any other charges linked to the service and the applicable tariffs are reflected in the Solid Waste Tariff Schedule as approved by Council.

(a) Residential properties:

Residential refuse (solid waste) will be removed once a week. Households are allowed 3 bags or one "Otto"-type container per week.

Refuse removal tariffs are based on a flat rate per household.

A specific tariff for Indigent consumers in respect of single residential properties will apply as per the approved Solid Waste Tariff Schedule.

(b) Business and industries:

Business and industry refuse (solid waste) are removed by means of “Otto”-type or bulk containers. Each container (size in volume) is accepted as a refuse unit at a specific tariff and number of removals per week.

(c) Availability Fee:

An availability fee may be charged to vacant properties, businesses, flats, and developments not permanently using the municipal collection services. The applicability of such fee shall be determined by the relevant directorate.

5.4 Sewerage Tariffs

Tariff structures for sewerage are applied uniformly in the area of jurisdiction of Stellenbosch Municipality.

The tariff structures for specific services rendered, any other charges linked to the service and the applicable tariffs are reflected in the Sewerage Tariff Schedule as approved by Council.

(a) Residential properties:

A tariff structure utilizing plot sizes is applied to allocate the sewerage costs to a specific property.

(b) Business and industries:

A tariff structure utilizing plot sizes, as well as floor areas per usage is applied to allocate the sewerage costs to a specific property.

The removal of industrial effluent is charged at a cost as per the applicable tariffs.

(c) Septic Tanks:

The clearance of septic tanks is charged per 5 000 litre or part thereof.

(d) Availability Fee:

An availability fee based upon a tariff structure utilizing plot sizes may apply to all vacant properties. The applicability of such fee shall be determined by the relevant directorate.

6. CALCULATION OF OTHER TARIFFS

6.1 Sundry Tariffs

(a) Tariff Structure:

- (i) The tariff structure as reflected in the Sundry Tariffs Tariff Schedule as annually approved by Council will be used to determine regulatory community and subsidized services.

(b) Method of calculation:

- (i) Existing tariffs will be revised annually, for application during the next financial year, by adjusting the tariff that applied during the current financial year by a percentage (suitable rounding will be applied) to recover increased costs or to compensate for any cost reductions where appropriate.
- (ii) New tariffs will be calculated based on the estimated actual cost where appropriate or to recover some costs depending on the type of community service.

(c) Building Clause references:

- (i) Obligations pertaining to Building Clauses as per the development agreements or contracts will be dealt with according to the contract obligations.

6.2 Rates Tariffs

The Stellenbosch Municipality's Rates Policy describes the process for imposing property rates for the various categories of owners and properties.

The tariff structures for the applicable categories and the applicable provisions for relief measures are reflected in the Property Rates Tariff Schedule and Rates Policy as approved by Council.

7. SHORT TITLE

This policy is the Tariff Policy of the Stellenbosch Municipality.

STELLENBOSCH MUNICIPALITY

RATES BY-LAW

Effective from 01 July 2023

**STELLENBOSCH MUNICIPALITY
RATES BY-LAW**

TABLE OF CONTENTS

	PAGE
1. PREAMBLE	1
2. DEFINITIONS	1
3. OBJECTS	2
4. ADOPTION AND IMPLEMENTATION OF RATES POLICY	2
5. CONTENTS OF RATES POLICY	2
6. ENFORCEMENT OF RATES POLICY	3
7. REPEAL	3
8. INTERPRETATION	3
9. SHORT TITLE and COMMENCEMENT	3

1. PREAMBLE

- (1) Section 229(1) of the Constitution authorizes a municipality to impose rates on property and surcharges on fees for services provided by or on behalf of the municipality.
- (2) Section 13 of the Systems Act read with Section 162 of the Constitution requires a municipality to promulgate municipal by-laws by publishing them in the gazette of the relevant province.
- (3) In terms of Section 3 of the Property Rates Act, a municipal council must adopt a policy consistent with the Property Rates Act on the levying of rates on rateable properties in the municipality.
- (4) In terms of Section 6(1) of the Property Rates Act, a municipality must adopt by-laws to give effect to the implementation of its rates policy.
- (5) In terms of Section 6(2) of the Property Rates Act, by-laws adopted in terms of Section 6(1) may differentiate between different categories of properties and different categories of owners of properties liable for the payment of rates.
- (6) To that effect the Council of Stellenbosch Municipality has enacted a Property Rates By-law, as follows:

2. DEFINITIONS

In this By-Law, any word or expression to which a meaning has been assigned in the Local Government: Municipal Property Rates Act, (Act 6 of 2004) shall bear the same meaning unless the context indicates otherwise.

"Municipality" means the Stellenbosch Municipality (WC024).

"Rates Policy" means the Municipality's Property Rates Policy adopted by the Council of the Municipality by a resolution for a specific financial year in terms of Section 3(1) of the Property Rates Act and in terms of this By-Law.

"Constitution" means the Constitution of the Republic of South Africa.

"Council" means the Council of the Municipality.

"Credit Control and Debt Collection Policy" means the Municipality's Credit Control and Debt Collection Policy as stipulated by sections 96(b) and 97 of the Systems Act.

"Systems Act" means the Local Government: Municipal Systems Act, (Act 32 of 2000).

"Property Rates Act" means the Local Government: Municipal Property Rates Act, (Act 6 of 2004) including the amendment Acts and Regulations pertaining to the same.

"Rates" means a municipal rate on property as envisaged in Section 229(1)(a) of the Constitution.

3. OBJECTS

The object of this By-Law is to give effect to the implementation of the Rates Policy as contemplated in Section 6 of the Property Rates Act.

4. ADOPTION AND IMPLEMENTATION OF RATES POLICY

- (1) The Council has adopted and implemented a Rates Policy as contemplated in terms of the provisions of Section 3(1) and consistent with the Property Rates Act on the levying of Rates on rateable properties within the jurisdiction of the Municipality.
- (2) The Rates Policy outlines the Municipality's rating practices; therefore, it is not necessary for this By-law to restate and repeat same.
- (3) The Rates Policy applicable to a financial year is hereby incorporated by reference in this By-law. All amendments to the Rates Policy as the Council may approve/adopt from time to time, shall be deemed to be likewise incorporated.
- (4) The Municipality shall not be entitled to levy Rates other than in terms of the Rates Policy for an applicable financial year and the annually promulgated resolution which reflects the cent amount in the Rand rate for each category of rateable property.
- (5) The Rates Policy is available at the Municipality's head office, satellite offices, libraries and website.

5. CONTENTS OF RATES POLICY

The Municipality's Rates Policy, inter alia:

- (1) Apply to all the Rates levied by the Municipality pursuant to the adoption of the Municipality's annual budget.
- (2) Comply with requirements for;
 - (a) the adoption and contents of a Rates Policy specified in Section 3 of the Property Rates Act.
 - (b) the differentiation of categories of properties and categories of owners of properties as provided for in Sections 6, 8 and 15 of the Property Rates Act.
 - (c) the process of community participation specified in Section 4 of the Property Rates Act.
 - (d) the annual review of a Rates Policy specified in terms of Section 5 of the Property Rates Act.
 - (e) the implementation of norms and provisions as directed by this By-law as approved by Council.

- (3) Specify principles, criteria, and implementation measures for categories of rateable properties in terms of Section 8 and consistent with the Property Rates Act for the levying of Rates which the Council may wish to adopt.
- (4) Specify principles, criteria, and implementation measures for the judicious granting of relief measures by means of Exclusions, Exemptions, Reductions and/or Rebates consistent with the applicable sections of the Property Rates Act which the Council may wish to adopt.
- (5) Include such further administrative, control and enforcement mechanisms if any that are consistent with the Property Rates Act and the Systems Act, as the Council may wish to impose in addition to those contained in the Credit Control and Debt Collection By-Law and its associated Policy.

6. ENFORCEMENT OF RATES POLICY

The Municipality's Rates Policy is enforced through the Municipality's Credit Control and Debt Collection By-Law and its associated Policy and any further enforcement mechanisms stipulated in the Property Rates Act and the Municipality's Rates By-Law.

7. REPEAL

The provisions of any By-laws relating to Property Rates by the Municipality are hereby repealed insofar as they relate to matters provided for in this By-Law.

8. INTERPRETATION

If there is a conflict of interpretation between the English version of this By-Law and a translated version, the English version prevails.

This By-Law must be read in conjunction with the Rates Policy.

9. SHORT TITLE and COMMENCEMENT

This By-Law is called the Stellenbosch Municipal Property Rates By-Law and shall take effect on 01 July 2022.

1. DEFINITIONS

1.1 In this policy unless the context indicates otherwise:

- 1.1.1 **“Accounting Officer”** means the Municipal Manager as referred to in section 60 of the Local Government: Municipal Finance Management Act, 56 of 2003 (“MFMA”);
- 1.1.2 **“Approved Budget”** means the Municipality’s annual budget approved by the Council in terms of section 24 of the MFMA and include an adjustment budget in terms of Section 28 of the MFMA;
- 1.1.3 **“Community”** means the residents within the Stellenbosch WCO24 area;
- 1.1.4 **“Constitution”** means the Constitution of the Republic of South Africa, 1996;
- 1.1.5 **“Director”** means a person appointed in terms of section 56 of the Systems Act who is directly accountable to the Municipal Manager;
- 1.1.6 **“Executive Mayor”** means the councillor elected as the Executive Mayor in terms of section 55 of the Local Government: Municipal Structures Act, 32 of 2000 (“the Structures Act”);
- 1.1.7 **“Chief Financial Officer”** or “CFO” means an official as envisaged in section 80(2)(a) of the Local Government: Municipal Finance Management Act, 56 of 2003 (“MFMA”);
- 1.1.8 **“Grant”** means a grant or allocation, as referred to in section 17(3)(j(ii) and 17(3)(j(iv) of the MFMA, made by the Municipality to any organisation or body referred to in section 67(1) and to be utilised to assist the Municipality in fulfilling its constitutional mandates including local tourism, municipal health services and such other municipal functions contemplated in Part B of Schedules 4 and 5 of the Constitution;
- 1.1.9 **“Grant Committee”** means the Committee established in terms of clause 7 of this policy;
- 1.1.10 **“official”** means an employee in the service of the Municipality;
- 1.1.11 **“organisation or body”** means those organisations or bodies outside any sphere of government making application for Grants in terms of this Policy, Which include associations, non-profit organisations or companies or trusts;
- 1.1.12 **“the Systems Act”** means the Local Government: Municipal Structures Act, 32 of 2000;
- 1.1.13 **“the Structures Act”** means the Local Government: Municipal Structures Act, 117 of 1998;
- 1.1.14 **“the MFMA”** means the Local Government: Municipal Finance Management Act, 56 of 2003;
- 1.1.15 **“the Municipality”** means the Stellenbosch Municipality and reference to Council has a similar meaning;
- 1.1.16 **“the Policy”** means the Financing of External Organisation/Bodies Performing Municipal Function Policy as set out in this document.

- 1.1.17 **"service delivery agreement"** or "MOA" means the agreement entered into between the Municipality and any organisation or body which received a Grant in terms of this Policy.

1. PURPOSE, AIMS AND OBJECTIVES

- 1.1 The purpose of this Policy is to provide a framework for financial assistance by Stellenbosch Municipality ("the Municipality") to external organisations / bodies performing local government functions to the extent as set out in section 155(6)(a) and (7) of the Constitution as listed in Part B of Schedule 4 and 5.
- 1.2 The purpose of this Policy is to ensure the efficient performance of the municipal function entrusted to that external organisation/body in a manner which gives effect to the goals and objectives of the Municipality's Integrated Development Plan ("IDP") by establishing partnerships between the municipality and the organisations and bodies performing the functions on behalf of the Municipality.
- 1.3 The Municipality will favour grants for achievement of outcomes aligned to the IDP. The objective of the funding of external bodied performing municipal functions is primarily to ensure the achievement of agreed outcomes to improve the health and well-being of the citizens and not to cover administrative costs and salaries.

2. LEGAL FRAMEWORK

- 2.1 In terms of section 156 of the Constitution, the Municipality has executive authority in respect of and the right to administer –
- 2.1.1 the local government matters listed in Part B of Schedule 4 and 5; and
- 2.1.2 any other matters assigned to it by national and provincial legislation.
- 2.2 Section 16(2) of the MFMA provides that the Mayor of the Municipality must table the annual budget at a council meeting at least 90 days before the start of the budget year. Section 17(3)(j)(ii) and 17(3)(j)(iv) provides that when an annual budget is tabled in terms of section 16(2) it must include particulars of any proposed allocation or grants by the municipality to any municipal entities and other external mechanism assisting the municipality in the exercise of its functions or power and any organisation or bodies referred to in section 67(1).
- 2.3 Immediately after the tabling of the annual budget the accounting officer must make public the annual budget and invite the local community to submit representations in connection with the budget before the budget is approved by Council in terms of section 24 of the MFMA.
- 2.4 Section 67 of the MFMA provides that the Municipality implement and sustain proper and effective controls and procedures when transferring funds of the Municipality to an organisation or body outside any sphere of government.
- 2.5 Section 67(1) provides that the accounting officer must be satisfied that the organisation or body has the capacity and agreed to comply with any agreement with the Municipality including all reporting, financial management and auditing requirements as may be stipulated in the agreement, to report at least monthly to the accounting officer on actual expenditure against such transfer and to submit audited financial statements for its financial year to the

accounting officer promptly. The organization must implement effective, efficient and transparent financial management and internal control systems to guard against fraud, theft and financial mismanagement and has the obligation to prove in terms of previous similar transfers that it has complied with all the requirements. The accounting officer must through contractual and other appropriate mechanism enforce compliance with this policy.

- 2.6 All transfer of funds in terms of this Policy shall comply with the Constitution, the Systems Act, the Structures Act, the MFMA and any other applicable legislation, regulations and policies that may govern the transfer of municipal funds and that are not in contradiction to the aforementioned legislation.

3. PUBLIC ADVERTISEMENT AND APPLICATION PROCEDURE

- 3.1 Applications for funding of external bodies performing municipal functions shall be considered where organisations or bodies have responded to advertisements published in the local newspapers distributed in the Stellenbosch Municipal Area calling upon organisations or bodies to submit proposals in the prescribed form, as set out 4.3 below, to perform a specific municipal function for a period up to 3 years. Such advertisements may be published quarterly by the accounting officer.
- 3.2 Advertisements should clearly specify the categories for which requests are called, the closing date for applications, who they should be addressed to, and where and how to obtain the relevant documentation pertaining to such applications, including the prescribed forms. Only applications made on the prescribed form (see Annexure A) may be considered.
- 3.3 The organisation/body must submit a detailed business plan with its application, confirming the envisaged outcomes their past achievements in the field and their commitment to performing that particular municipal function effectively and in line with Council's goals as set out in the IDP. Applications must be accompanied by a covering letter on the organisation/body letterhead, signed by the head of the organisation/body and must include the following information:
- 3.3.1 the organisation/body's legal name and a brief description of the organisation/body's business;
 - 3.3.2 the organisation/body's registration number, if any;
 - 3.3.3 the date of establishment, details of the organisation/body's members, founding documents, including constitution and certificates of incorporation;
 - 3.3.4 the contact name of the person signing the application, full street address, telephone number and email address of the organisation;
 - 3.3.5 if funding is required for a specific project, a brief description of the project and what it aims to achieve, as well as the detailed budget for and the duration of the project together with a written confirmation by the relevant municipal Director that the project is part of the IDP projects or programs;
 - 3.3.6 references, independent of the organisation/body and the head of the organisation/body;
 - 3.3.7 most recent audited financial statements not older than 24 months;
 - 3.3.8 a summary of its past achievements; and

- 3.3.9 a declaration by the head of the organisation/body to the satisfaction of the Municipal Manager that the organisation/body implements effective, efficient and transparent financial management and internal control mechanism to guard against fraud, theft and financial mismanagement and has in the past complied with requirements for similar transfers of funds.
- 3.4 Individuals will not be considered or appointed as an organisation/body to provide a municipal function as contemplated in this Policy.
- 3.5 Organisations or bodies whose directors, managers, major shareholders or trustees are in service of the state will not be considered or appointed as an organisation/body to provide a municipal function as contemplated in this Policy.
- 3.6 The appointment of a particular organisation/body to perform a municipal function for a period of three (3) years does not guarantee financial support by the Municipality, which will be determined annually when the municipal budget is approved by the Municipal Council.
- 3.7 No late applications received, in response to an advertisement as contemplated in clause 3.1 and 3.2 above will be considered and processed by the Grant Committee.

4. OBLIGATIONS OF THE ORGANISATION/BODY

- 4.1 The head of the organisation/body must acknowledge in writing to the Municipal Manager that the money allocated was received in its bank account and that the money will be utilised in accordance with the completed and signed MOA, the submitted application and this Policy within 30 days of transfer of funds / payment, failing which no future grants may be considered.
- 4.2 The organisation / body shall submit monthly reports on actual expenditure against such transfer, the ward within which activities are conducted as well as the number of people benefiting from the activity to the Municipal Manager.
- 4.3 The relevant municipal Director must co-sign each monthly report to confirm monthly management and oversight of the activities.

5. RIGHTS OF THE MUNICIPALITY, CONTROL AND MONITORING

- 5.1 The relevant municipal Director shall be entitled, at any reasonable time from time to time, to verify and inspect the existence and activities of the organisation/body. The relevant municipal Director or his delegate has the right to physically visit the premises where the organisation/body or funded project is based, to peruse the budgets and any progress report related to the project.
- 5.2 The relevant municipal Director shall manage the service delivery agreement entered into between the Municipality and the organisation / body by inter alia receiving and considering monthly reports, inspecting financial records including audited financial statement.
- 5.3 If the organisation / body fails to comply with the terms and conditions of its service delivery agreement with the Municipality, the accounting officer may in consultation with the relevant municipal Director terminate the agreement with reasonable notice or grant the organization / body an opportunity to rectify the

- breach within an agreed period of not more than 90 days, failing which the accounting officer may terminate the agreement with reasonable notice.
- 5.4 The Municipality has the right not to give a Grant to any or all organisations/bodies applying for such Grants or to give proportional or partial grants to give. Having been awarded a Grant previously does not give an organisation/body the right to receive a Grant again.
 - 5.5 The relevant municipal Director shall ensure that those organisations or bodies, who have received Grants in terms of this Policy:-
 - 5.5.1 comply with all the provisions of the completed and signed MOA;
 - 5.5.2 comply with all reporting, financial management and auditing requirements as stipulated in the MOA;
 - 5.5.3 report at least monthly to the Municipality on actual expenditure against such transfer;
 - 5.5.4 promptly, or no longer than 4 months after the end of their financial year, submit their audited financial statements; and
 - 5.5.5 utilise the grant funding strictly in accordance with the approved business plan and approved budget.
 - 5.6 The requirements in paragraphs 5.5.1 to 5.5.4 above shall not apply to organisations where the transfer does not exceed R200 000,00 (two hundred thousand rand), provided the Accounting Officer takes all reasonable steps to ensure that the targeted beneficiaries, as identified by the organisation or body in its application, receive the benefit of such grants and it certifies that compliance by that organisation or body with 5.5.1 to 5.5.4 above is uneconomical or unreasonable.

6. GRANT COMMITTEE

- 6.1 A Grant Committee consisting of at least the Municipal Manager, the Chief Financial Officer and one director of the Municipality, as well as any other official whom the Municipal Manager may include, shall evaluate all applications received in response to the local advertisement.
- 6.2 The Grant Committee will have the power to make recommendations to Council for final appointments and financial allocations.
- 6.3 The Grant Committee must submit a report on its decisions to the Council for final approval.
- 6.4 The Grant Committee shall, in terms of the Systems Act, establish a programme for community consultation and information dissemination regarding the appointment of any organisation/body and the availability of the service delivery agreement for perusal will be communicated to the local community through the media prior to any service delivery agreement being entered into between the Municipality and the organisation or body.
- 6.5 No payments in terms of the allocation will be made to any organisation / body until a service delivery agreement in the form approved by the accounting officer has been signed by the respective parties.
- 6.6 No payment can be made to an organisation/body until it has submitted its audited financial statements as contemplated in this Policy and a statement certified by its auditor that it has fully complied with its agreement with the Municipality.
- 6.7 Payments may be allocated as a once off amount or in tranches as determined

by the CFO in consultation with the relevant municipal Director.

7. Funding acknowledgement of the Municipality

Successful applicants will be required to acknowledge the Municipality as the provider of Grant funding in their funding record as well as any public record in respect of Grants received in order to confirm that these transfers of funds are also part of the Municipality's endeavours to meet its strategic objectives and to assist it in carrying out its constitutional powers and functions.

8. COMMENCEMENT

This Policy called the **FINANCING OF EXTERNAL BODIES PERFORMING MUNICIPAL FUNCTIONS POLICY** takes effect on the date on which it is adopted by the Council.

1. INTRODUCTION

1.1 Legal Context

In terms of S151 of the Constitution of the Republic of South Africa, 108 of 1996, a municipality has the right to govern on its own initiative, the local government affairs of its community, subject to national and provincial legislation.

S156 of the Constitution grants the municipalities the right to administer the local government matters listed in Schedule 5B, which include municipal roads. A municipality may make by-laws for the effective administration of municipal roads.

This Policy will be converted into municipal by-laws to give it legal effect.

1.2 Need for Co-ordination

The collective value of services infrastructure contained within the Public Road Reserve and the road itself amounts to a considerable value. This infrastructure needs to be maintained, periodically rehabilitated and replaced from time to time. Such activities can result in considerable delays, inconvenience, danger and additional costs to the road users and Municipality itself if not well planned and coordinated. The potential damages that can be suffered by either party include:

- Damage to roads and other Services;
- Damage to vehicles;
- Injury to vehicle occupants or pedestrians;
- Reduction of the useful life of the road, footway or other Services; and
- Time and social costs caused by delays.

It is apparent that careful control and co-ordination of all Work in the public road reserves is a prerequisite for effective service delivery. This responsibility resides with The Stellenbosch Municipality and its Service Departments to continuously improve their capability to provide such services.

Being the custodian of all municipal Road Reserves, the Infrastructure Services Directorate – Roads, Transportation and Stormwater Sub-Unit within The Stellenbosch Municipality initiated a programme to establish the necessary co-ordination activities and policies regarding Work in the public road reserves. This document is the first deliverable of the programme. It attempts to provide a basic framework for ensuring proper co-ordination and co-operation between the various departments as well as external parties who conduct Work in the public road reserves.

The document was prepared with the aim to minimise the effect of all Work in the public road reserves to the benefit of all concerned and in particular the ratepayers, road users (motorists and pedestrians), and eventually the coordinating body within The Stellenbosch Municipality. Included in this document are the procedures to apply for, process and approve Wayleaves, procedures to follow for undertaking and completion of Work, as well as a reference to specifications according to which the Work must be done.

This initiative can only succeed if all internal and external parties that work in the public road reserves constructively cooperate by working according to this Code and by providing feedback on how the system can be improved.

1.3 Establishing a Service Co-ordinator

The Infrastructure Services Directorate has identified that this co-ordination function will need to:

- Improve the interdepartmental communication on annual Work plans and the execution of such Work;
- Coordinate and regulate all Work carried out within the public road reserves;
- Minimise the danger and inconvenience to the public;
- Minimise the damage to existing Services;
- Reduce the number of legal claims; and,
- Promote the use of technology, such as Geographical Information Systems (GIS) to locate Services.

In order to effectively implement and sustain such a function a Service Co-ordinator and a Quality Control Engineer (collectively the Asset Management & Wayleaves section) are being established within The Stellenbosch Municipality. The four essential tasks that must be accomplished in the process of establishing the Service Coordinator and the Quality Control Engineer are:

- Establishing the necessary Council Policy in this regard (covered by this document);
- Establishing effective and simplistic procedures (covered by this document);
- Establishing effective Municipal Bylaws (future activity); and,
- Establishing an effective Organisational Structure (future activity).
- Proper record-keeping of each approval and work done on-site (future activity).

The process to develop the Policy included the following activities:

- Identifying and documenting the Stellenbosch Municipality requirements in terms of the Policy and procedures;
- Identifying representatives for both internal and external stakeholders to participate in the policy formulation process;
- Researching existing documentation and other information sources as provided by the Stellenbosch Municipality and representatives;
- Developing of a draft Policy and Procedures;
- Facilitating workshops on the document; and
- Finalising documentation and getting approval from the Stellenbosch Municipality Council.

1.4 Document Structure

This document is organised into three sections. The following is a brief description of each section:

Section 1 – Introduction: This section aims to illustrate the need for coordination and responsibility of the custodian of the public road reserves to coordinate. It continues by explaining the development approach that was followed.

Section 2 – Definitions: This section is a summary of definitions of terms used throughout the document.

Section 3 – Policy: The Wayleave Policy as adopted by Council is explained under a collection of topics, including the Basic Wayleave Procedure. This structure was used in order to simplify the use of the document.

1.5 Supporting Documents

Three supporting documents, which documents are incorporated and form part of this Policy.

- The General Conditions relating to Wayleave Applications. These general conditions may be amended by the Service Co-ordinator depending on the nature of the Work to be carried out.
- Wayleave Work Permit/Approval form
- Services Verification Meeting Certificate
- Wayleave Guarantee Checklist
- Wayleave Tariffs
- Certificate of Completion

2. DEFINITIONS

The following words and phrases have the meaning assigned to them in this Code unless the context otherwise indicates:

"Authorised Agent" means an agent who is authorised by the Service Co-ordinator to perform specified Services;

"Backfilling" refers to the replacement of the structural layers in the trench or excavation and includes the base, sub-base, selected subgrade and subgrade, but excludes the surfacing (see Reinstatement);

"Certificate of Completion" means the document issued by the Professional Engineer appointed by the Wayleave Holder as proof that Work in the public road reserves has been completed according to the specifications of this document;

"Code" means the Policy for Work in the Public Road Reserve (PRR) as approved by the Council and as agreed to by the Parties including any appendices attached thereto;

"Council" means the Municipal Council of The Stellenbosch Municipality established by Provincial Notice No. 352 of 2000 dated 19 September 2000, as amended, or its successor in title, and any committee or person to which or whom an instruction has been given or any power, function or duty has been delegated or sub-delegated in terms of, or as contemplated in, section 59 of the Local Government: Municipal Systems Act, 2000 (Act No. 32 of 2000);

"Distance of Excavation" means the shortest horizontal distance between the electrical equipment or electrical structure nearest to the excavation. "Electric structure" means any power line tower, electric pole, switch box, miniature substation fence or building or any other structure used in the distribution of electricity;

"Emergency Work" is defined as any Work that is required to prevent or end a dangerous situation, to prevent or end an unplanned interruption in the supply of a Service, or to avoid any substantial losses. It is important to note that a lack of proper planning of Work to be carried out will not justify Emergency Work and such activities will be stopped by the Service Coordinator;

"Lane Rentals" mean the rentals that are paid to the Service Coordinator by a Service Agency, excluding a Municipal Department, whose Work in the Public Road Reserve (PRR) results in time delay costs (TDC) being incurred by the users of the Public Road Reserve (PRR);

"Municipal Department" means any Department that belongs to or is controlled by the Council;

"Professional Engineer" means a person registered as a Professional Engineer/Technologist in terms of the Engineering Professions Act, 2000, appointed and funded by the Wayleave Holder to ensure compliance with the Conditions of Approval of the Wayleave. Appointment of such a person is required to control the Works wherever any excavation is involved.

"Public Road Reserve" means the full width of a public road, and includes the verge and the roadway;

"Reinstatement" refers to replacing the bituminous surfacing, paving blocks or grass, as applicable, in the case of roads, footways and verges;

"Routine Maintenance Work" is defined as all types of Work involved in maintaining the services in the public road reserves and does not require excavation, traffic control or reinstatement activities;

"Security Deposit" means the refundable deposit required to be paid to the Municipality in respect of each Wayleave approval issued, either a fixed amount per the tariff register (for smaller projects), a percentage of the costs of the works to be undertaken or in an approved and valid form of bank guarantee;

"Service" means any system for supplying a public need that a Service Agency has on/in the Public Road Reserve (PRR);

"Service Agency" means any Municipal Department, Public Agency or utility that has a Service in the Public Road Reserve (PRR);

"Service Coordinator" means the person/official/institutional body established by the Council with the sole responsibility to carry out the administrative functions of receiving and processing applications for wayleaves, obtaining comments from the various internal and external service agencies, and (following the decision by the Strategic Management Committee) conveying this decision in writing to the Applicant, namely to approve with conditions, or reject with reasons, any application, and to provide record-keeping of each application and installation;

"Service-Sharing Installation" means installations of a service which are designed to utilise existing ducting or pipelines without the need for excavations, except minimal excavation/construction at junctions or terminals;

"Quality Control Engineer" means the person/official/institutional body identified by the Stellenbosch Municipality to coordinate and regulate any work undertaken in those sections of the public road reserves that fall within the Municipal area of the Council;

"Wayleave" generally means the formal approval to carry out Work in the Public Road Reserve in specific positions and during a specific period.

"Wayleave Applicant" means the institution or Service Agency who currently owns or would own the future Service, who applies for a Wayleave;

"Wayleave Holder" means the person, institution or Service Agency who is in possession of a Wayleave Approval Document/Work Permit approved by the Service Co-ordinator;

"Wayleave Work Approval Document/ Work Permit" means the signed document/s issued by the Service Coordinator, detailing the Work which has been approved and the period during which the Work shall be carried out, and includes approved drawings/plans and Conditions of Approval;

"Work" in the Public Road Reserve means any activity, including the activities provided for in Section 1 of this Code, carried out within the Public Road Reserve. It includes any project related activities, irrespective of the size of the project.

3. POLICY

3.1 Overview

3.1.1 The coordination of Work in the public road reserves deals with two aspects, namely:

3.1.1.1 Planning the time schedule for future Work in the public road reserves so that the Work can be executed in a logical sequence, e.g. avoiding the placement of a Service in a road that was surfaced during the previous month. This could involve new construction, rehabilitation or Routine Maintenance Work; and

3.1.1.2 The application for and approval of a Wayleave for the execution of any Work in the public road reserves.

3.1.2 The co-ordination of Work schedules described under 3.1.1.1 above may result in specific co-ordination issues where the Service Co-ordinator, in consultation with the Quality Control Engineer, has to ensure that an acceptable solution is defined by the Service Agencies involved.

3.1.3 The role of the Quality Control Engineer is to facilitate coordination between the various Service Agencies. Each Service Agency will have its own project leaders and Professional Engineers. They are responsible for the implementation of their projects together with compliance with the Council's policies, procedures and standards.

3.1.4 The approval of a Wayleave means that:

3.1.4.1 The Wayleave Holder has permission to:

3.1.4.1.1 place a new Service in the Public Road Reserve;

3.1.4.1.2 do excavations in the Public Road Reserve;

3.1.4.1.3 do vehicular and pedestrian control in the Public Road Reserve; and,

3.1.4.1.4 do Reinstatement Work on the road and pavement surfaces where excavations have been made.

3.1.4.2 The Council intends to protect the new Service in its position in the public road reserves against damage by other parties while working in the public road reserves. However, it cannot be held responsible for any damages incurred.

3.1.4.3 The cost associated with relocating the Service when a road is widened or rebuilt remains with the Service Agency that owns the Service.

3.1.4.4 The cost to relocate a Service owned by the Council must be included in the project cost.

3.2 Planning Work Time Schedules

3.2.1 The necessary procedure that must be followed for planning the time schedule of future Work is as follows:

3.2.1.1 Within a designated time period from the approval of this Policy and publication of the by-laws each external Service Agency shall provide to the Council digital records for capture into the Council's GIS, of all of its services within the jurisdiction of Stellenbosch Municipality. This will form the basis for all future planning and updating of new installations.

3.2.1.2 By 30 March of each year, the various internal and external Service Agencies

shall submit Work Plans, for the next 1-year period to the Service Co-ordinator.

3.2.1.3 These Work Plans shall show:

- a) The nature of the Work, e.g. the placement of new water main, or the replacement of a water/ sewer line.
- b) The location of the Work in terms of street blocks and the side of the public road reserves where the Work will be executed, with due regard for the Councils typical cross-section for the public road reserves.
- c) The extent of the Work, i.e. the start and end positions.
- d) The planned timing of the Work, i.e. from month/year to month/year.
- e) Reference to the Work in the latest approved Integrated Development Plan of Council if applicable.

3.2.1.4 The Service Coordinator, in consultation with the Quality Control Engineer, shall review the Work plans in order to determine possible conflicts in the planned Work.

3.2.1.5 Before the end of June each year the Service Coordinator, in consultation with the Quality Control Engineer, shall schedule a Service co-ordination meeting with the internal and external Service Agencies where the identified conflicts will be discussed and resolved.

3.2.1.6 A second co-ordination meeting may be held in July/August to resolve any changes that may have resulted out of the budget approval process.

3.3 Basic Wayleave Procedure

3.3.1 The basic procedure that is required for Work in the public road reserves is as follows:

3.3.1.1 Permission to work in the public road reserves must be obtained from the Service Coordinator through a formal Wayleave application in the form of a letter describing the Work to be done with details and design drawings/plans.

3.3.1.2 The Wayleave Applicant must firstly obtain Service plans, indicating the positions of existing Services from the Service Agencies identified by the Service Coordinator, where available. The Service plans must indicate the positions and type of Services in the area where Work will be undertaken. It may be necessary for the Applicant to carry out certain preliminary Work in order to determine precise positions and dimensions of any existing services which are not clear from the Service Plans which have been consulted.

3.3.1.3 The Service Coordinator shall arrange a Services Verification Meeting on behalf of the Wayleave Applicant to meet up with the necessary Service Agencies. This will help facilitate the process mentioned in 3.3.1.2. The Service Coordinator shall only arrange a Services Verification Meeting once the the Wayleave Applicant is in good standing with the Stellenbosch Municipality.

3.3.1.4 The Wayleave Applicant shall ensure that the control section on the Wayleave application form is signed by each Service Agency, indicating that in principle there is no objection to the issuing of the Wayleave, alternatively where there is an objection then detailed reasons and motivations for such objection must be given. This approval will be subject to technical compliance with the standards of the Service Agencies involved

as well as compliance with the standards of The Stellenbosch Municipality and the Work planned by the Council within the area under consideration.

- 3.3.1.5 Once the control section has been completed by all the Service Agencies, the application must be made for the issuing of a Wayleave Work Permit in accordance with the procedure set out in this document. No Work in the public road reserves may commence before a Wayleave has been approved and a Wayleave Work Permit issued for that Work
- 3.3.1.6 The Service Coordinator, in consultation with the Quality Control Engineer, will review the Wayleave application and prepare a report on the application, with recommendations.
- 3.3.1.7 The Service Co-ordinator shall submit the report to the Manager: Asset Management and Systems detailing the application, the various Service Agencies consulted, their comments received, confirmation of payment of the processing fees and the relevant security deposit, and confirmation of the appointment by the Applicant of a Professional Engineer or Technologist if any excavation is involved in the proposed Works, and after consultation with the Quality Control Engineer, the proposed decision, with conditions to be imposed upon approval, or the reasons for refusal.
- 3.3.1.8 Once approved, the decision to approve with conditions, or to refuse with reasons, shall be forwarded by the Service Co-ordinator to the Applicant. In the case of approval, the documents forwarded to the Applicant will include two copies of each of the letter indicating approval of the application and the conditions under which the approval is given, the signed approved plans, Signed Site Services Verification Certificate and the signed Wayleave Work Permit form. One copy of the letter of approval with Conditions imposed by Council together with the approved plans for a specific project must be signed as accepted by the Applicant and returned for filing.
- 3.3.1.9 The security deposit must be deposited in a Municipal suspense account for the purpose and will be used to correct unsatisfactory Work or reinstatements if need be.
- 3.3.1.10 The Work must be carried out according to this Policy, any other applicable laws and policies, and the procedures and specifications as referred to in the Conditions of Approval.
- 3.3.1.11 The Wayleave Work Permit and the Service plans of the Service Agencies must be kept on-site while the Work is in progress.
- 3.3.1.12 Additional copies of the Work Permit and approval documents may be obtained from the Service Coordinator if the Wayleave is applicable to more than one Work area or Work team.
- 3.3.1.13 Work will be stopped if either the Wayleave Work Permit or the Service plans are not available during inspections on-site or if any of the Wayleave Conditions are not being met. Work will be stopped until the required documents are available on site. Failure to comply with the Wayleave Conditions may impact other applications being made by the same Service Provider.
- 3.3.1.14 On completion of the Work, all trenches and excavations in the public road reserves must be Backfilled and Reinstated according to the specifications of the Quality Control Engineer, referred to by this document.
- 3.3.1.15 On completion of the Work and permanent Reinstatement, a Certificate of Completion signed by the Wayleave Holder's Professional Engineer must be sent to the Service Coordinator by the Wayleave Holder.
- 3.3.1.16 The Quality Control Engineer must review the Completion Certificate as well as carry out an inspection of the site after receiving the Completion

Certificate, and sign the certificate confirming that all conditions have been met.

- 3.3.1.17 The applicable guarantee period will be stated in the letter of approval/conditions (usually 12 months).
 - 3.3.1.18 Work performed under an approved Wayleave can only be performed in normal working hours (Mondays – Thursdays 08:00-17:00 and Fridays 08:00-15h00). Working after hours, on public holidays or on the weekend is not permitted. Any work performed outside of business hours will attract a penalty as per the Municipal Tariffs. This penalty will apply before any new applications will be accepted from the Wayleave Applicant or non-Wayleave Holder.
 - 3.3.1.19 Where work in the road reserve has been performed without an approved wayleave, the penalty as per the Municipal Tariffs will apply. This penalty will apply before any new applications will be accepted from the Wayleave Applicant or non-Wayleave Holder.
- 3.3.2 This Code applies to all persons that carry out Work in the public road reserves in the Municipal area of the Council, such as internal Municipal Departments, external organisations, Service Agencies and contractors. It does not apply to work in national or provincial Road Reserves within the judicial area of the Council.

3.4 Work in the Public Road Reserve

- 3.4.1 Work in the public road reserves includes the digging of trenches, tunnelling, erection of signboards, erection of structures, street shaping, planting of trees in the public road reserves and any other Work that may affect motorists, cyclists, pedestrians, the road, footways, kerbing, traffic signs, traffic signals, street lighting, underground or overhead Services or any other structure or Service that is contained within the public road reserves.
- 3.4.2 The types of Work that require approval from the relevant Service Agencies before a Wayleave is granted are deemed to be a provision of a new Service and will be conducted according to the procedures in Section 3.3 above. In general, such Work refers to the positioning of a new Service, excavation in the public road reserves, traffic control and Reinstatement of the roadway and pavements. Examples include inter alia:
 - 3.4.2.1 Work relating to the installation or maintenance of underground or overhead Services by Council's Service Agencies like Roads and Transportation, Water and Sanitation, Electricity, Land and Environmental Planning and City Planning.
 - 3.4.2.2 Work relating to the installation or maintenance of underground or overhead Services done by non-Council Service Agencies such as telecommunication, data cables, electricity, gas, oil and regional water supply.
 - 3.4.2.3 The erection of structures that require approved building plans in terms of the National Building Regulations and Building Standards Act 103 of 1977;
 - 3.4.2.4 The erection of advertising signs and structures that require approval in terms of the relevant by-laws;
 - 3.4.2.5 Works in the public road reserves, such as the construction of new roads, road widening or accesses to developments, paving, bollards, garden walls, etc. undertaken by developers or private property owners;
 - 3.4.2.6 The installation of new connection points for municipal Services, such as water, sewers, electricity and stormwater drainage from developments.

- 3.4.3 The types of Work for which prior approval from Service Agencies cannot be obtained due to the nature of the Work is deemed Emergency Work and must be undertaken according to the procedures set out in Section 3.17.
- 3.4.4 The types of Work that do not include any construction Work are deemed Routine.
- 3.4.5 Maintenance Work and must be executed according to the procedures set out in S
- 3.4.6 An application shall also be made in respect of Works classified as Service-Sharing Installations which involve minimal or no excavation. Only if there is absolutely no excavation involved does it become unnecessary to appoint a Professional Engineer to be in control of the Works.

3.5 Wayleave

- 3.5.1 All Work in the public road reserves is controlled by a Wayleave. A Wayleave is simply permission to work at a specified time in a specified area in the public road reserves according to approved conditions.
- 3.5.2 A Wayleave Application may be submitted for a small or large project that covers Work in any part of the Municipal Area, provided that the position and expected start/end dates of all Work in the public road reserves are adequately described under the description of the Work to be done.
- 3.5.3 General conditions are stated on the Wayleave form and may include, but are not restricted to, the following:
 - 3.5.3.1 Description of Work to be done;
 - 3.5.3.2 Timeframe within which the Work must be done;
 - 3.5.3.3 Location of Work to be done. (Provision can be made for big projects with multiple locations. The scope of big projects must be limited to manageable portions from the Wayleave perspective. The Service Coordinator/Quality Control Engineer will be able to direct project managers in this regard;
- 3.5.4 Additionally, there may be Specific conditions relating to the Wayleave which will be stated on or referred to on the Wayleave. Such conditions may include:
 - 3.5.4.1 Specific working conditions required in terms of the Occupational Health and Safety Act (Act no 85 of 1993);
 - 3.5.4.2 Methods of Work execution in protected roads and precincts; and,
 - 3.5.4.3 Reinstatement requirements.
 - 3.5.4.4 A Wayleave Work Permit must be obtained before any approved Work may be done in the public road reserves.
- 3.5.5 To obtain a Wayleave, a Wayleave application form must be submitted, together with:
 - 3.5.5.1 A traffic control plan showing how vehicular and pedestrian traffic will be accommodated during the execution of the Works in the public road reserves.
 - 3.5.5.2 Two (2) copies of the design drawing/plans showing details of the proposed Work. An additional legible digital copy is also required.
 - 3.5.5.3 Subject to 3.5.7 below, proof of payment of the required processing fee and the applicable deposit or submission of proof of sureties already held by the Council over the Work.
 - 3.5.5.4 Proof of appointment of Professional Engineer or Technologist appointed to

monitor the construction and Reinstatement and to provide a Completion Certificate once completed.

3.5.5.5 Proof of appropriate public liability insurance and indemnity insurance.

3.5.6 Details required on the design drawing referred to in 3.5.5.2 are:

3.5.6.1 A clear depiction of the proposed Work.

3.5.6.2 Indication where Services are to be installed and the depth of the Service below the surface level of the relevant portion of the public road reserves.

3.5.6.3 Distance of the Service from the public road reserves boundary (i.e. the property boundary).

3.5.6.4 Position and extent of all structures, including underground structures such as manholes, chambers and junction boxes.

3.5.6.5 The location of all other Services in the public road reserves in relation to the proposed services to be installed. Services are located by obtaining information from the Service Agencies within the Council and by doing cross-cuts where required. The use of cross cuts, as explained in paragraph 3.14, is strongly recommended.

3.5.6.6 A Wayleave Work Permit will only be issued once all the requirements have been complied with and will be subject to any conditions specified in Section 3.3 and issued in terms of this Policy.

3.5.7 When the Wayleave Applicant is an internal Council Department, then the Wayleave Applicant shall provide a written assurance that they will be responsible for obtaining the deposit or proof of sureties (see 3.5.5.3) and the appointment, either internally or externally, of a suitably qualified engineer to supervise the project (see 3.5.5.4) that are required to protect the Council's interests.

3.5.8 The application for a Wayleave must be submitted timeously to ensure that the Wayleave can be issued before the Work is programmed to start. **WORK BEING CARRIED OUT IN THE PUBLIC ROAD RESERVE WITHOUT A WAYLEAVE MUST BE REPORTED TO THE SERVICE CO-ORDINATOR AND WILL BE STOPPED BY THE COUNCIL OFFICIAL ON SITE.** A copy of the Wayleave Work Permit and other documents as defined must therefore always be on site when Work is being done in the public road reserves.

3.5.9 The Service Coordinator will strive to limit the duration of the application review process to thirty (30) working days.

3.5.10 The Wayleave Holder accepts full responsibility for all costs (Refer to Section 3.10) associated with and resulting from the Work carried out in the public road reserves.

3.5.11 Only Work described in the Wayleave Work Permit may be executed. If the conditions on-site necessitate a deviation from the planned Work, the Service Coordinator must be informed before any work is done. These deviations may be in relation to the placement of the Service or the timing of the Works. The Service Coordinator may inform the Wayleave Holder of additional approvals that must be obtained from the Service Agencies affected by the deviation as well as further requirements in terms of drawings and specifications. Work will only be allowed to continue once the Service Co-ordinator is satisfied that all the additional requirements have been met.

3.5.12 The Wayleave Holder must complete the Work within the time specified on the Wayleave Work Permit or the approved time extension.

3.5.13 A Wayleave Holder who fails to complete the Work within the specified time window will be given a two (2) day notice period to either complete the Work or apply for a

time extension.

- 3.5.14 If upon expiry of the notice period referred to in 3.5.12 or 3.5.13 the Wayleave Holder is still in default, the Work will be stopped, and the Wayleave Holder will be given a further specific timeframe by the Quality Control Engineer to make the site safe. If the Wayleave Holder fails to do so the site may be made safe by the Quality Control Engineer, at the expense of the Wayleave Holder.

3.6 Existing Services and Planned Services

- 3.6.1 The Wayleave Applicant must submit Service drawings indicating the position of all Services in the area of Work with the Wayleave application form. This information is obtained from the relevant Service Agencies.
- 3.6.2 Service Agencies may require additional precautions relating to Work in the vicinity of their Services and must specify these in writing to the Wayleave Applicant.
- 3.6.3 As part of the Undertaking/Indemnity on the Wayleave application form, the Applicant has to confirm that the necessary information has been obtained from the Service Agencies and undertakes to adhere to the additional conditions laid down by the various Service Agencies. The control section on the Wayleave application form, signed by the Service Agencies, will serve as proof that the Service Agencies approved that a Wayleave Work Permit may be issued.
- 3.6.4 The Wayleave Applicant will verify with all Service Agencies whether future Work is planned for the area indicated in the Wayleave application. Such planned Work may dictate whether a Wayleave is approved and the conditions under which a Wayleave is approved. The planning horizon will depend on the planned life of the new Service as well as the Council's five year Work plan.

3.7 Road Categories

- 3.7.1 All roads are classified into one of the functional categories described below. The functional category of a road determines the Backfilling and Reinstatement specifications applicable to that road.
- 3.7.2 The following definitions apply for the road categories:

Category	Road Type	Administration
1	National Roads Primary – (inter) provincial Urban Freeway/Motorways	SANRAL PGWC PGWC
2	Primary – (inter) provincial Major (inter) urban arterials	PGWC PGWC
3	(Inter) district connectors Minor (intra) urban arterials	PGWC PGWC
4	Major and minor collectors Inter neighbourhood distributors Intra neighbourhood distributors	PGWC Service Coordinator (STM) Service Coordinator (STM)
5	Residential streets	Service Coordinator (STM)

- 3.7.3 All roads will be categorised into one of the above by the Council. For a specific road,

this information can be obtained from the Quality Control Engineer.

- 3.7.4 Work carried out on arterials, major collectors and central business district roads will be restricted to outside the following periods, namely from 6:30 to 09:00 and 15:30 to 18:00, to ensure the free flow of traffic during peak hours. These times apply seven days a week.

3.8 Restricted Roads

- 3.8.1 Over and above the road categories defined in Section 3.7 of this Code, certain roads are further classified as restricted roads (no-dig roads).
- 3.8.2 Restricted roads are roads across which no digging of trenches is permitted. A road is protected if it has been designated a restricted road by the Council. Roads are designated as restricted when they are of particular strategic importance (Categories 1 to 4 in the new road asset classification) or if they pose special engineering difficulties.
- 3.8.3 Any road that has been newly constructed, overlaid or resurfaced will be restricted for a seven (7) year period. A list of roads that falls in this category is available from the Quality Control Engineer.
- 3.8.4 If a road is restricted, it will be indicated as such on the Wayleave Work Approval/Permit.
- 3.8.5 Restricted roads may only be crossed using trenchless methods. If trenchless methods for some reason cannot be used, special permission to excavate must be obtained from the Quality Control Engineer. These road crossings will only be allowed after hours (Monday to Fridays 6 pm – 6 am, Saturday 2 pm to Monday at 6 pm).
- 3.8.6 For the purpose of planning Work done by Service Agencies, categories 4 and 5 may be regarded as unrestricted unless they have been newly constructed, overlaid or resurfaced and fall within the protected period and provided that the first 20m from an intersection with any other road category is considered to be restricted.

3.9 Protected Precincts

- 3.9.1 Works in protected precincts are subject to special trenching methods and care to ensure minimal damage to specialised and expensive material and furniture. The Quality Control Engineer will inform the Wayleave Applicant of the required methods and might request that a third-party contractor must be used to carry out the Work.
- 3.9.2 A list of protected precincts is available from the Senior Manager: Roads and Transport.

3.10 Costs

3.10.1 Administration & Supervision Fees

- 3.10.1.1 The administration and supervision fees are the tariff amounts that are payable by the Applicant upon submission of a Wayleave application form. These fee amounts will be determined by the Council on the recommendation of the Quality Control Engineer from time to time, and included in the Municipal Tariffs.
- 3.10.1.2 The administration and supervision fees covers the Council's costs for Work done by the Service Co-ordinator to process the Wayleave application.

3.10.2 Security Deposit

- 3.10.2.1 A refundable security deposit will be charged for each Wayleave being issued. Security deposits will not be charged for Work done by Internal Service Agencies (Council Departments) themselves.
- 3.10.2.2 The deposit amount will be based on a percentage of the value of Work to be carried out or the greatest value based on the on-site service verification, as per the Council's tariffs.
- 3.10.2.3 The Council will have the right to use the deposit to cover costs incurred by the Service Coordinator in relation to the Wayleave under consideration. This does not detract from the Municipality's legal remedies in enforcing this Policy or by-laws.
- 3.10.2.4 The responsibility remains with the Wayleave Holder to ensure that any of its contractors or agents engaged in the implementation of the Work is in possession of valid and sufficient public liability insurance. It is an express condition of this approval that the Wayleave Holder indemnifies and holds the Council harmless against any claims, demands or losses incurred as a result of any work performed in terms of the Application Form and under any Wayleave approval.

3.10.3 Reinstatement Cost

- 3.10.3.1 The total cost of the permanent Reinstatement on the site of the installation in terms of the Wayleave Approval/Work Permit will be borne by the Wayleave Holder plus 10% Administration Fee.

3.10.4 Other Costs

- 3.10.4.1 Other costs can result from any of the following:
 - 3.10.4.1.1 Damages to existing Services;
 - 3.10.4.1.2 Relocation of existing Services;
 - 3.10.4.1.3 Testing of Services and Backfills;
 - 3.10.4.1.4 Costs claimed by the Council's Municipal Traffic from external Service Agencies for loss in revenue due to disestablished parking bays;
 - 3.10.4.1.5 Rentals (Lane rentals during construction and perpetual rental after completion of the Works); (See Tariff)
 - 3.10.4.1.6 Services rendered by the Service Coordinator in completing Work or altering Work to conform to Wayleave specifications; and
 - 3.10.4.1.7 Claims that may result from the Work. In this case, it is expressly recorded that the Wayleave Holder shall be responsible for any shortfalls in the Security deposit and insurances in respect of any claim arising from the execution of the Works;
 - 3.10.4.1.8 Any penalties in terms of the Municipal tariffs (See Tariff).
 - 3.10.4.1.9 Loss of income to the Council as a result of disestablished parking bays (See Tariff).
- 3.10.4.2 All such costs will be borne by the Wayleave Holder. An additional 10%

Wayleave Administration Fee will also apply.

- 3.10.4.3 A party wishing to dispute the costs charged to him as a result of any of the above reasons will do so at their own cost.

3.11 Traffic Control

- 3.11.1 It is the responsibility of the Wayleave Holder working in the public road reserves to ensure that all laws regarding traffic, safety, traffic signs and barricading are complied with while executing Work.
- 3.11.2 The Wayleave Holder working in the public road reserves shall, therefore, take all necessary measures and provide all necessary facilities to ensure an adequately safe and easy passage for traffic and pedestrians through areas in which Work is in progress, or is incomplete.
- 3.11.3 The Service Coordinator can request that a traffic management plan be submitted Manager: Transport, Roads and Stormwater for approval. Any such Approved Traffic Management Plan shall be kept available on site.
- 3.11.4 Traffic signs and barricading shall be done according to the latest edition of the Southern African Development Community Roads Traffic Signs Manual.
- 3.11.5 The Wayleave Holder must contact the relevant traffic authority to ensure that all requirements have been met for the particular location where the Work is being done and whether points-men will be required.
- 3.11.6 The importance of adequate traffic signs and barricading is emphasised. These measures are intended to ensure the maximum safety for motorists, pedestrians and workers and also the minimum disruption of vehicles and pedestrians. Worksites must be properly barricaded and signed irrespective of how long the Work will last. The safety precautions must be maintained for the full time that risks exist in the public road reserves due to Work being performed in the public road reserves.

3.12 Road Closure

- 3.12.1 The granting of a Wayleave does not give the Wayleave Holder the authority to close the road completely to traffic. Methods of construction and programmes of Work must, therefore, be determined on the basis that no road, or portion of the road, may be completely closed to traffic for any considerable period.
- 3.12.2 In exceptional circumstances, permission may be granted for the closure of a road or portion of the road to traffic. The Wayleave Holder must apply to the Council separately for approval two weeks prior to the road being closed. A road closure will be approved for a specific period only, i.e. from and to a specific time on a specific date and is only valid for that specific period. If the Work is not carried out in that period, an application for a new road closure will have to be made.

3.13 Lane Rental

- 3.13.1 Lane rental refers to the rental of space in the public road reserves for the storage of construction materials, site offices or the closure of lanes for a period exceeding two weeks.
- 3.13.2 Lane rental is managed by the Council's Roads and Transportation Division.
- 3.13.3 The rates for Lane Rentals are to be set by the Council and will be included in the

tariffs.

3.14 Preliminary Works and Cross-Cuts

- 3.14.1 In respect of all preliminary Work requested by the Service Agencies and cross-cuts, the specifications from the relevant Service Agencies and in this document must be adhered to before Work will be allowed to start. Such requests include inter alia that:
 - 3.14.1.1 The Municipal Traffic Department must always be notified in writing seven (7) working days in advance by the Wayleave Holder.
 - 3.14.1.2 The Service Coordinator and the contact person of each Service Agency involved must be informed 48 hours prior to commencing with the Work by the Wayleave Holder.
 - 3.14.1.3 Alternatively, notice periods specified by the Service Agencies must be adhered to.
 - 3.14.1.4 The Municipal Traffic Department must be requested to remove parking meter heads where Work necessitates the temporary disestablishment of parking bays with the due agreement for compensation in loss of revenue where applicable.
- 3.14.2 The Applicant may be required to do cross cuts in the area where Work is planned. The purpose of cross cuts is to establish and confirm the position of Services in areas where the information on Services are unclear.
- 3.14.3 A cross-cut is done by excavating a trench that runs from the verge of the road up to the property boundary, perpendicular to the normal direction of Services. Excavation must always be done by hand.
- 3.14.4 The minimum depth of the cross-cut trench is 1 meter below the lowest point of the public road reserves.
- 3.14.5 A separate Wayleave Work Permit approval needs to be obtained for prior preliminary or cross-cut Work to be undertaken.
- 3.14.6 A non refundable Roadway Open Trench Fee will apply as well as outlined in the Municipal Tariffs.

3.15 Excavations

The Wayleave Holder shall be responsible for ensuring that:

- 3.15.1 The area that is excavated must always be kept to a minimum. The width of the trench must be uniform in length and depth; in other words, the sides must be parallel and vertical. The top of the trench must be cut with a saw to ensure smooth, uniform edges.
- 3.15.2 All excavations must comply with the statutory requirements for health and safety. The Wayleave Holder must pay specific attention to:
 - 3.15.2.1 Excavations must be executed according to the Occupational Health and Safety Act referred to in Section 5.
 - 3.15.2.2 Excavations deeper than 1.5 m must be shored or V-cut according to the Occupational Health and Safety Act.
 - 3.15.2.3 Excavations deeper than 1.5 m must be registered with the Department of Labour prior to commencement of the Work. The registration includes the

scope of the Work, depth of the trench and the construction method (shoring or V-cut method according to the Occupational Health and Safety Act).

- 3.15.3 The minimum depth that any Service may be placed under a road is 800 mm measured from the level of the surfacing of the road to the top of the Service. The minimum depth at any other place in the public road reserves, e.g. on a verge, is also 800 mm measured from the level of the surfacing of the road and not from natural ground level. Services not subject to being laid at a specific grade such as water pipes and cables should not be placed at depths in excess of the 800 mm as this could interfere with future Services that has to be laid at a specific grade, such as sewers and stormwater pipes.
- 3.15.4 All excavated material and equipment must be placed and demarcated in such a way as to cause the minimum disruption to vehicles and pedestrians.
- 3.15.5 The view of motorists must at all times be kept clear of any obstructions such as excavated material, road signs or hoardings.
- 3.15.6 Safe passage must be kept open for pedestrians at all times.
- 3.15.7 Excavation areas must be clearly demarcated with warning signs that allow ample time for motorists and pedestrians to alter their routes.
- 3.15.8 The Wayleave Holder is held responsible for any damage to existing Services. Services, indicated on the drawings or on-site by representatives from the relevant Service Agencies, must be opened by careful hand excavating. If the Services cannot be found, the relevant organisation must be contacted again for further instructions. Under no circumstances may a Wayleave Holder excavate with mechanical equipment before known Services have been found and marked. When found, Services must be marked and protected or supported as required by the owner. If Services need to be relocated, instructions from the owner must be followed carefully. The Wayleave Holder will be responsible for all relocation costs. If any Service is damaged as a result of the Work, the relevant Service Agency and the Service Coordinator must be contacted immediately.
- 3.15.9 Under no circumstances will the Council be held liable for any incorrect information provided by any external service agency or for any damages, losses and claims resulting from such incorrect information.
- 3.15.10 Adequate preventative measures must be taken to ensure that no water (e.g. due to rain) flows into the open trenches since this will result in the weakening of the structural layers of the road. Any water that is present in the trenches must be pumped out before Backfilling. Water must be pumped into the stormwater system and not into sewer manholes. Any material that has become wet must be removed from the bottom of the trench before Backfilling.
- 3.15.11 The Wayleave Holder must prevent foreign materials from entering the drains and ensure that silting does not occur either from pumping operations or as a result of rain. If any silting or other contamination does occur, the Wayleave Holder must clean the drains or request the Service Coordinator to do it at the cost of the Wayleave Holder.
- 3.15.12 All re-usable materials such as concrete blocks, slabs, kerbs, gutters, channels and stormwater inlets must be removed with care and re-used if possible. Any surplus material must be returned to the Roads and Transportation stores. The address will be available at the Service Coordinator.
- 3.15.13 If any street furniture (e.g. street names, traffic signs, bus shelters, etc.) have to be

removed, arrangements must be made with the relevant authority for the removal, storage and re-erection. The cost specified by the relevant authority will be for the Wayleave Holders account.

- 3.15.14 Where excavations are made through entrances to properties, access must be maintained by using steel plates, planks or other temporary bridges of sufficient strength that are adequately secured against movement. The occupants of the properties must be kept informed at all times of how their accesses will be affected.
- 3.15.15 The cleaning up of the construction site and the Reinstated to its previous condition is considered part of the Work and must be completed within 14 days after Reinstatement of the trench has been done. If the Wayleave Holder fails to do so, action will be taken by the Council as indicated in Sections 3.5.12 – 3.5.14.
- 3.15.16 Where a roadway is crossed, a non refundable Roadway Open Trench Fee will apply as well as outlined in the Municipal Tariffs.
- 3.15.17 Where a road crossing is planned and executed the Wayleave Holder shall provide three 110mm dai sleeves and one 160mm dai sleeve.
- 3.15.18 Road crossing to be clearly mark and painted in yellow on sidewalk.
- 3.15.19 Backfilling of road crossings: excavated material CANNOT be used to backfill road crossing trenches. The Wayleave Approval will specify the acceptable backfilling material. All excavated material must be removed from site before backfilling to avoid reuse.

3.16 Trenchless Methods

- 3.16.1 If trenchless methods are used, disruption of traffic flow and pedestrian movements can be reduced considerably or totally eliminated. However, it is crucial that the Wayleave Holder using such methods must have all the necessary equipment and expertise to complete the Work successfully. The trenchless method can be used for all road categories but shall be used for all roads classified as "Restricted" (Refer to Sections 3.7 & 3.8).
- 3.16.1 The position of existing Services must be located accurately. If any Services are damaged, the Wayleave Holder will be responsible for all costs.
- 3.16.2 The depth to the top of any tunnel that is drilled for the installation of new Services must be at least 800 mm measured from the lowest level of the road surfacing.
- 3.16.3 Where a directional drilling is planned and executed the Wayleave Holder shall provide and additional sleeve for future municipal use.
- 3.16.4 Direction drilling to be clearly mark and painted in yellow on sidewalk.

3.17 Emergency Work

- 3.17.1 Emergency Work is defined as any Work that is required to prevent or end a dangerous situation, to prevent or end an unplanned interruption in the supply of a Service, or to avoid any substantial losses. It is important to note that a lack of proper planning of Work to be carried out will not justify Emergency Work, and such activities will be stopped by the Service Co-ordinator.
- 3.17.2 A categorised list of Emergency Work will be maintained by the Service Coordinator. It will serve as a guideline for Service Agencies as well as the Service Co-ordinator in determining whether Work is an Emergency.

- 3.17.3 The Service Coordinator will provide an emergency number for the use of Service Agencies that requires information on the position of Services in the area where Emergency Work is to be carried out.
- 3.17.4 The Service Coordinator must be notified in writing within one working day from commencing with Emergency Work. The Emergency notification certificate must be used for this purpose. If the Service Co-ordinator is not notified within 24 hours from the first working day, the Work will be reinstated by the Service Coordinator, and the cost thereof will be invoiced against the Service Agency. The Emergency notification document can be obtained from the Service Co-ordinator.
- 3.17.5 The emergency notification must always be certified by an Authorised Agent of the Service Agency as an emergency situation that requires their immediate attention.

- 3.17.6 Emergency Work must be done in accordance with all procedures as set out in paragraph 3.15 above and specifications applicable to the type of Work as set out in the Municipality's specifications.
- 3.17.7 Backfilling must be done immediately, and full Reinstatement of the area must be done as soon as possible in accordance with the provisions of paragraph 3.19 below.
- 3.17.8 The responsibility remains with the Service Agency to ensure that their drawing information is updated according to the alterations made during the Emergency Work.

3.18 Routine Maintenance Work

- 3.18.1 Routine Maintenance Work is defined as all types of Work involved with maintaining the Services in the public road reserves and does not require excavation, traffic control or Reinstatement of the public road reserves as part of the Work.
- 3.18.2 A categorised list of Routine Maintenance Work will be maintained by the Service Coordinator. It will serve as a guideline for Service Agencies as well as the Service Coordinator in determining whether Work is Routine Maintenance Work.
- 3.18.3 Such Work can include inter alia:
 - 3.18.3.1 Any Work that relates to maintaining the vegetation in the road reserve through cutting planting, removing or relocating of plants.
 - 3.18.3.2 The placement of advertising material on or within structures pre-erected for that purpose.
 - 3.18.3.3 Temporary diversion of traffic for public events, i.e. sport, mass action, parades.

3.19 Backfilling and Reinstatement

- 3.19.1 Any trenching activity disturbs the structural integrity of a road or footway. Backfilling and Reinstatement must, therefore, be done in such a way as to ensure that the reinstated trench and its immediate surroundings do not fail structurally, thus resulting in road user discomfort and increased costs.
- 3.19.2 Backfilling refers to the replacement of the structural layers in the trench or excavation and includes the base, sub-base, selected subgrade and subgrade, but exclude the surfacing.
- 3.19.3 Reinstatement refers to replacing the bituminous surfacing or paving blocks in the case of roads, or the paving blocks, paving slabs, bituminous surfacing or grass in the case of footways and verges.
- 3.19.4 Backfilling must in all cases be done by the Wayleave Holder in accordance with the Council's specifications. The Service Agency is responsible for the maintenance of the site in a safe condition until the final Reinstatement has been done.
- 3.19.5 Permanent Reinstatement must be done by all external Service Agencies within five (5) working days. Reinstatement of the public road reserves will be done by the Council's Roads, Transportation and Stormwater Sub-Unit only for internal Council Service Agencies, upon receipt of a notification from the respective Municipal Department that the Work has been completed.

- 3.19.6 The Wayleave Holder must obtain prior written approval from the Council's Roads, Transportation and Stormwater Sub-Unit for the project specification to be used for backfilling public road reserves. The proposed specification shall be submitted to the Council's Roads, Transportation and Stormwater Sub-Unit, who shall provide written comments on the specification, or an alternative specification, within seven working days after the receipt of the request.
- 3.19.7 Permanent Backfilling and Reinstatement done by the Wayleave Holder will be subject to a guarantee period of one year based on the performance specifications described in the specifications document.
- 3.19.8 If the Reinstatement done by the Wayleave Holder fails during the one year guarantee period, the Wayleave Holder will be required to rectify the situation within 14 days of notification. If the Wayleave Holder fails to rectify it, then the Quality Control Engineer will carry out the permanent Reinstatement at the applicable rates defined by the Council and will deduct the costs from the security deposit of the Wayleave Holder.
- 3.19.9 Temporary Reinstatement must be done where the Wayleave Holder leaves the site with the view of returning to complete the Work. The Wayleave Holder must maintain this temporary Reinstatement.
- 3.19.10 The Wayleave Holder may not leave the site for more than fourteen days without permanently reinstating the site.
- 3.19.11 If a Wayleave Holder who leaves the site unattended for more than the period specified in 3.19.10, a penalty fee will be charged. The amount will be determined by the Council.

3.20 Certificate of Completion

- 3.20.1 On completion of the Work, the Professional Engineer appointed by the Wayleave Holder must provide the Completion Certificate to the Service Coordinator within two working days. The Quality Control Engineer will then set up a site meeting with the Wayleave Holder to carry out an inspection and will sign off the Certificate of Completion if all requirements have been met. The 12-month guarantee period for Reinstatements by the Wayleave Holder then commences.
- 3.20.2 Completion of the Work means that all Work has been completed, the Reinstatement has been done by the Wayleave Holder and that all materials, equipment and rubble have been removed and the site is completely cleared and cleaned. Furthermore, it requires that all applicable documentation and as-built drawings as specified on the Wayleave form have been handed to the Service Coordinator for recording.
- 3.20.3 If Work involves more than one street link (street block), then a Completion Notice must be submitted after completion of each phase of the Work.

3.21 Policy Enforcement

- 3.21.1 Council reserves its right to exercise its discretion in the implementation and enforcement of this Policy.
- 3.21.2 Notwithstanding any penalty or remedy expressly provided for in this Policy; the Council reserves the right to exercise any other legal remedy it may have in enforcing this Policy.

3.22 Exemption, Appeal and Revoking

- 3.22.1 The Accounting Officer may, upon written motivation by a Wayleave Applicant or Wayleave Holder or the Wayleave Service Co-ordinating Department, and after having considered any comment and advice on such motivation by other interested parties, authorise a deviation from this Policy or revoking of an approved wayleave. Such deviation or revoking shall be subject to such conditions as the Accounting Officer may stipulate in writing.
- 3.22.2 The Accounting Officer may authorise an amendment to any conditions imposed by the Council in respect of a Wayleave Approval, provided that an application for such amendment shall be referred to all interested and affected parties for comment, which comments shall be duly considered by the Accounting Officer.
- 3.22.3 Any person affected by or having an interest in the administration of this Policy shall have a right of appeal as determined in terms of S62 of the Local Government Municipal Systems Act in respect of any decision taken by the Council.

Introduction

This budget circular provides guidance to municipalities with their compilation of the 2023/24 Medium Term Revenue and Expenditure Framework (MTREF). It is linked to the Municipal Budget and Reporting Regulations (MBRR) and the Municipal Standard Chart of Accounts (mSCOA), and strives to support municipalities' budget preparation processes so that the minimum requirements are achieved.

Among the objectives of this budget circular is to demonstrate how municipalities should undertake annual budget preparation in accordance with the budget and financial management reform agenda by focussing on key "game changers". These game-changers include ensuring that municipal budgets are funded, revenue management is optimised, assets are managed efficiently, supply chain management processes are adhered to, mSCOA is implemented correctly and that audit findings are addressed.

Municipalities are reminded to refer to the annual budget circulars of the previous years for guidance in areas of the budget preparation that is not covered in this circular.

1. The South African economy and inflation targets

The National Treasury forecasts real economic growth of 1.9 per cent in 2022, compared with 2.1 per cent projected in the 2022 Budget Review, in response to global and domestic shocks. Growth is projected to average 1.6 per cent from 2023 to 2025. Implementing structural reforms, especially in the energy sector, remains crucial to improve the economy's productive capacity and competitiveness.

The recovery in economic activity that began in 2021 was driven by a strong rebound in global economic activity, high commodity prices and easing COVID-19 restrictions. The scarring impact of the pandemic on employment and investment decisions will likely weigh on the recovery over the medium term. Investment remains well below pre-pandemic levels.

The economy grew by 1.4 per cent in the first half of 2022 compared with the first half of 2021. Real GDP grew more than expected in the first quarter of 2022, with output returning to pre-pandemic levels. However, a deteriorating global environment, flooding in KwaZulu-Natal and the Eastern Cape, industrial action in the electricity and mining sectors, and prolonged and intense power cuts resulted in a broad-based contraction across most sectors during the second quarter. The third quarter was marked by frequent and prolonged power cuts, which significantly disrupted economic activity.

The following macro-economic forecasts must be considered when preparing the 2023/24 MTREF municipal budgets.

Table 1: Macroeconomic performance and projections, 2021 - 2026

Fiscal year	2021/22	2022/23	2023/24	2024/25	2025/26
	Actual	Estimate	Forecast		
CPI Inflation	5.2%	6.8%	4.7%	4.6%	4.6%

Source: Medium Term Budget Policy Statement 2022.

Note: the fiscal year referred to is the national fiscal year (April to March) which is more closely aligned to the municipal fiscal year (July to June) than the calendar year inflation.

It is noted that variations in regional specifics are possible, however, any variation of assumptions must be explicitly set out and well explained in the budget narratives, in the absence of which the Treasuries will refer the budget back to council for alignment to the macroeconomic performance projections.

2. Key focus areas for the 2023/24 budget process

2.1 Local government conditional grants allocations

Over the 2023 MTEF period, conditional grant allocations to municipalities will grow below inflation. This is due to a higher 2022/23 baseline (R3.8 billion) added to local government conditional grants in the 2022 Division of Revenue Amendment Act. Over the next three years, total local government resources, including the equitable share and indirect conditional grants increase at an annual average rate of 6 per cent.

The local government equitable share increases at an annual average rate of 7.8 per cent and municipal conditional grants increase by 3.6 per cent over the 2023 MTEF period. The local government equitable share formula has been updated to account for projected household growth, inflation and estimated increases in bulk water and electricity costs over the 2023 MTEF period.

The annual Division of Revenue Bill will be published in February 2023 after the Minister of Finance's budget speech. The Bill will specify grant allocations and municipalities must reconcile their budgets to the numbers published herein.

Municipalities are advised to use the indicative numbers presented in the 2022 Division of Revenue Act to compile their 2023/24 MTREF. In terms of the outer year allocations (2025/26 financial year), it is proposed that municipalities conservatively limit funding allocations to the indicative numbers as presented in the 2022 Division of Revenue Act for 2022/23. The DoRA is available at:

<http://www.treasury.gov.za/documents/national%20budget/2022/default.aspx>

2.2 Re-enforcing the 2023 Division of Revenue Bill, (DoRB) to facilitate improved intergovernmental relations

Towards enforcing a system of good intergovernmental relations as envisaged in the Chapter 3 of the Constitution and subsequent related legislation, the National Treasury would like to remind municipalities of Section 31 of DoRA that articulates the facilitation of personal liability for unnecessary litigation. Going forward, a municipality may therefore only institute litigation against any organ of state, state-owned enterprise, public-and/ or municipal entity after exhausting all dispute resolution mechanisms required and/ or available to the municipality in terms of existing intergovernmental relations processes, policy and/ or any related contract with the municipality, including in terms of the Municipal Finance Management Act, 2003, the Intergovernmental Relations Framework Act, 2005, and/ or the Electricity Regulation Act, 2006 (dispute processes administered by NERSA).

The 2023 DoRB will facilitate the personal liability of and refund of any expenditure related to such litigation to the national revenue fund (NRF) by any person responsible for the institution of litigation by a municipality without having exhausted all the available dispute resolution mechanisms. This will be done through the equitable share off-setting processes. Municipalities, parallel to instituting any litigation against any organ of state, must report such litigation to the Auditor-General, the National Treasury and to the relevant provincial treasury. The report must provide the details of all the dispute resolution processes that were attempted, supported by information explaining the failure of these attempts.

Division of Revenue Amendment Bill, 2022 (DoRAB)

Disaster response funding

Conversion of disaster response grants – To allow for adequate response to the April 2022 floods, funding was shifted between the disaster relief grants in August 2022. R145 million

was shifted from the Provincial Disaster Response Grant to the Municipal Disaster Response Grant and R120 million was shifted from the Municipal Emergency Housing Grant to the Provincial Emergency Housing Grant.

Additional funding for disaster response grants – In response to disasters that have occurred, most of the disaster funding for 2022/23 had been depleted by the time of the tabling of the DoRAB. To enable for response should a disaster(s) occur in the remaining months of the current financial year, R248 million is added to the Municipal Disaster Response Grant to enable immediate response by municipalities.

Additional funding for disaster reconstruction and rehabilitation¹ – For the reconstruction and rehabilitation of municipal infrastructure damaged by flash floods in the Western Cape (Overberg District Municipality, Cape Winelands District Municipality and Garden Route District Municipality) in December 2021 and the April 2022 floods in the Eastern Cape (Winnie Madikizela-Mandela Local Municipality) and KwaZulu-Natal (eThekweni Metropolitan Municipality, uMhlathuze Local Municipality, uThukela District Municipality, uMgungundlovu District Municipality and iLembe District Municipality), R3.3 billion is added to the Municipal Disaster Recovery Grant.

Purchasing of land for relocation of flood victims – R92 million is added to the Informal Settlements Upgrading Partnership Grant: Municipalities for eThekweni Metropolitan Municipality for the purchase of land identified for the relocation of displaced flood victims.

Changes to local government allocations

Roll-over of funds in the Integrated National Electrification Programme (municipal) Grant – R1 million is rolled over in the Integrated National Electrification Programme (municipal) Grant to fund 50 electrification connections in Swellendam in Dikgatlong Local Municipality.

Roll-over of funds in the indirect Regional Bulk Infrastructure Grant – R15 million is rolled over in the indirect Regional Bulk Infrastructure Grant to fund operational payments for the Vaal River pollution remediation project in Emfuleni Local Municipality.

Reprioritisation in the Neighbourhood Development Partnership Grant – R100 million of the Neighbourhood Development Partnership Grant is shifted from Schedule 5, Part B (direct) to Schedule 6, Part B (indirect) to fund project preparation, planning and implementation for municipalities that are having administrative and financial challenges that are affecting project implementation. These funds will be used for projects they were allocated for in the direct component. Affected municipalities are Mogale City Local Municipality, KwaDukuza Local Municipality and Emfuleni Local Municipality.

Changes to gazetted frameworks and allocations

Municipal Disaster Response Grant – The grant framework for the Municipal Disaster Response Grant is amended to allow for spending to respond to the disasters that occurred in December 2021 and April 2022.

Informal Settlements Upgrading Partnership Grant: Municipalities – The grant framework for the Informal Settlements Upgrading Partnership Grant is amended to ring-fence funds for

¹ There was an oversight in the allocations to Western Cape and KwaZulu-Natal, wherein the allocations or parts thereof allocated to the district municipalities in the DoRAB ought to have been allocated to the respective local municipalities in these districts. This is explained in detail in the section "Correction of errors in the Municipal Disaster Recovery Grant framework and allocations to municipalities" below.

the purchase of identified land for the relocation of flood victims who were previously residing in informal settlements that were washed away by April 2022 floods in eThekweni Metropolitan Municipality.

Municipal annexures – Changes to previously gazetted municipal allocations include a change of the name of a municipality. The name of Engcobo Local Municipality in the Eastern Cape is updated to Dr A.B. Xuma Local Municipality as per the Gazette published in terms of section 12 of the Local Government: Municipal Structures Act, on 30 May 2022.

Correction of errors in the Municipal Disaster Recovery Grant framework and allocations to municipalities

The National Disaster Management Centre (NDMC) has requested changes to the in-year allocations for the Municipal Disaster Recovery Grant in the DoRAB tabled in Parliament. Part of the funding allocated to uThukela and iLembe district municipalities in KwaZulu Natal (page 36 of the DoRAB), should have been allocated to Alfred Duma and KwaDukuza local municipalities, respectively. The allocations made to the Cape Winelands, Overberg, and Garden Route district municipalities in the Western Cape (page 39 of the DoRAB), should have been made to Breede Valley; Theewaterskloof and Swellendam; and Oudtshoorn and George local municipalities, respectively. These corrections also affect the ring-fencing in the grant framework (page 28 of the DoRAB).

Parliament has approved that the National Treasury correct the allocations and effect the required changes to the MDRG framework, as part of section 15(1) of the 2022 DoRA to ensure that MDRG allocations are correctly allocated to the municipalities assigned for the functions.

3. Pension fund defaults

There has been a growing trend where municipalities are deducting pension from the employees but are not paying it over to their pension fund. This in our view is inconsistent with the intent and spirit of the MFMA and constitute an act of financial misconduct in terms of section 171 of the MFMA read with the Municipal Regulations on Financial Misconduct Procedures and Criminal Proceedings and potentially also a criminal offence in terms of section 173 of the MFMA read with other applicable legislation. Municipal Councils should refer these actions to the Disciplinary Boards for further investigation and should also consider laying criminal charges against the accounting officer and other responsible officials that has failed to perform the responsibility outlined in terms of section 65(2)(f) of the MFMA which states that “the accounting officer of a municipality must take all reasonable steps to ensure that the municipality complies with its tax, levy, duty, pension, medical aid, audit fees and other statutory commitments”. Municipal Councils should also consider further measures and actions in terms of the Pension Funds Administration Act, as may be applicable.

4. Municipal Standard Chart of Accounts (mSCOA)

4.1 Release of Version 6.7 of the Chart

On an annual basis, the mSCOA chart is reviewed to address implementation challenges and correct chart related errors. Towards this end, Version 6.7 is released with this circular.

Version 6.7 of the chart will be effective from 2023/24 and must be used to compile the 2023/24 MTREF and will be available from 20 December on the link below:

<http://mfma.treasury.gov.za/RegulationsandGazettes/MunicipalRegulationsOnAStandardChartOfAccountsFinal/Pages/default.aspx>

Kindly note that, in accordance with section 8(2)(j) of the Municipal Property Rates Act (MPRA) as amended in 2014, municipalities may apply for categories other than the categories in 8(2)(a) to (i). Towards this end the Minister of Cooperative Governance and Traditional Affairs approved the following categories:

- Sports Clubs and Fields for Bitou Municipality and
- Residential sectional title garages for Drakenstein Municipality.

These categories were only approved for use by municipalities indicated above. System vendors must therefore block the use of these categories for all other municipalities. The Project Summary Document (PSD) on the National Treasury webpage will be aligned to the chart changes in version 6.7 where applicable. The PSD is also available on the above link.

For the National Treasury to consider a new chart change in version 6.8 of the chart, the issue must be logged with all relevant background and details on the *mSCOA* FAQ portal by 31 August 2023. The *mSCOA* FAQ portal can be accessed by all registered GoMuni users on the following link. https://lq.treasury.gov.za/ibi_apps/signin

4.2 Amendments to the regulated A1 schedules

The following tables of the A1 Schedule that was regulated in terms of the Municipal Budget and Reporting Regulations (MBRR), have been aligned to the *mSCOA* and Generally Recognised Accounting Standards (GRAP):

- A4: Statement of Financial Performance; and
- A6: Statement of Financial Position

In addition, tables A8 and A10 have been linked to the *mSCOA* data strings and will be included in the 2023/24 budget reports available on the GoMuni portal from 01 July 2023.

The amended and protected version of the A1 schedule will be available from 20 December on the link below:

<http://mfma.treasury.gov.za/RegulationsandGazettes/MunicipalRegulationsOnAStandardChartOfAccountsFinal/Pages/default.aspx>

System vendors and municipalities that are managing their own in-house systems must programme the amended schedules on their financial systems. Input fields for supporting tables that are not part of the non-financial data string must be created to ensure that a complete A schedule is generated from the core municipal financial system.

The *mSCOA* Regulations require that municipalities budget, transact and report on legislated *mSCOA* segments and directly on the core financial system and submit the required data strings directly from this system to the GoMuni Upload portal. To ensure that the data strings submitted are credible, municipalities must:

- Lock the budget adopted by Council on the core municipal financial system before submitting the budget (ORGB) data string to the GoMuni Upload portal;
- Close the core financial system at month-end as required in terms of the MFMA before submitting the monthly data string to the GoMuni Upload portal; and
- Generate the regulated MBRR Schedules (A, B and C) directly from the core municipal financial system.

The preparation of budgets on excel spreadsheets that is captured in the system at a later stage and manual correction of data strings by municipal officials or system providers are not allowed in terms of the *mSCOA* Regulations. Where a municipality makes use of a stand-alone 3rd party sub-system or a system provider has entered into an agreement or consortium for the provision of certain functionality with a 3rd party sub-system provider, such a 3rd party sub-system should host the relevant part of the *mSCOA* chart to seamlessly integrate with the core financial system without manual intervention.

4.3 Credibility of *mSCOA* data strings

The credibility and accuracy of the data strings must be verified by municipalities before submission as the data strings submitted will be used as the single source for all analysis and publications in the 2023/24 municipal financial year.

Municipalities have been given access to the GoMuni portal in April 2022 and should use the reports on GoMuni to verify the credibility of their submissions. It should be emphasized that errors in the data can only be corrected in the next open period. e.g., errors in the tabled budget (TABB) data string can only be corrected in the adopted budget data string (ORGB). Municipalities are not allowed to open closed periods to make corrections.

Municipalities are reminded that incorrect or incomplete data string submissions is considered as non-submission.

The credibility of the *mSCOA* data strings remains a concern in the following areas:

The inclusion of opening balances in data strings

Municipalities and system vendors must ensure that opening balances are included in the budget and in-year data strings. The opening balances at year end (month 12 – M12) of the previous financial year must be rolled over to the first month (M01) and updated with pre-audited (PAUD) and audit (AUDA) adjustments in the current financial year in the *applicable open period*. In other words, if the audit is completed on 31 October, then the changes in the opening balances must be reflected in the in-year submission for November 2022 (M05 submission). If opening balances and changes thereto are not included in the budget and in-year data strings, the C schedules will not populate correctly. This means that the movement of the balance sheet items will not have a starting point and the Statement of Financial Position (balance sheet) will be incorrect.

Accounting for Water Inventory

As per the guidance in MFMA Budget Circular No.115 (dated 04 March 2022), municipalities must budget and account for bulk water purchases as **inventory** under current assets in the Statement of Financial Position as per GRAP 12 (paragraph. 07).

In terms of GRAP 12:

Inventories are assets:

- a. *In the form of materials or supplies to be consumed in the production process;*
- b. *In the form of materials or supplies to be consumed or distributed in the rendering of services; and*
- c. *Held for sale or distribution in the ordinary course of operations, or*
- d. *In the process of production for sale or distribution.*

Inventory acquired through non-exchange transactions should be recorded at its fair value as at the date it is acquired. The cost of inventory, except for non-purified water, will be determined or recognised in accordance with paragraph 25 and 26, which is the primary and secondary costs in getting the water either to the treatment works or to the users of the water.

It is important to note that water cannot be issued if it was not purchased or brought into the inventory through system input transactions. Therefore, the total input volume of water related to water purified and water from natural sources should include both primary and secondary cost components. The allocation of secondary cost to the input volume of water will necessitate the utilisation of the Costing Segment in the mSCOA. This is crucial in determining cost reflective tariffs for water.

The fair value of water from natural resources such as boreholes, springs and fountains may be determined by the primary and secondary cost components. Secondary costs include:

- Labour
- Extraction cost
- Distribution cost
- Chemicals/ Treatment
- Maintenance
- Infrastructure
- Depreciation charges

The municipality must account for water from natural resources as follows:

Debit: System Input Volume: Natural Resources

Credit: Gains and Losses: Water at fair value

Water inventory must be budgeted to be acquired and recorded in the Current Assets: Inventory: Water as indicated below. The movement accounts in the mSCOA structure makes provision for the different methods of acquiring and the consumption/ issuing of Water inventory.

Current assets:

- Inventory: Water Opening balance: Non-Funding Transactions
- Inventory: Water: System Input volume: Bulk Purchases: Water Treatment/Natural Resources
- Water Authorised Consumption:
 - a) Billed Unmetered Consumption
 - b) Un-Billed Authorised Consumption
 - c) Billed Metered Consumption
- Inventory: Water Losses (Apparent and Real Losses)

Water that is issued to Consumers must be issued from the inventory and expensed in the **Expenditure:** Inventory: Consumed -Water.

Water losses will reduce the Water inventory in current assets and the corresponding amounts should be captured in **Gains and Losses:** Inventory: Water: Fair value

It is important to note that the change in accounting for water through the inventory purchased process and the change of using a methodology to report the balance of water as at year-end may impact on the Annual Financial Statements (AFS). Municipalities must ensure that they update their accounting policy, document this process, and provide comparative figures when assessing and reporting their water balance to ensure that the GRAP guidelines of changes in reporting and materiality is applied correctly.

The Local Government Municipal Property Rates (MPRA) Amendment Act, 2014

Municipalities are reminded that section 8 of the MPRA on the determination of categories of rateable properties has been revised through the Local Government Municipal Property Rates Amendment Act, 2014 ("the Amendment Act").

Municipalities were required to implement the new property categorisation framework by not later than 01 July 2021. The *mSCOA* chart Version 6.7 will only make provision for the new framework. The old framework has been retired and municipalities must prepare their 2023/24 MTREF Budgets accordingly.

Fixed Asset Register

Municipal financials systems must comply with the minimum business processes and system requirements on fixed asset registers as articulated for the asset management module in MFMA Circular No 80. The asset management module should be embedded in the core financial system or seamlessly integrate from a third-party sub-system to the core financial system. This will enable the regular and seamless updating of the fixed asset register. The register must contain the following information as a minimum requirement:

- Description of the asset
- Date of acquisition or brought into use
- Purchase cost
- Location of the asset
- Function responsible for the asset
- Current value
- Depreciation and method utilised
- Remaining life of the asset
- Maintenance information
- Insurance Coverage

Municipalities will be required to upload their updated fixed asset register in a PDF format on the GoMuni Upload portal as part of their 2023/24 MTREF tabled and adopted budget submission and thereafter on a quarterly basis as part of their in-year reporting.

Recording of Schedule 6B Grants in *mSCOA*

Grants allocated in terms of Schedule 6B of DoRA should be recorded in terms of *mSCOA* as an allocation-in-kind. This means that the municipality will only record the transaction once they received a completed asset.

Importantly, a Schedule 6B grant may not be transferred to the end-user of the asset to construct the asset as this is in contravention with the conditional grant framework. If a transferring officer of a Schedule 6B grant consider the municipality capable of constructing its own asset, the grant should be re-gazetted and reclassified as a Schedule 5B grant. The grant will then be transferred directly to the municipality to construct the asset and the receipt and expenditure of the grant must be in accordance with GRAP 17. An adjustments budget in terms of Section 28(2)(b) of the MFMA and Regulation 23(3) of the MBRR must be adopted to include the grant funding and project in the MTREF budget.

In the case where a municipality is constructing an asset for a national department but will not be the end-user of the asset being constructed, the accounting must be done in terms of GRAP 11. There will be VAT implications as the municipality will be a contractor and act as an agent. It is important to ensure that the contract between the municipality and the department outlines the responsibilities of all parties.

Municipalities must ensure that they are making provision for VAT in accordance with the VAT Act, 1991 (Act No. 89 of 1991) and the VAT 419 guide issued by SARS. The National Treasury issued *mSCOA Circular No.12* (dated 01 October 2021) that provides guidance on the recording of VAT in the *mSCOA*.

Impact of Balance Sheet Budgeting and Movement Accounting on Cash Flow Tables

From the analysis of the *mSCOA* data strings it is evident that the cash flow tables (A7, B7 and C7) are still not populating correctly or completely. This can be contributed to the fact that a number of municipalities still do not use balance sheet budgeting and movement accounting. Guidance on the use of balance sheet budgeting and movement accounting to populate tables A7, B7 and C7 correctly was provided in MFMA Budget Circular No. 107 (dated 04 December 2020) and *mSCOA Circular No. 11* (dated 04 December 2020).

4.4 Regulation of Minimum Business Processes and System Specifications

National Treasury will review and regulate minimum business processes and system specifications for *mSCOA* by the end of 2024/25. In preparation for the regulation of the minimum requirements, municipalities should ensure that they comply fully with the current minimum business processes and system specifications articulated in MFMA Circular No. 80 (dated 08 March 2016).

Where a municipality is not fully compliant with the *mSCOA* requirements, a *mSCOA* Road Map must be in place to drive and fast track the *mSCOA* implementation in the municipality. The *mSCOA* Steering Committee, chaired by the Accounting Officer or his/ her delegate, must use the *mSCOA* Road Map to track progress and take correction actions where required.

Road Maps must be reviewed and updated annually as part of the budget process is updated and submitted to Council for approval together with their 2023/24 MTREF budget. Municipalities will be required to upload their updated *mSCOA* Road Maps in a PDF format on the GoMuni Upload portal as part of their 2023/24 MTREF tabled and adopted budget submission and thereafter on a quarterly basis as part of their in-year reporting.

Municipalities should ensure that they budget sufficiently to become and remain *mSCOA* compliant.

Guidance on the content of the *mSCOA* Road Map was provided in MFMA Budget Circular No. 115 (dated 04 March 2022).

4.5 *mSCOA* Training Initiatives

Training to municipalities and municipal system vendors

The National Treasury, in conjunction with CIGFARO, will conduct monthly training sessions aimed at municipalities, municipal system vendors and other relevant role-players. The training will focus on technical aspects of budgeting, transacting and reporting in the *mSCOA* and is aimed at improving the quality of *mSCOA* data strings. The draft programme is attached as **Annexure A**.

***mSCOA* eLearning Course**

The National School of Government is hosting the *mSCOA* eLearning Course that was developed by the National Treasury. The *mSCOA* eLearning Course provides government officials with the basic knowledge on the reform and how to record transactions using the *mSCOA*.

Government institutions can enrol their employees for this course by sending a request for training to the NSG at contactcentre@thensg.gov.za. If your institution has not attended any training with the NSG previously, then you will also be required to register on the NSG database. The mSCOA eLearning Course will be offered as no cost until 31 March 2023. Thereafter, delegates will have to pay to attend the course.

Any queries in this regard must be directed to the NSG at contactcentre@thensg.gov.za or tel number: 086 100 8326.

5. The revenue budget

Similar to the rest of government, municipalities face a difficult fiscal environment. The weak economic growth has put pressure on consumers' ability to pay for services, while transfers from national government are growing more slowly than in the past. Some municipalities have managed these challenges well, but others have fallen into financial distress and face liquidity problems. These include municipalities that are unable to meet their payment obligations to Eskom, Water Boards and other creditors. There is a need for municipalities to focus on collecting revenues owed to them and eliminate wasteful and non-core spending.

Municipalities must ensure that they render basic services, maintain their assets and clean environment. Furthermore, there must be continuous communication with the community and other stakeholders to improve the municipality's reputation. This will assist in attracting investment in the local economy which may result in reduced unemployment. Some municipalities are experiencing serious liquidity challenges. Therefore, the new leadership is advised to:

- Decisively address unfunded budgets by reducing non-priority spending and improving revenue management processes to enable collection; and
- Address service delivery failures by ensuring adequate maintenance, upgrading and renewal of existing assets to enable reliable service delivery.

5.1 Maximising the revenue generation of the municipal revenue base

Reference is made to MFMA Circulars No. 93, paragraph 3.1 and No. 98, paragraph 4.1. The emphasis is on municipalities to comply with Section 18 of the MFMA and ensure that they fund their MTREF budgets from realistically anticipated revenues to be collected. Municipalities are cautioned against assuming collection rates that are unrealistic and unattainable as this is a fundamental reason for municipalities not attaining their desired collection rates.

The purpose of the above mentioned MFMA Circulars is to ensure that the municipalities are using their entire revenue base as the basis for the revenue budget. It is essential that municipalities reconcile their most recent consolidated valuation roll data to that of the current billing system data to ensure that revenue anticipated from property rates is realistic. The municipalities should implement a data management strategy and develop internal capacity to perform these reconciliations and investigations to improve completeness of billing.

One of the aims of the reconciliation process is to identify exceptions, i.e. records on the roll and not on the billing system and records on the billing system and not on the roll. In addition, the reconciliation must identify duplicated records, missing data, and data errors. These exceptions should then be investigated, and remedial action strategies developed for data cleansing and other corrective actions. The Debtors Ageing data should also form part of the reconciliation process so that "debtors" can be tracked and assessed at a property record level and prioritised for verification of rates liability measured against a MPRA property and owner.

To facilitate reconciliation of the separate databases (Roll and Billing), a unique property identifier (common primary unique link code) must be created and populated for each rateable property on the roll system and on the rates billing system. This property identifier must be unique, without duplicates, and remain constant for the life of the property. The standards adopted by the South African Council for the Property Valuers Profession (SACPVP), namely South African Standard: Municipal Valuations for Property Rating, specifies that the Surveyor General Code SG 21-digit Code, derived, and created from the property description, be applied for all registered full title property defined in terms of part (a) of the definition of property.

For all other MPRA defined property, Part (a) Sectional Title, Part (b) Registered Rights, Part (c) Land Tenure Rights and Part (d) PSI, and apportioned multiple use property in terms of sections 8(2)(i) and 9(2), an added suffixed 5 digits to the SG 21-digit code must be assigned by the designated municipal valuer, thereby creating a unique 26-digit code. The municipality must ensure that the SG21 digit code and 26-digit coding system is applied in their valuation roll management system and billing system and engage with their designated municipal valuer and systems service providers to implement the unique property identifier.

Further it is important that municipalities who are performing a general valuation (GV) to implement a new valuation roll on 1 July 2023, must also as best practice compare the current consolidated roll to the new valuation roll. This can identify any anomalies and errors of category of property and market values for review and investigation and the option of lodging an objection by the municipality, where applicable. This process should also identify outliers and shifts in market values by category and area so that tariffs on the new roll can be modelled and determined in an equitable manner to avoid rates shocks.

Municipalities should undertake this exercise as a routine practice during the budget process so that supplementary adjustments to the valuation roll are kept up to date. In order to ensure that the most updated information is used for the reconciliations, municipalities are reminded to adhere and comply with s23(1)(2) of the MPRA and therefore use the Part A register as the basis for performing the reconciliations going forward.

Furthermore, municipalities are also advised and expected to comply with s8(1) of the MPRA in terms of the billing methodology that needs to be specified within their policies to ensure that the correct categories (based on the selection made by the municipality) are used in the reconciliation process.

The list of exceptions derived from this reconciliation will indicate where the municipality may be compromising its revenue generation in respect of property rates or whether the municipality is overstating its revenue budget.

A further test would be to reconcile this information with the Deeds Office registry. In accordance with the MFMA Circular No. 93, municipalities are once more requested to submit their reconciliation of the Valuation roll/Part A register to the billing system to the National Treasury on a quarterly basis by no later than the 10th working day. A detailed action plan must accompany the reconciliation where variances are noted.

The above information must be uploaded by the municipality's approved registered user(s) using the GoMuni Upload Portal at: https://lg.treasury.gov.za/ibi_apps/signin. If the municipality experience any challenge uploading the information, a request for an alternative arrangement may be emailed to linda.kruger@treasury.gov.za.

No operation can be sustainable if it does not collect its revenue. A municipality is no different. There is a misconception that a municipality may not interrupt or restrict the supply of water services of a defaulting consumer. The National Treasury confirms that neither the

Water Services Act, 1997 (Act No. 108 of 1997) or any other legislation prevents a municipality from cutting the supply of water to a defaulting consumer unless the consumer is an indigent in which case the water services to that household must be restricted to the national free basic water limit of 6 kilolitre water monthly (or 50 kilowatt hours in the case of free basic electricity monthly). This was confirmed by the Constitutional Court in the matter of Mazibuko and Others v City of Johannesburg and Others (CCT 39/09) [2009] ZACC 28; 2010 (3) BCLR 239 (CC); 2010 (4) SA 1 (CC) (8 October 2009).

Municipalities are urged to use the restriction/ interruption of supply of both water and electricity services as a collection tool. Effective from the tabling and adoption of the 2023/24 MTREF, municipalities' By-laws and policies must facilitate this and clearly stipulate the order in which any partial payment of the consolidated municipal bill (including property rates) will be applied as well as the process before the supply of water and electricity services will be cut. The National Treasury recommended that any partial payment firstly be applied to property rates, wastewater, waste management, water and lastly to electricity. When interrupting or restricting the supply of water it is important that such is undertaken together with the municipal engineer(s) to ensure a continued minimum supply of waste water.

5.2 Setting cost-reflective tariffs

Reference is made to MFMA Circular No. 98, paragraph 4.2. The setting of cost-reflective tariffs is a requirement of Section 74(2) of the Municipal Systems Act which is meant to ensure that municipalities set tariffs that enable them to recover the full cost of rendering the service. This forms the basis of compiling a credible budget. A credible budget is one that ensures the funding of all approved items and is anchored in sound, timely and reliable information on expenditure and service delivery (Financial and Fiscal Commission (FFC), 2011). Credible budgets are critical for local government to fulfil its mandate and ensure financial sustainability.

A credible expenditure budget reflects the costs necessary to provide a service efficiently and effectively, namely:

- A budget adequate to deliver a service of the necessary quality on a sustainable basis; and
- A budget that delivers services at the lowest possible cost.

The National Treasury issued a tariff setting tool and guide as part of MFMA Budget Circular No. 98 (refer item 4.2) on 6 December 2019 and since 2019, encouraged municipalities to utilise the tool. **With effect, the 2023/24 MTREF, all municipalities (except metropolitan cities and district municipalities that do not provide any services) as part of both the tabled and adopted MTREF submissions must submit the completed National Treasury tariff tool (in excel format)** illustrating that the revenue component of the budget is credible and funded and that the municipality's tariffs are cost reflective. If the municipality's initial calculation results in high increases to facilitate cost-reflectiveness, it is recommended that such are phased in over 3 to 5 years. The municipality's strategy in this regard should be included as part of the budget narratives.

This tool will assist in setting tariffs that are cost-reflective and enable a municipality to recover costs to fulfil its mandate. Going forward it is also imperative that every municipality fully embrace the Municipal Standard Chart of Accounts (mSCOA): costing component. Considering, mSCOA implementation is entering its sixth year of implementation, all municipalities must fully embrace and report also utilising the costing segment correctly. The National Treasury Municipal Costing Guide is available on the link below on the National Treasury website.

<http://mfma.treasury.gov.za/Guidelines/Documents/Forms/AllItems.aspx?RootFolder=%2fGuidelines%2fDocuments%2fMunicipal%20Costing%20Guide&FolderCTID=0x0120004720FD2D0551AE409361D6CB3E122A08>.

5.3 Tariffs – achieving a balance between cost-reflectiveness and affordability

National Treasury encourages municipalities to maintain tariff increases at levels that reflect an appropriate balance between the affordability to poorer households and other consumers while ensuring the financial sustainability of the municipality.

When setting tariffs, it is therefore critical to understand the economic environment specific to the municipality and consideration should include at least –

- *The socio-economic profile undertaken for the municipality* available on the National Treasury GoMuni portal – municipalities are encouraged to annually update their own socio-economic profile using the template model available on GoMuni;
- *The most recent average monthly household income in the municipality* as per Statistics South Africa (Stats SA) available on [Statistics South Africa | Improving Lives Through Data Ecosystems \(statssa.gov.za\)](http://Statistics South Africa | Improving Lives Through Data Ecosystems (statssa.gov.za));
- *The average property value in the municipality* per its most recent approved general valuation roll and/ or supplementary general valuation roll;
- *The number of indigent households in the municipality*, including any variation in the number of indigent households included in the Equitable Share: free basic services component for the municipality vs the municipality's own indigency level discretion; and
- *The economic drivers and activities specific to the municipal area²; etc.*

The municipality's tariff-setting or other committee tasked with this role must understand and deliberately reflect on this context during the tariff-setting process. Considering the average monthly household income, the median affordable municipal bill would ideally not exceed proportionally the average monthly household income. This median affordable bill, in combination with the median average property value should inform the basis to determine any rebates to households with income below the median.

It is also important when setting particularly water and electricity tariffs that municipalities consider setting two-tier tariffs, that include a basic availability charge to recover the fixed (direct and indirect) cost associated with the service in conjunction with consumption-based tariff bands. For example, in a drought, such tariffs will facilitate the ability to pay for infrastructure and maintenance, treating chemicals and salaries, etc. while parallel facilitating water restriction based on inclining tariffs as consumption increase. Furthermore, it is important to link the municipality's water tariffs to dam levels, also approved as part of the budget process. For example, if the dam levels drop to 60 per cent the first tier of restriction tariffs should become applicable in terms of the municipality's approved tariff policy.

It is also noted that NERSA approves seasonal tariffs for Eskom but not necessarily for the municipality. It is important that the municipality clearly factor this in its tariff application to NERSA, illustrating the cashflow crunch if the municipality is not similarly allowed a seasonal tariff to recover the higher Eskom bulk cost during winter months.

Lastly, municipalities are cautioned against setting tariffs that include operating inefficiencies. This could lead to tariffs falling into the unaffordable range.

The Consumer Price Index (CPI) inflation is forecasted to be within the 3 to 6 per cent target band; therefore, municipalities are required to **justify all increases in excess of the projected inflation target for 2023/24** in their budget narratives and pay careful attention to

² The spatialised tax data is now available through National Treasury for all municipalities that provides an up to date information on economic activity within a municipal boundary.

tariff increases across all consumer groups. In addition, municipalities should include a detail of their revenue growth assumptions for the different service charges in the budget narrative.

5.4 Bulk Account Payments and Concessions

During 2018/19, intense work was undertaken to resolve systemic and structural issues pertaining to the electricity function in municipalities. Core to this work was addressing the escalating Eskom debt that threatened the sustainability of Eskom as well as that of municipalities.

During the process, Eskom agreed to provide relieve in certain areas. Municipalities are reminded of the following concessions that remain in place:

- The interest rate charged on overdue municipal bulk accounts were reduced from prime plus 5 per cent to prime plus 2.5 per cent;
- Payment terms were extended from 15 days to 30 days for municipal bulk accounts; and
- Eskom allocation of municipality payments to capital first and then to interest.

These concessions align to the MFMA and are meant to curb municipal growing debt levels by allowing a more conducive payment regime than what was previously employed. In addition, municipalities are urged to budget for and ring-fence their payment of bulk services. Bulk current account payments must be honoured religiously to avoid stringent application of the bulk suppliers' credit control policy.

Municipalities are also urged to enforce a culture of payment for services through their normal credit control processes. In this regard it should be noted that municipalities are only compensated for free basic services based on an indigent user component calculation through the equitable share. As such, a municipality's allocation of free basic services to all of the municipality's consumers is not funded in the equitable share. Every municipality, during the budget process, must consider the affordability to the municipality when allocating free basic services above the national norm and to consumers other than indigent consumers. **If a municipality has any arrears on any of its bulk supplier's accounts, it must limit its provision of free basic services to registered indigent consumers only.**

5.5 Critical Notice Affecting STS Meters

As highlighted in previous MFMA Circular No. 115 (dated 06 December 2022) municipalities are once again alerted that there is still a pending business risk to the prepayment metering industry that requires urgency of action. The token identifiers (TID) used to identify each credit token will run out of available numbers in November 2024, at which point all STS meters will stop accepting credit tokens.

The remedy is to visit each meter and enter a special set of key change tokens in order to reset the meter memory. Municipalities are advised that the National Treasury, through the Office of the Chief Procurement Officer (OCPO), will soon facilitate a transversal contract for the provision of auditing, re-calibration and re-configuration services for standard transfer specification compliant prepayment meters that align to minimum and critical technical specifications for local government. In this respect the development of the transversal contract for smart prepaid meters as per NRS 049 (per latest approved version) is at an advanced stage and should be issued shortly by National Treasury.

If your municipality or municipality entity is currently in the process of procuring for a solution or is planning to, you are cautioned:

- Against proceeding prior to the OCPO having issued and awarded the transversal contract for the provision of inter alia auditing, re-calibration and re-configuration services for standard transfer specification compliant prepayment meters Terms of Reference (ToR); and

- That, with immediate effect, you must obtain the National Treasury's input prior to proceeding with any current procurement or proposed procurement for this purpose or any related solution or similar. This is to prevent unnecessary and wasteful expenditure on such solutions. Any request for National Treasury's input on the current or planned procurement of any related solution or similar or component thereof, must be directed to the National Treasury for the attention of the Local Government Budget Analysis Unit (Mr. Sadesh Ramjathan) Sadesh.Ramjathan@treasury.gov.za.

In this regard, municipalities will have two options to choose from:

- Firstly, to pursue the route of auditing, re-calibrating and re-configuring services for standard transfer specification compliant prepayment meters; and/ or
- Secondly, to replace the old meter with a new smart prepaid meter.

For both options, the municipality will have to budget accordingly as no additional funding will be available through the national fiscus.

Your assistance in proactively ensuring that the municipality and/ or its entities are not adversely affected by these processes will be appreciated.

5.6 Completeness and credibility of revenue related information in the Budget

The MBRR regulates the minimum level of information required from municipalities when compiling, implementing, monitoring, and evaluating the municipality's financial management situation. Failure to include the minimum required information hampers the municipal council, the public and stakeholders' ability to make informed decisions and engage on the matter. It also limits research, studies, and benchmarking undertaken for local, provincial, and national purposes.

The National Treasury would like to take this opportunity to caution municipalities that the MBRR prescribe the minimum level of information municipalities must include as part of their legal reporting obligations.

Going forward the Treasuries will place increased attention and focus on the adequacy of municipalities' submissions. The National Treasury regards this non-compliance to include the minimum level of information as serious and if persistent will consider applying the available legal sanctions, including recourse in terms of section 216(2) of the Constitution. In this context, National Treasury will particularly focus on the completeness of asset management related information as well as the statistical information required in the A, B and C schedules during the 2023/24 MTREF.

5.7 Eskom Bulk Tariff increases

The National Energy Regulator of South Africa (NERSA) is responsible for the price determination of the bulk costs of electricity. In the municipal financial year 2022/23, bulk electricity costs increased moderately at 9.61 per cent, compared to 17.8 per cent in the 2021/22 municipal financial year. Due to Eskom's funding needs, they are seeking higher tariff increases and have applied to NERSA for a 32 per cent hike from 1 April 2023/24. NERSA will make a final decision on the tariff application by 24 December.

In addition, a High Court hearing is still pending on the Multi-Year Price Determination (MYPD 5) application. The urgent High Court review requires NERSA to urgently process the Eskom revenue application for at least one year, as required by law. The timeframes for the review allow for a decision to be made in time for implementation by 1 April 2023.

5.8 Updated Municipal Borrowing Policy Framework

Cabinet approved the Update to the Policy Framework for Municipal Borrowing and Financial Emergencies on the 17th of August, 2022. The purpose of the Update is to re-examine the original Policy Framework, along with the legislation (i.e. Municipal Finance Management Act – MFMA) that was adopted to implement it, considering the experience with municipal borrowing that has accumulated since 2000.

The following key reforms have been introduced through the Update to the Policy Framework for Municipal Borrowing:

- The Policy Framework for Municipal Borrowing has been updated to introduce the necessary reforms that will expand the scope of responsible municipal borrowing and create an environment that attracts more players (e.g. insurers, pension funds, institutional investors and fund managers, and international Development Finance Institutions) in the municipal debt market space. The original core principles underlying municipal borrowing are maintained (i.e. creditworthy municipalities should borrow prudently to finance capital investment, and that there will be no bail-outs by the provincial or national government);
- The updated policy framework clarifies the role of Development Finance Institutions (DFIs), as it was not clearly articulated in the original policy. DFIs are required to pursue clear and agreed developmental goals, as outlined in the policy. The objective of this approach is to ensure that a DFI lending does not crowd out the private sector. Public-sector lenders, both domestic and foreign, should be guided by a social and developmental investment approach in which demonstrable social outcomes are considered alongside potential financial returns;
- The updated policy framework permits and clarifies innovative infrastructure financing mechanisms (such as pooled financing mechanisms, project finance, tax increment financing, revenue bonds, and pledging of conditional grants) that municipalities can use to leverage municipal borrowing. Municipalities are encouraged to explore these alternatives, and innovative infrastructure financing mechanisms permitted subject to the requirements contained in the Municipal Finance Management Act (MFMA) and
- The participation of both private and public sector market participants in the development of a liquid secondary market for municipal debt securities is also encouraged. The policy proposes options that can be explored to support the development and growth of an efficient and liquid market for municipal debt obligations.

The Updated Municipal Borrowing Policy Framework can be accessed at the MFMA website at the following link <http://mfma.treasury.gov.za/Guidelines/Pages/default.aspx>.

5.9 Tariff Policies

Municipalities must comply with the provisions of Section 74 of the Municipal Systems Act (MSA) which requires that a municipal council must adopt and implement tariff policy on the levying of fees for municipal services provided by the municipality itself or by way of service delivery agreements, and which complies with the provisions of this Act and with any other applicable legislation. Municipalities should also ensure that the tariff policies adhere to all the principles outlined in section 74(2) of the MSA. A municipality's tariff policies must also take into consideration variable factors such as water shortages and electricity feedback excess into the municipal system from new generation capacity. Municipalities must adopt by-laws to give effect to the implementation and enforcement of their tariff policies.

5.10 Non-Revenue Electricity and Non-Revenue Water/ Revenue Losses:

Water Service Authority municipalities and electricity licensed municipalities are urged to align both their non-revenue water and non-revenue electricity indicators and their set targets in the 2023/24 SDBIPs with identifiable infrastructure or operational projects and/ or programmes. Municipalities should improve on the baseline information included in the SDBIPs by indicating the volume of water losses (i.e., kilolitres/ mega-litres) and the amount of electricity losses (KwH or MWs) for the previous year. This approach will help to determine the progress of municipalities in curbing losses, which impact on municipal revenues, in both non-revenue water and non-revenue electricity.

6. Burial of Councillors

Salaries, allowances and benefits for political office-bearers and members is managed through Determination of Upper Limits of Salaries, Allowances and Benefits of Different Members of Municipal Councils notice issued by the Minister of Cooperative Governance and Traditional Affairs.

Section 167 of the MFMA provides that a municipality may remunerate its Councillors within the framework of the Public Office-Bearers Act, 1998 (Act No. 20 of 1998), setting the upper limits of the salaries, allowances and benefits for those political office-bearers and members. Any benefit which is not included in the above-mentioned notice will be deemed irregular expenditure and recovery thereof from the Councillor concerned is mandatory.

Municipalities may also refer to relevant Councillor Pension Scheme or personal funeral policies in existence for any funeral benefits relating to such Councillor

7. Funding choices and management issues

Municipalities are under pressure to generate revenue. The ability of customers to pay for services is declining and this means that less revenue will be collected. Therefore, municipalities must consider the following when compiling their 2023/24 MTREF budgets:

- Improving the effectiveness of revenue management processes and procedures;
- Cost containment measures to, amongst other things, control unnecessary spending on nice-to-have items and non-essential activities as highlighted in the Municipal Cost Containment Regulations read with MFMA Circular No. 82;
- Ensuring value for money through the procurement process;
- The affordability of providing free basic services to all households;
- Not taking on unfunded mandates;
- Strictly control the use of costly water tankers and fix the water infrastructure to enable the sustainable provision of water;
- Prioritise the filling of critical vacant posts, especially linked to the delivery of basic services; and
- Curbing the consumption of water and electricity by the indigents to ensure that they do not exceed their allocation.

Accounting officers are reminded of their responsibility in terms of section 62(1)(a) of the MFMA to use the resources of the municipality effectively, efficiently and economically. Failure to do this will result in the accounting officer committing an act of financial misconduct which will trigger the application of chapter 15 of the MFMA, read with the Municipal Regulations on Financial Misconduct Procedures and Criminal Proceedings.

7.1 Employee related costs

The Salary and Wage Collective Agreement for the period 01 July 2021 to 30 June 2024 dated 15 September 2021 through the agreement that was approved by the Bargaining Committee of the Central Council in terms of Clause 17.3 of the Constitution should be used when budgeting for employee related costs for the 2023/24 MTREF. In terms of the agreement, all employees covered by this agreement shall receive with effect from 01 July 2023 and 01 July 2024 an increase based on the projected average CPI percentages for 2023 and 2024. The forecasts of the Reserve Bank, in terms of the January 2023 and January 2024, shall be used to determine the projected average CPI. Municipalities are encouraged to perform an annual head count and payroll verification process by undertaking a once-a-year manual salary disbursement, in order to root out ghost employees.

According to the 2021 State of Local Government Finance Report, there are about 165 municipalities that are in financial distress. These municipalities need to ensure that they seek an early exemption from this dispensation of this salary agreement. Municipalities should also avoid paying out leave in cash while having major financial challenges.

7.2 Remuneration of Councillors

Municipalities are advised to budget for the actual costs approved in accordance with the Government Gazette on the Remuneration of Public Office Bearers Act: Determination of Upper Limits of Salaries, Allowances and Benefits of different members of municipal councils published annually between December and January by the Department of Cooperative Governance. It is anticipated that this salary determination will also take into account the fiscal constraints. Municipalities should also consider guidance provided above on salary increases for municipal officials during this process. Any overpayment to councilors contrary to the upper limits as published by the Minister of Cooperative Governance and Traditional Affairs will be irregular expenditure in terms of Section 167 of the MFMA and must be recovered from the councilor(s) concerned.

8. Transfers to municipalities

8.1 Criteria for the release of the Equitable Share

Section 216(2) of the Constitution of South Africa requires that the National Treasury must enforce compliance with the measures established to ensure both transparency and expenditure control in each sphere of government and may stop the transfer of funds to an organ of state if that organ of state commits a serious or persistent material breach of those measures.

The criteria for the release of the Equitable Share Instalments for the 2023/24 municipal financial year are as follows:

- The 2023/24 adopted budget must be funded and adopted by Council as per the legal framework, as required in terms of section 18 of the MFMA and consistent with the Budget Council and Budget Forum resolutions;
 - a. The adopted budget must include budget allocations for bulk suppliers current account payments;
 - b. Should the adopted budget still be unfunded, then a credible funding plan will be required to show how the municipality intends moving progressively out of this position into a funded state, if this plan has been adopted in the past, then a progress report must be submitted on the framework previously shared to guide municipalities which is aligned to the rescue phase of the new approach to Municipal Financial Recovery Service (MFRS);

- c. Those municipalities that adopted an unfunded budget must work with their respective Provincial Treasuries to rectify this position in the lead up to the main adjustments budget process in February 2023; and
- d. A council resolution showing commitment to address the unfunded position must be submitted by these municipalities to the National Treasury by 01 July 2023.
- Credible mSCOA data strings and source documents for the 2023/24 MTREF and 2022/23 audits must be generated directly from the core municipal financial system and successfully uploaded to the Local Government GoMuni Portal. Source documents must be submitted in PDF and no excel based spreadsheet/ templates will be accepted;
- The report submitted by bulk suppliers in terms of section 41 of the MFMA must indicate that the current account has been paid timeously in terms of section 65(2)(e) of the MFMA. In addition, where the municipality has a repayment plan with Eskom and/ or the water boards, proof that the current accounts have been paid and a copy of the agreed upon payment plan (or evidence of negotiations underway with creditors) must be submitted to the National and provincial treasuries;
- Municipalities must provide evidence that SARS, pension and other staff benefits deducted from municipal officials have been paid over the appropriate Funds and/ or institutions;
- The information requested in MFMA Circulars No. 93, 98 and 107 on the reconciliation of the valuation roll have been submitted to the National Treasury as per the required timeframes;
- The Competency Regulations reporting requirements have been complied with;
- Provide a copy of the Unauthorised, Irregular, Fruitless and Wasteful (UIF&W) expenditure register, the latest copy of the Municipal Public Accounts Committee (MPAC) recommendations, Council Resolution on UIFW as well as a copy of the council approved UIFW Reduction Strategy/ Plan, proof of establishment of the Disciplinary Board (or evidence of progress towards their establishment) including evidentiary evidence demonstrating functionality of the Disciplinary Board and updated audit action plan (where the audit has been completed);
- Those municipalities that received an adverse or disclaimed opinions for the 2020/21 financial year will not receive their funding allocation unless there is a council resolution committing to address these opinions with an implementable plan. The resolution must be signed by each member of the Council and submitted to National Treasury by 1 October 2023;
- The Municipal Financial Recovery Service progress reporting framework for financial recovery plans must be complied with by municipalities under intervention in terms of S139 of the Constitution;
- Additionally, those municipalities that have outstanding audits for both the 2020/21 and 2021/22 financial years as well as municipalities with outstanding 2021/22 audit opinions that also received an adverse or disclaimer opinion in 2020/21, will also not receive their allocation; and
- Any other outstanding documents as per the legal framework have been submitted including the AFS submission (municipality only and consolidated AFS).

Failure to comply with the above criteria will result in National Treasury invoking section 38 of the MFMA which empowers National Treasury to withhold a municipality's equitable share if the municipality commits a serious or persistent breach of the measures established in terms of Section 216(2) of the Constitution which includes reporting obligations set out in the MFMA and National Treasury requests for information in terms of Section 74 of the MFMA.

9. The Municipal Budget and Reporting Regulations

9.1 Schedule A – version to be used for the 2023/24 MTREF

National Treasury has released Version 6.7 of the Schedule A1 (the Excel Formats) which is aligned to Version 6.7 of the *mSCOA* classification framework and must be used when compiling the 2023/24 MTREF budget.

All municipalities must prepare their 2023/24 MTREF budgets in their financial systems and produce the Schedule A1 directly from their financial system.

Municipalities must start early enough to capture their tabled budget (and later the adopted budget) in the budget module in the financial system and must ensure that they produce their Schedule A1 directly out of the budget module. **Manual capturing on the A1 schedule version 6.7 is not allowed** in terms of the *mSCOA* Regulations.

National Treasury has protected the A1 schedule version 6.7 in order to ensure that the Schedule A1 generated directly from the financial system and not populated manually.

The budget, adjustments budget and Section 71 monthly reporting Schedules that have been regulated in terms of the MBRR have also been aligned to the *mSCOA* chart version 6.7. The revised MBRR Schedules for the 2023/24 MTREF and its linkages to the financial and non-financial data string are available on the link below:

<http://mfma.treasury.gov.za/RegulationsandGazettes/Municipal%20Budget%20and%20Reporting%20Regulations/Pages/default.aspx>

9.2 Assistance with the compilation of budgets

If municipalities require advice with the compilation of their respective budgets, specifically the budget documents or Schedule A1, they should direct their enquiries to their respective provincial treasuries or to the following National Treasury officials:

Province	Responsible NT officials	Tel. No.	Email
Eastern Cape	Matjatji Mashoeshoe Pitso Zwane Oreal Tshidino	012-315 5553 012-315 5171	Matjatji.Mashoeshoe@treasury.gov.za Pitso.Zwane@Treasury.gov.za Ophulusa.Tshidino@Treasury.gov.za

National and provincial treasuries will analyse the credibility of the data string submissions.

9.3 Assessing the 2023/24 MTREF budget

National and provincial treasuries will assess the 2023/24 MTREF budgets to determine if it is complete, funded and complies with the mSCOA requirements. The mSCOA data strings for the tabled (TABB) and adopted (ORGB) budgets will be used for this assessment.

Municipalities should note that the MFMA legislated timeframes for submission of the tabled and adopted budgets are outer timeframes. In this context, different to previous MTREF's, going forward, if the municipality's budget is unfunded, council in terms of MFMA section 74 is requested to table and/ or adopt a budget funding plan together with the budget at the same time.

The Treasuries' **assessment period** of municipal budgets will be from **01 April to 30 June 2023 for both the tabled and adopted budgets**. However, (in a context of some municipalities persisting with unfunded budgeting practices), **if the municipality tabled and/ or adopted an unfunded budget in the 2022/23 MTREF**, the municipality must adjust its schedule of key budget deadlines to facilitate an earlier Treasuries' assessment thereof between 1 April to 15 May 2023 for both tabled and adopted budgets. In this period the national and provincial treasuries will evaluate all municipal budgets for completeness and for being fully funded. Any adjustment that needs to be made must be done before the start of the municipal financial year on 30 June 2023.

Importantly, in order to generate an adopted budget (ORGB) data string, the budget must be locked immediately on the financial system at the start of the new municipal financial year on 1 July. Therefore, once the ORGB data string has been generated, errors in the ORGB can only be corrected via an adjustments budget in February of each year. In terms of the design principles of mSCOA, municipalities are not allowed to open the budget on the system for corrections after it has been locked. This means that the tabled budget data string (TABB) should in fact be verified and errors in the TABB should be corrected in the ORGB **before the adopted budget is locked on the financial system and the ORGB data string is generated**.

Amending an unfunded, incomplete and erroneous budget through an adjusted budget is also not encouraged as the National Treasury only considers an adjusted budget in the third and fourth quarter of the financial year for analysis and publication purposes. This will result in overspending and unauthorised expenditure not been monitored in the first six months of the financial year.

The National Treasury would like to emphasise that **where municipalities have adopted an unfunded budget together with a funding plan that lacks credibility, they will be required to correct the funding plan and ensure that it is credible. The credible funding plan must be immediately adopted by the Municipal Council, and the changes to the**

budget must be effected in the mid-year adjustments budget to ensure compliance with Section 18 of the MFMA.

Municipalities with municipal entities are once again reminded to prepare consolidated budgets and in-year monitoring reports for both the parent municipality and its entity or entities. The following must be compiled:

- An annual budget, adjustments budget and monthly financial reports for the parent municipality in the relevant formats;
- An annual budget, adjustments budget and monthly financial reports for the entity in the relevant formats; and
- A consolidated annual budget, adjustments budget and monthly financial reports for the parent municipality and all its municipal entities in the relevant formats.

The budget and data strings that the municipality submits to National Treasury must be a consolidated budget for the municipality (including entities). The budget of each entity must be submitted on the D Schedule in pdf format.

In the past it was noted that municipalities have challenges to align the audited outcomes on the financial system to A1 Schedule. Municipalities must ensure that the audited figures and adjusted budget figures captured on the A1 Schedule aligns to the annual financial statements and Schedule B respectively.

10. Submitting budget documentation and A1 schedules for 2023/24 MTREF

To facilitate oversight of compliance with the Municipal Budget and Reporting Regulations, accounting officers are reminded that:

- Section 22(b)(i) of the MFMA requires that, ***immediately*** after an annual budget is tabled in a municipal council, it must be submitted to the National Treasury and the relevant provincial treasury in electronic formats. If the annual budget is tabled to council on **31 March 2023**, the final date of submission of the electronic budget documents and corresponding mSCOA data strings is **Monday, 03 April 2023**; and
- Section 24(3) of the MFMA, read together with regulation 20(1) of the MBRR, requires that the approved annual budget must be submitted to both National Treasury and the relevant provincial treasury within ten working days after the council has approved the annual budget. However, given that municipalities are generating the annual budgets directly from the financial system as required by the mSCOA Regulations and that the budgets must be verified before it is locked on the financial system and transacted against, municipalities must submit the approved budget to the National Treasury and the relevant provincial treasury in electronic formats ***immediately*** after approval by the municipal council. Therefore, if the annual budget is tabled to council on **31 May 2023**, the final date of submission of the electronic budget documents and corresponding mSCOA data strings is **Thursday, 01 June 2023**.

Since the 2020/21 MTREF, municipalities are no longer required to submit hard copies of all required documents including budget related, Annual Financial Statements and Annual Reports to National Treasury via post or courier services. Electronic copies must be submitted in PDF format to the GoMuni Upload portal.

10.1 Expected submissions for 2023/24 MTREF

The following information should be submitted for the 2023/24 MTREF:

- The budget documentation as set out in the MBRR. The budget document must include the main A1 Schedule Tables (A1 - A10);
- The non-financial supporting tables (A10, SA9, SA11, SA12, SA13, SA22, SA23, SA24 etc. and any other information not contained in the financial data string) in the A1 schedule must be submitted in the prescribed *mSCOA* data string in the format published with Version 6.7 of the A1 schedule;
- The draft and final service delivery and budget implementation plan (SDBIP) in electronic PDF format;
- The draft and final IDP;
- The council resolution for the tabled and adopted budgets;
- Signed Quality Certificate as prescribed in the MBRR for the tabled and adopted budgets;
- D Schedules specific for the entities;
- A budget locking certificate immediately at the start of the new municipal financial year on 1 July;
- The National or Provincial treasury input to the tabled budget must be included as an Annexure to the adopted budget together with the municipality's explanation of how such was addressed in the adopted budget. If not, the explanation should provide reasons; and
- The bulk water-and electricity invoices for the 3 months immediately preceding respectively the tabled and adopted budgets, must be included as an annexure to the tabled and adopted budgets as part of supporting the municipalities provision for and calculations of payments to bulk suppliers over the 2023/24 MTREF.

10.2 Portals for the submission of information

Municipalities must ensure that the documents are submitted to the correct portals/ mailboxes. These portals/ mailboxes are:

https://lg.treasury.gov.za/ibi_apps/signin (GoMuni Upload Portal) – All documents required in terms of legislation, including:

- *mSCOA* Data Strings by approved registered users;
- Budget-related and in-year documents and schedules (A, B and C) by approved registered users; and
- Reconciliation of the valuation roll to the financial system (as per MFMA Circular No. 93).

Budget related documents and schedules must be uploaded by approved registered users using the GoMuni Upload Portal at: https://lg.treasury.gov.za/ibi_apps/signin. The GoMuni Upload Portal does not have the same size restrictions encountered with lgdocuments@treasury.gov.za, but requires all documents to:

- Be in PDF format only; and
- Each PDF file must NOT contain multiple document e.g. council resolution and quality certificate within the budget document. Each document type must be identified clearly and uploaded separately.

Municipalities may **only** send electronic versions of the above documents to lgdocuments@treasury.gov.za when experiencing problems with the GoMuni Upload Portal.

lgdataqueries@treasury.gov.za – Database related and submission queries and the grant rollover templates.

lgdocuments@treasury.gov.za – Any additional information required by National Treasury that is not listed under the GoMuni Upload portal such as the documents meeting the criteria to release Equitable Share and the contact list information.

FMCM and Audit Action plans – using the web-enabled systems and as articulated in MFMA Circulars No. 113 and 114.

Please do not submit the same document to ALL the platforms listed above as it means that our Database Team must register the same documents three times which slows down the process. **Any document/ queries that are submitted to the incorrect portal/ mailbox will be deleted and not processed.**

10.3 Publication of budgets on municipal websites

In terms of section 75 of the MFMA, all municipalities are required to publish their tabled budgets, adopted budgets, annual reports (containing audited annual financial statements) and other relevant information on the municipality's website. This will aid in promoting public accountability and good governance.

All relevant documents mentioned in this circular are available on the National Treasury website, <http://mfma.treasury.gov.za/Pages/Default.aspx>. Municipalities are encouraged to visit it regularly as documents are regularly added / updated on the website.

10.4 Communication by municipal entities to National Treasury

Municipal entities should not request meetings directly from National Treasury. National Treasury will only engage the entities through the parent municipalities. This includes all communications apart from the legislative reporting requirements.

8.3 UNSPENT CONDITIONAL GRANT FUNDS FOR 2022/23	19
9. THE MUNICIPAL BUDGET AND REPORTING REGULATIONS.....	20
9.1 ALIGNMENT OF MUNICIPAL BUDGET AND REPORTING REGULATIONS (MBRR) SCHEDULES	20
10. SUBMITTING BUDGET DOCUMENTATION AND A1 SCHEDULES FOR 2023/24 MTREF	21

Introduction

This budget circular is a follow-up to MFMA Circular No. 122 that was issued on 09 December 2022. It aims to provide further guidance to municipalities with the preparation of their 2023/24 Medium Term Revenue and Expenditure Framework (MTREF) budgets and should be read together with the budget circulars that have been issued previously.

The grant allocations as per the 2023 Budget Review and the 2023 Division of Revenue Bill are also key focus areas in this circular. Municipalities are reminded to refer to the annual budget circulars of the previous years for guidance in areas of the budget preparation that is not covered in this circular.

1. The South African economy and inflation targets

GDP is expected to grow by 0.9 per cent in real terms in 2023, compared with an estimate of 1.4 per cent at the time of the medium-term budget policy statement (MTBPS), recovering slowly to 1.8 per cent in 2025.

The economic outlook faces a range of risks, including weaker-than-expected global growth, further disruptions to global supply chains and renewed inflationary pressures from the war in Ukraine, continued power cuts and a deterioration in port and rail infrastructure, widespread criminal activity, and any deterioration of the fiscal outlook.

Government is taking urgent measures to reduce load-shedding in the short term and transform the sector through market reforms to achieve long-term energy security. Several reforms are under way to improve the performance of the transport sector, specifically freight rail and to improve the capability of the state.

The following macro-economic forecasts must be considered when preparing the 2023/24 MTREF municipal budgets.

Table 1: Macroeconomic performance and projections, 2021 - 2026

Fiscal year	2021/22	2022/23	2023/24	2024/25	2025/26
	Actual	Estimate	Forecast		
CPI Inflation	4.9%	6.9%	5.3%	4.9%	4.7%

Source: Budget Review 2023.

Note: the fiscal year referred to is the national fiscal year (April to March) which is more closely aligned to the municipal fiscal year (July to June) than the calendar year inflation.

2. Key focus areas for the 2023/24 budget process

2.1 Local government conditional and unconditional grants allocations

Over the 2023 MTEF period, local government allocations will increase by a total of R14.3 billion, made up of R8.1 billion in the local government equitable share and R6.2 billion in direct conditional grants. This takes the total direct allocation to R521.7 billion over the same period. These allocations alleviate some of the financial pressures, particularly in basic services, where the costs of providing services are rising.

The *local government equitable share* and related allocations increases at an annual average rate of 7.8 per cent and municipal conditional grants increase by 3.5 per cent over the 2023 MTEF period.

The *local government equitable share* formula has been updated to account for projected household growth, inflation and estimated increases in bulk water and electricity costs over the 2023 MTEF period. It also includes allocations for the operational and maintenance costs associated with the provision of free basic services.

The 2023 Budget has ensured that sufficient provision has been made to ensure that all municipalities are fully subsidised to support indigent households. Following this, R1.35 billion has been left unallocated in the LGES formula for 2023/24 to serve as a precautionary measure should municipal electricity tariffs exceed the 20.7 per cent provided for in the formula (see section 5.7 on why this is above the 18.7 per cent approved by the Energy Regulator). If the actual increase in municipal bulk tariffs exceeds the provision made in the formula, it will be the first call on those unallocated funds. We will consider funding broader cost relief measures for municipalities if funds remain available after that.

The R6.2 billion in direct conditional grants is funded from the Budget Facility for Infrastructure (BFI) and is broken down as follows:

- **R2.2 billion** added to the Urban Settlements Development Grant to fund the implementation of projects in the eThekweni Metropolitan Municipality and the City of Johannesburg;
- **R461 million** added to the Public Transport Network Grant to align funding with the revised implementation plan and cash flow projections for the City of Cape Town's MyCiTi public transport network project; and
- **R3.4 billion** added to the Regional Bulk Infrastructure Grant to fund 3 water projects in Sol Plaatje Local Municipality, Drakenstein Local Municipality and Nelson Mandela Bay Metropolitan Municipality.

Notable changes to the conditional grants system

Housing emergency grants

Changes to conditional grants in the 2023 Budget include the discontinuation of the conditional emergency housing grants for provinces and municipalities. The baselines of these two grants are shifted to the Department of Human Settlements. This will allow the department to respond quickly in the event of an emergency housing need.

Changes to the INEP conditional grant frameworks

As part of government's efforts to accelerate access to electricity thereby addressing the energy crisis, Eskom and municipal INEP grants will begin funding alternative energy technologies such as rooftop solar and energy-saving devices. Due process must be followed to access funding for these new technologies. As a result, both Eskom and municipalities will need to conform to the set requirements by submitting business plans by 31 October 2023. These business plans, will need to be approved by the Department of Mineral Resources and Energy (DMRE) before they can be implemented. Priority should be given to new connections, i.e., non-grid technology should be targeted at households that do not have access to electricity.

The annual Division of Revenue Bill was published on 22 February 2023. The Bill specifies the grant allocations and municipalities must reconcile their budgets to the numbers published therein in compiling their 2023/24 MTREF.

The Division of Revenue Bill, 2023, which includes the annexures outlining allocations to each municipality is available at:
<http://www.treasury.gov.za/documents/national%20budget/2023/default.aspx>

2.2 Re-enforcing improved intergovernmental relations in the 2023 Division of Revenue Bill, (DoRB)

In order to strengthen the system of good intergovernmental relations as envisaged in the Chapter 3 of the Constitution and subsequent related legislation, municipalities are reminded of Section 31(3) of DoRA that provides for the facilitation of personal liability for unnecessary litigation. As required by subsection (1)(a) of this clause, read together with section 41(3) of the Constitution, a municipality may only institute litigation against any organ of state, state-owned enterprise, public- and/ or municipal entity after exhausting all dispute resolution mechanisms required and/ or available to the municipality in terms of existing intergovernmental relations processes, policy and/ or any related contract with the municipality, including in terms of the Municipal Finance Management Act, 2003, the Intergovernmental Relations Framework Act, 2005, and/ or the Electricity Regulation Act, 2006 (dispute processes administered by National Energy Regulator of South Africa (NERSA)).

Section 31 is amended to include a clause that requires that where an organ of state decides to institute judicial proceedings against another organ of state, it must, within 10 working days of its decision, notify the National Treasury, the relevant provincial treasury, the Department of Cooperative Governance and the Auditor-General, of the details of compliance with Chapter 4 of the Intergovernmental Relations Framework Act, 2005, including an explanation of the failure to resolve the dispute.

2.3 Conditional grants usage

Conditional grant funds may only be used for the purposes, and subject to the conditions specified in the framework for each conditional grant. These conditions are binding in terms of sections 11 and 12 of the annual Division of Revenue Act. Any instruction by a municipal, provincial, or national official or politician that is inconsistent with the framework of a conditional grant is invalid. Municipalities are reminded that in terms of section 32 of DoRA, spending of a grant that is inconsistent with DoRA is considered irregular or unauthorised expenditure.

3. Pension and medical aid fund defaults

There has been a growing trend where municipalities are deducting pension and/ or medical aid contributions from officials but are not paying it over to their pension- and/ or medical aid fund. This is inconsistent with the intent and spirit of the MFMA and constitutes an act of financial misconduct in terms of section 171 of the MFMA read with the Municipal Regulations on Financial Misconduct Procedures and Criminal Proceedings, 2014 and also a financial offence in terms of section 173 of the MFMA read together with the Municipal Regulations on Financial Misconduct Procedures and Criminal Proceedings. Municipal Councils should refer these actions to the Disciplinary Boards for further investigation and should also lay criminal charges against the accounting officer or any other responsible or delegated official who has failed to perform the responsibility outlined in terms of section 65(2)(f) of the MFMA which states that “the accounting officer of a municipality must take all reasonable steps to ensure that the municipality complies with its tax, levy, duty, pension, medical aid, audit fees and other statutory commitments”. Municipal Councils should also consider further measures and actions in terms of the Pension Funds Act, as may be applicable.

4. Municipal Standard Chart of Accounts (mSCOA)

4.1 Version 6.7 of the *m*SCOA Chart Go Live

Version 6.7 of the *m*SCOA chart will go live on 13 March 2023, whereafter tabled budget data strings can be uploaded on the GoMuni portal.

For new *m*SCOA chart changes to be considered for version 6.8 of the chart, a Frequently Asked Questions (FAQ) must be logged by 31 August 2023 on the *m*SCOA FAQ database on GoMuni. FAQ queries can be logged at:

https://lg.treasury.gov.za/ibi_apps/portal/mSCOA_FAQ

It is important that the issue logged is described clearly and that sufficient supporting evidence is provided to ensure that all aspects of the issue are considered. After investigating the query logged, the following actions will be taken:

- If the query does not require a chart change, the FAQ will be closed, and feedback will be provided to the logger.
- If the query warrants a chart change, it will be submitted for consideration and approval by the relevant committees within the National Treasury.

Chart changes are communicated in October of each year to allow sufficient time for municipalities and vendors to effect such changes. Chart changes are officially published in the MFMA Budget Circular in December of each year.

4.2 Additional requirements to change municipal financial systems

The cost and risk associated with procuring and implementing a new Enterprise Resource Planning (ERP) financial system necessitate careful consideration and extensive planning to ensure a smooth operational transition. Such a transition takes at least 18 months to conclude and does not come without challenges and disruptions in operations.

The National Treasury will regulate the minimum business processes and system specifications for *m*SCOA by the end of 2024/25. A new transversal tender for the provision of ERP financial systems that complies with these regulations will be put in place once the regulations have been issued. Municipalities should therefore exercise extreme caution when changing their financial systems at this stage to eliminate fruitless and wasteful expenditure by procuring financial systems that might not comply with the said regulations.

Municipalities are reminded to follow the due diligence processes set out in MFMA Budget Circulars No. 93, 98 and *m*SCOA Circulars No 5 and 6 prior to procuring new financial systems to protect them from making incorrect decisions in this regard.

In addition, and **with immediate effect**, municipalities must inform the National and relevant Provincial Treasury of any intention to replace the financial system currently operating at the municipality prior to inviting proposals from system providers. This is a requirement in terms of section 74 of the MFMA. The submission should include:

- A comprehensive motivation with specific reasons for why it is deemed necessary to replace the existing financial system;
- A copy of the service level agreement with minutes of the meetings between the municipality and the current service provider (financial system vendor) during the previous twelve months;
- An assessment to determine which modules of the existing financial system are being utilised by the municipality. Reasons must be provided for modules not in operation. Details and reasons must be provided on the use of third-party systems to provide functionality required in terms of MFMA Circular No. 80;

- An assessment to detail the proficiency of municipal users to utilise the current financial system properly. Reasons must be provided if users are not proficient in the use of the system and the details must be provided on how the system is being operated and transactions are being captured on the system in such cases;
- The date on which the existing financial system was implemented, the procurement and implementation costs and the current operational costs thereof must be disclosed;
- The organisational structure, specifically for the IT department/ function, clearly indicating management capacity and responsibility for operating the financial system;
- A technical assessment should be submitted indicating how the existing ICT infrastructure, server and network comply with the requirements of the current financial system; and
- Copies of all IT strategies, policies and procedural documents including the IT disaster recovery plan must be made available.

The above submissions and all enquiries must be forwarded to lgdocuments@treasury.gov.za. A working committee comprising representatives from the National and Provincial Treasuries, the Office of the Auditor-General and other relevant stakeholders will assess the submissions and respond with its findings. These findings must be tabled in Council and a council resolution must be submitted to lgdocuments@treasury.gov.za within 14 working days after the Council meeting has taken place.

It must be emphasized that the combination of both credible data inputs and an effective financial system is fundamental to ensure the quality and timeliness of financial reporting. If the data input into the financial system is incorrect then any management information generated by the system will lack credibility and reliability for decision making. Furthermore, a municipality with poorly designed business processes will not resolve the problem by implementing a new financial system. Processes must firstly be redesigned with the necessary data validation rules if the municipality is to improve its data integrity. This foundation is integral to ensuring that software applications generate credible information and can be used effectively by municipalities.

5. The revenue budget

Similar to the rest of government, municipalities face a difficult fiscal environment. The weak economic growth has put pressure on consumers' ability to pay for services, while transfers from national government are growing more slowly than in the past. Some municipalities have managed these challenges well, but others have fallen into financial distress and face liquidity problems. These include municipalities that are unable to meet their payment obligations to Eskom, Water Boards and other creditors. There is a need for municipalities to focus on collecting revenues owed to them and eliminate wasteful and non-core spending. It is important to note that the municipal equitable share as a policy instrument is meant to subsidise services to the poorest of the poor and not to pay municipal creditors. This bad practice by municipalities will have to be addressed as a matter of urgency. Municipal creditors should be advised that municipalities cannot use funds allocated for basic service provision to pay creditors.

Municipalities must ensure that they render basic services, maintain their assets and a clean environment. Furthermore, there must be continuous communication with the community and other stakeholders to strengthen awareness and participation and to improve the municipality's reputation. This will assist in attracting investment in the local economy which may result in increased employment.

Some municipalities are experiencing serious liquidity challenges. Therefore, the new leadership is advised to:

- Decisively address unfunded budgets by reducing non-priority spending and improving revenue management processes to enable collection; and
- Address service delivery failures by ensuring adequate maintenance, upgrading and renewal of existing assets to enable reliable service delivery.

5.1 Maximising the revenue generation of the municipal revenue base

Reference is made to MFMA Circulars No. 93, paragraph 3.1 and No. 98, paragraph 4.1. The emphasis is on municipalities to comply with Section 18 of the MFMA and ensure that they fund their MTREF budgets from realistically anticipated revenues to be collected. Municipalities are cautioned against assuming collection rates that are unrealistic and unattainable as this is a fundamental reason for municipalities not attaining their desired collection rates.

The purpose of the above mentioned MFMA Circulars is to ensure that the municipalities are using their entire revenue base as the basis for the revenue budget. It is essential that municipalities reconcile their most recent consolidated valuation roll data to that of the current billing system data to ensure that revenue anticipated from property rates is realistic. The municipalities should implement a data management strategy and develop internal capacity to perform these reconciliations and investigations to improve completeness of billing.

One of the aims of the reconciliation process is to identify exceptions, i.e. records on the general valuation roll that are not on the billing system and records on the billing system and vice versa. In addition, the reconciliation must identify duplicated records, missing data, and data errors. These exceptions should then be investigated, and remedial action strategies developed for data cleansing and other corrective actions. The Debtors Ageing data should also form part of the reconciliation process so that “debtors” can be tracked and assessed at a property record level and prioritised for verification of rates liability measured against a MPRA property and owner.

To facilitate reconciliation of the separate databases (General Valuation Roll and Billing), a unique property identifier (common primary unique link code) must be created and populated for each rateable property on the general valuation roll system and on the rates billing system. This property identifier must be unique, without duplicates, and must remain constant for the life of the property. The standards adopted by the South African Council for the Property Valuers Profession (SACPVP), namely South African Standard: Municipal Valuations for Property Rating, specifies that the Surveyor General Code SG 21-digit Code, derived, and created from the property description, be applied for all registered full title properties defined in terms of part (a) of the definition of property.

For all other MPRA defined property, Part (a) Sectional Title, Part (b) Registered Rights, Part (c) Land Tenure Rights and Part (d) PSI and, apportioned multiple use property in terms of sections 8(2)(i) and 9(2), an added suffixed 5 digits to the SG 21-digit code must be assigned by the designated municipal valuer, thereby creating a unique 26-digit code. The municipality must ensure that the SG21 digit code and 26-digit coding system is applied in their valuation roll management system and billing system and engage with their designated municipal valuer and systems service providers to implement the unique property identifier.

Further it is important that municipalities who are performing a general valuation (GV) to implement a new valuation roll on 1 July 2023, must also as best practice compare the current consolidated roll to the new valuation roll. This will identify any anomalies and errors of category of property and market values for review and investigation and the option of lodging an objection by the municipality, where applicable. This process should also identify outliers and shifts in market values by category and area so that tariffs on the new roll can be modelled and determined in an equitable manner to avoid rates shocks.

Municipalities should undertake this exercise as a routine practice during the budget process so that supplementary adjustments to the valuation roll are kept up to date. In order to ensure that the most updated information is used for the reconciliations, municipalities are reminded to adhere and comply with Section 23(1)(2) of the MPRA and therefore use the Part A register as the basis for performing the reconciliations going forward.

Furthermore, municipalities are also advised and expected to comply with Section 8(1) of the MPRA in terms of the billing methodology that should to be specified within their policies to ensure that the correct categories (based on the selection made by the municipality) are used in the reconciliation process.

The list of exceptions derived from this reconciliation will indicate where the municipality may be compromising its revenue generation in respect of property rates or whether the municipality is overstating its revenue budget.

A further test would be to reconcile this information with the Deeds Office registry. In accordance with the MFMA Circular No. 93, municipalities are once more requested to submit their reconciliation of the Valuation roll/ Part A register to the billing system to the National Treasury on a quarterly basis by no later than the 10th working day after the end of the quarter. A detailed action plan must accompany the reconciliation where variances are noted.

The above information must be uploaded by the municipality's approved registered user(s) using the GoMuni Upload Portal at: https://lq.treasury.gov.za/ibi_apps/signin. If the municipality experience any challenge uploading the information, a request for an alternative arrangement may be emailed to linda.kruger@treasury.gov.za.

Municipalities are reminded of the need to clearly communicate the GV appeals and objection process to residents to ensure that any disputes are timeously resolved.

Revenue Collection – No operation can be sustainable if it does not collect its revenue. A municipality is no different. There is a misconception that a municipality may not interrupt or restrict the supply of water services of a defaulting consumer. The National Treasury confirms that neither the Water Services Act, 1997 (Act No. 108 of 1997) or any other legislation prevents a municipality from cutting the supply of water to a defaulting consumer unless the consumer is an indigent in which case the water services to that household must be restricted to the national free basic water limit of 6 kilolitre water monthly (or 50 kilowatt hours in the case of free basic electricity monthly). This was confirmed by the Constitutional Court in the matter of Mazibuko and Others v City of Johannesburg and Others (CCT 39/09) [2009] ZACC 28; 2010 (3) BCLR 239 (CC); 2010 (4) SA 1 (CC) (8 October 2009).

Municipalities are urged to use the restriction/ interruption of supply of both water and electricity services as a collection tool. Effective from the tabling and adoption of the 2023/24 MTREF, municipalities' By-laws and policies must facilitate this and clearly stipulate the order in which any partial payment of the consolidated municipal bill (including property rates) will be applied as well as the process before the supply of water and electricity services will be cut. The National Treasury recommended that any partial payment firstly be applied to property rates, wastewater, waste management, water and lastly to electricity. When interrupting or restricting the supply of water it is important that such is undertaken together with the municipal engineer(s) to ensure a continued minimum supply of waste-water.

Municipalities should develop a Wheeling Framework to allow for the transmission of energy across their networks. These wheeling frameworks provide an opportunity for municipalities to generate revenue from their distribution networks. Provincial Treasuries or National Treasury can be approached for support to develop these frameworks.

5.2 Funding Depreciation

The information shared in Circular 115 regarding the funding of the depreciation refers. It is important to note that depreciation represents the cost of using assets in service delivery and forms part of the total cost of providing the municipal service. Accordingly, it should be included in the setting of cost reflective tariffs to recover the full cost of rendering the service, failing which the depreciation will not be cash backed on Table A7 and will remain a journal entry with no value as mentioned in MFMA Circular No. 115.

5.3 Tariff-setting – the impact of loadshedding

Loadshedding not only affects the electricity service but also some municipalities' ability to pump water, thereby negatively impacting the stability of water supplies and the related functioning of the wastewater reticulation network. The loadshedding crisis has been declared a state of disaster and will require tough budgeting choices for municipalities to make sure that basic municipal services are sustained. The regulations published in the Government Gazette No. 48152 on 27 February 2023 in terms of the Disaster Management Act, 2002 (Act 57 of 2002) require municipalities to "ensure continuous operation of water infrastructure and other specified essential infrastructure, including by installing alternative energy sources or other measures to provide an uninterrupted power supply." Municipalities are also required to "mobilise available resources" and "provide funds for this purpose, subject to affordability." As an immediate interim solution back-up electricity to pump water should be prioritised while being mindful of its affordability within the municipality's available funding sources and other critical priorities. The municipality need to adequately plan and prioritise funding in its 2023/24 MTREF for this purpose, including:

- When planning to pump water/ maintain the wastewater service by way of any alternative solution(s), it is important that the municipality properly plan and budget for the associated capital and operational costs to operate and maintain the solution(s) over the 2023/24 MTREF and longer-term;
- Any additional cost the municipality already incurred in this regard during the period of elevated loadshedding since December 2022 should be projected to continue in 2023/24 i.e. diesel to operate a generator;
- Although a state of emergency has been declared to deal with the continual loadshedding challenges in the country, it is likely that loadshedding will continue during the 2023/24 municipal financial year. It is proposed that municipalities factor in the impact of loadshedding on their electricity revenue projections, taking into account current experience in terms of loadshedding practices by Eskom;
- The additional costs of prolonged loadshedding should be considered;
- Municipalities are always asked to try to balance full cost recovery on services with affordability for their residents. In practice, this means that where the full increase in the cost of a service is not passed on to consumers, municipalities must offset the increased costs through savings identified elsewhere in their operations. Therefore, **reducing/ limiting overall expenditure** is a key part of budgeting for the response to loadshedding. The municipality should stick to its core mandate and functions and carefully review overall expenditure to manage the net effect. Measures should include aggressively cutting costs, frills, and vanity projects, dealing with bloated administrations and structures possibly duplicated across Municipal Manager and Mayoral offices, and applying for exemptions from the annual salary increases if these are not affordable;
- While municipalities are urged to maximise efficiency in their operations, tariff setting efforts should consider the need to make additional provision for repairs and maintenance associated with infrastructure breakdowns during loadshedding;
- **Reducing/ limiting overall expenditure** – the municipality should stick to its core mandate and functions – it is necessary to carefully look at the overall expenditure side to manage the net effect, including aggressively cutting costs, fancy, frills, vanity

- projects, deal with bloated admin- and structures possibly duplicated across Municipal Manager and Mayoral offices, and apply for exemptions from the annual salary increases; and
- The cost should be considered and included when setting the tariffs of the service(s) to which it relates.

Municipalities should also budget for reduced bulk purchases and sales to municipal customers based on the same loadshedding assumptions cited above.

Municipalities should carefully monitor their Eskom accounts for any penalties that result from increased demand immediately after a period of loadshedding is ended. Eskom has indicated that they will reverse any penalties for exceeding notified maximum demand that results from the implementation of loadshedding. This should be factored into the tariff calculation to ensure that consumers are not overcharged.

Lastly, it is important to note that a municipality may only introduce a load-shedding levy or surcharge with the approval of the Minister of Finance and in terms of the legislated processes set-out in the MFMA and Municipal Fiscal Powers and Functions Act, 2007.

5.4 Setting cost-reflective tariffs

Reference is made to MFMA Circular No. 98, paragraph 4.2. The setting of cost-reflective tariffs is a requirement of Section 74(2) of the Municipal Systems Act which is meant to ensure that municipalities set tariffs that enable them to recover the full cost of rendering the service. This forms the basis of compiling a credible budget. A credible budget is one that ensures the funding of all approved items and is anchored in sound, timely and reliable information on expenditure and service delivery (Financial and Fiscal Commission (FFC), 2011). Credible budgets are critical for local government to fulfil its mandate and ensure financial sustainability.

A credible expenditure budget reflects the costs necessary to provide a service efficiently and effectively, namely:

- A budget adequate to deliver a service of the necessary quality on a sustainable basis; and
- A budget that delivers services at the lowest possible cost.

The National Treasury issued a tariff setting tool and guide as part of MFMA Budget Circular No. 98 (refer item 4.2) on 6 December 2019 and since 2019, has encouraged municipalities to utilise the tool. **With effect, from the 2023/24 MTREF, all municipalities (except metropolitan cities and district municipalities that do not provide any services) as part of both the tabled and adopted MTREF submissions must submit the completed National Treasury tariff tool (in excel format)** illustrating that the revenue component of the budget is credible and funded and that the municipality's tariffs are cost reflective. If the municipality's initial calculation results in high increases to facilitate cost-reflectiveness, it is recommended that such are phased in over 3 to 5 years. The municipality's strategy in this regard should be included as part of the budget narratives.

This tool will assist in setting tariffs that are cost-reflective and enable a municipality to recover costs to fulfil its mandate. Going forward it is also imperative that every municipality fully embrace the Municipal Standard Chart of Accounts (*mSCOA*): costing component. Considering, *mSCOA* implementation is entering its sixth year of implementation, all municipalities must fully embrace and report also utilising the costing segment correctly. The National Treasury Municipal Costing Guide is available on the link below on the National Treasury website.

<http://mfma.treasury.gov.za/Guidelines/Documents/Forms/AllItems.aspx?RootFolder=%2fGuidelines%2fDocuments%2fMunicipal%20Costing%20Guide&FolderCTID=0x0120004720FD2D0551AE409361D6CB3E122A08>.

5.5 Tariffs – achieving a balance between cost-reflectiveness and affordability

National Treasury encourages municipalities to maintain tariff increases at levels that reflect an appropriate balance between the affordability to poorer households and other consumers while ensuring the financial sustainability of the municipality.

When setting tariffs, it is therefore critical to understand the economic environment specific to the municipality and consideration should include at least –

- *The socio-economic profile undertaken for the municipality* available on the National Treasury GoMuni portal – municipalities are encouraged to annually update their own socio-economic profile using the template model available on GoMuni;
- *The most recent average monthly household income in the municipality* as per Statistics South Africa (Stats SA) available on [Statistics South Africa | Improving Lives Through Data Ecosystems \(statssa.gov.za\)](https://www.statssa.gov.za);
- *The average property value in the municipality* per its most recent approved general valuation roll and/ or supplementary general valuation roll;
- *The number of indigent households in the municipality*, including any variation in the number of indigent households included in the Equitable Share: free basic services component for the municipality vs the municipality's own indigency level discretion; and
- *The economic drivers and activities specific to the municipal area¹; etc.*

The municipality's tariff-setting or other committee tasked with this role must understand and deliberately reflect on this context during the tariff-setting process. Considering the average monthly household income, the median affordable municipal bill would ideally not exceed proportionally approximately 10 to 15 per cent the average monthly household income. This median affordable bill, in combination with the median average property value should inform the basis to determine any rebates to households with income below the median. Furthermore, municipalities contemplating to increase free basic electricity allocations as an indigent relief measure, should do so only after careful consideration of the long-term financial impact that such a decision might have.

It is also important when setting particularly water and electricity tariffs that municipalities are encouraged to set two-tier tariffs, that include a basic availability charge to recover the fixed (direct and indirect) cost associated with the service in conjunction with consumption-based tariff bands. For example, in a drought, such tariffs will facilitate the ability to pay for infrastructure and maintenance, treating chemicals and salaries, etc. while parallel facilitating water restriction based on inclining tariffs as consumption increase. Furthermore, it is important to link the municipality's water tariffs to dam levels, also approved as part of the budget process. For example, if the dam levels drop to 60 per cent the first tier of restriction tariffs should become applicable in terms of the municipality's approved tariff policy.

It is also noted that NERSA approves seasonal tariffs for Eskom but not necessarily for the municipality. It is important that the municipality clearly factors this in its tariff application to NERSA, illustrating the cash flow crunch if the municipality is not similarly allowed a seasonal tariff to recover the higher Eskom bulk cost during winter months.

Lastly, municipalities are cautioned against setting tariffs that include operating inefficiencies. This could lead to tariffs falling into the unaffordable range.

¹ The spatialised tax data is now available through National Treasury for all municipalities that provides an up to date information on economic activity within a municipal boundary.

The Consumer Price Index (CPI) inflation is forecasted to be within the 3 to 6 per cent target band; therefore, municipalities are required to **justify all increases in excess of the projected inflation target for 2023/24** in their budget narratives and pay careful attention to tariff increases across all consumer groups. In addition, municipalities should include a detailed account of their revenue growth assumptions for the different service charges in the budget narrative.

Additional loadshedding considerations when calculating anticipated revenue collection rates include:

- Consumption patterns amongst pre-paid users who work more sparingly with electricity units. This can have a lagging effect on revenue estimations i.e. although units are paid for up front, it is not necessarily used in high-demand periods; and
- A decline in average consumption patterns for post-paid customers.

As part of its debtor management strategy municipalities should clearly communicate the impact of loadshedding on municipal tariff setting, including through education campaigns. Consumers will expect a decrease in their electricity bills as consumption drops due to loadshedding. Not understanding the impact of tariff structures (fixed and demand-driven components) can create distrust and reduce willingness to pay municipal accounts.

5.6 Municipal Debt Relief

An optimally designed debt solution for Eskom can leverage the structural reform of the electricity sector that is needed both on the Eskom side and the municipal side, however, the municipal debt owed to Eskom pose a material risk to any Eskom debt relief package. In parallel the challenge of defaulting municipalities cannot be separated from a consumer culture to not pay for services.

Municipal Debt Relief that is **conditional and application based**, has therefore been sanctioned. The relief is aimed to correct the underlying behaviour and operational practices in defaulting municipalities and Eskom while in parallel, progressively introducing a smart metering solution to change consumer behaviour by instilling a culture of payment for services consumed. The proposal consists of 4 elements:

- i. **Eskom will write-off all debt municipalities owe** as on 31 March 2023 (excluding the March 2023 current account). This will be done over three national financial years and require as a critical qualification that municipalities monthly honour their current (monthly consumption) Eskom and water accounts going forward and maintain a minimum average quarterly collection, etc;
- ii. Secondly, **new mechanisms are explored to resolve non-payment** – this to include a dispute ombud mechanism and re-assigning the license of persistent defaulters;
- iii. Thirdly, Eskom will continue to **implement a regime of installation of pre-paid meters** in Eskom supplied areas to improve Eskom collection. Municipalities are additionally encouraged to adopt a similar operating regime; and
- iv. Lastly, the National Treasury will continue to implement municipal revenue enhancement initiatives, including a transversal tender for a smart pre-paid meter solution to change to a forward looking culture of payment of the consolidated municipal bill.

More details on the application process and related conditions for municipalities will soon be outlined and published through a separate MFMA Circular.

5.7 Bulk Account Payments and Concessions

Since 2018/19, intense work was undertaken to resolve systemic and structural issues pertaining to the electricity function in municipalities. Core to this work was addressing the

escalating Eskom debt that threatened the sustainability of Eskom as well as that of municipalities.

During the process, Eskom agreed to provide relieve in certain areas. Municipalities are reminded of the following concessions that remain in place:

- The interest rate charged on overdue municipal bulk accounts were reduced from prime plus 5 per cent to prime plus 2.5 per cent;
- Payment terms were extended from 15 days to 30 days for municipal bulk accounts; and
- Eskom allocation of municipality payments to capital first and then to interest.

These concessions align to the MFMA and are meant to curb municipal growing debt levels by allowing a more conducive payment regime than what was previously employed. In addition, municipalities are urged to budget for and ring-fence their payment of bulk services. Bulk current account payments must be honoured religiously to avoid stringent application of the bulk suppliers' credit control policy.

Municipalities are also urged to enforce a culture of payment for services through their normal credit control processes. In this regard it should be noted that municipalities are only compensated for free basic services based on an indigent user component calculation through the equitable share. As such, a municipality's allocation of free basic services to all of the municipality's consumers is not funded in the equitable share. Every municipality, during the budget process, must consider the affordability to the municipality when allocating free basic services above the national norm and to consumers other than indigent consumers. **If a municipality has any arrears on any of its bulk supplier's accounts, it must limit its provision of free basic services to registered indigent consumers only.**

5.8 Critical Notice Affecting STS Meters

As highlighted in previous MFMA Circular No. 115 (dated 04 March 2022) municipalities are once again alerted that there is still a pending business risk to the prepayment metering industry that requires urgency of action. The token identifiers (TID) used to identify each credit token will run out of available numbers in November 2024, at which point all STS meters will stop accepting credit tokens.

The remedy is to visit each meter and enter a special set of key change tokens in order to reset the meter memory. Municipalities are advised that the National Treasury, through the Office of the Chief Procurement Officer (OCPO), will soon facilitate a transversal contract for the provision of auditing, re-calibration and re-configuration services for standard transfer specification compliant prepayment meters that align to minimum and critical technical specifications for local government. In this respect the development of the transversal contract for smart prepaid meters as per NRS 049 (per latest approved version) is at an advanced stage and should be issued shortly by National Treasury.

If your municipality or municipality entity is currently in the process of procuring for a solution or is planning to, you are cautioned:

- Against proceeding prior to the OCPO having issued and awarded the transversal contract for the provision of inter alia auditing, re-calibration and re-configuration services for standard transfer specification compliant prepayment meters Terms of Reference (ToR); and
- That, with immediate effect, you must inform and obtain the National Treasury's input prior to proceeding with any current procurement or proposed procurement for this purpose or any related solution or similar. This is to prevent unnecessary and wasteful expenditure on such solutions. Any request for National Treasury's input on the current or planned procurement of any related solution or similar or component thereof, must be

directed to the National Treasury for the attention of the Local Government Budget Analysis Unit (Mr. Sadesh Ramjathan) at Sadesh.Ramjathan@treasury.gov.za.

In this regard, municipalities will have two options to choose from:

- Firstly, to pursue the route of auditing, re-calibrating and re-configuring services for standard transfer specification compliant prepayment meters; and/ or
- Secondly, to replace the old meter with a new smart prepaid meter.

For both options, the municipality will have to budget accordingly as no additional funding will be available through the national fiscus.

Your assistance in proactively ensuring that the municipality and/ or its entities are not adversely affected by these processes will be appreciated.

5.9 Completeness and credibility of revenue related information in the Budget

The MBRR regulates the minimum level of information required from municipalities when compiling, implementing, monitoring, and evaluating the municipality's financial management situation. Failure to include the minimum required information hampers the municipal council, the public and stakeholders' ability to make informed decisions and engage on the matter. It also limits research, studies, and benchmarking undertaken for local, provincial, and national purposes.

The National Treasury would like to take this opportunity to caution municipalities that the MBRR prescribe the minimum level of information municipalities must include as part of their legal reporting obligations.

Going forward the Treasuries will place increased attention and focus on the adequacy of municipalities' submissions. The National Treasury regards this non-compliance to include the minimum level of information as serious and if persistent will consider applying the available legal sanctions, including recourse in terms of section 216(2) of the Constitution. In this context, National Treasury will particularly focus on the completeness of asset management related information as well as the statistical information required in the A, B and C schedules during the 2023/24 MTREF.

5.10 Eskom Bulk Tariff increases

The National Energy Regulator of South Africa (NERSA) is responsible for the price determination of the bulk costs of electricity. In January 2023, NERSA approved tariff increases of 18.7 per cent in 2023/24 and 12.7 per cent increase in 2024/25. For purposes of calculating the free basic energy subsidy in the local government equitable share formula, the National Treasury has added 2 per cent to these increases. This is in anticipation of higher increases than those published in January, for municipalities, due to the difference in the financial years of Eskom customers and municipalities meaning that Eskom only has nine months to collect the allowable revenue from municipalities. R1.1 billion is added to the free basic energy subcomponent of the free basic services component of the local government equitable share formula to fund these higher tariff increases. To this end, the free basic electricity subsidy in the local government equitable share is calculated based on a 20.7 per cent tariff increase in 2023/24 and a 14.7 per cent increase in 2024/25. In the absence of an approved tariff increase in the outer year of the MTEF period, the formula assumes an increase of 17.7 per cent in 2025/26. This is the average of the estimated increases for the first two years of the MTEF period.

5.11 Updated Municipal Borrowing Policy Framework

Cabinet approved the Update to the Policy Framework for Municipal Borrowing and Financial Emergencies on the 17th of August, 2022. The purpose of the update was to re-examine the original Policy Framework, along with the legislation (i.e. Municipal Finance Management Act – MFMA) that was adopted to implement it, considering the experience with municipal borrowing that has accumulated since 2000.

The following key reforms have been introduced through the Update to the Policy Framework for Municipal Borrowing:

- The Policy Framework for Municipal Borrowing has been updated to introduce the necessary reforms that will expand the scope of responsible municipal borrowing and create an environment that attracts more players (e.g. insurers, pension funds, institutional investors and fund managers, and international Development Finance Institutions) in the municipal debt market space. The original core principles underlying municipal borrowing are maintained (i.e. creditworthy municipalities should borrow prudently to finance capital investment, and that there will be no bail-outs by the provincial or national government);
- The updated policy framework clarifies the role of Development Finance Institutions (DFIs), as it was not clearly articulated in the original policy. DFIs are required to pursue clear and agreed developmental goals, as outlined in the policy. The objective of this approach is to ensure that a DFI lending does not crowd out the private sector. Public-sector lenders, both domestic and foreign, should be guided by a social and developmental investment approach in which demonstrable social outcomes are considered alongside potential financial returns;
- The updated policy framework permits and clarifies innovative infrastructure financing mechanisms (such as pooled financing mechanisms, project finance, tax increment financing, revenue bonds, and pledging of conditional grants) that municipalities can use to leverage municipal borrowing. Municipalities are encouraged to explore these alternatives, and innovative infrastructure financing mechanisms permitted subject to the requirements contained in the Municipal Finance Management Act (MFMA); and
- The participation of both private and public sector market participants in the development of a liquid secondary market for municipal debt securities is also encouraged. The policy proposes options that can be explored to support the development and growth of an efficient and liquid market for municipal debt obligations.

The Updated Municipal Borrowing Policy Framework can be accessed at the MFMA website at the following link <http://mfma.treasury.gov.za/Guidelines/Pages/default.aspx>.

5.12 Tariff Policies

Municipalities must comply with the provisions of Section 74 of the Municipal Systems Act (MSA) which requires that a municipal council must adopt and implement a tariff policy on the levying of fees for municipal services provided by the municipality itself or by way of service delivery agreements, and which complies with the provisions of this Act and with any other applicable legislation. Municipalities should also ensure that the tariff policies adhere to all the principles outlined in section 74(2) of the MSA. A municipality's tariff policies must also take into consideration variable factors such as water shortages and electricity feedback excess into the municipal system from new generation capacity. Municipalities are urged to develop wheeling and Small-Scale Embedded Generation (SSEG) frameworks to guide the

development of associated tariffs. Municipalities must adopt by-laws to give effect to the implementation and enforcement of their tariff policies.

5.13 Non-Revenue Electricity and Non-Revenue Water/ Revenue Losses

Water Service Authority municipalities and electricity licensed municipalities are urged to align both their non-revenue water and non-revenue electricity indicators and their set targets in the 2023/24 SDBIPs with identifiable infrastructure or operational projects and/ or programmes. Municipalities should track improvements on the baseline information included in the SDBIPs by indicating the volume of water losses (i.e., kilolitres/ mega-litres) and the amount of electricity losses (KwH or MWs) for the previous year. This approach will help to determine the progress of municipalities in curbing losses, which impact on municipal revenues, in both non-revenue water and non-revenue electricity.

6. Burial of Councillors

Salaries, allowances and benefits for political office-bearers and members is managed through Determination of Upper Limits of Salaries, Allowances and Benefits of Different Members of Municipal Councils notice issued by the Minister of Cooperative Governance and Traditional Affairs.

Section 167 of the MFMA provides that a municipality may remunerate its Councillors within the framework of the Public Office-Bearers Act, 1998 (Act No. 20 of 1998), setting the upper limits of the salaries, allowances and benefits for those political office-bearers and members. Any benefit which is not included in the above-mentioned notice constitutes irregular expenditure and recovery thereof from the Councillor concerned is mandatory.

Municipalities may also refer to relevant Councillor Pension Scheme or personal funeral policies in existence for any funeral benefits relating to such Councillor.

7. Funding choices and management issues

Municipalities are under pressure to generate and collect revenue for service delivered. The ability of customers to pay for services is declining and this means that less revenue will be collected. Therefore, municipalities must consider the following when compiling their 2023/24 MTREF budgets:

- Improving the effectiveness of revenue management processes and procedures;
- Cost containment measures to, amongst other things, control unnecessary spending on nice-to-have items and non-essential activities as highlighted in the Municipal Cost Containment Regulations read with MFMA Circular No. 82;
- Ensuring value for money through the procurement process;
- The affordability of providing free basic services to all households;
- Not taking on unfunded mandates;
- Strictly control the use of costly water tankers and fix the water infrastructure to enable the sustainable provision of water;
- Automate business services where possible to increase efficiencies and lower customer costs;
- Prioritise the filling of critical vacant posts, especially linked to the delivery of basic services; and
- Curbing the consumption of water and electricity by the indigents to ensure that they do not exceed their allocation.

Accounting officers are reminded of their responsibility in terms of section 62(1)(a) of the MFMA to use the resources of the municipality effectively, efficiently and economically. Failure to do this will result in the accounting officer committing an act of financial misconduct which will trigger the application of chapter 15 of the MFMA, read with the Municipal Regulations on Financial Misconduct Procedures and Criminal Proceedings, 2014.

7.1 Employee related costs

The Salary and Wage Collective Agreement for the period 01 July 2021 to 30 June 2024 dated 15 September 2021 through the agreement that was approved by the Bargaining Committee of the Central Council in terms of Clause 17.3 of the Constitution should be used when budgeting for employee related costs for the 2023/24 MTREF. In terms of the agreement, all employees covered by this agreement shall receive with effect from 01 July 2023 and 01 July 2024 an increase based on the projected average CPI percentages for 2023 (5.4 per cent according to the Reserve Bank's Monetary Committee Statement for January 2023) and 2024 (4.8 per cent according to the Reserve Bank's Monetary Committee Statement for January 2023). The forecasts of the Reserve Bank, in terms of the January 2023 and January 2024, shall be used to determine the projected average CPI. Municipalities are encouraged to perform an annual head count and payroll verification process by undertaking a once-a-year manual salary disbursement, to root out ghost employees.

According to the 2021 State of Local Government Finance Report, there are about 165 municipalities that are in financial distress. These municipalities need to ensure that they seek an early exemption from this dispensation of this salary agreement. Municipalities should also avoid paying out leave in cash while having major financial challenges.

7.2 Remuneration of Councillors

Municipalities are advised to budget for the actual costs approved in accordance with the Government Gazette on the Remuneration of Public Office Bearers Act: Determination of Upper Limits of Salaries, Allowances and Benefits of different members of municipal councils published annually between December and January by the Department of Cooperative Governance. It is anticipated that this salary determination will also take into account the fiscal constraints. Municipalities should also consider guidance provided above on salary increases for municipal officials during this process. Any overpayment to councillors contrary to the upper limits as published by the Minister of Cooperative Governance and Traditional Affairs will be irregular expenditure in terms of Section 167 of the MFMA and must be recovered from councilor(s) concerned.

8. Conditional Grant Transfers to Municipalities

8.1 Criteria for the release of the Equitable Share

The equitable share release criteria for 2023/24 were set out in MFMA Circular No. 122. To assist with managing this process, a guiding checklist has been developed (attached hereto as Annexure A) which municipalities can follow throughout the course of the year to ensure that the required documents are timeously uploaded to the GoMuni platform in line with the prescribed deadlines.

Going forward, municipalities will be required to submit the completed checklist as part of the quarterly performance reporting process for quarter 1 of the municipal financial year. According to section 52(d) of the MFMA, the mayor of a municipality must within 30 days of the end of each quarter, submit a report to council on the implementation of the budget and the financial state of affairs of the municipality. The report must then be submitted to National

and Provincial Treasury within 5 days of being tabled in council as per section 32 of the MBRR. The report for quarter 1 of 2023/24 must therefore be submitted to council by the end of October 2023 and submitted to National and Provincial Treasury by no later than 5 November 2023. By including the completed checklist in this report, municipalities confirm their adherence to the equitable share release criteria, including that all supplementary information (as defined in the checklist) was successfully uploaded to the GoMuni platform.

Please note that most of the information required for the release of the equitable share, is already uploaded/ submitted by municipalities as part of existing reporting requirements throughout the year. There are however a few items (clearly marked in the checklist) that does not have a dedicated storage location (for example, payments of employee benefits) on GoMuni. A dedicated Equitable Share Verification Folder will be created on GoMuni for this purpose.

8.2 Criteria for the rollover of conditional grant funds

In terms of Section 21 of the Division of Revenue Act, 2022 (Act No.5 of 2022) (DoRA) in conjunction with the Division of Revenue Amendment Act, 2022 (Act No. 15 of 2022) (DoRAA), the Act requires that any conditional allocation or a portion thereof that is not spent at the end of the 2022/23 financial year reverts to the National Revenue Fund (NRF), unless the rollover of the allocation is approved in terms of subsection (2). Furthermore, the receiving officer, provincial treasury and national transferring officer is required to prove to National Treasury that the unspent allocation is committed to identifiable projects, in which case the funds may be rolled over.

When requesting a rollover in terms of section 21(2) of the 2022 DoRA, municipalities must include the following information with their submission to National Treasury:

1. A formal letter, signed by the accounting officer addressed to the National Treasury requesting the rollover of unspent conditional grants in terms of section 21(2) of the 2022 DoRA;
2. A list of all the projects that are linked to the unspent conditional grants and a breakdown of how much was allocated, spent and the balance per project;
3. The following evidence indicating that work on each of the projects has commenced, as applicable to the specific rollover(s):
 - a) Proof that a contractor or service provider was appointed for delivery of the project before 31 March; or
 - b) Proof of project tender and tender submissions published and closed before 31 March or with the appointment of contractor or service provider for delivery of service before 30 June in cases where additional funding was allocated during the course of the financial year of the project;
 - c) Incorporation of the Appropriation Statement;
 - d) Evidence that all projects linked to an allocation will be fully utilised by 30 June 2024 (attach cash flow projection for the applicable grant).
4. A progress report (also in percentages) on the status of each project's implementation that includes an attached **legible implementation plan**);
5. The value of the committed project funding and the conditional allocation from the funding source;
6. Reasons why the grants were not fully spent during the year on the original allocation per the DoRA;
7. Rollover of rollovers will not be considered. Municipalities must therefore not include previous year's unspent conditional grants as rollover request;
8. An indication of the time period within which the funds are to be spent if the rollover is approved; and

9. Proof that the Municipal Manager and Chief Financial Officer are permanently appointed.

No rollover requests will be considered for municipalities with vacant or acting Chief Financial Officers and Municipal Managers for a period exceeding 6 months from the date of vacancy; this also includes acting appointments because of suspensions of either MM or CFO that are more than 12 months.

If any of the above information is not provided or the application is received by National Treasury (Intergovernmental Relations Division) after 31 August 2023, the application will be declined.

In addition, National Treasury will also consider the following information when assessing rollover applications; and reserves the right to decline an application should there be non-performance by the municipality in any of these areas:

1. Compliance with the in-year reporting requirements in terms of sections 71 and 72 of the MFMA and section 12 of the 2022 DoRA, **including the Municipal Manager and Chief Financial Officer signing-off on the information** sent to National Treasury;
2. Submission of the pre-audited Annual Financial Statements to National Treasury by 31 August 2023;
3. Accurate disclosure of grant performance in the 2022/23 pre-audited Annual Financial Statements, (i.e. correct disclosure of grant receipts and spending in the notes to the AFS);
4. Despite the fact that local government is required to comply with to different norms and standards prescribed by different legislations, municipalities are expected to fully comply with the provisions of DoRA that relate to rollover processes and disclose conditional grant performance in the 2022/23 pre-audited Annual Financial Statements (i.e Cash coverage and unspent conditional grants in the Statement of Financial Position) in order to verify grant expenditure; and
5. Cash available reflected in the Statement of Financial Position and Cash Flow Statements and the bank (net position including short term investments) as at 30 June 2023 is equivalent to the unspent amount at the end of the financial year. If the amount that is requested for rollover **is not entirely cash-backed**, such a rollover will not be approved. National Treasury will also not approve portions of rollover requests.

It should be noted that under no circumstances will the National Treasury consider requests to rollover:

1. The entire 2022/23 allocation to the municipality, in cases whereby the rollover request is more than 50 per cent of the total allocation, National Treasury will approve the rollover amount up to 50 per cent of the 2022/23 allocation;
2. Rollover request of the same grant for the third consecutive time. In a case where a municipality is applying for rollover as a result of additional funding, the application will be given a careful consideration;
3. Funding for projects procured through Regulation 32 of the Municipal Supply Chain Management Regulations (Gazette No.27636) – Projects linked to additional funding and disasters are exempted; and
4. A portion of an allocation where the proof of commitment for the rollover application is linked to invoices that were issued before or on 31 May 2023.

8.3 Unspent conditional grant funds for 2022/23

The process to ensure the return of unspent conditional grants for the 2022/23 financial year will be managed in accordance with section 22 of the DoRA. In addition to the previous MFMA Circulars, the following practical arrangements will apply:

- Step 1: Municipalities must submit their June 2023 conditional grant expenditure reports according to section 71 of the MFMA reflecting all accrued expenditure on conditional grants and further ensure that expenditure reported to both National Treasury and national transferring officers reconciles;
- Step 2: When preparing the Annual Financial Statements, a municipality must determine the portion of each national conditional grant allocation that remained unspent as at 30 June 2023. The unspent grant values must be determined based on the guidance that was provided in mSCOA Circular No. 13 in as far as VAT, retention and interest is concerned; and
- Step 3: If the receiving officer wants to motivate in terms of section 22(2) of the 2020 DoRA that the unspent funds are committed to identifiable projects, the rollover application pack must be submitted to National Treasury by no later than 31 August 2023.

National Treasury will not consider any rollover requests that are incomplete or received after this deadline.

- Step 4: National Treasury will confirm in writing whether or not the municipality may retain any of the unspent funds as a rollover based on criteria outlined above by 20 October 2023;
- Step 5: National Treasury will communicate the unspent conditional grants amount by 08 November 2023. A municipality must return the remaining unspent conditional grant funds that are not subject to a specific repayment arrangement to the National Revenue Fund by 17 November 2023; and
- Step 6: Any unspent conditional grant funds that should have but has not been repaid to the National Revenue Fund by 17 November 2023, and for which a municipality has not requested a repayment arrangement, will be offset against the municipality's 06 December 2023 equitable share allocation.

All other issues pertaining to Appropriation Statement and reporting on approved rollovers are addressed in the Annexure to MFMA Circular No. 86.

9. The Municipal Budget and Reporting Regulations

9.1 Alignment of Municipal Budget and Reporting Regulations (MBRR) Schedules

The revised Regulated MBRR Schedules (A1, B, C, D, E and F), as aligned to the mSCOA chart and GRAP are published on the National Treasury web page and can be accessed using the following link.

<http://mfma.treasury.gov.za/RegulationsandGazettes/Municipal%20Budget%20and%20Reporting%20Regulations/Documents/Forms/AllItems.aspx?RootFolder=%2fRegulationsandGazettes%2fMunicipal%20Budget%20and%20Reporting%20Regulations%2fDocuments%2f2023%2d24&FolderCTID=0x0120001860D4A2BD7AD042BF8427FC3BB59F67>

The alignment of the A1 Schedules required substantial changes to the reporting formats used for budgeting and reporting purposes which required the creation of new A1 Schedule codes to ensure that the data strings populate the new reporting formats. The relevant changes were also made in the reporting formats relating to versions 6.1 to 6.7 of the mSCOA chart to ensure that the historical data are populating when reports are drawn from GoMuni.

To ensure that ERP systems generate the A1 Schedule aligned to version 6.7 of the mSCOA chart, municipalities and system vendors should refer to the linkages provided on GoMuni. The following reports on GoMuni should be used for this purpose:

- List *m*SCOA account linkages to A1 Schedule based on 6.7 under menu option *m*SCOA Reporting; and
- List *m*SCOA A1 schedule codes WIP (i.e. new A1 Schedule codes) under menu option *m*SCOA Administration.

Both reports can be located under:

https://lg.treasury.gov.za/ibi_apps/portal/Local_Government_Database

The new format for the non-financial data strings A1D and A1F is available on the link below:

<http://mfma.treasury.gov.za/RegulationsandGazettes/Municipal%20Budget%20and%20Reporting%20Regulations/Documents/Forms/AllItems.aspx?RootFolder=%2fRegulationsandGazettes%2fMunicipal%20Budget%20and%20Reporting%20Regulations%2fDocuments%2f2023%2d24&FolderCTID=0x0120001860D4A2BD7AD042BF8427FC3BB59F67>

The A1D is the data string which populates information which we do not extract from the TABB while the A1F populates the budget information which we do not extract from the ORGB. Municipalities should ensure that they use the new format when submitting the non-financial data strings.

10. Submitting budget documentation and A1 schedules for 2023/24 MTREF

The MFMA and its Regulations require the submission of *m*SCOA data strings for budgets, in-year reporting, and annual financial statements in a specific format and by a required timeframe. The credibility and accuracy of the *m*SCOA data strings must be verified by municipalities prior to submission to the GoMuni Upload portal. Since the financial system must be locked at the end of the month in order to generate a *m*SCOA data string, municipalities may not open closed periods to correct errors. Errors must be corrected in the next open period. Providers of municipal financial systems must ensure that the necessary internal controls are built into the system to prevent the opening of closed periods on the financial system and the bypassing of such controls. This also applies to the correction of information in closed periods for 3rd party systems that should be integrating with the main financial system in terms of the requirements of the *m*SCOA Regulations.

From 1 July 2023, Municipal Managers and Chief Financial Officers will be required to sign off on the financial and non-financial data strings submitted to the GoMuni Upload portal when they submit their data strings. The schedules prescribed in terms of the Municipal Budget and Reporting Regulations (MBRR) populated from the *m*SCOA data strings on National Treasury's Local Government and Reporting System (LGDRS) must also be signed off monthly. These sign-offs are for audit purposes and serves as a confirmation by the municipality that the data strings submitted are accurate. Details on the submission of the signed-off figures will be communicated in due course.

In terms of Section 171 of the MFMA, financial misconduct by municipal officials includes the provision of incorrect or misleading information in any document which must be submitted to the National Treasury.

From 1 July 2023, the GoMuni Upload portal for the monthly in-year data strings will be closed at 16h00 on the 10th working day of each month. All publications by the National and Provincial Treasuries are now solely sourced from the *m*SCOA data strings submitted by

municipalities and several stakeholders including Statistics South Africa (STATSSA), Auditor General South Africa (AGSA), the Reserve Bank, and NERSA are in the process of streamlining some of their reporting to the information contained on the National Treasury Local Government Database and Reporting System (LGDRS). The resubmission of data strings after the legislated timeframes is not only illegal but also causing challenges in data sets used by various stakeholders for analysis and reporting purposes. **No data string submissions will therefore be accepted by the National Treasury after the 10th working day of the respective month.**

8.5	MONTHLY FINANCIAL STATUTORY REPORTING: DEVIATIONS FOR FEBRUARY 2023
-----	--

Collaborator No:

IDP KPA Ref No:

Meeting Date:

Good Governance and Compliance

22 March 2023 & 29 March 2023

1. SUBJECT: MONTHLY FINANCIAL STATUTORY REPORTING: DEVIATIONS FOR FEBRUARY 2023

2. PURPOSE

To comply with Regulation 36(2) of the Municipal Supply Chain Management Regulations and Section 36 of the Supply Chain Management Policy 2022/2023 to report the deviations to Council.

3. DELEGATED AUTHORITY

Council

FOR NOTING.

4. EXECUTIVE SUMMARY

Regulation 36(2) of the Municipal Supply Chain Management Regulations and Section 36 of the Supply Chain Management Policy (2022/2023) stipulate that SCM deviations be reported to Council. In compliance thereto, this report presents to Council the SCM deviations that occurred during February 2023.

5. RECOMMENDATION

that Council notes that there are no deviations listed for the month of February 2023.

6. DISCUSSION / CONTENTS

6.1 Background/Legislative Framework

The regulation applicable is as follows:

GNR.868 of 30 May 2005: Municipal Supply Chain Management Regulations

Deviation from and ratification of minor breaches of, procurement processes

36. (1) A supply chain management policy may allow the accounting officer—

(a) To **dispense with the official procurement processes** established by the policy and to procure any required goods or services through any convenient process, which may include direct negotiations, but only—

(i) in an emergency;

(ii) if such goods or services are produced or available from a single provider only;

(iii) for the acquisition of special works of art or historical objects where specifications are difficult to compile;

(iv) acquisition of animals for zoos; or

(v) in any other exceptional case where it is impractical or impossible to follow the official procurement processes; and

(b) to ratify any minor breaches of the procurement processes by an official or committee acting in terms of delegated powers or duties which are purely of a technical nature.

(2) The accounting officer must record the reasons for any deviations in terms of sub regulation (1) (a) and (b) and **report them to the next meeting of the council**, or board of directors in the case of a municipal entity and include as a note to the annual financial statements.

6.2. Discussion

Reporting the deviations as approved by the Accounting Officer for February 2023:

None

6.4 Legal Implications

The regulation applicable is:

GNR.868 of 30 May 2005: Municipal Supply Chain Management Regulations: Deviations from and ratification of minor breaches of, procurement processes.

6.5 Staff Implications:

No staff implications

6.6 Previous / Relevant Council Resolutions:

None

6.7 Risk Implications

That the market may not be tested.

The measures in place to deal with deviations mitigate the risk to an acceptable level. The auditor general also audit the deviations during the yearly audit.

6.8 Comments from Senior Management:

The item was not circulated for comment except to Municipal Manager

6.8.1 Municipal Manager

Supports the recommendation.

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 6.5

that Council notes that there are no deviations listed for the month of February 2023.

9.	REPORT BY THE MUNICIPAL MANAGER ON OUTSTANDING RESOLUTIONS
-----------	---

No report submitted as outstanding resolutions serves at Section 80 Committees.

10.	ITEMS FOR NOTING
------------	-------------------------

10.1	REPORT/S BY THE EXECUTIVE MAYOR
-------------	--

10.1.1	REPORT BY THE EXECUTIVE MAYOR ON THE MAYOR – RECTOR FORUM MEETING: 10 NOVEMBER 2022
---------------	--

Collaborator No:

IDP KPA Ref No:

Meeting Date:

Good Governance

29 March 2023

1. SUBJECT: REPORT BY THE EXECUTIVE MAYOR ON THE MAYOR – RECTOR FORUM MEETING: 10 NOVEMBER 2022

2. PURPOSE

To inform Council of the matters under discussion at the Mayor – Rector Forum meeting held on 10 November 2022.

3. DELEGATED AUTHORITY

For information.

4. EXECUTIVE SUMMARY

The Executive Mayor has since her election reported to Council on discussions that takes place at the regular meetings of the Mayor – Rector Forum. The meeting was held on 10 November 2022. The minutes is attached as **Annexure A** and was only submitted to the municipality by the University in February 2023.

5. RECOMMENDATION

that Council takes note of the report from the Executive Mayor.

6. DISCUSSION / CONTENTS

6.1 Background

The Mayor – Rector Forum was established to collaborate and share information and research on main areas of agreement regarding the challenges facing Stellenbosch and the possible solutions.

6.2 Discussion

The Executive Mayor has since her election reported to the Council on discussions that takes place at the regular meetings of the Mayor – Rector Forum. The minutes is attached as **ANNEXURE A**.

The following concerns were discussed: 10 November 2022.

- Matters arising from previous meeting
 - o Future upgrade of the Die Braak
 - o Recent events and engagements on campus
 - o Adam Tas Corridor
 - o Coetzenburg and School Sports
 - o Student perceptions and Stellenbosch town

- Feedback from standing committees
 - o Stellenbosch Municipality Mobility Forum
 - o Infrastructure Forum
 - o Stellenbosch Municipal Water Management
 - o Monitoring & Advisory Committee on Crime (MACC)
- New Matters
 - o Update on Stellenbosch Network (presentation)
 - o #Call to All Men-campaign

6.3 Financial Implications

Dealt with in terms of the approved budget.

6.4 Legal Implications

The decisions are in line with approved delegations or powers vesting in the Executive Mayor.

6.5 Staff Implications

This report has no additional staff implications to the Municipality.

6.6 Previous / Relevant Council Resolutions

Item 10.1.3 – Council meeting: 2022-07-27

6.7 Risk Implications

Addressed through the content of the item.

6.8 Comments from Senior Management

The report was not circulated for comment. The Executive Mayor discusses relevant issues with the Municipal Manager who takes up actions with the Directors directly.

Prof N Koopman	Vice-Rector: Social Impact, Transformation and Personnel
Mr N van der Merwe	Corporate Communication and Marketing
Mr M Nyakatya	Social Impact Co-Ordinator
Ms M C Douman	Manager: Executive Communication

Members absent with apology:

Stellenbosch Municipality (the Municipality)	
Mr Donovan Muller	Manager: Councillor Support
Stellenbosch SU (the SU)	
Prof H Klopper (HK)	Deputy Vice-Chancellor: Strategy and Internationalisation

[illegible]

	SU is on record that we have a zero tolerance approach to this and have numerous activities and initiatives in this regard.	WdV
4.3	Carbon dioxide mitigation concept Met with Paul Rowett and has been to a coffee shop where one can buy coffee with Toco tokens so it is functioning and is a nice app. It is also a way for us to utilize carbon credits in a socially beneficial way.	SdP
4.4	Update on Adam Tas Corridor The landowner's collective memorandum of understanding has been signed and there is a lot of traction from the landowners' side. The main developments have been on the Municipality's side. Council approved the Local Spatial Development Framework on 23 October 2022 as a policy document of Council. The Municipality will also advertise in the papers this week. Council approved that we could go out on public participation with that overlay zone and that this process will also be advertised in the newspapers. The process will run for 60 days and the Municipality is expecting some comments. Once the comments have been received, the Municipality will revert back to Council with the revised overlay zone and ask Council to consider that for approval. The landowners' collective has been formed and the document has been signed and is operational. The Municipality is in constant contact with the landowners regarding the phasing and the infrastructure required for phasing. Would like to congratulate the Municipality, Remgro and many other parties for the opening of the pedestrian crossing last week.	NvdE
4.5	Uber Stop in Ryneveldt Street Uber does not have a license to pick up people in Ryneveldt Street. Licenses are given to the operators by the provincial government. Uber is only allowed to drop off passengers in Ryneveldt Street. Uber is part of the public transport solution, it is important for us to understand how to resolve this. It is not helpful that Uber cannot pick up passengers. Have to revisit this because people cannot use only public transport to come from Cape Town to Stellenbosch.	DL GM
4.6	Stellenbosch Post Office (Neelsie) The Post Office did not renew their contract in the Neelsie. They have moved to Andringa Street and deal with all packages as well as with social payments.	SdP
4.7	Stellenbosch Network All the big employers, including SU and the Municipality is now solidified and is known as the Stellenbosch Network. This network focuses on entrepreneurship-based activities. Most of the bigger employers are involved. The focus is on entrepreneurship on a number of levels: innovation, social impact and other initiatives, as well as upskilling and upscaling micro and small businesses and the network does fantastic work locally. It currently receives funding from all the partners including SU through Innovus and from the Department of Science Technology. Will request Hanli to do a full presentation at the next meeting. The fibre roll-out in Kayamandi is in full swing. A meeting with Alan Knott-Craig and other partners has been arranged to see how SU can support all the endeavours linked to the roll-out of fast, cheap bandwidth in the area of Kayamandi. The latest socially linked competition of the network is linked to the roll-out of higher speed fibre in Kayamandi. Looking forward to see what impact and change this will bring to the community of Kayamandi and the broader Stellenbosch community. Residents have enquired about the fibre project and the Municipality has assisted with the applications for the wayleaves. It is overlying and not underground connections. Public participation processes with the community was done and the Municipality is on	LBvR

	<p>board. The concerns and issues around the connections and the electrical lines and the interference thereof has been addressed. The provision of fibre optics is not a municipal function. The Municipality dealt with the wayleaves and approved the overhead way of dealing with it. It is impossible to do it underground because of the tight spaces available but this was sorted out and is going ahead.</p> <p>There was an enquiry from the community in Kayamandi and the Municipality followed up with the appointed consultants. All of the people in the first phase of the roll-out of fibre were consulted.</p>	
5.	Feedback from standing committees	
5.1	<p>Stellenbosch Municipality Mobility Forum</p> <p>A few discussions were held internally at the Municipality and there are current statutory structures already in place and the proposal is to improve upon them. The National Land Transport Act and provincial legislation requires us to compile the Comprehensive Integrated Transport Plan (CITP) for the Municipality and public participation, as well as the SDF in the master planning and the IDP is required. Proposing that the CITP be reviewed every five years and also to be updated annually. Propose that every annual update of the CITP – the integrated transport plan be public participated to deal with transport roads and mobility matters at the same time.</p>	SC
5.2	<p>Infrastructure Forum</p> <p>The last meeting was held on 8 August 2022.</p> <p>Infrastructure Development Sub-Committee</p> <p>There was an in-time control system for traffic signals along the R44 corridor. This is a joint project between SU, the Municipality and private institutions. For traffic optimization, smart traffic lights on the R44 – the initial phase is calling for smart traffic controllers that has been installed at three intersections on the R44.</p> <p>The data is currently sent off site, but will be moved to a traffic centre in Stellenbosch. The next step is to extend the traffic controllers from Van Reede to Helshoogte Road. The goal is to link all the traffic lights within Stellenbosch. Procedures are being put in place to sign new agreements going forward because at present the Municipality is working on the project within the parameters of existing agreements.</p> <p>Landfill and construction of the new cell</p> <p>The Provincial Department of Environmental Affairs did not approve our waste management license variation application in August 2022 and the Municipality is required to redo some steps, due to a legal opinion that took place at Witzenberg Municipality. The Municipality reappointed the consultant who did the initial application who will open it up for the public participation process again in the next two weeks.</p> <p>Electricity Regeneration Project</p> <p>Mr Lowe has been retained by the Municipality and is now running this project on a full time basis. The first milestone reached in the last few weeks was that the Energy Master Plan has been completed by the CSIR. A consultant (Linus) was appointed for the cost of supply study. There are 700 kilowatts of rooftop solar on the municipal buildings that has been completed successfully from the public input to generation of electricity and an additional 6 megawatts is available at present. Looking at reaching first milestone of 10 megawatts. The aim is to have an engagement with Eskom about the first stage of loadshedding and reaching 10% of our target by June 2023. SU, through Dr Arnold Reeks, is conducting an energy storage study which is an important initiative because how we go about the storage of the alternative electricity is important and needs to be in place.</p> <p>Alternative disinfection of drinking water</p> <p>There is a countrywide shortage of chlorine gas, Paul Robert was appointed on 1 August 2022 and is investigating for easier, better and cheaper ways to dose the Hypo tablets as this is the safest route.</p>	SC

	<p>New Projects:</p> <p>Impact of veld fires on flooding Professor Kobus du Plessis raised with the Municipality the impact of veld fires on flooding. Professor Anton Basson raised with the Municipality the integration between data silos to have a better view of maintenance schedules and is recruiting students for 2023.</p> <p>Traffic Circles Megan Brewer is doing a small project on road signs and traffic rule adherence at the different circles in Stellenbosch. Professor Theunis Booysen has raised the electric minibus taxis as well. For fixed charging base to reinstall at the taxi rank in Stellenbosch and other initiatives under that banner. They are retrofitting a minibus taxi of SU and the conversion was to be done by November. DL is looking at a possible future project to estimate the impact on the electricity network should the electrical vehicle take off.</p> <p>Update on Trains between Muldersvlei/Stellenbosch and Muldersvlei/Klapmuts Prasa is now attending the Adam Tas Corridor meetings. It is expected that the rail from Stellenbosch to Paarl will be operational by June 2023. There is no objection from the Ministrative side to the proposals from Western Cape to the National Prasa, but they need to go through the administrative procedures in order to escalate it upwards and then have it discussed at a political level.</p>	NvdE
5.3	<p>Stellenbosch Municipal Water Management An internal drought readiness plan was developed in August to see where the Municipality is at because of the concern around rainfall this year. An analysis showed that the Municipality is drought ready. There are boreholes from the drought period. There are a few exciting initiatives such as The Berg River Voëlvlei Augmentation Scheme 'bravas' – raising the Berg River Dam wall. The Municipality invited the surrounding municipalities to offtake some of that water which will be cheaper than what we pay the City of Cape Town, however, it is not approved as yet.</p> <p>A request from NdvE to SC was to look into if we could get water from the sewage plant for gardens and grounds which will relieve some of the pressure from not being able to draw water from the Eersterivier. The other issue is the situation at Marianthal. Getting water through Elsenburg and there are some issues there. Need a resolution there as well.</p> <p>Stormwater This project is to investigate and develop different methods for clean stormwater run-off. SU has requested that the Municipality assist with practical inputs into the study. Dr Isabel Brink (PhD student) is doing a project on green infrastructure and laboratory scale setups for stormwater runoff that is heavily polluted. There are three types: rain garden, filter strip and swale; as well as three plant species being identified in the previous research. It takes about six weeks to establish and the project is starting in the laboratory to evaluate potential. The Municipality will have preliminary results from runs at the end of 2023 testing to see how well it removes from the water with the high levels of substance.</p> <p>Grey Water Management The Grey Water report has been previously reported on at this meeting and was launched on 1 September 2022 by the Water Research Commission. Karen Kritzingier will forward all future invites for subsequent meetings to all meeting participants and she has forwarded the link for the report. The next step is to conduct workshops and these will be reported on at the next meeting.</p>	<p>SC</p> <p>NvdE</p> <p>SC</p> <p>SC</p>
6.4	<p>Monitoring and Advisory Committee on Crime (MACC) The last meeting was held on 5 June 2022. The concern that was raised from SU's perspective is the Joubert Street House. SU receives a lot of complaints from parents about the people selling and using drugs and are hoping that the Municipality will put pressure on them from a legal perspective to sort out this house.</p> <p>There is the issue of the homeless people which SU is struggling with on campus. Municipality is trying their best, but there is a lot of difficulty with the homeless people</p>	NvdE

	<p>and in particular repeat offenders, as well as people that are mentally ill. The concern is the distress it causes the students. The matter is on the agenda as a point from the Mayor for discussion.</p> <p>It has become a difficult situation. Suggest we refer this to a committee to see if we can try and find assistance from SU's side. There are also safety issues because criminals tend to disguise themselves as homeless people. It is a complex issue, but affects the students directly. Suggest a standing committee to deal with the issue – MACC.</p> <p>Would be worthwhile to have the Social Work department conduct a study on the homeless people to figure out what will help us get more information, more data, where they come from, etc. and possible ways forward.</p> <p>A very valuable workshop was organised by the Municipality and some work was done subsequent to that workshop. Prof Moyo has written a piece on this which is a very useful contribution like the notion of an urban renewal project.</p> <p>There is currently a proposal where we want to register all the homeless people in and around the area. The idea is to get Stellenbosch Unite to do a program or project.</p> <p>Suggested getting the homeless to assist with parking in the evenings and then giving a stipend and try to get them off the streets permanently. Such proposals are being discussed. It is about re-skilling.</p> <p>We should also explore the establishment of a Homelessness Forum where we also involve the homeless as a key participant in such a forum. The Municipality will invite SU to participate in and help to reformulate some of the strategies and relook how we approach this challenge.</p>	<p>GvD</p> <p>WdV</p> <p>NvdE</p> <p>GM</p> <p>GB</p>
6.	New matters	
6.1	<p>Meeting with Wesgro</p> <p>SU met with Wesgro and Stellenbosch Network. The meeting dealt with current and recent projects between Wesgro and Stellenbosch and also potential future collaboration opportunities. Premier Alan Winde had to postpone his visit to SU but this will be rescheduled to early in the new year. It was agreed to have regular meetings and the Municipality will be included in these meetings. The purpose will be for further collaboration in terms of knowledge networks of science parks, as well as future plans for the Belville Park redevelopment.</p>	WdV
6.2	<p>SU Sports Grounds and Schools</p> <p>Have had representatives from various schools (disadvantaged and affluent schools) who claim that it has become unaffordable to use SU's sports grounds.</p> <p>SdP received a letter from the Headmaster (Mr Pellissier) earlier this year who wrote a letter on behalf of a group of Headmasters to complain about the costs of hosting an interschool event at Coetzenburg. It was claimed that SU charges more than the Dal Josafat Stadium in Paarl.</p> <p>SdP wrote back to Mr Pellissier and has received no response to that letter. It was explained that there are other costs associated with hosting an event such as necessary security, medical staff and cleaning that is required at such events which are the requirements for all events. The request from the schools is that SU cover the cost of these services on their behalf. Schools are aware of these events and should budget ahead of time.</p> <p>LBvR met with CK, B Como and J Lark (Maties Sport) to deal with the matter. It is for the bylaws to be implemented. It has a number of cost implications. Brand and Facilities Management, Charl Kitching and his team are busy devising processes and protocols to deal with this.</p> <p>The tourism body is also unhappy that a number of events cannot take place at Coetzenburg and they have already entered into conversations with the Municipality with regards to large events and how we can better streamline and manage large events and how the Municipality can support the Visit Stellenbosch organised events. It is agreed that a joint conversation should be held between Visit Stellenbosch, the Municipality and SU where we can share information and possibilities. All events at Coetzenburg are welcomed as long as they comply with the appropriate risk</p>	<p>GvD</p> <p>SdP</p> <p>LBvR</p>

	management legislation. Would like for our Stellenbosch schools to use the facilities of SU. Suggested that SU helps the schools that are economically deprived and cover the realistic and fair costs that is associated with using Coetzenburg between the teams. We should rather seek ways to subsidise it and try to make provision for it and host Stellenbosch schools at SU.	NK
8	Closing	
	The meeting adjourned at 16h00. The next meeting is scheduled for Monday, 27 February 2023 (Chair and Secretariat: Stellenbosch Municipality)	WdV

10.2	REPORT/S BY THE SPEAKER
10.2.1	QUARTERLY REPORT–WARD COMMITTEE FUNCTIONING (OCT –DEC 2022)

Collaborator No:

IDP KPA Ref No:

Good Governance

Meeting Date:

29 March 2023

1. SUBJECT: QUARTERLY REPORT – WARD COMMITTEE FUNCTIONING (OCT – DEC 2022)

2. PURPOSE

For Council to take note of the Functioning of Ward Committees within the Stellenbosch municipal areas.

3. DELEGATED AUTHORITY

For Notification by Municipal Council

4. EXECUTIVE SUMMARY

In terms of section 73 of the Local Government: Municipal Structures Act, no 117 of 1998 and Regulations, Ward Committees must be established for each ward within the municipal area within 120 days after the election.

The system of delegations of the Stellenbosch Municipality (S6 and S7) designates the Speaker of Stellenbosch Municipality to facilitate the establishment of Ward Committees in line with the provisions and stipulations of the Municipal Structures Act and Council's policy for the establishment of Ward Committees.

At the Council meeting of 30 March 2022, Council noted the establishment of Ward Committees for all 23 wards within the Stellenbosch Municipality.

Wards who did not have the full complement of Ward Committees members were allowed to co-opt members in line with Council Policy and Procedures for Ward Committees. Ward 3 co-opted 4 new members in September 2022. All ward committees are fully functional and are performing all duties as set out in the Policy and Procedures for Ward Committees.

Attached herewith as ANNEXURE A is a table outlining the functioning of all Ward Committees for the period October 2022 – December 2022, including dates and number of Ward Committee meetings held to date.

5. RECOMMENDATIONS

- (a) that Council note the functioning of Ward Committees in all 23 wards; and
- (b) that Council take note of the number of Ward Committee and Sector meetings held to date in all 23 wards from October 2022 – December 2022.

6. DISCUSSION / CONTENTS**6.1 Background**

In terms of the Policy and Procedures for Ward Committees amended and adopted by Council on 23 November 2021, the Speaker of Council is the custodian of Ward Committees. The Speaker must, in collaboration with Ward Councillors, regulate and monitor the frequency of ward committee and community report back meetings and must through his/her office ensure functionality of ward committees, as outlined in paragraphs 15(1) and 15(3 and 4) of Council's Policy and Procedures for Ward Committees.

In terms of section 73 of the Local Government: Municipal Structures Act, no 117 of 1998 and Regulations, Ward Committees must be established for each ward within the municipal area within 120 days after the election.

6.2 Discussion

At the meeting of 30 March 2022 Council noted the establishment of Ward Committees for all 23 wards within the Stellenbosch Municipality.

Wards who did not have the full complement of Ward Committees members were allowed to co-opt members in line with Council Policy and Procedures for Ward Committees. Ward 3 co-opted 4 new members in the 3rd quarter of 2022. All ward committees are fully functional and are performing all duties as set out in the Policy and Procedures for Ward Committees.

Attached herewith as ANNEXURE A is a table outlining the functioning of all Ward Committees, including dates and number of Ward Committee meetings for the period October 2022 – December 2022.

6.3 Financial Implications

As per the approved budget.

6.4 Legal Implications

The recommendations in this report comply with approved delegations, legislation and Council policies.

6.5 Staff Implications

Ward Administrators have been appointed to assist with the functioning of Ward Committees. Where vacancies exist, there are processes in place to fill the vacancies.

6.6 Previous / Relevant Council Resolutions

6TH COUNCIL MEETING: 2022-07-27: ITEM 13.2

- (a) that Council notes the final report on the establishment of the ward committees and the current vacancies on ward committees;
- (b) that Council notes the filling of vacancies during the 2nd round of elections for wards 15 and 19;
- (c) that it be noted that Ward Committees may co-opt members where vacancies exists and inform council accordingly.

6.7 Risk Implications

This report addresses the risk implications for the Municipality.

6.8 Comments from Senior Management

The report was not circulated for comment

11.5.1	THE ANNUAL REVIEW OF STELLENBOSCH MUNICIPALITY HOUSING PIPELINE FOR THE MTREF PERIOD OF 2023 – 2026

Collaborator No: 746213
 IDP KPA Ref No: Good Governance
 Meeting Date: 22 March 2023 & 29 March 2023

1. SUBJECT: THE ANNUAL REVIEW OF STELLENBOSCH MUNICIPALITY HOUSING PIPELINE FOR THE MTREF PERIOD OF 2023 – 2026

2. PURPOSE

To seek Council's approval of the Stellenbosch Municipality's Housing Pipeline (Projects) for the Medium-Term Revenue and Expenditure Framework (MTREF) period 2023 to 2026 attached herein as **ANNEXURE A**.

To inform Council of the draft Human Settlement Development Grant (HSDG) and the draft Informal Settlements Upgrading Partnership Grant (ISUPG) allocation for human settlements development projects received from the Provincial Department of Human Settlements (PDoHS) for the (MTREF) 2023 to 2026.

To request that the Housing Pipeline be submitted to the Provincial Department of Human Settlements (PDoHS) upon attainment of Council's approval.

To inform Council of the new strategic shifts pertaining the provision of human settlements development from the National Department of Human Settlements (NDoHS) and Provincial Departments of Human Settlements (PDoHS).

To provide a status report to Council on the progress of existing human settlement development projects that were previously on the approved Housing Pipeline.

3. DELEGATED AUTHORITY

Council

4. EXECUTIVE SUMMARY

This Council item relates to the annual review of the Stellenbosch Municipality's Housing Pipeline for the MTREF period 2023 – 2026.

The PDoHS requires that every Municipality must have a Housing Pipeline. The Housing Pipeline is premised on a ten-year horizon and serves as the planning and budgeting tool for the implementation of Human Settlements initiatives. Each Municipality's Housing Pipeline is an integral component of the Department of Human Settlements' Business Plan. It is required that the Housing Pipeline must be annually reviewed.

According to the PDoHS housing demand database, Stellenbosch Municipality's current housing demand waiting list comprises of 18 263 applicants. The Municipality currently has numerous housing development projects under consideration to ensure a healthy delivery pipeline towards fulfilling the housing demand and its legislative mandate. The overall housing pipeline of the Municipality articulates active housing development projects that are at various stages of planning and implementation.

In 2020, the Minister of Human Settlements Gazetted the declaration of the Priority Human Settlements and Housing Development Areas (PHSHDA's). The PHSHDAs

intends to advance Human Settlements Spatial Transformation and Consolidation by ensuring that the delivery of housing is used to restructure and revitalise towns and cities, strengthen the livelihood prospects of households and overcome apartheid spatial patterns by fostering integrated urban forms.

In 2020, the Provincial Department of Human Settlements (PDoHS) presented new strategic shifts in human settlements development projects to enable the residents of the Western Cape to have access to liveable, accessible, safe, and multi-opportunity settlements. The specific strategic objectives are radical acceleration of housing opportunities, radical integration approach to human settlements, radical implementation of innovative solutions and radical economic growth and job creation.

The Department: Spatial Planning has collaborated with the Department of Environmental Affairs and Development Planning (DEA&DP) and undertaken a Housing Market Study for the Stellenbosch CBD to determine the needs and demand for affordable housing within the government housing subsidy programmes and private sector housing developments.

5. RECOMMENDATIONS

- (b) that **Council approve** the reviewed annual Housing Pipeline (Projects) for the Medium-Term Expenditure Framework ("MTREF") period 2023 to 2026 for Stellenbosch Municipality, attached as **ANNEXURE A** to this report;
- (c) that **Council take note** of the draft Human Settlement Development Grant ("HSDG") and draft Informal Settlements Upgrading Partnership Grant ("ISUPG") budget allocations for human settlements development projects received from the Provincial Department of Human Settlements (PDoHS) for the MTREF period of 2023 to 2026;
- (c) that **Council take note** of the new strategic shifts pertaining the provision of human settlements development from the National Department of Human Settlements (NDoHS) and Provincial Departments of Human Settlements (PDoHS);
- (d) that **Council take note** that the reviewed annual Housing Pipeline is aligned to the Stellenbosch Municipality's Spatial Development Framework ("MSDF") as amended in 2023; and the Stellenbosch Municipality's Capital Expenditure Framework (CEF);
- (e) that **Council approves** the submission of the revised Stellenbosch Municipality's Housing Pipeline to the Provincial Department of Human Settlements;
- (f) that **Council takes note** of the progress of the human settlements development projects that are at pre-planning, and/or planning phase as reflected in table 1 below, as contained in this report;
- (g) that **Council take note** of the projects under construction (within the implementation phase which is dealt by the Department: Project Management Unit) as reflected in table 2 below contained in this report; and
- (h) that **Council approves** that the reviewed Housing Pipeline for the MTREF period of 2023 to 2026 be advertised as an appendix to the Stellenbosch Municipality's Municipal Spatial Development Framework (MSDF) as amended during 2023.

TABLE 1: PROJECTS IN PRE-PLANNING AND/OR PLANNING PHASE

Name of Project / Settlement		Estimated Number of Opportunities	Project Phase	Progress Update
1	Erf 7001 Stellenbosch, Cloeteville ("Soek-mekaar")	300 -400 GAP housing	Detailed planning	A service provider was appointed to undertake planning studies and obtain development rights for the proposed middle to higher income GAP housing development.
2	Jamestown Development: Phase 2 & 3	+400 service sites (top structures TBD)	Detailed planning	A service provider was appointed to undertake planning studies and obtain development rights for a mixed-used housing development.
3	Northern Extension	± 4000 – 6000 service sites (top structures TBD)	Detailed planning	A service provider was appointed to obtain development rights for a mixed-use development on the properties known as the Northern Extension.
4	Erf 64 Kylemore	± 600 sites (top structures TBD)	Detailed planning	A feasibility study report into the proposed housing development was completed. A Power of Attorney has been obtained by the HDA. The HDA has appointed a team of professionals to finalise detailed planning studies and to obtain development rights.
5	Erven 412, 217 and 284 Groendal, Franschhoek	90 sites	Pre - planning	The consultant submitted various proposed concept layout options for the consideration by Council. An Item will be submitted to Mayco to consider the proposed development options for the property.
6	Portion of Erf 7271 Stellenbosch, Cloeteville	170 sites / top structures	Planning	Council has approved the project to proceed to detailed planning studies. Funding application to PDoHS was submitted, Housing Development await the outcome of funding application.
7	Erven 6300, 6847, 6886 Stellenbosch, Cloeteville	279 service sites /top structures)	Planning	Council has approved the project to proceed with to detailed planning studies. Funding application to PDoHS was submitted, Department: Housing Development, await the outcome of the funding application.
8	Erf 8776 Stellenbosch, Cloeteville	37 service sites / top structures	Planning	Council has approved the project to proceed with to detailed planning studies. Funding application to PDoHS was submitted, Department: Housing Development, await the outcome of the funding application.
9	Erf 6705 Stellenbosch, Cloeteville	12 service sites	Planning	Council has approved the project to proceed with to detailed planning studies. Funding application to PDoHS was submitted, Department: Housing Development, await the outcome of the funding application.

AGENDA

12TH MEETING OF THE COUNCIL
OF STELLENBOSCH MUNICIPALITY

2023-03-29

10	La Motte Old Forest Station	442 serviced sites; possible temporary relocation units	Planning	A feasibility study report into the proposed housing development was completed. The HDA has been appointed to facilitate the transfer of land and to finalise detailed planning studies for township establishment.
11	Droë Dyke	1000 sites (type TBD)	Pre - Planning	Forms part of the Adam Tas Corridor initiative. The property is under investigating for future housing development.
12	Jamestown Development: Phase 4	+1500 - 2000 service sites and top structures	Detailed planning	A service provider was appointed to undertake planning studies and obtain development rights for a mixed-used housing development. The request for the inclusion of the subject property within the Stellenbosch Town Urban Edge, has been submitted and is currently contained as part of the proposal for the amendment of the MSDP which will be table for public comment at the Council meeting scheduled for March 2023.

***SOCIAL HOUSING PROJECTS**

	Name of project / settlement	Estimated Number of opportunities	Project Phase	Progress Update
1	Farms 81/2 and 81/9 Stellenbosch	± 250 – 350 rental units	Detailed planning	The Terms of Reference (ToR) was advertised to appoint an accredited Social Housing Institute (SHI) and/or Other Development Agency (ODA) to develop social housing project.
2	Lapland Precinct	±368 rental units	Feasibility study	The service provider completed a feasibility study and further detailed studies will commence subject to the availability of funding.
3	Teen-die-bult Precinct	±180 rental units	Feasibility study	The service provider completed a feasibility study and further detailed studies will commence subject to the availability of funding.

***PROJECTS DEALING WITH THE FORMALISING AND UPGRADING OF EXISTING SETTLEMENTS**

	Name of project / settlement	Estimated Number of opportunities	Project Phase	Progress Update
1	Erf 2183 Klapmuts, La Rochelle	100 serviced sites, possible temporary relocation units	Detailed planning	A service provider has submitted land use applications to obtain development rights for enhanced serviced sites.
2	Langrug, Franschhoek	1900 sites	Detailed planning	A service provide will be appointed to finalise detailed plans for the rehabilitation of the freshwater dam and implementation of an in-situ upgrade project.
3	Enkanini Informal Settlement	1300 sites (top structures TBD)	Detailed planning	The in-situ upgrade of Enkanini to commence in 2025/26 financial year.
4	Kayamandi Town Centre	1854 serviced sites and top structures	Detailed planning	A service provider has submitted land use applications to obtain development rights for township establishment for 3-storey (BNG) walk-ups.
5	Maasdorp Village, Franschhoek	16 - 32 top structures	Detailed planning	A service provider has submitted a land use application to obtain development rights.

Name of project / settlement		Estimated Number of opportunities	Project Phase	Progress Update
6	3460 Meerlust, Franschhoek (200)	200 units	Feasibility study	A feasibility study report into the proposed housing development project was concluded. The HDA has been appointed to facilitate the transfer of land and to finalise detailed planning studies for township establishment.
7	Jonkershoek	Units and sites TBD, together with 40 existing units	Feasibility study	A feasibility study report has been concluded. HDA has been appointed to facilitate the process. Clarity on the way forward need to be determined.

TABLE 2: HOUSING PROJECTS AT IMPLEMENTATION PHASE

Name of project / settlement		Estimated Number of opportunities	Project Phase	Progress Update
1	Erf 3229 Mooiwater	253 sites	Implementation	<p>Development rights for the project have been obtained. A contractor has completed rehabilitation of the property. The project was implemented in two phases as follows.</p> <ul style="list-style-type: none"> Phase 1: A contractor was appointed in July 2022 for the-site rehabilitation and construction of bulk. The project was completed in December 2023. Phase 2: The Project Management Unit is in the process of appointing a contractor for the installation of Civil and Electrical infrastructure. The completion date of the project is scheduled for March 2023.
2	Idas Valley	166 sites and 166 FLISP Units	Implementation	The construction of 166 top structures to commence in July 2022 until December 2023.
3	The Steps and Orlean Lounge, Cloetesville	161 existing houses	Implementation	The upgrade of the housing units commenced July 2020. The completion date of the project is scheduled for June 2023.
4	ISSP Kayamandi Zone O (711) UISP	178 sites	Implementation	A contractor was appointed in July 2022 for the installation of civil services for 178 sites. The contractor has been unable to establish on site due to the relocation of 58 families on site. There has been a collaborative effort in the municipality to relocate the families to commence with the implementation of the project. According to the program, the contractor is expected to commence with the construction activities in May 2023. The completion date of the project is scheduled for June 2024.

6. BACKGROUND AND DISCUSSION

6.1. Background

The Provincial Department of Human Settlements (PDoHS) requires that every Municipality must have a Housing Pipeline. The Housing Pipeline is premised on a

ten-year horizon and serves as planning and budgeting tool for implementation of human settlements initiatives. Each Municipality's housing pipeline is an integral component of the Department of Human Settlements' Business Plan. The housing pipeline must be reviewed annually to effectively articulate the Municipality project list, targets, and budget allocations towards fulfilling the housing demand and its legislative mandate.

The objective of the housing pipeline is to provide more emphasis on the housing programmes administered by the Municipality such as:

- The provision of enhanced serviced sites,
- the upgrading of informal settlements,
- access to affordable housing (BNG),
- Social Housing (the National Minister of Human Settlements approved Stellenbosch as a restructuring town and restructuring zones in March 2017),
- the IRDP enables the development of well-located, socially diverse projects that provide a mix of income groups and land uses; and
- Financed Linked Individual Subsidy Programme (FLISP) - for those within the gap market to acquire existing properties or to buy a serviced site.

Upgrading of Informal Settlements

The Municipality manages and coordinates the upgrading of informal settlements through the following broad objectives:

- In-situ upgrading of informal settlements;
- Upgrade informal settlements by the provision of basic services;
- Develop emergency housing sites geared to accommodate evictees;
- Enumerate / undertake demographic surveys of identified informal settlements;
- Facilitate tenure security in informal settlements;
- Assist in short-term job creation through linkages with Expanded Public Works Programme (EPWP) and longer-term job creation through upgrading programmes;
- Facilitate capacity-building and training for residents and stakeholders through direct service provision and partnerships with outside agencies; and
- Manage the provision of services and development programmes to informal settlements.

Informal backyard dwellings

The Municipality through the Housing Pipeline is actively attempting to address the needs and plight of backyard dwellers within the municipal area. Currently it is required to be registered on the Housing Demand Database and hopefully this will result in a permanent dwelling in one of Council's housing projects. This process is long and tedious and the chance of obtaining a formal house, is very slim. Therefore, Council is actively researching ways in which the service (and basic services) to backyard dwellers can be improved through its various housing programmes.

Social Housing

Stellenbosch Municipality was approved as a Restructuring Town in March 2017, by the National Minister of Human Settlements. This approval included the confirmation of the various Restructuring Zones within the Municipality and the latter culminated in a Council decision instructing the administration to attract Social Housing Institutions (SHI) and/or Other Development Agency (ODA) in order to effect to the Municipality's social housing programme. The aim of this programme is to ensure improved quality of life for communities through a Rental housing programme. This process of integration speaks to the importance of:

- Economic sustainability: affordability, access to economic opportunities, and promoting job creation via the multiplier effect associated with building medium density housing stock etc.;
- Social sustainability: social integration between various income groups, access to educational, recreational and health facilities, etc.; and
- Ecological sustainability: conservation of scarce resources.

The image below depicts areas that have been declared as Restructuring Zones for Stellenbosch Municipality as figure 1.

Figure 1: Restructuring Zones as indicated in green.

To give effect to the Housing Pipeline, the PDoHS through the Human Settlements Business Plan, the allocation for the Human Settlement Development Grant (HSDG) and Informal Settlements Upgrading Partnership Grant (ISUPG) in the 2023/24 financial year is R41 046 000.

6.2. DISCUSSION

6.2.1. Housing Demand Overview

According to the Provincial Department of Human Settlement's housing demand database, Stellenbosch Municipality's current housing demand waiting list comprises of 18263 applicants. For purposes of planning and alignment, the active demand is used to determine the backlog and opportunities that are required to ensure a healthy delivery pipeline towards fulfilling the housing demand and its legislative mandate.

The Department: Spatial Planning has collaborated with DEA&DP and undertook a Housing Market Study for the Stellenbosch CBD to determine the needs and demand of affordable housing within the government housing subsidy programme and private sector housing developments. This Housing Market Study for the Municipality will allow the Department: Housing Development together with Department: Housing Administration to articulate the number of active housing demand under each housing subsidy programme to provide a clearer picture of the housing demand relative to the housing subsidy programme.

The table below articulates the housing subsidy programmes provided by Government.

Housing subsidy programmes		Income bracket (Monthly Household Income)	Description
1	Government subsidised housing	<R3 500	100% government subsidy with no beneficiary contributions (Breaking New Ground units subsidised in full by government).
2	Enhanced site and Service	R3 500 or R3 501 - R7 000	100% government subsidy with no beneficiary contributions for an enhanced service site (standpipe and toilet facility).
3	Gap Housing	R 3501 – R 22 000	A bond must be obtained through a financial institution who will apply directly to the PDoHS for a top structure. The subsidy amount decreases as the monthly income increases.
4	Social housing	R1 850 – R6 700 R6 701 - R22 000	Rental or co-operative housing option managed by an accredited SHI.
5	Finance-Like Individual Subsidy Programme (FLISP) housing	R3 501 – R22 000	Provision of government subsidies on a sliding scale (of between R121 626 and R27 960) to reduce monthly home loan repayments (partially subsidised by government).
6	Bonded housing	> R22 000	Private financing from financial institutions for housing on the open market.

6.2.2 New Housing Delivery Model Development

A Minister's engagement in September 2020 to discuss the business planning and budgeting process, with specific emphasis on the funding realities. During this particular engagement, the Head of Department of the Provincial Department of Human Settlements indicated that the national funding for housing has been reduced and advised that it will have a severe impact on municipalities.

The National Department of Human Settlements thereafter sent correspondence to the Provincial Department of Human Settlements to elaborate on the changed directive towards the provision of housing, which now entails the following:

- Delivery of top structures is fiscally un-sustainable leading to the directive to downscale delivery of top structures and prioritise the delivery of serviced sites and enhanced serviced sites where applicable;
- Project approval for normal Breaking New Ground (BNG) top structures will only be provided for the following beneficiary categories: The elderly (sixty years and older), military veterans, persons with disabilities, child headed households, persons on the waiting list fifteen years or longer and backyarders (category added by the Provincial Department of Human

Settlements); The typologies to be considered for top structures will be focused on medium to high density developments;

- Top structures will only be provided where approvals or contractual commitments exist or where construction has begun. No new contractual commitments will be entered into for top structures as from 1 April 2021;
- No new top structure projects may be awarded without the approval from the National Department;
- Providing access to basic services; and
- Focus on the in-situ upgrading of Informal Settlements.

6.2.3 Budget - Medium Term Revenue and Expenditure Framework (MTREF)

The Municipality received a draft Business Plan from the Provincial Department of Human Settlements (PDoHS) indicating the projects list, targets, and funding allocation of the approved 2022/2023 HSDG and ISUPG Business Plans. The draft Human Settlement Development Grant (HSDG) and draft Informal Settlements Upgrading Partnership Grant (ISUPG) allocation for 2023/24 financial year is R41 046 000. Stellenbosch Municipality's draft allocation of the HSDG and ISUPG for the Medium-Term Revenue and Expenditure Framework (MTREF) of 2023/2024 to 2025/2026 is described in table below:

Housing Subsidy Programme	Financial Year (MTREF PERIOD)		
	2023/24	2024/25	2025/26
Human Settlement Development Grant	R18 383 000	R24 008 000	R59 025 000
Informal Settlements Upgrading Partnership Grant	R22 663 000	R16 744 000	R21 800 000
Total	R41 046 000	R40 752 000	R80 825 000

Draft Grant allocation to the Municipality for the MTREF period

6.2.4 Priority Human Settlements and Housing Development Areas (PDSHDA)

In 2020, the Minister of Human Settlements Gazetted the declaration of the Priority Human Settlements and Housing Development Areas (PHSHDA's). The PHSHDAs intends to advance Human Settlements Spatial Transformation and Consolidation by ensuring that the delivery of housing is used to restructure and revitalise towns and cities, strengthen the livelihood prospects of households and overcome apartheid spatial patterns by fostering integrated urban forms.

The PHSHDA's are underpinned by the principles of the National Development Plan (NDP) and allied objectives on the National Spatial Development Framework (NSDF) and the Integrated Urban Development Framework (IUDF) which includes:

- **Spatial Justice:** reversing segregated development and creation of poverty pockets in the peripheral areas, integrate previously excluded groups and resuscitate declining areas;
- **Spatial efficiency:** consolidating spaces and promoting densification and efficient communicating patterns;
- **Access to connectivity, economic and social infrastructure:** ensure the attainment of basic services, job opportunities, transport networks, education, recreation, health and welfare to facilitate and catalyse increased investment and productivity;
- **Access to adequate accommodation:** emphasis is on provision of affordable and fiscally sustainable shelter in areas of high need; and

- **Provision of quality housing options:** ensure that different housing typologies are delivered to attract different market segments of appropriate quality and innovation.

Emphasis is placed on synchronising national housing programmes in these priority human settlements and housing development areas namely:

- **Integrated Residential Development Programme** provides a tool to plan, fund and develop integrated settlements that include all the necessary land uses and housing types and price categories to create integrated communities. It provides for subsidized, as well as finance linked housing, social and rental housing, commercial, institutional and other land uses to be developed;
- **Social Housing Programme in Restructuring Zones** provides for Social Housing located in specific, defined localities (mostly urban) which have been identified as areas of opportunity (largely economic) where the poor have limited or inadequate access to accommodation, and where the provision of social housing can contribute to redressing structural, economic, social and spatial dysfunctionalities. It is also aimed to improve and contribute to the overall functioning of the housing sector and in particular the rental sub - component thereof, especially insofar as social housing is able to contribute to widening the range of housing options available to the poor;
- **Informal Settlements Upgrading Programme** provides for the structured in situ upgrading of informal settlements to address the social and economic exclusion of communities. It remains evident that informal settlements provide new migrants and the urban poor an affordable point of access into towns and cities, although they are also associated with high degrees of physical and social vulnerability;
- **Finance Linked Individual Subsidy Programme** provides for the creation of an inclusive and vibrant residential property market which can provide state assistance to households who are unable to independently access housing credit to become upwardly mobile and progress up the housing ladder;
- **The Special Presidential Package (SPP) Programme on Revitalisation of Distressed Mining Communities** by developing and implementing human settlements spatial transformation plans for identified mining areas;
- **Enhanced People's Housing Process** provides for a process in which beneficiaries actively participate in decision - making over the housing process and housing product and make a contribution in such a way that: 1) Beneficiaries are empowered individually and collectively, 2) various partnerships are created, 3) social capital is retained and expanded upon, and 4) housing is valued as an asset far beyond its monetary value.

The current status of the PSHDA for Stellenbosch Municipality, namely:

- The “Stellenbosch Urban Core” Priority Human Settlements and Housing Development Area (PSHDA) was formally gazette on 15 May 2020 (Government Gazette No. 43316) and consists of the neighborhoods of Jamestown, Kayamandi and Central Stellenbosch;
- To date the Housing Development Agency (HDA) with assistance from the Provincial Department of Human Settlements (PDoHS) have undertaken a Status Quo Analysis in preparation for the drafting of the Stellenbosch PSHDA Development Plan. The Status Quo Analysis has been completed and will inform the Development Plan drafting going forward; and
- The PDoHS, Stellenbosch Municipality and HDA will proceed with the drafting of the Stellenbosch PSHDA Development Plan in the near future.

The image below depicts areas that have been declared as Priority Human Settlements and Housing Development Areas (PDSHDA) as figure 2.

Figure2: Priority Human Settlements and Housing Development Areas (PDSHDA)

6.2.5 Readiness Matrix

The priority of a project is determined as follows:

- Land is identified for consideration and further investigation into the potential development of the land.
- A Project Initiation Document (PID) is submitted to the Provincial Department of Human Settlements for approval by the Department to release funds to proceed with Feasibility Studies.
- Feasibility studies are then conducted to provide a framework in which an informed decision can be taken whether the land is suitable for a housing development project.
- A Project Feasibility Report (PFR) is then submitted to the Provincial Department of Human Settlements for approval by the Department to release funds to proceed with the planning and pre-planning phase.
- In the event that the project is deemed feasible (approval of the PFR), the pre-planning and planning phase then continues which entails the obtaining of development rights in terms of various applicable legislation, such as, amongst others and where relevant, the Land Use Planning Act and subsequent Municipal Land Use Planning By-Law, the Subdivision of Agricultural Land Act No 70 of 1970, the National Environmental Management Act No 107 of 1998 and the National Heritage Resources Act No 25 of 1999. Surveyor General Approval and Deeds Office Registrations are also required.

- Once all the required development rights have been obtained, a Project Implementation Readiness Report (PIRR) is submitted to the Provincial Department of Human Settlements for approval to release funds to proceed with the installation of services and the construction of top structures where applicable.
- The Provincial Department of Human Settlements requests that the Project Readiness Matrix, an instrument to assess the credibility of their Business Plan submitted to the National Department of Human Settlements, be completed as a priority by Municipalities. The Readiness Matrix indicates the status of beneficiary approvals, land use and environmental approvals, evidence of submission to the Surveyor-General and/or approved General Plans, evidence of sufficient bulk infrastructure, contractor procurement, and detailed cash flows per project. Municipalities are urged to ensure that project applications are submitted with a portfolio of evidence to satisfy the Readiness Matrix for all projects to be funded on the Business Plan.

6.2.6 Stellenbosch Municipality Housing Pipeline and Existing Housing Projects.

The Municipality currently has numerous housing development projects under consideration to ensure a healthy delivery pipeline towards fulfilling the housing demand and its legislative mandate. The overall housing pipeline of the Municipality articulates active housing development projects that are at pre-planning and or detailed phase (mostly Greenfield developments), formalisation and/or upgrading of existing settlements, social housing projects and various projects that are at implementation phase. The housing development project information is provided per town/area and described in terms of its project name, locality, subsidy mechanism, targeted units, planning timeframes and whether the projects have council approval or not.

The implementation of housing projects in the Municipality is executed by the Department: Project Management Unit (PMU). The Department: Housing Development is responsible for planning and ensuring that development rights are obtained, whereafter the projects handed over to the Department: Project Management Unit for implementation.

6.2.7 Proposed amendments to the Stellenbosch Municipality's Housing Pipeline for the 2023/2024 financial year as compared to the Housing Pipeline reviewed and approved by Council for the 2022/2023 financial year.

The proposed reviewed Housing Pipeline for the 2023/2024 financial year features no new additional housing development proposals.

The proposed reviewed Housing Pipeline for the 2023/2024 financial year has, however, been rationalised to bring it into alignment with the proposed amended Stellenbosch Municipal Spatial Development Framework, 2023 and the Stellenbosch Municipality's Capital Expenditure Framework. Projects removed from the proposed Housing Pipeline include:

A portion of the Farm Elsenburg A No. 34, Stellenbosch (Vaaldraai, Elsenburg) – The reason for proposing the removal of this project from the proposed Housing Pipeline is because this portion of land is Western Cape Government owned land. The land portion is currently outside of the municipal approved urban edge and is not aligned with the Municipality's Capital Expenditure Framework. Having said this, this portion of land will be subject to investigation by the Municipality's Department of Development Planning in terms of its future development potential and as such it could be re-introduced

into future Housing Pipelines should the outcome of these investigations be positive, and agreement can be reached with the landowner in terms of the financial implications of potential future development.

De Novo – The reason for proposing the removal of this project from the proposed Housing Pipeline for the 2023/2024 financial year is because this project is not a Stellenbosch Municipality driven project, it is a Western Cape Government Provincial Department of Human Settlement driven project which is not catered for in the Municipality's proposed Capital Expenditure Framework. The land portion is currently outside of the municipal approved urban edge and is not aligned with the Municipality's Capital Expenditure Framework.

Faure Agri-Village: Portions 3 and 5 of the Farm 1081, Stellenbosch – The reason for proposing the removal of this project from the proposed Housing Pipeline is because this is a private sector led project and not a Municipal project. This project is also not aligned with the proposed Municipality's Capital Expenditure Framework. The land portion is currently outside of the municipal approved urban edge and is not aligned with the Municipality's Capital Expenditure Framework.

Simonsig Village: Portion 39 and 40 of the Farm Koelenhof No 66, Stellenbosch– The reason for proposing the removal of this project from the proposed Housing Pipeline is because this is a private sector led project and not a Municipal project. This project is also not aligned with the proposed Municipality's Capital Expenditure Framework. The land portion is currently outside of the municipal approved urban edge and is not aligned with the Municipality's Capital Expenditure Framework.

7. Financial Implications

The proposed Housing Pipeline is submitted to Council on an annual basis. The financial implications are based on the approval of projects as per the funding submissions (applications) and project feasibility reports to the PDoHS. The financial implications to Council for the Medium-Term Revenue and Expenditure Framework (MTREF) period are described in the table below.

Funding source	Financial Years (MTREF PERIOD)		
	2023/24	2024/25	2025/26
Draft Human Settlement Development Grant and Informal Settlements Up Partnership Grant	R41 046 000	R40 752 000	R80 825 000

The Housing Pipeline must reconcile with the PDoHS approved budget/s and Business Plans as well as the infrastructure capacity as aligned with the Municipality's Capital Expenditure Framework.

8. Staff Implications

This report has staff implications in accordance with the approved organogram. The Department: Housing Development has a vacancy rate of 90%. The Programme Manager is currently appointed on a contract basis, the post has been advertised and closed. Recruitment and selection are currently on-going.

9. Previous / Relevant Council Resolutions**5th COUNCIL MEETING: 2022-05-25: ITEM 11.5.1****RESOLVED** (nem con)

- (a) that the reviewed annual Housing Pipeline (Projects) for the MTREF period 2022 to 2025 for Stellenbosch Municipality **be noted**;
- (b) that the reviewed annual Housing Pipeline (Projects) for the MTREF period 2022 to 2025 for Stellenbosch Municipality **be approved**;
- (c) that the HSDG and ISUPG allocations for human settlements development projects received from the Provincial Department of Human Settlements (PDoHS) for the (MTREF) 2022 to 2025 **be noted**;
- (d) that the new strategic shifts pertaining the provision of human settlements development from the National Department of Human Settlements (NDoHS) and Provincial Departments of Human Settlements (PDoHS) **be noted**;
- (e) that the submission of the revised Stellenbosch Municipality's Housing Pipeline to the Provincial Department of Human Settlements **be approved**;
- (f) that the progress of the human settlements development projects that are at pre-planning, and/or planning phase as reflected in table 1 below, **be noted**:

TABLE 1: PRE-PLANNING AND/OR PLANNING PHASE

Name of Project / Settlement		Estimated Number of Opportunities	Project Phase	Project Progress Update
1	Northern Extension, Kayamandi	± 4000 – 6000 service sites (top structures TBD)	Detailed planning	Service provider has been appointed to obtain development rights for a mixed-use development on the properties known as the Northern Extension.
2	Jamestown Development: Phase 2 & 3	+400 service sites (top structures TBD)	Detailed planning	A service provider will be appointed to undertake planning studies and obtain development rights for a mixed-used housing development.
3	Jamestown Development: Phase 4	+1500 - 2000 service sites and top structures	Feasibility study	A service provider will be appointed to undertake planning studies and obtain development rights for a mixed-used housing development.
4	Erf 7001 Stellenbosch, Cloeteville ("Soek-mekaar")	400 service sites / top structures	Feasibility study	A service provider has been appointed to undertake planning studies and obtain development rights for middle to higher GAP housing development.
5	Erf 64 Kylemore	± 600 sites (top structures TBD)	Detailed planning	Feasibility study report has been concluded. Power of Attorney has been obtained by the HDA and will appoint a service provider to obtain development rights. Land has been transferred to the Municipality. HDA to appoint a service provider
6	Erven 412, 217 and 284 Groendal, Franschhoek	90 sites	Pre - planning	The consultant has submitted various concept layout options for the consideration by Council. Council Item was submitted to Mayco.

AGENDA

12TH MEETING OF THE COUNCIL
OF STELLENBOSCH MUNICIPALITY

2023-03-29

7	Botmaskop	TBD	Feasibility study	Service provider is currently in process to submit a feasibility study report with proposals of various development options.
8	Portion of Erf 7271 Stellenbosch, Cloeteville	170 sites / top structures	Feasibility study	Council has approved the project to proceed with detailed planning studies. Funding application to PDoHS was submitted, await outcome of the application.
9	Erven 6300, 6847, 6886 Stellenbosch, Cloeteville	279 service sites /top structures)	Feasibility study	Council has approved the project to proceed with detailed planning studies. Funding application to PDoHS was submitted, await outcome of the application.
10	Erf 8776 Stellenbosch, Cloeteville	37 service sites / top structures	Feasibility study	Council has approved the project to proceed with detailed planning studies. Funding application to PDoHS was submitted, await outcome of the application.
11	Erf 6705 Stellenbosch, Cloeteville	12 service sites	Feasibility planning	Council has approved the project to proceed with detailed planning studies. Funding application to PDoHS was submitted, await outcome of the application.
12	La Motte Old Forest Station	442 serviced sites; possible temporary relocation units	Feasibility study	Feasibility study report have been concluded. HDA has been appointed to facilitate the transfer of land to finalise planning studies for township establishment. HDA to submit PFR to PDoHS.
13	Adam Tas Corridor	TBD	LSDF	The Department: Spatial Planning is currently undertaking the development of a Local Spatial Development Framework (LSDF) for the ATC development.
14	Droë Dyke	1000 sites (type TBD)	Pre - Planning	Forms part of the Adam Tas Corridor initiative. The property is under investigating for future housing development.
*SOCIAL HOUSING PROJECTS				
Name of project / settlement		Estimated Number of opportunities	Project Phase	Project Progress Update
1	Teen-die-bult Precinct	180 top structures (units)	Feasibility study	The terms of reference to be prepared to appoint an accredited Social Housing Institute (SHI) to develop social housing project.
2	La Colline Precinct	TBD	Feasibility study	Terms of reference to be prepared to appoint an accredited Social Housing Institute (SHI) to develop social housing project.
3	Farms 81/2 and 81/9 Stellenbosch	± 250 – 350 rental units	Detailed planning	Terms of reference to be prepared to appoint an accredited Social Housing Institute (SHI) to develop social housing project.

4	Lapland Precinct	368 top structures	Feasibility study	Terms of reference to be prepared to appoint an accredited Social Housing Institute (SHI) to develop social housing project.
*FORMALISING AND UPGRADING OF EXISTING SETTLEMENTS				
1	Kayamandi Town Centre	1854 serviced sites and top structures	Detailed planning	Service provider is in the process to submit land use applications to obtain development rights for township establishment for subsidised housing (BNG).
2	Enkanini Informal Settlement	1300 sites (top structures TBD)	Detailed planning	The in-situ upgrade of Enkanini to commence in 2025/26.
3	Langrug, Franschhoek	1900 sites	Detailed planning	A service provide will be appointed to finalise detailed plans for the rehabilitation of the freshwater dam and implementation of an in-situ upgrade project.
4	Erf 2183 Klapmuts, La Rochelle	100 serviced sites, possible temporary relocation units	Detailed planning	Service provider is in the process to submit land use applications to obtain development rights for enhanced serviced sites.
5	Maasdorp Village, Franschhoek	+ 16 - 32 top structures	Detailed planning	The service provider is in the process to submit a land use application to obtain development rights.
6	De Novo	77 rectifications of existing structures, 300 top structures,	-	The project is being managed and implemented by PDoHS,
7	Five housing projects in Kayamandi	396 erven	Detailed planning	Rezone and subdivide the property and register at the Surveyor General (SG)'s office.
8	3460 Meerlust, Franschhoek (200)	200 units	Feasibility study	Feasibility study report has been concluded. HDA has been appointed to facilitate the transfer of land to finalise planning studies for township establishment.
9	Jonkershoek	Units and sites TBD, together with 40 existing units	Feasibility study	A feasibility study report has been concluded. HDA has been appointed to facilitate the transfer of land to finalise planning studies for township establishment.
10	Farm 34 Vaaldraai Elsenburg	283 sites	Feasibility study	The property is owned by the Department of Public Works and Infrastructure (DPW&I). There are on-going discussions between the Municipality and DPW&I to transfer land to finalise township establishment.

(g) that the projects under construction (within the implementation phase which is dealt by the Department: PMU) as reflected in table 2 below, **be noted**:

TABLE 2: HOUSING PROJECTS AT IMPLEMENTATION PHASE

Name of project / settlement		Estimated Number of opportunities	Project Phase	Project Progress Update
1	Vlottenburg Longlands	144 sites and 106 top structures	Implementation	The construction of 106 top structures to commence in May 2022.
2	Erf 3229 Mooiwater	253 sites	Implementation	Development rights have been obtained. A contractor will be appointed in July 2022 to implement the project. The project will be implemented in two phases as follows: - Phase 1 entails the bulk earth works and site rehabilitation. - Phase 2 entails the installation of infrastructure services.
3	Idas Valley	166 sites and 166 FLISP Units	Implementation	The housing development project will be implemented over a period of two years. The construction of 166 top structures to commence in July 2022 until December 2023.
4	The Steps and Orlean Lounge, Cloeteville	161 existing houses	Implementation	Phase two of the project to commence in May 2022.
5	ISSP Kayamandi Zone O (711) UISP	178 sites	Implementation	In the process of appointing a contractor to implement the project. Approximately 55 families must be relocated to a decanting site for the project to commence.

10. Risk Implications

This report has no risk implications for the Municipality.

11. Comments from Department: Spatial Planning

The reviewed Housing Pipeline is aligned with the proposed amended MSDF 2023.

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.5.1

- (a) that **Council approve** the reviewed annual Housing Pipeline (Projects) for the Medium-Term Expenditure Framework ("MTREF") period 2023 to 2026 for Stellenbosch Municipality, attached as **ANNEXURE A** to this report;
- (b) that **Council take note** of the draft Human Settlement Development Grant ("HSDG") and draft Informal Settlements Upgrading Partnership Grant ("ISUPG") budget allocations for human settlements development projects received from the Provincial Department of Human Settlements (PDoHS) for the MTREF period of 2023 to 2026;
- (c) that **Council take note** of the new strategic shifts pertaining the provision of human settlements development from the National Department of Human Settlements (NDoHS) and Provincial Departments of Human Settlements (PDoHS);

-
- (d) that **Council take note** that the reviewed annual Housing Pipeline is aligned to the Stellenbosch Municipality's Spatial Development Framework ("MSDF") as amended in 2023; and the Stellenbosch Municipality's Capital Expenditure Framework (CEF);
- (e) that **Council approve** the submission of the revised Stellenbosch Municipality's Housing Pipeline to the Provincial Department of Human Settlements;
- (f) that **Council take note** of the progress of the human settlements development projects that are at pre-planning, and/or planning phase as reflected in table 1 below, as contained in this report;
- (g) that **Council take note** of the projects under construction (within the implementation phase which is dealt by the Department: Project Management Unit) as reflected in table 2 below contained in this report; and
- (h) that **Council approves** that the reviewed Housing Pipeline for the MTREF period of 2023 to 2026 be advertised as an appendix to the Stellenbosch Municipality's Municipal Spatial Development Framework (MSDF) as amended during 2023.

INTRODUCTION

The Provincial Department of Human Settlements (PDoHS) requires that every Municipality must have a Housing Pipeline. The Housing Pipeline is premised on a ten-year horizon and serves as planning and budgeting tool for implementation of human settlements initiatives. Each Municipality's Housing Pipeline is an integral component of the Provincial Department of Human Settlements' Business Plan. The Housing Pipeline must be reviewed annually to effectively articulate the Municipality project list, targets, and budget allocations towards fulfilling the housing demand and its legislative mandate.

The objective of the Housing Pipeline is to provide more emphasis on the housing programmes administered by the Municipality such as:

- The provision of enhanced serviced sites;
- the upgrading of informal settlements;
- access to affordable housing (Breaking New Ground - BNG);
- Social Housing (the National Minister of Human Settlements approved Stellenbosch as a restructuring town and restructuring zones in March 2017);
- the IRDP enables the development of well-located, socially diverse projects that provide a mix of income groups and land uses; and
- Financed Linked Individual Subsidy Programme (FLISP) - for those within the gap market to acquire existing properties or to buy a serviced site.

Upgrading of Informal Settlements

The Municipality manages and coordinates the upgrading of informal settlements through the following broad objectives:

- In-situ upgrading of informal settlements;
- Upgrade informal settlements by the provision of basic services;
- Develop emergency housing sites geared to accommodate evictees;
- Enumerate / undertake demographic surveys of identified informal settlements;
- Facilitate tenure security in informal settlements;
- Assist in short-term job creation through linkages with Expanded Public Works Programme (EPWP) and longer term job creation through upgrading programmes;
- Facilitate capacity-building and training for residents and stakeholders through direct service provision and partnerships with outside agencies; and
- Manage the provision of services and development programmes to informal settlements.

Informal backyard dwellings

The Municipality through the Housing Pipeline is actively attempting to address the needs and plight of backyard dwellers within the municipal area. Currently it is required to be registered on the Housing Demand Database (municipal waiting list) and hopefully this will result in a permanent dwelling in one of Council's housing projects. This process is long and tedious and the chance of actually obtaining a formal house, is very slim. Therefore, Council is actively researching ways in which the service (and basic services) to backyard dwellers can be improved through its various housing programmes.

Social Housing

Stellenbosch Municipality was approved as a Restructuring Town in March 2017, by the National Minister of Human Settlements. This approval included the confirmation of the various Restructuring Zones within the Municipality and the latter culminated in a Council decision instructing the administration to attract Social Housing Institutions (SHI's) and/or Other Development Agency (ODA's) to effect to the Municipality's social housing programme.

The aim of this programme is to ensure improved quality of life for communities through a Rental housing programme. This process of integration speaks to the importance of:

- Economic sustainability: affordability, access to economic opportunities, and promoting job creation via the multiplier effect associated with building medium density housing stock etc.;
- Social sustainability: social integration between various income groups, access to educational, recreational and health facilities, etc.; and
- Ecological sustainability: conservation of scarce resources.

The image below depicts areas that have been declared as Restructuring Zones for Stellenbosch Municipality.

To give effect to the Housing Pipeline, the PDoHS through the Human Settlements Business Plan, the allocation for the Human Settlement Development Grant (HSDG) and Informal Settlements Upgrading Partnership Grant (ISUPG) in the 2023/24 financial year is R41,046,000.00. The table below describes the human settlement development projects that have been allocated grant funding in the 2023/24 financial year:

Name of Project/ Settlement	Type of Project/ Subsidy Mechanism	Estimate Number of Opportunities
Erf 7001 Cloetesville, Stellenbosch ("Soek-mekaar")	IRDP, FLISP	±250 – 300 service sites (top structures TBD)

Name of Project/ Settlement	Type of Project/ Subsidy Mechanism	Estimate Number of Opportunities
ISSP Kayamandi Zone O	UISP	711 sites
La Motte Old Forest Station	IRDP, FLISP	442 service sites
Erf 2183 La Rochelle, Klapmuts	UISP	109 serviced sites; possible temporary relocation units
Langrug Franschhoek Mooiwater Dam Rehab & Basic Services	UISP	236 sites (top structures TBD)
Erf 64, Kylemore	IRDP, FLISP	600 opportunities
Droë Dyke	IRDP, FLISP	1000 Opportunities

STELLENBOSCH MUNICIPALITY HOUSING DEMAND OVERVIEW

Stellenbosch Municipality's current housing demand waiting list comprise of 18 263 applicants. This list is directly linked to the Western Cape Housing Demand Database. For purposes of planning and alignment, the active demand is used to determine the backlog and opportunities that are required. The table 1 below indicates the housing products and finance options currently available based on the household income ranges.

Housing subsidy programmes		Income bracket (Monthly Household Income)	Description
1	Government subsidised housing	<R3 500	100% government subsidy with no beneficiary contributions (Breaking New Ground units subsidised in full by government).
2	Enhanced site and Service	R3 500 or R3 501 -R7 000	100% government subsidy with no beneficiary contributions for an enhanced service site (standpipe and toilet facility).
3	GAP Housing	R 3501 – R 22 000	A bond must be obtained through a financial institution who will apply directly to the PDoHS for a top structure. The subsidy amount decreases as the monthly income increases.
4	Social Housing	R1 850 – R6 700 R6 701 - R22 000	Rental or co-operative housing option managed by an accredited SHI.

Housing subsidy programmes		Income bracket (Monthly Household Income)	Description
5	Finance-Liked Individual Subsidy Programme (FLISP) housing	R3 501 – R22 000	Provision of government subsidies on a sliding scale (of between R121 626 and R27 960) to reduce monthly home loan repayments (partially subsidised by government).
6	Bonded housing	> R22 000	Private financing from financial institutions for housing on the open market.

* The Department: Spatial Planning has collaborated with the PDoHS to undertake a Housing Market Study for the Stellenbosch CBD to determine the needs and demand of affordable housing within the government housing subsidy programme and private sector housing developments. The Housing Market Study for the Municipality were completed during August 2022. The Department: Housing Development together with Department: Housing Administration are now in a much better position to articulate the number of active housing demand under each housing subsidy programme to provide a clearer picture of the housing demand relative to the housing subsidy programme.

NEW HOUSING DELIVERY MODEL DEVELOPMENT

In 2020, the National Department of Human Settlements issued a letter to Provincial Department of Human Settlements regarding the new directives in human settlements projects. The letter stated that the delivery of top structures was fiscally unsustainable and therefore there is a need to downscale on the delivery of top structures to prioritise the delivery of service sites. The four newly prioritised categories for top structure on the letter were:

- The elderly;
- Military veterans;
- Persons with disabilities; and
- Child headed households.

The PDoHS added to the above its existing priority categories of:

- Backyard residents; and
- Person, longest on the waiting list.

After consultation with the National Department, the Provincial Department confirms that all new projects application received from municipalities, which include top structures, must adhere to the above criteria. All the supporting applicable beneficiary approval information must be attached to the top structure project application.

PRIORITY HUMAN SETTLEMENTS AND HOUSING DEVELOPMENT AREAS (PDSHDA)

In 2020, the Minister of Human Settlements Gazetted the declaration of the Priority Human Settlements and Housing Development Areas (PHSHDA's). The PHSHDAs intends to advance Human Settlements Spatial Transformation and Consolidation by ensuring that the delivery of housing is used to restructure and revitalise towns and cities, strengthen the livelihood prospects of households and overcome apartheid spatial patterns by fostering integrated urban forms.

The PHSHDA's are underpinned by the principles of the National Development Plan (NDP) and allied objectives on the National Spatial Development Framework (NSDF) and the Integrated Urban Development Framework (IUDF) which includes:

- **Spatial Justice:** reversing segregated development and creation of poverty pockets in the peripheral areas, integrate previously excluded groups and resuscitate declining areas;
- **Spatial efficiency:** consolidating spaces and promoting densification and efficient communicating patterns;

- **Access to connectivity, economic and social infrastructure:** ensure the attainment of basic services, job opportunities, transport networks, education, recreation, health and welfare to facilitate and catalyse increased investment and productivity;
- **Access to adequate accommodation:** emphasis is on provision of affordable and fiscally sustainable shelter in areas of high need; and
- **Provision of quality housing options:** ensure that different housing typologies are delivered to attract different market segments of appropriate quality and innovation.

Emphasis is placed on synchronising national housing programmes in these priority human settlements and housing development areas namely:

- **Integrated Residential Development Programme** provides a tool to plan, fund and develop integrated settlements that include all the necessary land uses and housing types and price categories to create integrated communities. It provides for subsidized, as well as finance linked housing, social and rental housing, commercial, institutional and other land uses to be developed;
- **Social Housing Programme in Restructuring Zones** provides for Social Housing located in specific, defined localities (mostly urban) which have been identified as areas of opportunity (largely economic) where the poor have limited or inadequate access to accommodation, and where the provision of social housing can contribute to redressing structural, economic, social, and spatial dysfunctionalities. It is also aimed to improve and contribute to the overall functioning of the housing sector and in particular the rental sub - component thereof, especially insofar as social housing is able to contribute to widening the range of housing options available to the poor;
- **Informal Settlements Upgrading Programme** provides for the structured in situ upgrading of informal settlements to address the social and economic exclusion of communities. It remains evident that informal settlements provide new migrants and the urban poor an affordable point of access into towns and cities, although they are also associated with high degrees of physical and social vulnerability;
- **Finance Linked Individual Subsidy Programme** provides for the creation of an inclusive and vibrant residential property market which can provide state assistance to households who are unable to independently access housing credit to become upwardly mobile and progress up the housing ladder;
- **The Special Presidential Package (SPP) Programme on Revitalisation of Distressed Mining Communities** by developing and implementing human settlements spatial transformation plans for identified mining areas;
- **Enhanced People's Housing Process** provides for a process in which beneficiaries actively participate in decision - making over the housing process and housing product and contribute in such a way that: 1) Beneficiaries are empowered individually and collectively, 2) various partnerships are created, 3) social capital is retained and expanded upon, and 4) housing is valued as an asset far beyond its monetary value.

The current status of the PSHDA for Stellenbosch Municipality, namely:

- The “Stellenbosch Urban Core” - Priority Human Settlements and Housing Development Area (PHSHDA) was formally gazette on 15 May 2020 (Government Gazette No. 43316) and consists of the neighbourhoods of Jamestown, Kayamandi, and Central Stellenbosch;
- To date the Housing Development Agency (HDA) with assistance from the Provincial Department of Human Settlements (PDoHS) have undertaken a Status Quo Analysis in preparation for the drafting of the Stellenbosch PHSHDA Development Plan. The Status Quo Analysis has been completed and will inform the Development Plan drafting going forward; and
- The PDoHS, Stellenbosch Municipality and HDA will proceed with the drafting of the Stellenbosch PHSHDA Development Plan in the near future.

The image below depicts areas that have been declared as Priority Human Settlements and Housing Development Areas (PDSHDA):

Priority Human Settlements and Housing Development Areas (PDSHDA)

BUDGET - MEDIUM TERM REVENUE AND EXPENDITURE FRAMEWORK (MTREF)

1. HUMAN SETTLEMENT DEVELOPMENT GRANT ALLOCATION

The Human Settlement Development Grant (HSDG) and Informal Settlements Upgrading Partnership Grant (ISUPG) allocation for 2023/24 financial year is R41 046 000. Stellenbosch Municipality's allocation of the HSDG and ISUPG for the Medium-Term Revenue and Expenditure Framework (MTREF) of 2022/2023 to 2025/2026 is described hereunder in table 1:

Housing Subsidy Programme	Financial Year (MTREF PERIOD)		
	2023/24	2024/25	2025/26
Human Settlement Development Grant	R22 413 000	R24 008 000	R59 025 000
Informal Settlements Upgrading Partnership Grant	R18 633 000	R16 744 000	R21 800 000
Total	R41 046 000	R40 752 000	R80 825 000

Table 1: Grant allocation to the Municipality for the MTREF period

The Municipality received the Gazetted Business Plan from the Provincial Department of Human Settlements (PDoHS) indicating the projects list, targets and funding allocation for the approved 2023/2043 HSDG and ISUPG Business Plans. The list of projects, targets and budget allocation for Stellenbosch Municipality in the 2023/2024 financial year as well as the MTREF period are stipulated hereunder on the table below:

3 YEAR DELIVERY PLAN 20 January 2023 Business Plan 2023/24 - 2025/26 HSDG & ISUPG	PROGRAMME	2023/2024			2024/2025			2025/2026

STELLENBOSCH MUNICIPALITY PIPELINE AND EXISTING HOUSING PROJECTS

Stellenbosch Municipality currently has numerous planned and potential housing development projects under consideration to ensure a healthy delivery pipeline towards fulfilling the housing demand and its legislative mandate. The overall Housing Pipeline of the Municipality, potential planned and current projects provided includes the formalisation and/or upgrade of informal settlements. The housing development project information is provided per town/area and described in terms of its project name, locality, subsidy mechanism, targeted units, planning timeframes and whether the projects have council approval or not. The housing development projects are at various stages of planning such as desktop studies, feasibility studies, detailed planning studies and securing development rights and implementation.

The implementation of housing projects in the Municipality is executed by the Department: Project Management Unit (PMU). The Department: Housing Development hands over projects to the Department: Project Management Unit for implementation after obtaining all the required development rights. Projects that have been included in the Housing Pipeline for the 2023/24 financial year are indicated in the table below.

*PRE-PLANNING AND/OR PLANNING PHASE								
Name of project / settlement		Type of project / subsidy Mechanism	Estimated Number of opportunities	Status of project	Project timeframes Land use approvals			Comment
					2023/24	2024/25	2025/26	
1	Erf 7001 Stellenbosch, Cloetesville (“Soek-mekaar”)	IRDP, FLISP	± 250 - 300 service sites (top structures TBD)	Detailed planning				A service provider was appointed to undertake planning studies and obtain development rights for the proposed middle to higher income GAP housing development.
2	Jamestown Development: Phase 2 & 3	IRDP, FLISP	400 service sites (top structures TBD)	Detailed planning				A service provider was appointed to undertake planning studies and obtain development rights for a mixed-used housing development.
3	Northern Extension, Kayamandi	IRDP, FLISP	± 4000 – 6000 service sites (top structures TBD)	Detailed planning				A service provider was appointed to obtain development rights for a mixed-use development on the properties known as the Northern Extension.
4	Erf 64 Kylemore	IRDP	+ 600 service sites and top structures	Detailed planning				A feasibility study report into the proposed housing development was completed. A Power of Attorney has been obtained by the HDA. The HDA has appointed a team of professionals to finalise detailed planning studies and to obtain development rights.

***PRE-PLANNING AND/OR PLANNING PHASE**

Name of project / settlement		Type of project / subsidy Mechanism	Estimated Number of opportunities	Status of project	Project timeframes Land use approvals			Comment
					2023/24	2024/25	2025/26	
5	Erven 412, 217 and 284 Groendal, Franschhoek	IRDP, FLISP	± 150 – 200 service sites	Pre - planning				The consultant submitted various proposed concept layout options for the consideration by Council. An Item will be submitted to Mayco to consider the proposed development options for the property.
6	Portion of Erf 7271 Cloeteville, Stellenbosch.	BNG, FLISP	170 service sites (top structures TBD)	Planning	TBD			Council has approved the project to proceed to detailed planning studies. Funding application to PDoHS was submitted, Housing Development await the outcome of funding application.
7	Erven 6300, 6847, 6886 Cloeteville, Stellenbosch.	FLISP	279 sites (top structures TBD)	Planning	TBD			Council has approved the project to proceed to detailed planning studies. Funding application to PDoHS was submitted, Housing Development await the outcome of funding application.
8	Erf 8776 Cloeteville, Stellenbosch.	FLISP	37 sites (top structures TBD)	Planning	TBD			Council has approved the project to proceed to detailed planning studies. Funding application to PDoHS was submitted, Housing Development await the outcome of funding application.

***PRE-PLANNING AND/OR PLANNING PHASE**

Name of project / settlement		Type of project / subsidy Mechanism	Estimated Number of opportunities	Status of project	Project timeframes Land use approvals			Comment
					2023/24	2024/25	2025/26	
9	Erf 6705 Cloeteville, Stellenbosch.	BNG	12 service sites / top structures	Planning	TBD			Council has approved the project to proceed to detailed planning studies. Funding application to PDoHS was submitted, Housing Development await the outcome of funding application.
10	La Motte Old Forest Station	IRDP, FLISP	± 1000 sites serviced sites; possible temporary relocation units	Planning				A feasibility study report into the proposed housing development was completed. The HDA has been appointed to facilitate the transfer of land and to finalise detailed planning studies for township establishment.
11	Droë Dyke	IRDP, FLISP	± 1500 mixed use development	Feasibility study	-	-	-	Forms part of the Adam Tas Corridor initiative. The property is under investigating for future housing development.
12	Jamestown Development: Phase 4	IRDP, FLISP	1000 service sites (top structures TBD)	Detailed planning				A service provider was appointed to undertake planning studies and obtain development rights for a mixed-used housing development. Minor amendments were made to the MSDF to make provision for this project.

***Social Housing Project**

Name of project / settlement		Type of project / subsidy Mechanism	Estimated Number of opportunities	Status of project	Project timeframes Land use approvals			Comment
					2023/24	2024/25	2025/26	
1	Farms 81/2 and 81/9 Stellenbosch	Social Housing	± 250 - 350 rental units	Detailed planning				The Terms of Reference (ToR) was advertised to appoint an accredited Social Housing Institute (SHI) and/or Other Development Agency (ODA) to develop social housing project.
2	Lapland Precinct	Social Housing	±368 rental units	Feasibility study	TBD			The service provider completed a feasibility study and further detailed

								studies will commence subject to the availability of funding.
3	Teen-die-bult Precinct	Social Housing	±180 rental units	Feasibility study	TBD			The service provider completed a feasibility study and further detailed studies will commence subject to the availability of funding.
*Formalising and Upgrading of Existing Settlements								
Name of project / settlement		Type of project / subsidy Mechanism	Estimated Number of opportunities	Status of project	Project timeframes Land use approvals			Comment
					2023/24	2024/25	2025/26	
1	Erf 2183 Klapmuts, La Rochelle	UISP	100 serviced sites; possible temporary relocation units	Detailed planning				A service provider has submitted land use applications to obtain development rights for enhanced serviced sites.
2	Langrug, Franschhoek	UISP	1900 sites	Detailed planning				A service provide will be appointed to finalise detailed plans for the rehabilitation of the freshwater dam and implementation of an in-situ upgrade project.
3	Enkanini Informal Settlement	UISP	1300 sites	Detailed planning	-	-		The in-situ upgrade of Enkanini to commence in 2025/26 financial year.
4	Kayamandi Town Centre	UISP, Institutional	1854 service sites and top structures	Detailed planning				A service provider has submitted land use applications to obtain development rights for township establishment for 3-storey (BNG) walk-ups.
5	Maasdorp Village, Franschhoek	Township Establishment	+ 16 – 32 top structures	Detailed planning				A service provider has submitted a land use application to obtain development rights.
6	Five housing projects in Kayamandi	Township establishment	396 erven	Detailed planning				The service provider is in process to register at the Surveyor General (SG)'s office.
7	3460 Meerlust, Franschhoek (200)	IRDP	200 housing units	Feasibility study	-	-	-	A feasibility study report into the proposed housing development project was concluded. The HDA has been appointed to facilitate the transfer of land and to finalise detailed planning studies for township establishment.

8	Jonkershoek	Township Establishment, IRDP, FLISP	Units and sites TBD, together with 40 existing units	Feasibility study	-	-	-	A feasibility study report has been concluded. HDA has been appointed to facilitate the process. Clarity on the way forward need to be determined.
---	-------------	-------------------------------------	--	-------------------	---	---	---	--

***Housing projects being Implemented**

Name of project / settlement		Type of project / subsidy Mechanism	Estimated Number of opportunities	Status of project	Project timeframes Implementation			Comment
					2023/24	2024/25	2025/26	
1	Erf 3229 Mooiwater	UISP	253 sites	Implementation				<p>Development rights for the project have been obtained. A contractor has completed rehabilitation of the property. The project was implemented in two phases as follows.</p> <ul style="list-style-type: none"> Phase 1: A contractor was appointed in July 2022 for the site rehabilitation and construction of bulk. The project was completed in December 2023. <p>Phase 2: The Project Management Unit is in the process of appointing a contractor for the installation of Civil and Electrical infrastructure. The completion date of the project is scheduled for June 2024.</p>
2	Idas Valley	IRDP	166 sites and 166 FLISP Units	Implementation				The construction of 166 top structures commenced in July 2022 and completion is scheduled December 2023.
3	The Steps and Orlean Lounge, Cloetesville	CRR	161 existing houses	Implementation				The upgrade of the housing units commenced July 2020. The completion date of the project is scheduled for June 2023.

Name of project / settlement		Type of project / subsidy Mechanism	Estimated Number of opportunities	Status of project	Project timeframes Implementation			Project timeframes Implementation
					2023/24	2023/24	2023/24	
4	ISSP Kayamandi Zone 0 (711) UISP	UISP	178 sites	Implementation				A contractor was appointed in July 2022 for the installation of civil services for 178 sites. The contractor has been unable to establish on site due to the relocation of 58 families on site. There has been a collaborative effort in the municipality to relocate the families to commence with the implementation of the project. According to the program, the contractor is expected to commence with the construction activities in May 2023. The completion date of the project is scheduled for June 2024.

1. PRE-PLANNING AND/OR PLANNING PHASE

1.1. Jamestown Development: Phase 2 – 4 – Ward 21

Project Name		3269 Jamestown Phases 2 to 4 (1069) IRDP
Property Description		Portion of the Remainder, Portion 3 and a broader portion of Portion 7 of Farm No 527
Town		Stellenbosch
Suburb		Jamestown
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		Currently planning
% of Total need addressed by Project		12,3
Housing Programme/s		IRDP / FLISP
Housing Opportunities	Sites	2 000
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	Yes (PID)
	Council Approval	Yes
	Risks / Issues	Large scale of project
	Readiness Score	3

Project Suitability	Geotech Conditions	Suitable, location in an already built-up area
	Strategic alignment	Majority of the proposed development is located within the approved urban edge. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially. The appointed Service Provider and the specialist studies must be used to provide the detailed supporting evidence to substantiate the inclusion of portion of the property within the urban edge. The amendment process of the SDF will consider the inclusion of portion 3 based on the legislative criteria.
	Planning Opinion	The Planning Directorate fully support this PID application. The Planning Directorate recommends that Tranche 1.1 be released for 1044 opportunities. This implies the release of R 1 199 984.04 funding for Tranche 1.1 payment and provisional release of R 2 957 965.20 for Tranche 1.2. The release of Tranche 1.1 will allow the Stellenbosch Municipality to continue with the planning process by undertaking preliminary feasibility studies for the site. The following points serve as motivation for project support: <ul style="list-style-type: none"> • The project is consistent with the PSDF and Municipal SDF (2019) that promotes compaction and densification within the urban edge • The project was in principle supported by PPC in 2016 • The project forms part of the Municipality's Housing Pipeline and is incorporated in the Municipal 5-year IDP (dated 2017 – 2022) • The project is located within the proclaimed Stellenbosch PHDA • This project will provide new housing opportunities in the Gap Market which is a strategic objective of the Department.

The subject property is located on the southern edge of the suburb of Jamestown, east of the R44 between Stellenbosch and Somerset West. It is flanked by an existing cemetery on its western boundary and a sports field located centrally on its northern edge. The site falls within an area characterized by medium to high-density residential as well as non-residential uses that serve the local community of Jamestown.

A professional team was appointed during June 2022 to undertake a broad conceptual urban design framework for a portion of portion 7 of farm 527 and remainder farm 527, Stellenbosch, and to obtain town planning and development rights. It should be noted that development rights have also been obtained for Phases 2 and 3 on Portion 7 of Farm 527 (site and service, 2-storey walk-ups, GAP housing, high income housing and public open space) and it is proposed that these two phases be made available simultaneously for development in the short to medium term.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Planning studies Obtain development rights: Phase 2 - 3
2024/25	Implementation of Phase 2 – 3 Obtain development rights: Phase 4
2025/26	Implementation of Phase 2 – 3 Obtain development rights: Phase 4

1.2. Erf 7001 Stellenbosch ("Soek-mekaar") - Ward 17

Project Name		3694 Erf 7001 Cloeteville (360) IRDP
Property Description		Erf 7001
Town		Stellenbosch
Suburb		Cloeteville
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		2023/24
% of Total need addressed by Project		1,5 – 1,8
Housing Programme/s		IRDP / FLISP
Housing Opportunities	Sites	250 – 300 sites
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	Yes
	Land Use Approval	No
	PDOHS Approval	Yes (PID)
	Council Approval	Yes
	Risks / Issues	FLISP Beneficiaries
	Readiness Score	4
Project Suitability	Geotech Conditions	Suitable, location in an already built-up area
	Strategic alignment	MSDF 2019 - Project does fall within the approved Urban Edge of Stellenbosch (page 70), and the project is listed on page 199. MHSP 2020 - Project is included in the proposed Housing Pipeline noted on page 130. IDP 2020 - Project is listed as a priority municipal project on page 189. PHSHDA - The Project is included in the Stellenbosch PHSHDA.
	Planning Opinion	The Planning Directorate fully support this PID application. The Planning Directorate recommends that Tranche 1.1 be released for 360 opportunities. This implies the release of R413 788.00 funding for Tranche 1.1 payment and provisional release of R1 019 988.00 for Tranche 1.2. The release of Tranche 1.1 will allow the Stellenbosch Municipality to continue with the planning process by undertaking preliminary feasibility studies for the site. The following points serve as motivation for project support: <ul style="list-style-type: none"> • The project is consistent with the PSDf and Municipal SDF (2019) that promotes compaction and densification within the urban edge • The project was in principle supported by PPC in 2017 • The project forms part of the Municipality's Housing Pipeline and is incorporated in the Municipal 5-year IDP (dated 2017 – 2022) • The project is located within the proclaimed Stellenbosch PHDA • This project will provide new housing opportunities in the Gap Market which is a strategic objective of the Department.

A study was done by a service provider that investigated different sites to for possible developments in Cloeteville. In accordance with the recommendations which were presented to Council, Erf 7001 was identified for possible GAP/ FLISP housing. A Call for Proposal for the mix use development of Erf 7001 Stellenbosch in Cloeteville was advertised on two occasions.

A team of professionals have been appointed in April 2022 to undertake a Broad Conceptual Urban Design framework for the Erf no 7001 and to obtain town planning and development rights. This project timeframe for completion during 2024/25 financial year.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Planning studies
2024/25	Planning approvals
2025/26	Implementation

1.3. Erf 64 Kylemore - Ward 4

Project Name		2053(20) Stellenbosch Erf 64 Kylemore (171) IRDP
Property Description		Erf 64
Town		Kylemore
Suburb		Kylemore
Catalytic / PHDA Project		No
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		1.0
Housing Programme/s		IRDP
Housing Opportunities	Sites	0
	Serviced Sites	±600 serviced sites
	Top Structures (Units)	TBD
	Other	0
Project Readiness	Land Obtained	No (currently being transferred from the Dept. of Transport and Public Works and Infrastructure)
	EIA ROD	No
	Bulk capacity	Yes (Water is sufficient, Sewerage - Upgrades being undertaken. Link service for sewer needs to be upgrade)
	Land Use Approval	No
	PDOHS Approval	No (Was previously supported by PPC in 2013/14, but no applications have been submitted)
	Council Approval	Yes
	Risks / Issues	Land not in Municipal ownership, land invasion
	Readiness Score	2
Project Suitability	Geotech Conditions	Suitable, location in an already built-up area
	Strategic alignment	The project falls within the approved urban edge and has been identified in the SDF as future mixed-use, community, and residential infill.
	Planning Opinion	This project was presented to the PPC in 2013 already and was in principle supported. Although the project is located on the southern periphery of Kylemore, it can be considered as well located because of the proximity of two schools adjacent to erf 64. The project will provide infill development on a site within the urban edge of Kylemore on well-located land and as such should be further investigated.

Stellenbosch Municipality identified a portion of Erf 64 Kylemore (approximately 8 hectares) as a possible site for a housing development and pre-feasibility studies were concluded a few years ago to determine the potential of this site for a proposed housing development. From the studies, and the outcome of the community meeting held, it was apparent that the site is suitable for the envisaged development.

The Remainder of Erf 64 Kylemore is located at the south-east end of the Kylemore village. Kylemore High School is situated on the northern side of Erf 64. The property is surrounded by agricultural land to the southern and western sides, immediately to the east there is undeveloped land and then a stream.

The Municipality has appointed the Housing Development Agency (HDA) via an Implementation Protocol Agreement (IPA) to assist and finalise the transfer of land from the Department of Public Works and Infrastructure (DPWI) to the Municipality. Treasury endorsed the release of Erf 64, Kylemore on 25th of October 2021.

The Department of Public Works and Infrastructure (DPWI) released Erf 64, Kylemore to the HDA through SPoA on 15 November 2021. The HDA has reviewed previous planning studies and proposed layout options that were conducted more than 10 years ago. The HDA appointed a service provider for detailed planning and design of the preferred development option.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Detailed planning studies
2024/25	Obtain development rights
2025/26	Implementation

1.4. Northern Extension, Kayamandi - Ward 12

Project Name		Northern Extension, Kayamandi
Property Description		Various
Town		Stellenbosch
Suburb		Kayamandi
Catalytic / PHDA Project		PHDA proposed to National Department of Human Settlements
Urgency (Proposed year of implementation)		2023/24
% of Total need addressed by Project		24,5 – 36,8
Housing Programme/s		IRD / FLISP
Housing Opportunities	Sites	4 000 – 6 000
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	Yes (PID)
	Council Approval	Yes
	Risks / Issues	Large scale, and land invasions
	Readiness Score	3
Project Suitability	Geotech Conditions	Mostly suitable although some steep slopes are on certain properties
	Strategic alignment	This project falls within the approved urban edge and has been Identified in the SDF as future mixed-use, community, and residential infill. Portion of the property partially forms part of the ATC LSDF project. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	This project has already been supported through the release of planning funding as well as the funding of land acquisition of the Watergang site that was subsequently invaded. This project is seen as a viable solution to the continued formalisation of Kayamandi and will be critical to the decanting of the rest of the Kayamandi housing projects. Consideration should also be given to the provision of Enhanced Serviced Sites as additional housing opportunities in this project as well.

The Northern Extension Project of Stellenbosch is situated north of Kayamandi, adjacent to Cloetesville and Welgevonden Estate. The site is located on the western side of the R304 (main arterial from the North) to Stellenbosch.

The subject properties as per the sale agreements are Remainder Farm 182 Stellenbosch, Portion 1 of Farm 182 Stellenbosch, A portion of the Remainder of Farm 183 Stellenbosch (Farm 183 A, Farm 183 B, Farm 183 C), Portion 1 of Farm 183 Stellenbosch, Portion 5 of Farm 183 Stellenbosch, and Portion 23 of Farm 183 Stellenbosch. As per the Surveyor-General Database, the farms also included in the subject area are Portions 36 and 60 of the Farm 183 Stellenbosch.

The Northern Extension is a potential development of approximately 130 hectares of land located north of Kayamandi. A key factor in this proposed development is the alignment of the proposed Western Bypass which is to form the western boundary of the project area as well as the new north-western urban edge of Stellenbosch town.

The specific site has been suggested by the Stellenbosch Municipality for the northward extension of the urban area of Stellenbosch. A feasibility study was conducted, and it was determined that the potential exists to provide between 4 000 to 6 000 accommodation opportunities in the Northern Extension of Stellenbosch. The Municipality is aiming to facilitate the development of the 4 000 to 6 000 residential opportunities, as well as providing the required social amenities and public facilities required.

The feasibility study identified developable land within the study area (different farmland identified). The development potential of the said site was evaluated from an engineering, planning and environmental perspective. The subsequent planning applications following this feasibility study will include the rezoning of the given properties from Agricultural to the relevant zonings in terms of the Stellenbosch Municipality Zoning Scheme By-Law suitable for the proposed residential densities and mix use development. What remains important is the overall objective of a mixed-income development, creating housing opportunities for the income categories as identified and a range of choice to prospective owners.

A service provider was appointed by Stellenbosch Municipality to appoint the necessary multidisciplinary team of professional consultants to conduct a due diligence assessment to assess whether it is suitable for the expansion of a mixed-use development to the north of Kayamandi.

A tender was advertised, and a Service provider was appointed to undertake a Broad Conceptual Urban Design framework for the Northern Extension and to obtain town planning and development rights. This project timeframe to obtain development rights is 2023/24 financial year.

It should be noted that a portion of the development of the northern extension has been identified as a possible relocation area for the redevelopment of the Kayamandi Town Centre.

The draft Market Analyst study that was undertaken by DEA&DP was concluded during May 2022 and incorporated into the draft conceptual design layouts. The different conceptual design layout options were workshopped during June 2022 with departments Spatial Planning and PMU and on 25 August 2022 with the senior management of Infrastructure Services. Comments were received on 19 September 2022 from the Department Heritage Western Cape. Consultants. The Service Provider submitted a Notice of Intent to Develop the application to Heritage Western Cape of which the service provider was informed that two additional specialist studies are required to be submitted namely an Archaeological impact assessment and a visual impact assessment on the cultural landscape. The service provider is currently finalising the concept layout options to submit the Land Use Application to obtain development rights. Submission to Department: Land Use Management will occur before end July 2023.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Planning
2024/25	Planning approvals
2025/26	Implementation

1.5. Erven 412, 217 and 284 Groendal, Franschhoek – Ward 2

Project Name		Erven 412, 217 and 284 Groendal
Property Description		Erven 412, 217 and 284 Groendal
Town		Groendal
Suburb		Groendal
Catalytic / PHDA Project		N/A
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		0,9 – 1,2
Housing Programme/s		IRDP / FLISP
Housing Opportunities	Sites	150 – 200
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	Yes
	Risks / Issues	TBD
	Readiness Score	2
Project Suitability	Geotech Conditions	TBD
	Strategic alignment	This project falls within the approved urban edge and has been identified in the SDF as strategic sites, projects, and/or infill opportunities of the MSDF. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

Erven 412, 217 and 284 Groendal are located along Santa Rose Street in Groendal, a suburb of Franschhoek, next to the R45. The site falls within an area characterised by medium to high-density residential as well as non-residential and light industrial uses.

Various studies have been undertaken over the years regarding the development of Erf 412. Most of the studies included extensive public participation processes. The outcome of these studies was that the property should be developed for high density residential units but also include business (light industrial) opportunities. Erf 412 has been rezoned to subdivisional area during 2016 allowing for general residential, local authority and general business. The initial plans for Erf 284 were to develop an old age home or retirement village, but due to financial constraints, this never materialised.

The Department: Property Management and the Department: Housing Development undertook a process to formulate a Call for Proposal in line with the approved agenda item. A service provider was appointed to draft different site development options.

An agenda item has been drafted and was circulated to the relevant departments for inputs/comments. An additional layout inputs were received from the Department: Roads, Transport, Stormwater, Traffic and Engineering Infrastructure Services and therefore the item served at the Section 80 IHS Committee meeting during May 2022. Discussions with senior role players were concluded on 11 November 2022, and an enquiry was raised during these discussions on Erf 284. The user department has forwarded this enquiry to the PDoHS for input.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Appointment of Service provider
2024/25	Planning
2025/26	Obtain development rights

1.6. Cloetesville Infill Housing Project

The Cloetesville Infill Housing Project was implemented to serve to develop vacant and underdeveloped portions of land within Cloetesville to address the housing need. A service provider was appointed to conduct a feasibility study on eight sites (11 erven) as identified by Council. The objective was to identify the development potential of each site and to provide a conceptual site development layout for the identified sites. The feasibility report served before Council during 26 May 2021 to determine if the sites is viable for housing purposes. The following sites were under investigation:

Erf 7271 is relatively flat, however the soil conditions and the permanent or perched water table, which is found less than 1,0m below the ground surface, is expecting to impact the cost of construction. The site makes allowance for a substantial number of units and is therefore a more attractive site. The proposed development of the site can potentially accommodate the following:

- Potential for mixed residential development.
- Each high-rise building is designed with an internal courtyard which provide safe recreational space.
- Concept plan makes provision for pedestrian walkways to be used by Smartie Town residents.
- Proposed development:
 - 16 serviced sites (Plot and Plan); and
 - 152 GAP/ and or FLISP units.

Erven 6847, 6886, 6300 is relatively flat, however the soil conditions and the permanent or perched water table, which is found less than 1,0m below the ground surface is expecting to impact the cost of construction since alternative construction methods are used to mitigate the risks. The site makes allowance for a substantial number of units and is therefore a more attractive site. The proposed development of the site can potentially accommodate the following:

- A small apartment block is proposed for the vacant space in the south-eastern corner of the site whilst larger high-rise buildings are proposed for the western portion of the site.
- Each high-rise building is designed with an internal courtyard which provide safe recreational space.
- Proposed development:
 - 279 GAP/ and or FLISP units.

Erf 8776 is relatively flat, however the soil conditions and the permanent or perched water table, which is found less than 1,0m below the ground surface is expecting to impact the cost of construction since alternative construction methods are used to mitigate the risks. The site makes allowance for a limited number of units and a detailed cost-benefit analysis should be undertaken. The proposed development of the site can potentially accommodate the following:

- Ideal location for a high-rise building.
- U-shaped building will provide the opportunity to develop accommodation whilst retaining many of the existing features of the site.
- Retain the pedestrian walkways.
- Play Park furniture to be relocated to the courtyard at the building.
- Proposed development:
 - 37 GAP/ and or FLISP units.

Erf 6705 is relatively flat; however, the soil conditions is expecting to impact the cost of construction. The site makes allowance for a limited number of units and a detailed cost-benefit analysis should be undertaken.

- Proposed housing typology should blend with the existing houses.
- Proposed development:
 - 12 serviced sites (Plot and Plan).

1.6.1. A portion of Erf 7271 Stellenbosch, Cloetesville

Project Name		A portion of Erf 7271 Stellenbosch, Cloetesville
Property Description		A portion of Erf 7271 Stellenbosch, Cloetesville
Town		Stellenbosch
Suburb		Cloetesville
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		1
Housing Programme/s		BNG / FLISP
Housing Opportunities	Sites	0
	Serviced Sites	168 (top structures TBD)
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	No
	Risks / Issues	Environmental sensitivity; cost of construction
Project Suitability	Readiness Score	1
	Geotech Conditions	Soil conditions and permanent or perched water table adds to the cost of construction
	Strategic alignment	The project is located within the approved urban edge and is identified in the SDF as strategic sites, projects, and/or infill opportunities of the MSDF. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

The relevant portion of Erf 7271 Stellenbosch is located on Long Street, behind Cloeteville sports ground. It is in close proximity to Plakenberg River, which separates Smartie Town from the site area. Opposite the subject portion of Erf 7271 is a crèche and a park. This area has previously been used as a parking lot for the sports ground, but more recently the area was earmarked to house 'Slab Town'.

This site has potential for a mixed residential development. A row of single residential or BNG units located along the northern and eastern boundary of the site with the remainder of the site comprising of high-rise GAP units. It is expected that a total of 16 BNG units and 152 GAP units can be developed on the site, however significant relaxation of the parking requirements will be required. Each proposed high-rise building is designed with an internal courtyard which provides safe recreational space. The design of the concept plan makes provision for several pedestrian walkways that can be used by the residents of Smartie Town.

Council approved the feasibility study report to proceed with the planning processes to obtain development rights for the proposed housing project. Funding application has been approved on the Business Plan of the Provincial Department of Human Settlements for the outer financial year. A procurement process to appoint a professional team will follow in 2024/25 – 2025/26 for planning studies and during 2026/27 to obtain development rights.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Request for Proposals to appoint a service provider
2024/25	Planning
2025/26	Planning

1.6.2. Erven 6300, 6847 and 6886 Stellenbosch, Cloeteville

Project Name		Erven 6300, 6847 and 6886 Stellenbosch, Cloetesville
Property Description		Erven 6300, 6847 and 6886 Stellenbosch, Cloetesville
Town		Stellenbosch
Suburb		Cloetesville
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		1,7
Housing Programme/s		FLISP
Housing Opportunities	Sites	279
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No

	Council Approval	No
	Risks / Issues	Environmental sensitivity; construction costs
	Readiness Score	1
Project Suitability	Geotech Conditions	Soil conditions and the permanent or perched water table adds to the cost of construction
	Strategic alignment	The project is located within the approved urban edge and is identified in the SDF as strategic sites, projects, and/or infill opportunities of the MSDF. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

Erven 6300, 6847 and 6886 Stellenbosch are located between the railway line and Curry Road and adjacent to Cloetesville swimming pool and tennis courts. The swimming pool facility and the identified erven are directly situated behind the Cloetesville High School. Moreover, the swimming facility is clustered with a park and outdoor gym. Many attempts have been made to start a skateboard park in one of the tennis courts as the tennis courts are constantly affected by acts of vandalism. The outdoor gym is being used effectively and the vacant land is used as a hangout area for the youth. The area is monitored by houses on Last Street (street adjacent to swimming pool and vacant land), should matters get out of hand, law enforcement is called. Concerns raised were the lack of recreational activities for youths in the community.

The corner of Last Road and Curry Road provides good line of sight and, together with the sports facilities, provides an ideal location for a community facility. A small apartment block is proposed for the vacant space in the south-eastern corner of the site whilst larger high-rise buildings are proposed for the western portion of the site. It is expected that a total of 279 GAP/FLISP units can be developed on the site, however significant relaxation of the parking requirement will be required. Each proposed high-rise building is designed with an internal courtyard which provides safe recreational space.

Council approved the feasibility study report to proceed with the planning processes to obtain development rights for the proposed housing project. Funding application has been approved on the Business Plan of the Provincial Department of Human Settlements for the outer financial year. A procurement process to appoint a professional team will follow in 2024/25 – 2025/26 for planning studies and during 2026/27 to obtain development rights.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Request for Proposals to appoint a service provider
2024/25	Planning
2025/26	Planning

1.6.3. Erf 8776 Stellenbosch, Cloetesville

Project Name		Erf 8776 Stellenbosch, Cloetesville
Property Description		Erf 8776 Stellenbosch, Cloetesville
Town		Stellenbosch
Suburb		Cloetesville
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		0,2
Housing Programme/s		FLISP
Housing Opportunities	Sites	37
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	No
	Risks / Issues	Construction costs
	Readiness Score	1

Project Suitability	Geotech Conditions	Soil conditions and the permanent or perched water table adds to the cost of construction
	Strategic alignment	The project is located within the approved urban edge and is identified in the SDF as strategic sites, projects, and/or infill opportunities of the MSDF. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

Erf 8776 Stellenbosch is located on a four-way traffic intersection, Adam Tas Road and Helshoogte Road. Concerns were raised relating to the existing park and wall that have great significance to Cloeteville as a community.

The corner of Last Road and Adam Tas Road is an ideal location for a high-rise building. It is proposed that a U-shaped building will provide the opportunity to develop accommodation whilst retaining many of the existing features of the site. The building should be located along the eastern portion of the site to retain the pedestrian walkways and the play park furniture can be relocated to the courtyard at the building. Parking can be provided where the existing play park furniture is located. It is expected that a total of 37 GAP/FLISP units can be developed on the site.

Council approved the feasibility study report to proceed with the planning processes to obtain development rights for the proposed housing project. Funding application has been approved on the Business Plan of the Provincial Department of Human Settlements for the outer financial year. A procurement process to appoint a professional team will follow in 2024/25 – 2025/26 for planning studies and during 2026/27 to obtain development rights.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Request for Proposals to appoint a service provider
2024/25	Planning
2025/26	Planning

1.6.4. Erf 6705 Stellenbosch, Cloeteville

Project Name		Erf 6705 Stellenbosch, Cloetesville
Property Description		Erf 6705 Stellenbosch, Cloetesville
Town		Stellenbosch
Suburb		Cloetesville
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		0,07
Housing Programme/s		BNG
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	12
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	No
	Risks / Issues	Soil conditions expected to impact on construction cost
Project Suitability	Readiness Score	1
	Geotech Conditions	Soil conditions expected to impact on construction cost
	Strategic alignment	The project is located within the approved urban edge and is identified in the SDF as strategic sites, projects, and/or infill opportunities of the MSDF. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

Erf 6705 Stellenbosch is a triangular shaped property with access from Wilger Road. Located to the north, north-west and south of the site are residential erven measuring between 450m² and 510m². The site is currently vacant.

The site is considered a part of an existing neighbourhood and proposed housing typologies should therefore blend with the existing houses. As such, BNG units are proposed; a total of 12 BNG units can be developed on the site. The site contains an embankment along the western boundary, and it is proposed that it should be formalised for stormwater drainage.

Council approved the feasibility study report to proceed with the planning processes to obtain development rights for the proposed housing project. Funding application has been approved on the Business Plan of the Provincial Department of Human Settlements for the outer financial year. A procurement process to appoint a professional team will follow in 2024/25 – 2025/26 for planning studies and during 2026/27 to obtain development rights.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Request for Proposals to appoint a service provider
2024/25	Planning
2025/26	Planning

1.6.5. Erf 8915 Stellenbosch, Cloetesville

Project Name		Erf 8915 Stellenbosch, Cloetesville
Project Description		Erf 8915 Stellenbosch, Cloetesville
Project Location		Erf 8915 is situated adjacent to and stretches behind Pieter Langeveldt Primary School. Moreover, it is situated behind one row of houses. A concern raised for this site is that the expense of servicing the land could possibly jeopardise the feasibility of providing facilities for the disadvantaged. Another concern is the number of trees on the site, especially behind the school, and their environmental and heritage impact. Currently the site is being utilised as an illegal dumping site.
Town		Stellenbosch
Suburb		Cloetesville
Catalytic / PHDA Project		N/A
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		0,5
Housing Programme/s		IRDP / FLISP / Other
Housing Opportunities	Sites	0
	Serviced Sites	84 (Top structures TBD)
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	Yes
	Risks / Issues	Steep slope; poor soil condition; insufficient infrastructure demand
	Readiness Score	1

Project Suitability	Geotech Conditions	The site is located along a steep slope
	Strategic alignment	Identified in the SDF as strategic sites, projects, and/or infill opportunities of the MSDf. From an MSDf/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

Erf 8915 is situated adjacent to and stretches behind Pieter Langeveldt Primary School. Moreover, it is situated behind one row of houses. A concern raised for this site is that the expense of servicing the land could possibly jeopardise the feasibility of providing facilities for the disadvantaged. Another concern is the number of trees on the site, especially behind the school, and their environmental and heritage impact. Currently the site is being utilised as an illegal dumping site.

Council approved the feasibility study report to proceed with the planning processes to obtain development rights for the proposed housing project. Although it is expected that this site will be very costly to develop (due to the poor soil condition and subsequent required bulk earth works), it is recommended that the Stellenbosch Municipality develops the site for either BNG units or only serviced sites, depending on the subsidy quantum.

Funding application has been approved on the Business Plan of the Provincial Department of Human Settlements for the outer financial year. A procurement process to appoint a professional team will follow in 2024/25 – 2025/26 for planning studies and during 2026/27 to obtain development rights.

It is suggested that the following timeframe should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Request for Proposals to appoint a service provider
2024/25	Planning
2025/26	Planning

1.6.6. Erven 6668 and 7181 Stellenbosch, Cloetesville

Project Name		Erven 6668 and 7181 Stellenbosch, Cloetesville
Property Description		Erven 6668 and 7181 Stellenbosch, Cloetesville
Town		Stellenbosch
Suburb		Cloetesville
Catalytic / PHDA Project		N/A
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		0,5
Housing Programme/s		IRDP / FLISP / Other
Housing Opportunities	Sites	0
	Serviced Sites	83 (Top structures TBD)
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	Yes
	Risks / Issues	Significant bulk earth works required
Project Suitability	Readiness Score	1
	Geotech Conditions	Soil conditions poor; significant bulk earth works required
	Strategic alignment	Located within the approved urban edge. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

Erven 6668 and 7181 Stellenbosch are situated adjacent to the R44 arterial road and are near Rietenbosch Primary School. The old Drakenstein Road passes between the property and the R44. The site is relatively steep and located near a wetland area. This wetland area is currently in a poor condition and there are several illegal dwelling units on the site. The current access to the site is not sufficient should development occur on site and portions of Erven 7296 and/or 7047 Stellenbosch would need to be acquired.

Only a portion of the site is developable. The developable portion of the site allows for a mix of opportunities in the form of single residential erven and high-rise apartment buildings. In total 17 BNG units and 65 GAP/FLISP units can be accommodated on the site. Depending on the socio-economic profile of the beneficiaries and the available subsidies, the site can also be developed as part of the UISP and the Stellenbosch Municipality would then be required to provide serviced sites (water, sewer and electrical connections) to the beneficiaries. The GAP units can be developed by the Municipality, or the land can be sold to the Social Housing Regulatory Authority (SHRA) which provides rental accommodation to people earning between R1 850 and R22 000 per month.

Council approved the feasibility study report to proceed with the planning processes to obtain development rights for the proposed housing project. Funding application has been approved on the Business Plan of the Provincial Department of Human Settlements for the outer financial year. A procurement process to appoint a professional team will follow in 2024/25 – 2025/26 for planning studies and during 2026/27 to obtain development rights.

It is suggested that the following timeframe should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Request for Proposals to appoint a service provider
2024/25	Planning
2025/26	Planning

1.7. La Motte: Farm 1339, Farm 1158 and Farm 1158/1 Paarl – Ward 2

Project Name		La Motte Old Forest Station IRDP
Property Description		Farm 1339, Farm 1158 and Farm 1158/1 Paarl
Town		Franschhoek
Suburb		La Motte
Catalytic / PHDA Project		No
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		6,8
Housing Programme/s		IRDP / FLISP
Housing Opportunities	Sites	830 + 283
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	No (Currently being transferred from Dpt. Of Transport & Public Works)
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	Yes (PID)
	Council Approval	Yes
	Risks / Issues	Land not in municipal ownership
	Readiness Score	2

Project Suitability	Geotech Conditions	Suitable, location in an already built-up area
	Strategic alignment	MSDF 2019 - The proposed housing development layout options falls within the urban edge of La Motte (page 87), and the project is listed on page 200. MHSP 2020 - Project is included in the proposed Housing Pipeline noted on page 131. IDP 2020 - Project is listed as a current municipal project on page 245. PSHDA - The Project is not included in the Stellenbosch PSHDA.
	Planning Opinion	This project has been supported by the Dept. of Human Settlements with the release of Tranche 1.1 and forms part of the Municipality's approach to dealing with the Langrug Informal Settlement. The project will allow for the decanting of qualifying beneficiaries from Langrug onto the site, but care must be taken with regard to the community dynamics associated with introducing a new group into an older rural community.

La Motte is a former Bosbou Hamlet situated approximately 3.5 km north-west of Franschhoek town, on the Robertsvalei Road, close to where it intersects the R45. Originally built to house forestry workers, the village is made up of the original dwellings and a range of community facilities. During the construction phase of the Berg River Water Scheme, new houses were built adjacent to the existing settlement to temporarily house the construction workers; these houses have been transferred to identified beneficiaries.

Portions of Farm 1653, Remainder Farm 1339, Remainder Farm 1158, and Portion 1 Farm 1158 Paarl have been identified for mixed-use housing development for the expansion of La Motte

Feasibility studies and various development options have been completed for consideration. From the findings, the identified properties have sufficient capacity for the provision of an integrated housing development. Discussions with the owner of the land, the Department of Transport and Public Works, have occurred to initiate the transfer of land to the Stellenbosch Municipality for housing developments.

The La Motte properties are owned by the National Department of Public Works and Infrastructure. In 2021, the Municipality entered into an Implementation Protocol (IP) with the Housing Development Agency (HDA) to assist and facilitate the process of ensuring the transfer of the above-mentioned properties for housing development. The HDA estimates that the land maybe transferred to the Municipality in 2025/26 FY, planning studies and approvals will be finalised thereafter.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Enablement of transfer of land
2024/25	-
2025/26	-

1.8. Droë Dyke – Ward 11

Project Name		Droë Dyke (1000)
Property Description		Portion of Remainder Farm 279; Portion 1 of Farm 284; Remainder Farm 284; Portion 17 of the Farm 183; Remainder Portion 35 of the Farm 183; Portion 8 of Farm 283; Remainder Farm 283; Farm 281
Town		Stellenbosch
Suburb		Stellenbosch
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		6,1
Housing Programme/s		IRDP, FLISP, Social Housing
Housing Opportunities	Sites	1000 (type TBD)
	Serviced Sites	0
	Top Structure (serviced)	0
	Other	0
Project Readiness	Land Obtained	No (National Dept. of Transport and Public Works – being transferred)
	EIA ROD	No
	Bulk capacity	No (Upgrades planned and being implemented)
	Land Use Approval	No
	PDOHS Approval	No (Was previously supported by PPC in 2013/14, but no applications have been submitted)
	Council Approval	Yes
	Risks / Issues	Scale, dependence on Adam Tas TOD Project
	Readiness Score	1
Project Suitability	Geotech Conditions	TBD
	Strategic alignment	MSDF 2019 - Project does fall within Urban Edge. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	This project was previously presented to the Dept. of Human Settlements in 2013 and was in principle supported. The project did not proceed from the pre-planning stage because the land could not be transferred from the National Dept. of Transport and Public Works. The project was reinvigorated recently as the land issue was resolved and the project was identified as the southern node of the Adam Tas TOD Project. As such this project shares the same opportunities as the Adam Tas TOD Development. The location on the southwestern periphery of Stellenbosch is not ideal and the project will probably not contribute towards alleviating the needs of Kayamandi, but previous discussion with Stellenbosch indicated that FLISP opportunities will be investigated for this site. As such the project can be supported for further investigation. It will be necessary to ensure that this project could be viable even if the remainder of the Adam Tas TOD Project is not developed in future.

In terms of the Stellenbosch Municipal Spatial Development Framework Droë Dyke is seen as part of the Adam Tas Corridor Catalytic Initiative to restructure Stellenbosch Town. The land parcels which make up Droë Dyke comprise of Stellenbosch Farms Portion 17 of the Farm 183, Portion 35 of the Farm 183, Portion 8 of the Farm 238, the Farm 283, and the Farm 281. The farms are situated at the entrance to Stellenbosch town and are adjacent to the R310 and the Eerste River, with the Stellenbosch railway line and reserve splitting the site. Collectively, the land parcels making up Droë Dyke equates to approximately 103 hectares.

Droë Dyke forms part of the residential component for the redevelopment of the Adam Tas Corridor. Droë Dyke is earmarked for medium to high density residential housing and commercial as well as public facilities (including sportsfields). The site will accommodate a public transport node within the R310/Adam Tas Public Transport Corridor and is also seen as a potential park and ride location.

The identified developable area, totalling 75.86 hectares is defined as the Droë Dyke Precinct. With the precinct plan providing the context of the urban form, spatial arrangements and movement routes, the actual overall development area for the precinct is 29.85 hectares.

Droë Dyke is suitable for social housing as it is a precinct in the Stellenbosch Restructuring Zone. The site offers significant opportunity to alleviate Stellenbosch Municipality's housing demand. The site can accommodate and is attractive for a mix of social, affordable and open market housing.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Enablement of transfer of land. Land needs to be transferred to Municipality from National Department of Public Works & Infrastructure.
2024/25	-
2025/26	-

2. SOCIAL HOUSING

It is the intention of the Stellenbosch Municipality to give effect to the Social Housing Programme by making available land portions in the Restructuring Zones to Social Housing Institutions (SHI) and/or Other Development Agencies (ODA) who then will undertake all the necessary processes for the development of Social Housing Estates and the effective management of new rental stock. It is imperative that such SHI's and ODA's are duly accredited by the SHRA.

Social Housing is not a method for mass delivery, but a way to pursue integrated and sustainable urban development. Restructuring Zones were identified based on their close proximity to social and economic amenities and their potential to promote integration, access to economic opportunities and spatial restructuring.

Social Housing currently caters for people earning between R1 850 – R22 000 per month. It is desirable that environments created through this process should conform to health and safety principles, be liveable, vibrant, with the requisite amenities and facilities that provide a better quality of life for tenants. The proposed Social Housing Estate should optimise the utilisation of the land portions through innovative approaches in the development of a medium to high density residential estate.

Stellenbosch Municipality's Social Housing Programme aims to effect the provision of affordable, well-located housing opportunities to low and moderate-income households. It is implemented within the framework of the National Social Housing policy, legislation and regulations. The Municipality is on a drive to accelerate the pace and scale of housing delivery, maximising social housing opportunities, and promoting socio, spatial and economic integration of people into its urban fabric.

This transformative aim will be fulfilled by the Municipality's continued effort to identify well located municipal owned parcels of land for infill development of Social Housing with a precinct development approach. The key purpose is the creation of socially integrated neighbourhoods providing housing for low-middle income households into areas that they would normally be excluded from due to past legacies and the prevailing property markets.

It is crucial that the Social Housing projects complement the social functionality of the neighbourhood with inclusion of other minimum ancillary and complementary uses in the development driven by the integrated development principles. Social integration should be achieved by having an urban design approach that integrates the development with the existing surroundings. The creation of an enhanced public realm with quality environments should be promoted by designing active and passive green open space systems that link the proposed site with public facilities and amenities through safe pedestrian orientated public open space systems. Proposed layouts should consider barrier free access for physically disabled people and cater to people with special needs.

The urban design concept for such sites should be based on a socially integrated development with a holistic and reasonable neighbourhood level planning approach that unfolds through the site plan. It should show some level of conformity with the character of the existing urban environment and some innovation that fosters a sense of place. The site plan must demonstrate an appropriate medium-high density approach by building height and compact site plan with minimum parking. In addition, the site plan design for the public realm, common spaces and landscaping have to facilitate social integration with existing neighbourhoods.

Sites situated in approved and gazetted Restructuring Zones are eligible for social housing grants. Application for the social housing grants will be the responsibility of the SHI/ ODA.

2.1. Farms 81/2 and 81/9 Stellenbosch - Ward 16

Project Name		Farms 81/2 and 81/9 Stellenbosch
Property Description		Farms 81/2 and 81/9 Stellenbosch
Town		Stellenbosch
Suburb		Cloetesville
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		2021/2022 – Planning to commence
% of Total need addressed by Project		1,5 – 2,1
Housing Programme/s		Social Housing
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	0
	Other	± 250 – 350 rental units
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	Yes (feasibility study)
	Risks / Issues	Various site constraints; significance as gateway
	Readiness Score	2
Project Suitability	Geotech Conditions	The property is regarded as being of favourable to poor suitability for residential development. The factors that reduce the suitability of the land for development are the extent of uncontrolled fill, the existing topography and soil corrosivity.
	Strategic alignment	This project falls within the approved urban edge. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

In terms of the implementation of the Social Housing Programmes, the Stellenbosch Municipality has identified Portions 2 and 9 of the Farm No 81 Stellenbosch. This site is located between the Cloetesville and Kayamandi settlements. Its boundary is framed by the R304 to the west and the railway line to the east. The Plankenburg River traverses the site along the eastern boundary. The southern boundary of property includes portions of the Kayamandi Tourism Centre, as well as a bridge over the railway line. The northern boundary is framed by the Mount Simon residential development.

A feasibility study has been done during January 2020 to determine the development potential of the site. Council approved the feasibility report on the 12 February 2020 for Social Housing (rental stock). Further planning studies were conducted by a suitable, qualified, and experienced professional service providers during March 2021 to undertake a geotechnical investigation, flood line studies and a traffic impact assessment on the site.

In terms of the geotechnical investigation, the property is regarded as being of favourable to poor suitability for residential development. The factors that reduce the suitability of the land for development are the extent of uncontrolled fill, the existing topography and soil corrosivity.

The tender has been advertised during June 2022 and closing date was 4 July 2022. On request from the bidders due to the short period to submit their bids, Bid Specification Committee approved extension of closing date to 8 August 2022.

The tender for the Request for Proposals (RFP) had to be cancelled due to material changes to the scope of works with reference to Construction Industry Development Board (CIDB) and Compensation for Occupational Injuries and Diseases Act (COIDA). The amended tender was re-advertised on 2 September 2022 and a compulsory clarification meeting was held on 15 September 2022. The closing date for the tender was on 3 October 2022. The tenders received was evaluated and served at Bid Evaluation Committee on 30 November 2022. Appointment of a SHI and/or ODA will occur after Bid Adjudication Committee approval.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Planning
2024/25	Planning
2025/26	Implementation

2.2. Lapland Precinct - Ward 10

Project Name		Lapland Precinct
Property Description		Erven 2149, 6590, 2608, 2609, 6659, 9106 Stellenbosch
Town		Stellenbosch
Suburb		Stellenbosch
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		2,3
Housing Programme/s		Social Housing
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	368
	Other	0
Project Readiness	Land Obtained	No (Properties owned by the Municipality and the National Department of Public Works)
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	Yes
	Risks / Issues	Relocation of prison; construction above existing units
Project Suitability	Readiness Score	0
	Geotech Conditions	TBC
	Strategic alignment	This project is located within the approved urban edge and has been identified for infill development. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

The Lapland Precinct comprises Erven 2149, 6590, 2608, 2609, 6659 and 9106 Stellenbosch.

The Lapland precinct situated on the northern outskirts of the Stellenbosch CBD is ideally located in a well-connected node via the R44 and Helshoogte Roads and is near various commercial and economic facilities. The surrounding land uses consist of residential spaces, public spaces, and commercial properties. The properties located in the precinct are owned by the Stellenbosch Municipality and the National Department of Public Works. The properties have extents upwards of 1300m² to roughly 4000m², are developed on a gentle gradient and are bordered to the north by Kromriver and Teen-die-Bult, Plankenburg to the west, Stellenbosch CBD to the south and Die Rand to the east. The Lapland precinct is home to the Stellenbosch Traffic Department, the Stellenbosch Correctional Services building and three high rise municipal flats (Lavanda, Aurora and Phyllaria) with a total of 220 existing rental units. Preliminary building inspections revealed that the structures are sound with some upgrades having been performed recently.

The precinct is made up of three high rise municipal flats (Lavanda, Aurora and Phyllaria) with a total of 220 rental units, the Department of Home Affairs, the Traffic Department and the Correctional Services Prison and ancillary housing and facilities. Taking cognisance of the Status Quo Study findings and in line with densification principles, the following development concepts and land use rights are proposed for the Lapland precinct:

Two of the existing high-rise buildings are proposed to be developed as mixed use eight-storey high rise tower blocks incorporating the existing governmental uses on ground floor together with retail shops and offices. Social housing with housing typologies ranging from one-bedroom to two-bedrooms are proposed for five floors. Market orientated Rental Housing Development of one bedroom and two-bedroom units are proposed for the two top floors. It is proposed that pavements be widened, and street furniture and informal traders be accommodated in a predesigned format. A density of 320 dwelling units per hectare is proposed.

It is proposed that the prison be relocated to the outskirts of Stellenbosch town on a site to be identified by the Stellenbosch Municipality and approved by the Department of Correctional Services. A portion of this property is to be set aside for market orientated rental housing development of one bedroom and two-bedroom units for two floors and retail and/or office spaces to be located on the ground floor. The proposed density is 616 dwelling units per hectare.

It is proposed that infill developments be implemented on the existing vacant land in between the existing flats to increase the density. This would allow for spatial and architectural maximisation of the existing site and the formulation of designs in line with SHRA design standards. To achieve the desired density and enhance the quality of living in the vicinity, it is proposed that the site be set aside for Social Housing purposes only with the accommodation of a crèche. Eight-storey buildings are proposed with a proposed density of 186 dwelling units per hectare.

The Municipality will go out on a procurement process to appoint an accredited Social Housing Institutes (SHI's) and/or Other Development Agencies (ODA's) for a social housing project on the property.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Request for Proposal
2024/25	Planning
2025/26	Planning

2.3. Teen-die-Bult Precinct - Ward 10

Project Name		Teen-die-Bult Precinct
Property Description		Farm 180 and Erven 2728, 3481 – 3486 Stellenbosch
Town		Stellenbosch
Suburb		Stellenbosch
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		1,1
Housing Programme/s		Social Housing
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	180
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	Yes
	Risks / Issues	Construction above existing units
	Readiness Score	1
Project Suitability	Geotech Conditions	TBC
	Strategic alignment	This project falls within the approved urban edge. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially,
	Planning Opinion	TBD

The Teen-die-Bult Precinct comprises the Remainder Farm 180 and Erven 2728, 3481 – 3486 Stellenbosch (portions of the Remainder Farm 180).

Less than 2km north of the Lapland precinct properties are the eight Teen-die-Bult erven. Situated close to major transport corridors in Helshoogte road and the R44, the Teen-die-Bult precinct is bordered to the west by Tenantville (a designated Restructuring Zone), by the La Colline precinct to the north and Simonswyk to the east. The surrounding land uses are predominantly residential with some commercial properties. As earlier mentioned, the Teen-die-Bult precinct consists of eight erven on gradually sloping terrain except for Farm 180 that has a comparatively steep gradient. Six of the properties are developed with existing duplex flats and low-rise flats that are in good condition and are known as Bellerive and Teen-die-Bult. Two properties are undeveloped Open Spaces which offer opportunities for developments. The properties are owned by the Stellenbosch Municipality.

It is proposed that new development be carried out on the consolidated site consisting of Farm 180 and Erf 2728 (Open Spaces) only. This is motivated by the maximisation of existing infrastructure capacity by the proposed development on the open spaces. It is also proposed that existing buildings in the precincts receive cosmetic upgrades (beautification) as a trade-off for maximising development on the parcels. This may ensure the community support of the project.

Eight-storey buildings are proposed with a proposed density of 184.27 dwelling units per hectare. A housing typology mix is proposed with Social Housing being the primary mix and market orientated rental housing development to cross subsidise the development of one-bedroom and two-bedroom units on the top floors.

The following is proposed for the Teen-die-Bult Precinct:

Precinct	Unit Type	Number	Expected Rental	Monthly Rental Income	Annual Rental Income
Teen-die-Bult	32m ² 1 Bedroom	50	R7 000,00	R350 000,00	R4 200 000,00
	34m ² 1 Bedroom	50		R350 000,00	R4 200 000,00
	45m ² 2 Bedroom	40	R8 500,00	R340 000,00	R4 080 000,00
	47m ² 2 Bedroom	40		R340 000,00	R4 080 000,00
	Total	180			R16 560 000,00

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	TBC
2024/25	TBC
2025/26	TBC

2.4. La Colline - Ward 10

Project Name		La Colline Precinct
Property Description		Erven 2644, 2645, 2660, 2661, 2666, 2667, 2683, 2684, 2727 and 2729 Stellenbosch
Town		Stellenbosch
Suburb		Stellenbosch
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		TBD
Housing Programme/s		Social Housing
Housing Opportunities	Sites	TBD
	Serviced Sites	TBD
	Top Structures (Units)	TBD
	Other	TBD
Project Readiness	Land Obtained	No (properties owned by the Municipality and the Department of Local Government and Housing)
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	No
	Risks / Issues	TBD
	Readiness Score	0
Project Suitability	Geotech Conditions	TBD
	Strategic alignment	This project falls within the approved urban edge. The two public open spaces are important to be retained and upgraded. There are densification opportunities available. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially. Once the project reaches the planning phase, it needs to be considered within the capital planning process/CEF.
	Planning Opinion	TBD

The La Colline Precinct comprises Erven 2644, 2645, 2660, 2661, 2666, 2667, 2683, 2684, 2727 (General Residential) and 2729 Stellenbosch (Public Open Space). The La Colline Precinct, just a short walk north from the Teen-die-Bult and Lapland Precincts, is easily accessible via Helshoogte Road from the east, Ryneveld Street from the south and the R44 from the north. The La Colline Precinct consists of residential properties built around a public open space, Tobruk Park (which forms part of the La Colline Precinct erven) and an additional public open space called La Colline Park. The residential properties are developed with low rise duplex flats that appear to be structurally sound with some minor cosmetic remedial work required. The properties are owned by the Department of Local Government and Housing and the Stellenbosch Municipality.

It is proposed that the residential properties remain as is and be the trade-off for the density maximisation development on the consolidated Teen-die-Bult sites. The open spaces should be developed as active open space for the enjoyment of the residents.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	TBC
2024/25	TBC
2025/26	TBC

3. FORMALISING AND UPGRADING OF EXISTING SETTLEMENTS

3.1. Erf 2183 Klapmuts, La Rochelle – Ward 18

Project Name	La Rochelle Klapmuts
Property Description	Erf 2183 Klapmuts

Town		Klapmuts
Suburb		Klapmuts
Catalytic / PHDA Project		No
Urgency (Proposed year of implementation)		2023/24
% of Total need addressed by Project		0,6
Housing Programme/s		UISP
Housing Opportunities	Sites	0
	Serviced Sites	100
	Top Structures (Units)	Possible Temporary Relocation Units
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	Yes
	Bulk capacity	Yes (Water supply is being upgraded ETA 18 months, Sewerage will require upgrades)
	Land Use Approval	No
	PDOHS Approval	No (Was previously supported by PPC in 2016/17, but no applications have been submitted)
	Council Approval	Yes
	Risks / Issues	Small size of project, possible land invasion high risk
	Readiness Score	4

Project Suitability	Geotech Conditions	Suitable, location in an already built-up area
	Strategic alignment	MSDF 2019 - Project does fall within the approved Urban Edge of Klapmuts (page 74), and the project is listed on page 199. MHSP 2020 - Project is included in the proposed Housing Pipeline noted on page 129. IDP 2020 - Project is not indicated in the IDP. PSHDA - The Project is not included in the Stellenbosch PSHDA.
	Planning Opinion	This project was previously presented to the PPC in 2016 and in principle supported for further studies. The specific type of housing program to be used was not confirmed by the Municipality. The site is located within in walking distance of socio-economic facilities in Klapmuts and development will increase the urban density of Klapmuts. The site is relatively small and will only be able to assist a small number of beneficiaries.

Klapmuts is situated on the N1 transport corridor and has significant potential to serve as centre for economic activity and residence within the metropolitan region and Stellenbosch Municipality. Erf 2183 Klapmuts is located along Gomas Street, Klapmuts, approximately 1.5km off the R310 that links Stellenbosch to the N1. The site is located on the south-eastern edge of the town of Klapmuts and is bordered by vacant land to its southern and eastern boundaries, with a proposed new housing development on the western and northern boundaries towards Mandela City, Klapmuts. To provide in the dire housing need in the Klapmuts area, especially for current backyarders, this property was identified as a possible option for a “site-and-service” housing project.

Erf 2183 Klapmuts is zoned Subdivisional Area for the following uses: Less Formal Residential Zone, Public Open Space Zone, Public Road, and Parking Zone. A team of professional service providers have been appointed to attend to the subdivision of the property into residential erven of approximately 40m² to 50m², the submission of all diagrams to the Surveyor-General’s office for approval and registration as well as the submission of all documents to the Provincial Department Human Settlements to obtain the relevant funding for this incremental housing project.

The service provider drafted conceptual subdivisional layouts and presented it to various internal departments for inputs. The Land Use Application submitted, await approval.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Planning approval
2024/25	Implementation
2025/26	Implementation

3.2. Langrug, Franschhoek (Planning P1) - Ward 1 and 2

Langrug informal settlement is in the north-eastern area of Franschhoek and falls within the jurisdiction of the Stellenbosch Municipality. On the southern side of the settlement is Groendal formal housing developments down to Franschhoek town. On the eastern side is the Mooiwater low-cost housing development. On the northern side of Langrug is a nature reserve that is located on the upper part of the mountain slope on which Langrug informal settlement encroaches.

Project Name		3256 Franschhoek Langrug (1900) UISP
Property Description		Erven 959 – 1120 and Erf 2901
Town		Franschhoek
Suburb		Langrug
Catalytic / PHDA Project		No
Urgency (Proposed year of implementation)		2024/25 – Rehabilitation of freshwater dam
% of Total need addressed by Project		TBD
Housing Programme/s		UISP
Housing Opportunities	Sites	0
	Serviced Sites	1900
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	Yes (PID)
	Council Approval	Yes
	Risks / Issues	Dense informal settlement that will require a large decanting site
	Readiness Score	3
Project Suitability	Geotech Conditions	Suitable, location in an already built-up area, although structures are being constructed on steep mountain slopes.
	Strategic alignment	MSDF 2019 - Project does fall within the approved Urban Edge of Franschhoek (page 77), and the project is listed on page 200. MHSP 2020 - Project is included in the proposed Housing Pipeline noted on page 131. IDP 2020 - Project is listed as a current municipal project on page 245. PHSFDA - The Project is not included in the Stellenbosch PHSFDA.
	Planning Opinion	This project has been supported by the Dept. of Human Settlements with the release of Tranche 1.1 and is a critical priority for the Dept. of Human Settlements. Addressing the Langrug Informal Settlement must be a major priority for both local and provincial government. Decanting of Langrug Informal Settlement must be dealt with carefully to avoid damaging the local community.

Living conditions at informal settlements are typically poor with residents facing a range of basic livelihood challenges, such as poor access to basic sanitation, low to no potable water supply, inadequate electricity provision, detrimental solid waste accumulation in public spaces, frequent shack fires, safety, and security risks; to name a few. Langrug informal settlement is no exception to these deplorable living conditions. Furthermore, and due to the growing number of informal housing and population in the settlement coupled with the lack of availability of land for housing in the Franschhoek Area, there is a growing need at Langrug for additional basics services and amenities (roads, water, sanitation, electricity etc.), the management of grey and black water emanating from households, and the development of housing projects in the settlement.

Considering the above challenges, there are various projects and interventions which have been identified for planning and eventual implementation. The objective of these projects is to upgrade Langrug incrementally and to, as far as possible, formalise existing development patterns to improve the delivery of basic services.

Hereunder is a summary of the medium to long term projects:

- The construction of phase 2 emergency access road and the installation of underground services.
- Relocation and subsequent rehabilitation of the dam area.
- Cancellation of the existing General Plan and consolidation to create one land unit.

The Municipality is planning to undertake detailed planning studies to unlock housing development opportunities, develop a phased approach implementation plan premised on detailed designs for the provision of basic services and formalization of Langrug, apply for development rights and installation of basic services, and identify suitable land for decanting.

The Department: Housing Development to request technical proposals from service provider to finalise detailed planning for the rehabilitation of the freshwater dam and implement an in-situ upgrading project in September 2023, pending availability of funding.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Planning
2024/25	Implementation of upgrading projects
2025/26	

3.3. Kayamandi Town Centre Ward 12, 13, 14

Project Name		3258 ISSP Kayamandi Town Centre (1000) UISP
Property Description		Various
Town		Stellenbosch
Suburb		Kayamandi
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		2024/2025
% of Total need addressed by Project		11,3
Housing Programme/s		UISP / Institutional
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	1 847
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	Yes
	Land Use Approval	No
	PDOHS Approval	Yes (PID)
	Council Approval	Yes
	Risks / Issues	Large scale of project and need for decanting onto a non-existent TRA
	Readiness Score	4

Project Suitability	Geotech Conditions	Suitable, location in an already built-up area
	Strategic alignment	MSDF 2019 - Project does fall within the approved Urban Edge of Stellenbosch (page 70), and the project is listed on page 200. MHSP 2020 - Project is included in the proposed Housing Pipeline noted on page 130. IDP 2020 - Project is listed as a current municipal project on page 179. PSHDA - The Project is included in the Stellenbosch PSHDA.
	Planning Opinion	This project has already been supported by the release of Tranche 1.1 and the Dept. of Human Settlements is waiting for the PFR application currently. The project will entail the redevelopment of the older town centre of Kayamandi that is in desperate need of attention. The project will require a decanting site. This project can be further supported for feasibility studies.

A service provider has been appointed by Municipality to conduct a feasibility report to assess the redevelopment of the Town Centre of Kayamandi. The scope of their work during the feasibility phase consisted of determining the existing status quo, contextual assessment of the site, planning policy directives, site development plan with housing placing thereon, indicating the development patterns, proposed land uses and residential densities.

The feasibility studies were completed in December 2017 and Council approved the development at a Council Meeting on 28 March 2018. The objective has since been to prepare and submit a detailed planning application for the Town Centre of Kayamandi, to determine the civil services bulk capacity for the Kayamandi Town Centre, to compile engineering designs and submit for approval and to apply for funding approval to install services and build multi-storey top structures. The Environmental and Heritage studies have been completed for the Town Centre and draft layouts and draft house typologies have been concluded. A Geotechnical study of the area has been conducted and a funding application has been submitted to the Provincial Department of Human Settlements during June 2020 for the detailed planning of 1854 units. The planning layout has been approved by Council on 24 August 2020.

The consultant revised the previously Council approved feasibility report and planning layout of 24 August 2020. In September 2021, the consultants submitted the draft urban design framework and typologies for the redevelopment of the Town Centre. The draft submissions were workshopped with internal departments as well as the PDoHS for comments and/or inputs. An item will serve at Council during May 2022, to seek approval for the revised conceptual design planning layouts.

The Town Centre development is linked to the Northern Extension development. Land Use Application has been submitted, awaits approval.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Planning approval
2024/25	Implementation
2025/26	Implementation

3.4. Maasdorp Village, Franschhoek – Ward 2

Project Name		Maasdorp Village, Franschhoek
Property Description		Farm La Motte 1041/27 and 1041/28 Paarl
Town		Rural
Suburb		Rural
Catalytic / PHDA Project		N/A
Urgency (Proposed year of implementation)		Current – planning
% of Total need addressed by Project		0,1
Housing Programme/s		Township Establishment
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	0
	Other	16 existing units
Project Readiness	Land Obtained	No
	EIA ROD	Yes - Checklist completed; EA not applicable
	Bulk capacity	No
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	Yes – with respect to a Memorandum of Understanding with the Dept. of Public Works
	Risks / Issues	Costly sites
Readiness Score		2
Project Suitability	Geotech Conditions	Suitable, already built-up area
	Strategic alignment	This project falls within the approved urban edge and has been identified in the SDF as future mixed-use, community, and residential infill. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	TBD

The Maasdorp Forest Village comprises portions 27 and 28 of Farm La Motte No 1041 Paarl is located north of the intersection of Main Road 191 (R45) and Divisional Road 1351 approximately four kilometres northeast of Franschhoek.

The site currently accommodates approximately 32 formal houses and outbuildings. The property is currently zoned for Agricultural purposes and must be rezoned and subdivided to enable formal township establishment accommodating the existing households and as otherwise may be determined by further investigations and community engagements.

In June 2018 a service provider was appointed to attend to the township establishment process for Maasdorp Forest Village, Franschhoek: portions 27 and 28 of Farm La Motte No 1041 Paarl, and future expansion on Portions 3 and 7 of Farm La Motte No 1041, Franschhoek; the project has later been referred to only as the detailed planning and design for the township establishment of Maasdorp Forest Village.

Community engagements, a traffic impact study, engineering services reports and a geotechnical investigation have been completed together with draft plans of subdivision for further consideration. The required process for township establishment took longer than anticipated primarily due to the impact of Covid-19 on processes, the challenges on the ability to interact with relevant stakeholders and certain aspects in the planning process that arose and now requires additional input. Due to the socio-economic impact of Covid-19 and the relevancy of the socio-economic profile on the feasibility of proposed property extents and accommodation of original Maasdorp residents on these properties, the necessity to update the socio-economic survey and engineering services costing for efficient decision-making purposes on the development proposal, was identified.

The service provider submitted the Land Use Planning Application to the Department: Land Use Planning and was advertised for public participation during February 2023. Planning approvals to be obtained during 2023/24 financial year.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Planning approval
2024/25	Application for funding to PDoHS
2025/26	Implementation of services depending on approval of funding

3.6 Five housing projects in Kayamandi, Stellenbosch

In 1995, to direct and accommodate the accelerated growth and severe development pressure that prevailed in the Kayamandi Township, the former Stellenbosch Transitional Council commissioned the drafting of a Spatial Development Framework for Kayamandi and the immediate surrounding area. During 1996 and 1997 Special Council Meetings and workshops were held to deal with the Development Framework of Kayamandi with the aim to identify and implement priority projects within the area. The Spatial Development Framework was formally approved on 11 September 1996 and the priority projects plan during January 1997. Although the projects were implemented during the period, majority of the erven however have not been formally registered at the Surveyor General and the deeds office to proceed with the individual transfers of the properties to the respective end users/beneficiaries. For various reasons, the formal township establishment process for certain projects was not completed. Stellenbosch Municipality is now able to finalise the required statutory land use management approvals required for formal township establishment.

A service provider has been appointed to finalise township establishment by obtaining the necessary land use rights for each of the five projects situated in Kayamandi, Stellenbosch as well as submission of all diagrams in the Surveyor-General's office for registration and approval.

Five of these properties are now the subject of a township establishment process. Four of the projects have obtained land Use approval during January 2023 by the MPT. Project 5B was submitted to Land Use department and was withheld due to no Power of Attorney could be submitted for Erf 66.

The said provisions applied to the following projects:

- *Project 4 A (Erven 1080 to 1112, Kayamandi) (Ward 12)*

The 146 units were developed as rental stock units. The relevant statutory approvals (consolidation of land units) are required to enable the registration of the sectional title scheme on the consolidated properties. A service provider appointed to entail the amendment of the approved General Plan.

- **Project 4 B (Red Bricks Hostels - Erven 112, 114, 115, 116) (Ward13)**

The project formed part of the hostel upgrading programme for Kayamandi and was implemented and constructed during 2004. It comprised the consolidation of erven 112, 114, 115 and 116 as registered in terms of General Plan.

The project entails the rezoning and the subdivision of the property into 51 units and 5 public open spaces.

- **Project 5 A (175 Units - Erven 1123 – 1154) (Ward 15)**

The project entailed the consolidation of Erven 1123 and 1152 as well as Erven 1113 and 1122 as registered in terms of General Plan. The said erven formed part of the 18,5-ha development area that comprised Erven 707 and 1071 as approved in terms of Act 4 of 1984.

The project entails the subdivision of the property into 175 higher density units and public open spaces.

Although the General Plan (Erven 1982 – 2165) was submitted to the Provincial government Western Cape, the registration of the plan was not done to date since Erf 1120 (public place) was not closed.

- **Project 5 B (137 Units – Erven 513-522, 67 and 69 and portion of Erf 523) (Ward 12 and 15)**

Project 5B formed part of the Kayamandi Town Centre urban renewal project as funded in terms of the overall hostel project upgrading programme. The development made provision for 137 higher density units, a new road, and several open spaces.

The development entails the consolidation of Erven 67, 69, a portion of Erf 523 and Erven 513-522 and the re-subdivision thereof into individual higher density units. The project was implemented and constructed during 2004. The project was partially completed due to the construction of informal structures on the remainder of the property. A total of 42 units have been built. It is recommended that the amendments of the General Plans (149/1987 and 290/1989) be done.

- **Project 8 (Mpelazwe – Remainder Erf 288 Kayamandi - 65 units) (Ward 13)**

Mpelazwe is one of the oldest parts of the Kayamandi town and was identify as priority projects considering its historic character and response from the community.

The development forms part of the hostel upgrading programme and comprised the development of 54 residential units.

Although approval was previously granted for the relay out of the area it still forms part of Remainder Erf 288 as per General Plan.

Although erf numbers (Erven 2392-2446) have been allocated, the formal rezoning and subdivision and closure of public roads have not been completed to date.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Registration of erven by SG office
2024/25	-
2025/26	-

3.4.1. Erven 1080 - 1112 Kayamandi (33 erven) – Ward 12

Project Name		Erven 1080 - 1112 Kayamandi (33 erven)
Property Description		Erven 1080 - 1112 Kayamandi
Town		Kayamandi
Suburb		Kayamandi
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		2021/2022 Planning to commence
% of Total need addressed by Project		0,2
Housing Programme/s		Township Establishment
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	Completed
	Other	33 erven
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	Yes
	Land Use Approval	No
	PDOHS Approval	Yes (previous)
	Council Approval	Yes
	Risks / Issues	Community challenges and possible encroachments
	Readiness Score	4

	Strategic alignment	These projects fall within the approved urban edge and have been identified in the SDF as future mixed-use, community, and residential infill. From an MSDF/CEF perspective, these projects fall within the functional area and priority development areas and from a strategic perspective align spatially.

	Planning Opinion	TBD
--	-------------------------	-----

The project was approved by Council in 1996 and comprised the development of 146 family units by Stocks Housing Cape (Pty) Ltd. The 146 units were developed as rental stock units on Erven 1080 to Erven 1112 and were completed in 1998. The relevant statutory land use approvals are required to enable the registration of the sectional title scheme on the consolidated properties. This process will also entail the amendment of the approved General Plan (GP 3343/1993).

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Registration of erven by SG office
2024/25	-
2025/26	-

3.4.2. Red Bricks Hostels: Erven 112, 114, 115, 116 Kayamandi – Ward 13

Project Name		Red Bricks Hostels: Erven 112, 114, 115, 116 Kayamandi

	Geotech Conditions	Suitable, already built-up area
	Strategic alignment	TBD
	Planning Opinion	TBD

The project formed part of the hostel upgrading programme for Kayamandi and was implemented and constructed in 2004. It comprised the consolidation of erven 112, 114, 115 and 116 as registered in terms of General Plan L 149/1987. The project entails the rezoning and the subdivision of the property into 51 units and 5 public open spaces.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	-Registration of erven at SG office
2024/25	-
2025/26	-

3.4.3. Erven 1123 – 1154 and 1113 – 1120 Kayamandi – Ward 15

Project Name		Erven 1123 – 1154 and 1113 – 1120 Kayamandi

	Council Approval	Yes
	Risks / Issues	Community challenges and possible encroachments
	Readiness Score	4
Project Suitability	Geotech Conditions	Suitable, location in an already built-up area
	Strategic alignment	TBD
	Planning Opinion	TBD

The project entailed the consolidation of Erven 1123 and 1152 as well as Erven 1113 and 1122 as registered in terms of General Plan 3343/1993. The project entails the subdivision of the property into 175 higher density units and public open spaces. Although the General Plan (Erven 1982 – 2165) was submitted to the

Provincial government Western Cape, the registration of the plan was not done to date due to the fact that Erf 1120 (public place) was not closed.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	-Registration of erven at the SG office
2024/25	-
2025/26	-

3.4.4. Erven 513-522, 66, 67, 69 and Portion of Erf 523 Kayamandi – Wards 12 and 15

Project Name		Erven 513-522, 66, 67, 69, a portion of Erf 523 Kayamandi
Property Description		Erven 513-522, 66, 67, 69, a portion of Erf 523 Kayamandi
Town		Kayamandi
Suburb		Kayamandi

% of Total need addressed by Project		0,8
Housing Programme/s		Township Establishment
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	0
	Other	137
Project Readiness	Land Obtained	Yes. Only Erf 66 is in private ownership
	EIA ROD	No
	Bulk capacity	Yes
	Land Use Approval	No
	PDOHS Approval	Yes (previous)
	Council Approval	Yes
	Risks / Issues	Community challenges and possible encroachments
	Readiness Score	4
Project Suitability	Geotech Conditions	Suitable, location in an already built-up area
	Strategic alignment	TBD
	Planning Opinion	TBD

This project formed part of the Kayamandi Town Centre urban renewal project as funded in terms of the overall hostel project upgrading programme. The development made provision for 137 higher density units, a new road and several open spaces. The underlying erven forms part of General Plan 149/1987 and General Plan 290/1989. The development entails the consolidation of Erven 67, 69, a portion of Erf 523 and Erven 513-522 and the re-subdivision thereof into individual higher density units. The project was implemented and constructed during 2004. The project was partially completed due to the construction of informal structures on the remainder of the property. A total of 42 units have been built. It is recommended that the amendments of the General Plans (149/1987 and 290/1989) be done.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Registration of erven at the SG office
2024/25	-
2025/26	-

3.4.5. Mpelazwe: Remainder Erf 288 Kayamandi - Ward 13

2024/25	-
2025/26	-

3.5. Portion 1 of the Farm Meerlust No 1006 Paarl, Franschhoek – Ward 3

Project Name		3460 Meerlust, Franschhoek (200)
Property Description		Portion 1 of the Farm Meerlust 1006
Town		Meerlust
Suburb		Meerlust
Catalytic / PHDA Project		No
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		1,2
Housing Programme/s		IRDP
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (serviced)	200
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	No
	Bulk capacity	TBD
	Land Use Approval	No
	PDOHS Approval	Yes (PID)
	Council Approval	Yes
	Risks / Issues	Location, site is not located close to any urban settlements and extreme small scale of project
Readiness Score		3
Project Suitability	Geotech Conditions	TBD
	Strategic alignment	This property is partially located within the the approved urban edge. The portion within the urban edge has been identified in the SDF as future mixed-use, community, and residential infill as well as green areas to be retained. The Spatial Planning Section will undertake a Local Spatial Development Framework (LSDF) to determine potential and future development of this property.
	Planning Opinion:	TBD

In accordance with the housing need, Stellenbosch Municipality has identified a portion of land, Portion 1 of the Farm Meerlust No 1006 Paarl, in the Franschhoek Valley known as Meerlust for residential development. Ownership of the property currently vests with the National Department of Public Works and Infrastructure.

The site is located on the southern edge of the R45 close to the intersection of the R45 and the R310 and lies between Werda in the north-west and Allee Bleue, Lekkerwyn and the Pickstones to the east. The site is located on a sub-regional corridor linking the towns of Franschhoek and Paarl.

The Municipality has appointed the Housing Development Agency (HDA) via an Implementation Protocol Agreement (IPA) to assist and finalise the transfer of land from the National Department of Public Works and Infrastructure (DPWI) to the Municipality. The HDA has reviewed previous planning studies and proposed layout options that were conducted on the property. An item will be submitted to Council in July 2022, to seek approval for the revised conceptual design planning layouts. The HDA have appointed a professional team to finalise planning studies and attend to the required applications to obtain land use rights, the registration of diagrams / general plans with the Surveyor General and the relevant applications to the Provincial Department of Human Settlements

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Transfer of land from DPW&I;
2024/25	Detailed Planning studies
2025/26	Development rights

3.6. Jonkershoek – Ward 5

Project Name		Jonkershoek
Property Description		Various
Town		Stellenbosch
Suburb		Jonkershoek
Catalytic / PHDA Project		N/A
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		0,7
Housing Programme/s		Township Establishment / IRDP / FLISP
Housing Opportunities	Sites	TBD
	Serviced Sites	TBD
	Top Structures (Units)	TBD
	Other	40 existing units
Project Readiness	Land Obtained	No
	EIA ROD	No
	Bulk capacity	No
	Land Use Approval	No
	PDOHS Approval	No
	Council Approval	Yes- with respect to a Memorandum of Understanding
	Risks / Issues	Conservation status and bulk service provision restraints
Project Suitability	Readiness Score	0
	Geotech Conditions	TBD
	Strategic alignment	The Spatial Planning Section will undertake a Local Spatial Development Framework (LSDF) to determine potential and future development of this property.
	Planning Opinion	TBD

The Jonkershoek Valley is located about 10km east of Stellenbosch, below the imposing Hottentots-Holland Mountains. The valley is relatively narrow (3-5 km) and approximately 13 kilometres in length. The upper Jonkershoek Valley has been conserved as part of the Jonkershoek Nature Reserve to preserve the mountain fynbos ecosystems; however, large areas have been converted to plantation forestry. Besides the original Jonkershoek farmyard, Jonkershoek has a bosdorp, which historically accommodated the labour force of forestry and catchment management.

The Municipality has appointed the Housing Development Agency (HDA) via an Implementation Protocol Agreement (IPA) to assist and finalise the transfer of land from the National Department of Public Works and Infrastructure (DPWI) to the Municipality. The HDA has reviewed previous planning studies and proposed layout options that were conducted on the property. An item will be submitted to Council in July 2022, to seek approval for the revised conceptual design planning layouts. The HDA have appointed a professional team to finalise planning studies and attend to the required applications to obtain land use rights, the registration of diagrams / general plans with the Surveyor General and the relevant applications to the Provincial Department of Human Settlements

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Transfer of land from various property owners;
2024/25	Detailed planning studies
2025/26	Development rights

4. IMPLEMENTATION PHASE

4.1. Erf 3229 Franschhoek (Mooiwater) – Ward 1

Project Name		Erf 3229 Mooiwater, Franschhoek TRA
Property Description		Erf 3229
Town		Franschhoek
Suburb		Mooiwater
Catalytic / PHDA Project		No
Urgency (Proposed year of implementation)		Current
% of Total need addressed by Project		1,6
Housing Programme/s		UISP
Housing Opportunities	Sites	258
	Serviced Sites	0
	Top Structures (Units)	0
	Other	Provision of communal basic services 51 standpipes and waterborne toilets
Project Readiness	Land Obtained	Yes
	EIA ROD	The proposed development does not trigger Environmental authorisation
	Bulk capacity	Yes (Water supply sufficient, Sewerage needs some upgrades)
	Land Use Approval	Yes, LUPA approval for a temporary departure obtained in 2022
	PDOHS Approval	Yes – the project is supported by PDoHS.
	Council Approval	Yes
	Risks / Issues	Decanting of beneficiaries, invasion is a high risk
	Readiness Score	1
Project Suitability	Geotech Conditions	Suitable, location in an already built-up area
	Strategic alignment	MSDF 2019 - Project does fall within the approved Urban Edge but is not indicated specifically. MHSP 2020 - Project is not included in the HSP. IDP 2020 - Erf 3229 is noted as necessary for the decanting of Langrug, but the project is not specifically mentioned. PSHDA - Not included in the Stellenbosch PSHDA, although Langrug Informal Settlement is included.
	Planning Opinion	This project will allow for the partial decanting of the Langrug Informal Settlement and as such can be supported by the Dept. of Human Settlements. The location of the decanting site is within the urban area of Franschhoek and within walking distance of the Langrug settlement. Consideration should be given to a long-term solution for this site, as experience with the Langrug Informal Settlement has been that addressing this settlement will not be a speedy process.

Erf no. 3229 at Mooiwater was identified as a temporary decanting site for the relocation of families residing and impacted by the freshwater dam at Langrug informal settlement. Their livelihoods are under constant threat during winter and rainy session as the freshwater dam fills up and flood structures within the dam area. The freshwater dam was flagged as a risk and unsafe for human settlement purposes. It was recommended that the dam wall be rehabilitated.

Erf no. 3229 is currently vacant and is being used for illegal dumping. A consultant was appointed in 2019 to undertake a Geotechnical Study to assess the feasibility of establishing a decanting site on Erf no. 3229. The

outcome of the study indicates that the property is suitable for human settlement purposes subject to undertaking site works and rehabilitation of the property.

The Municipality appointed a team of professional to undertake planning studies for the proposed development of a Temporary Development Area (TRA) on Erf 3229 Franschoek. The primary purpose of this project is to create a decanting site (TRA) for the relocation of households residing and impacted by the freshwater dam at Langrug informal settlement.

The design of the layout plan for the proposed development has been completed. The land use application to use the property as a decanting site was Approved by the Municipal Tribunal in February 2022. The proposed development does not trigger an Environmental Authorisation in terms of NEMA.

The project was implemented in two phases as follows.

- Phase 1: A contractor was appointed in July 2022 for the-site rehabilitation and construction of bulk. The project was completed in December 2022.
- Phase 2: The Project Management Unit is in the process of appointing a contractor for the installation of Civil and Electrical infrastructure. The completion date of the project is scheduled for June 2024.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Implementation of Phase 2
2024/25	Implementation of Phase 2
2025/26	-

4.2. A portion of Erf 9445 Stellenbosch: (Oak Tree Village, Idas Valley) – Ward 5

Project Name		Stellenbosch Idas Valley IRDP
Property Description		Erf 9445
Town		Stellenbosch
Suburb		Idas Valley
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		Current
% of Total need addressed by Project		1
Housing Programme/s		IRDP / FLISP
Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	166
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	Yes
	Bulk capacity	Yes
	Land Use Approval	Yes
	PDOHS Approval	Yes (PIRR)
	Council Approval	Yes
	Risks / Issues	Community cooperation and land invasion
	Readiness Score	Current
Project Suitability	Geotech Conditions	Suitable
	Strategic alignment	N/A
	Planning Opinion	Development rights obtained

The subject site is located on the original Erf 9445 Stellenbosch in Idas Valley. The required approvals were obtained for the creation of 166 erven which will provide residential opportunities for the GAP market and by means of the FLISP programme.

The 166 erven are to be provided with engineering services and houses to be built by the Developer. The housing project will be implementation over a period of two years. The construction of 166 top structures commenced in May 2022. The completion date of the project is scheduled in December 2023.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Construction of top structures
2024/25	-
2025/26	-

4.3. The Steps and Orlean Lounge, Cloetesville – Ward 16

Project Name		The Steps and Orlean Lounge: Rectification of existing units
Property Description		Erven 6846, 8667, 6852, 8937 Stellenbosch
Town		Stellenbosch
Suburb		Cloeteville
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		Current
% of Total need addressed by Project		1

Housing Opportunities	Sites	0
	Serviced Sites	0
	Top Structures (Units)	0
	Other	Rectification of 161 existing units
Project Readiness	Land Obtained	N/A
	EIA ROD	N/A
	Bulk capacity	Yes
	Land Use Approval	N/A
	PDOHS Approval	N/A
	Council Approval	Yes
	Risks / Issues	Community cooperation, decanting
	Readiness Score	N/A
Project Suitability	Geotech Conditions	Suitable location in an already urban area
	Strategic alignment	This project is located within the approved urban edge and has been identified for infill development. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	N/A

In 2003, the Municipality identified a portion of land in Cloetesville to address the numerous housing challenges in the area. Several of the 161 units were built to specifically address overcrowding and backyarders. The project was implemented through the People's Housing Programme and many defects and challenges were experienced on these sites (sub-standard buildings).

A contractor was appointed for rectification of 161 houses. The upgrade of the housing units commenced July 2020. The completion date of the project is scheduled for June 2023.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	The rectification works and completion date is scheduled for June 2023.
2024/25	-
2025/26	-

4.4. Zone O, Kayamandi – Wards 14 and 15

Project Name		ISSP Kayamandi Zone O (711) UISP
Property Description		Erf 2991
Town		Kayamandi
Suburb		Kayamandi
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		Current
% of Total need addressed by Project		4,4
Housing Programme/s		UISP
Housing Opportunities	Sites	711
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	Yes
	Bulk capacity	Yes
	Land Use Approval	Yes
	PDOHS Approval	Yes (PIRR)
	Council Approval	Yes
	Risks / Issues	Risk of land invasion and community cooperation
	Readiness Score	Current

Project Suitability	Geotech Conditions	Suitable
	Strategic alignment	This project is located within the approved urban edge. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	Development rights obtained (MPT approval)

The property is located on the western side of Kayamandi, on the slope leading up to the school and reservoir. The access to the land is through Kayamandi, with the most direct route being from the R304 (Bird Street extension) via the northern entrance to Kayamandi (Sokuqala Street). Zone O comprises an original portion of Remainder Erf 2183, Portion of Erf 1714, Unregistered Erven 863 and 873 (Portions of Erf 707) Kayamandi.

The civil designs and drawings for project have been approved by the relevant competent authorities. The project will be implemented in phases as indicated in the map above (i.e. phase 1, phase 2 and phase 3). For technical reasons, the implementation of the project will commence at phase 3 which comprises of 178 sites. The Project Management Unit (PMU) is project co-ordinating and managing the implementation of 178 internal services for phase 3. The PMU is in the final stages of appointing a contractor for the installation of internal services.

A contractor was appointed in July 2022 for the installation of civil services for 178 sites. The contractor has been unable to establish on site due to the relocation of 58 families on site. There has been a collaborative effort in the municipality to relocate the families to commence with the implementation of the project. According to the program, the contractor is expected to commence with the construction activities in May 2023. The completion date of the project is scheduled for June 2024.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Implementation of 178 internal services
2024/25	-
2025/26	-

4.5. Enkanini ABS (Planning) – Ward 12

Project Name		3259 ISSP Kayamandi Enkanini (1300) UISP
Property Description		Various
Town		Stellenbosch
Suburb		Kayamandi
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		Current (planning and service installation)
% of Total need addressed by Project		8
Housing Programme/s		UISP
Housing Opportunities	Sites	1 300
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	Yes
	Bulk capacity	Yes
	Land Use Approval	Yes
	PDOHS Approval	Yes (PRF)
	Council Approval	Yes
	Risks / Issues	Large scale of project and need for decanting onto a non-existent TRA
Project Suitability	Readiness Score	4
	Geotech Conditions	Steep slopes, increased cost of development
	Strategic alignment	This project is located within the approved urban edge and has identified in the SDF as future mixed-use, community, and residential infill. From an MSDF/CEF perspective, this project falls within the functional area and priority development areas and from a strategic perspective aligns spatially.
	Planning Opinion	This project has already been supported by the release of Tranche 1.1 and the Dept. of Human Settlements is waiting for the PFR application currently. The project will entail the formalisation of the Enkanini Informal Settlement in Kayamandi. The project will require a decanting site. This project can be further supported for feasibility studies.

Enkanini is an informal settlement located to the north-west of Stellenbosch town. It abuts light industrial areas, informal settlements such as Zone O, the Town Centre and Watergang. The footprint of the Enkanini Informal Settlement covers an area of approximately 17.9 hectares of land located on portions of five properties being the Remainder of the Farm 183, the Farm 181, Portion 5 of the Farm 175, Portion 33 of the Farm 175 Stellenbosch, and Erf 2175 Kayamandi. The informal settlement has a total number of structures estimated at approximately 3300 units and approximately 10 000 inhabitants.

Urban Dynamics Western Cape was appointed as lead consultant to obtain the statutory land use planning, environmental and related approvals to enable the formalisation of the Enkanini Informal Settlement.

The Department Infrastructure Services is currently busy with the installation of 1 000 electrical connections. Integrated National Electrification Programme (INEP) approved and funded the project. It should be noted that the Programme is rolled out over the next three to four years, which will result in the installation of additional electrical connections.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	Provision of electricity
2024/25	Provision of electricity
2025/26	In situ upgrading

4.6. Watergang Phase 2C – Erf 3603 Kayamandi – Ward 14

Project Name		Watergang Phase 2C
Property Description		Erf 3603 Kayamandi
Town		Kayamandi
Suburb		Kayamandi
Catalytic / PHDA Project		PHDA
Urgency (Proposed year of implementation)		TBD
% of Total need addressed by Project		0,5
Housing Programme/s		UISP
Housing Opportunities	Sites	87
	Serviced Sites	0
	Top Structures (Units)	0
	Other	0
Project Readiness	Land Obtained	Yes
	EIA ROD	Yes
	Bulk capacity	Yes
	Land Use Approval	Yes
	PDOHS Approval	Yes
	Council Approval	Yes
	Risks / Issues	Cost to install services and rehabilitate site
	Readiness Score	Current
Project Suitability	Geotech Conditions	TBC
	Strategic alignment	N/A
	Planning Opinion	Development rights have been obtained

Erf 3603 Kayamandi was subdivided, and the General Plan approved by the Surveyor-General. The property provides for 87 residential opportunities and has been serviced. It has been determined that the cost to rehabilitate the site to make it liveable is extremely high, especially considering the retaining walls to be constructed. This project is thus pending further discussions on the way forward.

The development of Erf 3603 is directly linked with the upgrade/development of the Zone O informal settlement. There are approximately 60 residents that do not qualify for a government subsidy programme. It has been resolved by the Department to temporally relocate the 60 residents from Zone O to Erf 3603 to create space for the implementation of the Zone O upgrading project. The implementation of the Zone O upgrading project is set to commence in during May 2023.

It is suggested that the following timeframes should be considered for project progression:

Timeframes	Project Deliverables
2023/24	TBD according to new layout and costing
2024/25	-
2025/26	-

11.6	INFRASTRUCTURE SERVICES : (PC : CLLR Z DALLING (MS))
11.6.1	PROGRESS ON THE PROVISION OF A PUBLIC TRANSPORT SERVICE FOR STELLENBOSCH

Collaborator No: 742663
 IDP KPA Ref No: Good Governance and Compliance
 Meeting Date: 22 March 2023 & 29 March 2023

1. SUBJECT: PROGRESS ON THE PROVISION OF A PUBLIC TRANSPORT SERVICE FOR STELLENBOSCH

2. PURPOSE

Council to note the Section 78(1) Assessment Report, and to note the proposed approach by the Infrastructure Services Directorate.

3. DELEGATED AUTHORITY

Municipal Council.

4. EXECUTIVE SUMMARY

The Western Cape Government's Department of Transport and Public Works (DTPW) had previously provided assistance to Stellenbosch Municipality and compiled a Section 78 (1) Assessment Report on the provision of a public transport service, for Stellenbosch. See attached **APPENDIX 1**. The report was based on a study that, at the time, proposed a conventional (largely bus-based) public transport system, that would be managed by the Municipality.

The key findings by the DTPW's, Section 78(1) Assessment Report is as follows:

- The municipality is better suited to an incremental upgrade rather than a brand new large scale bus-based system.
- Irrespective of the mechanism selected to deliver a public transport service (internal vs. external) and based on the lessons learned from the public transport implementation of George, Cape Town etc, the Municipality should consider pursuing an alternative approach to a public transport service.
- The municipality does not have the capacity nor potential future capacity to furnish the skills, expertise and resources necessary for the provision of a municipal public transport service.

Taking into account recommendations from the current Comprehensive Integrated Transport Plan (CITP), advice from industry experts, advice from the DTPW, and lessons learned from other Municipalities (where conventional public transport services were rolled out), an alternative approach to a public transport service for Stellenbosch is proposed.

The Directorate therefore proposes that the municipality adopts an incremental approach to bring about improvements to existing systems. This will allow adaptations to existing public transport modes, incremental budgeting to be used for those improvements, as well as existing arrangements with the bus and taxi operators and associations to be tweaked accordingly, rather than a "Big-Bang" new approach to be implemented.

The incremental approach, being more flexible at incorporating and assigning the different modes of public transport is most suitable for a developing area such as Stellenbosch.

The Directorate also proposes that a Public Transport Plan first be developed. The Public Transport Plan will set the framework and context of the public transport service and identify necessary projects to be implemented.

5. RECOMMENDATIONS

- (a) that Council notes the Section 78(1) Assessment Report on the provision of public transport services. (**APPENDIX 1**);
- (b) that Council accepts that all the requirements of Section 78(1), has been complied with;
- (c) that Council concurs with the finding of the study i.e.
 - The municipality is better suited to an incremental upgrade rather than a brand-new large-scale bus-based system.
 - Based on the lessons learned from the public transport implementation of George, Cape Town etc, the Municipality should consider pursuing an alternative approach to a public transport service.
 - The municipality does not have the internal capacity nor potential future capacity to furnish the skills, expertise and resources necessary for the provision of a municipal public transport service.
- (d) that Council considers an alternative approach, namely the Incremental Approach that progressively moves towards improved public transport services and, over time, establishes the most efficient public transport service; and
- (e) that a Public Transport Plan be compiled to facilitate improvements to existing public transport services, identifying necessary projects to ultimately establish an efficient public transport service.

6. DISCUSSION / CONTENTS

6.1 Background

The Western Cape Government's Department of Transport and Public Works (DTPW) had previously provided assistance to Stellenbosch Municipality and compiled a Section 78 (1) Assessment Report on the provision of a public transport service, for Stellenbosch. See attached **APPENDIX 1**.

Section 78 (1) Assessment Report was based on a Public Transport Services Network Study that the Municipality had undertaken, for the implementation of Public Transport System for Stellenbosch. The study proposed a conventional (largely bus-based) public transport system, that would be managed by the Municipality. The public transport service comprises of a network of 11 local routes within Stellenbosch, and 8 long distance routes linking Stellenbosch to Klapmuts, Paarl, Somerset West, Eerste River, Bellville, Airport Industry etc. The financial cost of implementing such a service is estimated to exceed R200M over first 4 years of implementation.

Stellenbosch Municipality's Comprehensive Integrated Transport Plan (CITP) for the period 2022-2027, currently being finalized, presents a framework for development of an integrated public transport service network, highlighting the Incremental Approach as being most suitable approach to bring about improvements to the public transport.

The CITP further proposes the compilation of a Public Transport Plan to assist the Municipality to further conceptualize public transport requirements and identify necessary projects.

6.2 **Discussion**

Section 78 (1) Assessment Report by the Western Cape Government's Department of Transport and Public Works (DTPW) states that the Department does not intend, at this time, to replicate conventional bus-based public transport systems and will support alternative approaches to public transport. The DTPW proposes an Incremental Approach, that focusses on getting the basics right while progressively moving towards an improved public transport service over time. The report also mentioned that cities at the forefront of public transport improvements are exploring alternative hybrid models that are more cost effective and better recognizes the complexities of an industry in transition.

The key findings by the Department of Transport & Public Works (DTPW)'s, Section 78(1) Assessment Report is as follows:

- The municipality does not have the capacity nor potential future capacity to furnish the skills, expertise and resources necessary for the provision of a municipal public transport services.
- That irrespective of the mechanism selected to deliver a public transport service (internal vs. external), based on the experiences of George, Cape Town etc, the Municipality should consider pursuing an alternative approach to public transport improvement.

It should be mentioned that nationally and regionally, the public transport services industry is currently in a state of flux. The majority of rail service is not operational and severely impacted upon by vandalism and theft, regional bus services are operating a limited and reduced service and the taxi industry continues to be plagued by violence.

Given the high cost of implementing a conventional (largely bus-base) public transport service and the need to introduce austerity measures due to current economic conditions, the Directorate supports the Incremental Approach towards an improved public transport service.

Therefore, taking into account, recommendations from the Comprehensive Integrated Transport Plan (CITP), advise from industry experts, advise from the Department of Transport and Public Works (DTPW), and lessons learned from other Municipalities (where conventional public transport services were rolled out), an alternative approach to a public transport service for Stellenbosch is proposed. The Directorate therefore proposes that the Incremental Approach be used to bring about improvements to existing systems. The Incremental Approach, being more flexible at incorporating and assigning the different modes of public transport is most suitable for a developing town such as Stellenbosch.

Transport legislation such as the National Land Transport Act and other existing institutional arrangements can underpin partnerships, define roles and responsibilities and provide for the necessary agreements to be compiled. Existing partnerships with stakeholders such as Department of Transport and Public Works (DTPW), Bus and Taxi Associations, the University of Stellenbosch, Development Agreements with Developers etc., will be utilized to achieve the required improvements to public transport services.

The Directorate also proposes that a Public Transport Plan be developed. The Public Transport Plan should set the framework and context of the public transport service, identify appropriate projects to be implemented. Proposals and recommendations from partnerships with stakeholders should align with the framework and context of the Public Transport Plan.

6.3. Financial Implications

The appointment of a service provider to compile a Public Transport Plan is estimated at R3 million.

6.4 Legal Implications

The recommendations in this report comply with Council's policies and all applicable legislation as discussed under delegated authority.

6.5 Staff Implications

This report has no staff implications to the Municipality.

6.6 Previous / Relevant Council Resolutions:

4TH COUNCIL MEETING: 2016-11-23: ITEM 7.6.2

RESOLVED (majority vote)

- (a) that Council approves the proposal that an assessment of the municipality's capacity be done to determine its ability to provide the proposed public transport service through an internal mechanism and that the recommendation of the assessment be submitted to Council for consideration and decision; and
- (b) that, should the above assessment recommend the use of an external mechanism for the provision of the public transport service, a feasibility study be conducted for the provision of the service through an external mechanism.

14TH COUNCIL MEETING: 2017-11-29: ITEM 7.6.4

RESOLVED (majority vote with abstentions)

- (a) that Council takes note of the Operational Business Plan for the proposed Integrated Public Transport Service Network (IPTN) as recommended in the Comprehensive Integrated Transport Program;
- (b) that the recommendations of the Integrated Public Transport Service Network (IPTN) not be adopted at this stage, but that Council wait for the findings of the Provincial Sustainable Transport Program before any public transport system is implemented; and
- (c) that Council takes note of the progress made with the Provincial Sustainable Transport Program (PSTP).

6.7 Risk Implications

This report has no risk implications for the Municipality at this point in time, full risks will be identified and reported on, during the Section 78(3) report.

6.8 Comments from Senior Management:**6.8.1 Director: Infrastructure Services**

Agree with the recommendations.

RECOMMENDATIONS FROM INFRASTRUCTURE SERVICES COMMITTEE MEETING TO THE EXECUTIVE MAYOR: 2023-02-02: ITEM 5.1.1

- (a) that Council notes the Section 78(1) Assessment Report on the provision of public transport services. (**APPENDIX 1**);
- (b) that Council accepts that all the requirements of Section 78(1), has been complied with;
- (c) that Council concurs with the finding of the study i.e.
 - The municipality is better suited to an incremental upgrade rather than a brand-new large-scale bus-based system.
 - Based on the lessons learned from the public transport implementation of George, Cape Town etc, the Municipality should consider pursuing an alternative approach to a public transport service.
 - The municipality does not have the internal capacity nor potential future capacity to furnish the skills, expertise and resources necessary for the provision of a municipal public transport service.
- (d) that Council considers an alternative approach, namely the Incremental Approach that progressively moves towards improved public transport services and, over time, establishes the most efficient public transport service; and
- (e) that a Public Transport Plan be compiled to facilitate improvements to existing public transport services, identifying necessary projects to ultimately establish an efficient public transport service.

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.6.1

- (a) that Council notes the Section 78(1) Assessment Report on the provision of public transport services. (**APPENDIX 1**);
- (b) that Council accepts that all the requirements of Section 78(1), has been complied with;
- (c) that Council concurs with the finding of the study i.e.
 - The municipality is better suited to an incremental upgrade rather than a brand-new large-scale bus-based system.
 - Based on the lessons learned from the public transport implementation of George, Cape Town etc, the Municipality should consider pursuing an alternative approach to a public transport service.

-
- The municipality does not have the internal capacity nor potential future capacity to furnish the skills, expertise and resources necessary for the provision of a municipal public transport service.
- (d) that Council considers an alternative approach, namely the Incremental Approach that progressively moves towards improved public transport services and, over time, establishes the most efficient public transport service; and
- (e) that a Public Transport Plan be compiled to facilitate improvements to existing public transport services, identifying necessary projects to ultimately establish an efficient public transport service.

1. Introduction

1.1 Background

The Stellenbosch Municipality has approved a Comprehensive Integrated Transport Plan (CITP) for the period 2016 – 2021, which identified the need for improved public transport services for the Municipality. This vision for transport in the Municipality reflected in the CITP is as follows:

A sustainable transport system that provides for the basic mobility needs of individuals, supports a vibrant economy and operates seamlessly within and across the municipal boundaries.

From a public transport perspective, the CITP includes proposals to establish a Stellenbosch Public Transport Service Network (PTSN). These plans have been refined through the development of an Initial Operational and Business Plan (December 2016), which provides detail on a pilot service.

At the same time, the Western Cape Government, through its Department of Transport and Public Works, has entered into a partnership with Stellenbosch Municipality to plan and implement sustainable transport initiatives. The purpose of this partnership is to support the development and implementation of sustainable transport systems in the Western Cape through collaboration with local government and other key stakeholders, and to align with strategic imperatives.

The provision of public transport services by the Municipality is required in terms of the National Land Transport Act (Act 5 of 2009) (NLTA). The NLTA when read in conjunction with the Constitution and the Municipal Structures Act (Act 117 of 1998), clearly places the responsibility with the local municipality.

Given that the Municipality is considering providing a public transport service, Section 77 of the Municipal Systems Act (MSA) of 2000 (and its amendment of 2003) requires that the Municipality “review and decide on the appropriate mechanism to provide a municipal service” when a new service is to be provided (or “significantly upgraded, extended or improved). Section 78 of the MSA sets out the procedure to be followed when conducting the review. Accordingly, this report therefore constitutes the required review in terms of section 78(1) of the MSA.

At its meeting of 23 November 2016, the Municipal Council resolved that such a Section 78 process could commence.

1.2 Methodology and Report Layout

Section 78(1) of the MSA sets out the criteria and process that must be followed when deciding on the mechanism to be used for service provision. This report, therefore, adopts the structure set out in Section 78(1). The following sources of information have been used:

- Council approved documents: the IDP and the CITP (and related budget information).

- The Initial Operational and Business Plan for the pilot PTSN service.
- Interviews with key officials within the Municipality.
- Consultation with the relevant labour unions.

The document is structured as follows:

- **Chapter 2** outlines the nature and extent of the service envisaged by the PTSN.
- **Chapter 3** describes the requirements of the Municipal Systems Act.
- **Chapter 4** follows the MSA process and evaluates the suitability of an internal mechanism to deliver the service.
- **Chapter 5** summarises the conclusions.
- **Chapter 6** sets out the recommendations of the review.

2. Provision of Municipal Public Transport

This chapter outlines the nature and extent of the public transport service provision envisaged by the Municipality. It gives an indication of the resources that would be required to operate and manage the service.

2.1 Endorsement by the CITP and the IDP

The Municipality has an approved Integrated Development Plan (IDP) for the period 2017 to 2022. A component plan to the IDP is the Comprehensive Integrated Transport Plan (CITP) for the period 2016 – 2021, which has also been approved by the Municipal Council. The CITP includes proposals for the establishment of a formal Public Transport Service Network and these proposals were developed further through the completion of an Initial Operational and Business Plan in 2016. The guiding principles for the PTSN are as follows:

- Compliance with the Department of Transport guidelines for a Public Transport Network Grant and the Provincial Public Transport Institutional Framework
- Transformation and upliftment of the public transport industry
- To improve public transport services and quality of life of residents
- Phased development of the public transport system
- Financial sustainability

2.2 The extent of the service envisaged by the PTSN

The Initial Operational and Business Plan for the Stellenbosch Public Transport Service Network provides high-level detail on the proposed network of improved public transport services and more specific detail on an envisaged pilot service.

The proposed PTSN includes a network of 11 local routes and 8 long distance routes operating for 16 hours per day (05h00 – 21h00), with a frequency of 10 minutes in the AM and PM peak, 20 and 30 minutes during the off-peak, and 15 minutes during early morning off-peak (05h00 – 06h00). The proposed PTSN is currently being reviewed to incorporate Taxi Operating Companies as well as other transport service providers for example, exploring options such as electrical vehicles for shorter trips within the CBD. The proposal will be for a quality bus, midibus or taxi service operating in mixed traffic with selective improvements at intersections to give priority to public transport. Route stops were designed so that the community served would be within a maximum walking distance of 400m from a stop.

Figure 2-1 Proposed Stellenbosch Public Transport Service Network showing 11 local routes (Source: CITP, 2016)

Figure 2-2 Proposed Stellenbosch Public Transport Service Network showing 8 long distance routes (Source: CITP, 2016)

The network of local routes uses a hub-and-spoke design with all routes connecting close to the centre of the network, making it possible to transfer from any route to any other route at the central terminal point. In addition, the regional routes will provide accessibility from all parts of Stellenbosch Municipality to Somerset West, Paarl, and to Cape Town with minimal transfers and the interchange points with the City of Cape Town's MyCiTi system.

2.2.1 Pilot Service

From the full network, 2 of the main routes (Route 1 and 7) were proposed to be implemented as a pilot and explored in further detail. Routes have been prioritised based on ridership. The proposed pilot service has a capped capacity of 216 passengers per hour, and will form part of a hybrid system operating alongside existing mini-bus taxi services.

The pilot system consists of the following routes:

- Kayamandi to Idas Valley via Bergzicht and the University of Stellenbosch (Route 1)
- Cloetesville to Jamestown via Bergzicht (Route 7)

Bergzicht would serve as a terminal for transfers between the two routes. Fares would be zonal-based with a fixed fare for travel within a zone, and an AFC system with tap-on and tap-off capability. Each route will have 2 zones, with the option to transfer to any other zone at Bergzicht terminal.

3. Requirements of the Municipal Systems Act

3.1 The responsibility

Section 78 (1) of the Municipal Systems Acts states that:

"When a municipality has in terms of Section 77 to decide on a mechanism to provide a municipal service in the municipality, or to review an existing mechanism"

Accordingly, a Municipality:

- a) Must first assess –
 - i. The direct and indirect costs and benefits associated with the project if the service is provided by the municipality through an internal mechanism, including the expected effect on the environment and on human health, well-being and safety;
 - ii. The municipality's capacity and potential future capacity to furnish the skills, expertise and resources necessary for the provision of the service through an internal mechanism mentioned in section 76(a);
 - iii. The extent to which the re-organisation of its administration and the development of the human resource capacity within that administration, as provided for in sections 51 and 68, respectively, could be utilised to

provide a service through an internal mechanism mentioned in section 76 (a);

iv. The likely impact on development, job creation and employment patterns in the municipality, and

v. The views of organised labour; and

b) It may take into account any developing trends in the sustainable provision of municipal services generally.

Section 78(2) of the MSA then states that, after having applied subsection (1), a municipality may -

a) Decide on an appropriate internal mechanism to provide the service; or

b) Before it takes a decision on an appropriate mechanism, explore the possibility of providing the service through an external mechanism mentioned in section 76(b).

What the above means is that when a municipality wants to deliver a new service, it must first decide whether it is broadly feasible to do so internally or whether it should consider outsourcing the service provision.

3.2 Definitions

Key considerations in the interpretation of the MSA relate to the definitions of the term "service", and "mechanism".

A "Municipal service" is defined as "a service that a municipality in terms of its powers and functions provides or may provide to or for the benefit of the local community irrespective of whether –

a) such service is provided, or to be provided, by the municipality through an internal mechanism contemplated in section 76 or by engaging an external mechanism contemplated in section 76; and

b) fees, charges or tariffs are levied in respect of such a service or not".

For the purposes of this review the public transport service includes not only the operation of the buses, but related services such as fleet management, management of ticketing systems, intelligent transport systems and facilities (depots, stations and stops).

It is also useful to draw a distinction between the provision of a municipal service, on the one hand, and the actions taken and decisions made by a municipality in relation to a municipal service, on the other. The terms "service provider" and "service authority" are sometimes used to describe those two roles. Municipalities can, and often do, outsource the provision of municipal services, in terms of a service delivery agreement. A private (or public) company is then the service provider and the municipality remains the service authority.

The term “mechanism” is deemed to refer to either an internal mechanism (defined by section 76(a) as a department, business unit or any other component of the Municipality's administration) or an external mechanism (a municipal entity, another municipality, an organ of state, a community based organisation or other NGO, or any other institutions, entity or person legally competent to operate a business activity).

3.3 The Methodology for Assessment

Section 78 (1) sets out the method by which the delivery of the service via an internal mechanism is to be assessed. This report adopts the s78 (1) methodology.

3.4 Criteria for Assessment

In terms of Section 73(2), the municipality has the duty to ensure that the delivery of its services adheres to the following guidelines:

Municipal services must be

- a) equitable and accessible;
- b) provided in a manner that is conducive to:
 - i. The prudent, economic, efficient and effective use of available resources; and
 - ii. The improvement of standards of quality over time;
- c) financially sustainable;
- d) environmentally sustainable; and
- e) regularly reviewed with a view to upgrading, extension and improvement.

Thus, the Section 78(1) investigation must consider the internal mechanisms for compliance with the above requirements.

4. Assessment of Service Delivery

This section sets out the assessment for internal service delivery, using the structure provided by section 78(1) of the MSA.

4.1 Direct and indirect costs and benefits including the effect on the environment, human health, wellbeing and safety

The assessment undertaken here is at a high level, in order to give an indication of the resources required by the Municipality and the economic, environmental and social impact of providing the service internally.

Public transport is widely recognised as a key driver of socio-economic growth and development, particularly in developing and emerging economies where many citizens are unable to afford private vehicles and rely on public transport to access services, work, educational, recreational and social opportunities. The need for an efficient, effective, affordable and safe public transport system to support economic growth and development is particularly relevant in South Africa. Indeed, recognition of the central role to be played by public transport in South Africa's growth and transformation agenda is repeatedly highlighted in the National Development Plan 2030.

In the Western Cape, public transport is viewed as an essential catalyst and enabler for accelerated and shared economic growth. Likewise, poor public transport systems are recognised as key constraints to economic growth and development in many parts of the developing world. In Stellenbosch, both the captive and choice markets will benefit from improved public transport services. Movement into and around the Municipality is hampered by a lack of good quality public transport services. The development of such services will help to facilitate safe, reliable access to all.

4.1.1 Direct and Indirect Costs and Benefits

Benefits

The major benefit of a formal public transport service is the increased number of people that will be able to access good quality public transport to get to work or school, to look for work, and to access services such as hospitals, clinics, libraries, shops, etc. The existing minibus taxi industry provides an essential service to the people of Stellenbosch, but there is scope to improve the quality of the service provided. Table 4-1, below, outlines the possible benefits of the full PTSN.

Table 4-1 Benefits of an improved public transport service

Present	Future
Monitoring of public transport service quality is limited.	Service quality is closely monitored ensuring that passengers well-served.
Passengers must pay a single fare for each trip.	Passengers save through transfer and bulk ticket purchases.
Geographic service coverage is limited and demand-driven.	A full network of services is provided, providing accessibility to a larger proportion of the population.
Vehicle quality is variable.	Vehicle quality is standardized and vehicles are well-maintained, providing a comfortable and safe passenger experience.
Services primarily provided during peak hours, off-peak services are limited, with long waiting times.	Services provided throughout the day and set intervals.
Limited public transport options for the choice market, which fuels dependence on the private vehicle and contributes to the issue of congestion.	The choice market has access to a good quality public transport alternative.
No formal customer service facility.	Comprehensive user information for existing and new users and mechanism for registering enquiries and complaints.

Direct costs

A public transport service run by the Stellenbosch Municipality is going to be more expensive than the current services operated by the minibus taxi industry. The primary reasons for this are:

1. A scheduled service will be provided with significantly more coverage and reliability than the current informal services (16-18 hours a day, 7 days a week, within 400m walking distance to most urban residents).
2. IPTN Vehicles will be upgraded and strict service and maintenance schedules will need to be followed.
3. Employment legislation (Labour Relations Act, Basic Conditions of Employment Act, Health and Safety Act) must be adhered to.
4. Public safety will be a priority, with systems implemented to reduce accidents and personal security incidents.

5. Fares are to be based on affordability to users and not cost recovery or profit generation. Given the high levels of poverty (upwards of 20% of households in the Municipality have no income), it is expected that fares may therefore be lower than the current fares.

The costs associated with the full PTSN have not been provided. Available cost estimates are limited to the proposed pilot service. Across South Africa, the cost of providing public transport services has been underestimated, while fare revenues have been overestimated. Therefore, the outcomes and recommendations contained in the Initial Operational and Business Plan should be approached with caution.

Implementation costs (which exclude direct operating costs) for the pilot system have been estimated at R180m over the first 4 years. The cost of infrastructure makes up the greatest share of these costs and includes items such as road upgrading and the development of a central terminal (Bergzicht), a temporary depot and stops and shelters.

The Initial Operational and Business Plan (currently under review) proposes a pilot service based on the following.

- IPTN Vehicles running at capacity (216 passengers per hour) for 16hrs per day, 365 days per year
- Fares of R8 and R10 per trip for travel within the same zone

Operating cost for similar services is estimated at about R37 per km (32% higher than proposed in the Plan). This suggests that the actual cost of operations may be to R32m per annum, with a potential shortfall of between R11m – R17m.

The costs for the full service have not been estimated. However, assuming that direct operating costs are between R120m and R180m per annum for the full network, the estimated shortfall for the full service is likely to be between R40m – R90m.

The possibility of obtaining grant or subsidy funding from National or Provincial Government must be investigated. Initial capital investments, and indirect operating costs could be covered by subsidy/grant funding such as:

- Public Transport Network Grant (PTNG)
- Public Transport Operations Grants (PTOG)

Currently 13 cities receive funding through the PTNG, the PTNG provides no contribution toward direct operating costs and only a partial contribution toward indirect operating costs. Grant funding may cover up to 70% of indirect operating costs for the first 2 years after the municipal financial year in which operations commence, and up to 50% of these costs in subsequent years. There are however no plans to extend the grant to additional municipalities.

The Municipality will endeavour to apply for funding, however the receipts of grants funding cannot be guaranteed and the Municipality will mostly likely be required to source funding from elsewhere, or use own funding.

The Municipality cannot afford the implementation and operating costs described above, and as part of the review of the Public Transport Service, measures to reduce both capital and operational cost will be investigated.

With current estimates, the establishment costs for the pilot represent approximately 33% of the Municipality's annual capital budget or 8.13% if these costs are divided equally over 4 years. This represents a significant financial burden on the Municipality which cannot be absorbed without significant budget reallocation or additional revenue generation.

The financial impact of the estimated operating shortfall for the pilot (between R8.5 – R17m) and the full network (between R40m and R90m) is outlined in Table 4-2 below.

Table 4-2 Implications of an operating shortfall

Service	Operating shortfall (direct OPEX only)	Approximate percentage of Municipal operating budget
Pilot	R11m – 17m	0,6% - 1,2%
Full Network	R40m - 90m	2,9% - 6.5%

This does not include indirect operating costs, which would be additional to this.

Indirect costs

Indirect costs associated with the provision of a bus service include the cost of planning and management, the cost of support from other municipal departments (finance, safety and security, cleansing), station/terminal management, infrastructure maintenance, insurance, the ongoing cost of ITS and AFC systems, industry transition costs (company formation, training, compensation) and additional safety and security costs (security guards). Some of these costs are included in the total implementation costs described in the previous section, however others have not been costed.

The management of public transport (even using an outsourced model) requires substantial internal capacity to oversee the service, with an associated cost. Based on experiences elsewhere in South Africa, there are also likely to be substantial consulting services costs during the initial years of planning, establishment and operations until sufficient capacity has been developed internally.

4.1.2 Environment

Public transport services have the potential to reduce or mitigate the impact of the transport system on the environment. Well-designed public transport can transport more people, using less fuel, producing fewer emissions (including greenhouse gas emissions) and air pollutants and taking up less space than private vehicles. In light of the above, the overall impact on the environment is expected to be positive – other than the short-term impact of noise pollution etc. caused by infrastructure upgrades.

4.1.3 Human Health, Wellbeing and Safety

The impact on human health, wellbeing and safety is expected to be positive, since the PTSN places particular emphasis on the improvement of safety and security.

Access to social services, such as schools, clinics, hospitals, police stations, municipal offices and other such facilities will also be readily available through scheduled services operation for 16-hours per day at an affordable charge.

The environmental benefits of cleaner, serviced buses supplementing the existing minibus taxi fleet and reducing the need for cars will also benefit human health and wellbeing through a reduction in air pollution.

A scheduled service, operated by formally trained drivers and carefully monitored by the Municipality, is also expected to reduce the number of accidents compared the existing system.

4.2 Stellenbosch Municipality's capacity and potential future capacity to furnish the necessary skills, expertise and resources

In order to run the envisaged public transport service internally, the Stellenbosch Municipality would need to develop sufficient organisational capacity to perform the necessary functions.

4.2.1 Understanding the functions required

There are a range of strategic and operational functions that need to be fulfilled in order for a public transport system to run effectively and efficiently. These functions are described below.

- **Operational planning:** this includes the technical design of the service (demand assessment, route design, vehicle selection, scheduling) and ongoing service refinement.
- **Operations:** The provision of the actual public transport service by vehicles on set routes according to a schedule. This includes operations management,

service monitoring, driver vehicle operations and incident response (e.g. vehicle breakdown).

- **Fleet Management:** The specialised management of the vehicle fleet required to provide the public transport service, including procurement, maintenance and servicing, refueling, cleaning, insurance, accident administration, licensing and financial asset management
- **Marketing and Communications:** is focused on publicising the public transport service to the community to encourage service patronage, communicate service changes or updates and to distribute passenger information in a usable format.
- **Contract management:** All functions that are outsourced to external service providers will be contracted and these contracts need to be managed. Service providers need to be paid timeously as well as monitored in order to ensure that they are meeting their contractual obligations.
- **Fare management:** is the sale of tickets and the collection of fares from the commuters. This function also ensures that commuters have paid the correct fare for the passage that they are undertaking. The national department of transport (DoT) has issued guidelines that require fare management systems to be Euro/Mastercard/Visa (EMV) compliant. An EMV compliant system requires smart card fare media, a card distribution network and an electronic payment system that enables commuters to both purchase fares and register trips when they use the service. This will require electronic validation machines that can register when a commuter gets on and off a vehicle
- **Financial management:** Managing the various financial elements of the system including revenues (fare revenue, any grants or subsidy contributions from national or provincial government, municipal contribution, other system revenue) and costs (operating and capital costs). Asset management functionality is also required for the vehicle fleet.
- **Infrastructure:** is the development and management of the physical infrastructure needed to make the system work efficiently. This infrastructure includes, but is not limited to bus depots, bus stations, bus shelters/stops, lighting, ticket sales facilities, IT and fare collection infrastructure.
- **Intelligent transport systems (ITS):** relates to the monitoring of the public transport system to ensure services are operating optimally. This function requires a comprehensive information technology framework that connects on-board electronic monitoring devices to a central server.

The primary responsibility of the ITS system is to monitor whether or not buses are present at the location and time prescribed. The system should automatically generate exception reports that can then be sent to the operations manager to take the appropriate remedial action.

ITS systems can have additional layers of complexity that can provide for the live-monitoring of operator services. With the appropriate manpower the ITS system can be used to track, monitor and communicate with vehicles and liaise with traffic control and safety and security officials.

The ITS system can also provide passengers with real-time information regarding routes and scheduling, as well as providing the infrastructure through which the security of commuters can be monitored via CCTV and emergency phone networks.

- **Inspection and verification:** This function involves the physical monitoring of operator services. Teams of inspectors are tasked with checking the buses for punctuality, cleanliness and safety. They can also monitor the fare payment system by verifying that commuters travelling on the PTS have paid the correct fare for their trip.
- **Safety and security co-ordination:** ensures the safety of the commuters using the public transport system. This function includes the co-ordination of the SAPS and other private security service providers.

4.2.2 Capacity Requirements

It is estimated that the Municipality would need to employ between 200 and 400 people to run the full network of services proposed in the PTSN (assuming a full replacement model). Main job categories include service managers, bus drivers, fleet management and maintenance staff, ticket sellers/cashiers, security personnel, inspectors, cleaners (of buses and facilities), financial staff, infrastructure specialists, administrative staff and IT staff (primarily to maintain the Intelligent Transport Systems and the Fare Management Systems).

The Roads, Transport and Stormwater division has many vacant and unfunded positions within the structure. Currently filled positions are a Senior Manager with approx. 110 staff across three departments:

- The Roads and Stormwater department (Roads, Bridges Stormwater) has a Manager, 2 Technical Staff and 86 operation staff.
- Traffic Engineering department (Road Markings, Roads Signs, Traffic Signals ect) has a Manager, 1 Technical Staff and approximately 14 operational staff

- Transport Planning and Public Transport department has a Manager (2 technical staff positions are currently vacant).

Establishing and running the proposed public transport service internally will, therefore, increase the Stellenbosch Municipal staffing structure by between 19% and 38% (based on filled posts). If it was to be added to the responsibilities of the Transport, Roads and Stormwater division (where it is commonly housed), then it would increase the staff complement of that division by between 200% - 400%. This would likely require the establishment of a dedicated Transport Department, as is the case in large municipalities, like the City of Cape Town.

For the pilot, 29 drivers will be required to operate the service. In addition, a range of additional staff will be required to fulfil the functions described in Section 4.2.1. For the pilot it is estimated that at least 50 staff would be required, including the 29 drivers.

The Municipality does not have the capacity to increase its staff complement by the extent required in the short term. It may, in the long term, be able to develop the capacity by recruiting from the existing industry and instituting training programmes to develop the required skills over time. However this would also require an increase in the overall management capacity of the Municipality – not just for the Engineering Services Department, but also other Departments, since there would be additional burdens placed on Departments such as Financial Services, Community Safety, Corporate Services and the Municipal Manager's Office.

4.3 Extent that re-organisation could be utilised

Section 78(1)(a)(iii) states that a municipality “must first assess the extent to which the re-organisation of its administration and the development of the human resource capacity within that administration as provided for in sections 51 and 68, respectively, could be utilised to provide a service through an internal mechanism mentioned in section 76(a)”

Section 51 (g)(i) states that “a municipality must within its administrative and financial capacity establish and organise its administration in a manner that would enable the municipality to perform its functions through operationally effective and appropriate administrative units and mechanisms, including departments and other functional or business units.”

Section 68(1) states that “a municipality must develop its human resource capacity to a level that enables it to perform its functions and exercise its powers in an economical, effective, efficient and accountable way...”

The analysis under section 4.2 above indicates the extent of the organisational resources required to run a public transport service as envisaged by the PTSN. It is clear that, in the near term, Stellenbosch Municipality does not have the capacity to

take on these functions through a re-organisation of its existing staff and structures. The Directors of Departments that may potentially be responsible for such a service, Engineering Services and Community Safety, have also both indicated that they do not have the capacity to initiate such a service.

4.4 Likely impact on development, job creation and employment patterns in the municipality

The initiation of the public transport service will create at least 50 jobs within the Municipality during the pilot phase and up to 400 new jobs once the full network is operational. However, a significant portion of these jobs will be at the expense of existing jobs within the private sector (for example minibus taxi drivers) who are likely to be employed by the Municipality.

The overall impact of a public transport service is expected to have significant benefits for broader development, as discussed in the cost benefit analysis above, by facilitating continued economic growth and job creation through the establishment of an efficient transport system. Employment patterns may also change as the comprehensive and affordable service makes it easier for people to look for work and commute to places that were previously not affordable or easily accessed by existing means.

4.5 Trends in the sustainable provision of municipal services

Section 78(1) (b) states that a municipality “may take into account any developing trends in the sustainable provision of municipal services generally.”

Since the publication of the national Public Transport Strategy in 2007 and the establishment of a system of grants for public transport improvement in 13 municipalities there has been significant activity in the sector. Services are now in operation in Johannesburg, Tshwane, Cape Town and George, and at various stages of the planning and establishment process in the other municipalities.

One of the key challenges which has emerged during this period is that of financial sustainability. Across the board, the services which have been rolled out have proven to be more costly than originally expected, while system revenue has been lower than forecast. While efforts are being made to establish additional sources of funding for public transport improvement (additional contributions from National Government, fuel levy, local revenue retention), the cost of the current public transport model to government is increasingly being viewed as unsustainable.

In light of the above, cities at the forefront of public transport improvement are exploring alternative models. The City of Cape Town, for example, is exploring a hybrid model as a way of reducing costs. This includes formalised trunk operations, fed by existing minibus taxi operators.

In George, the Western Cape Government's Department of Transport and Public Works has played a seminal role in driving the establishment of the George Integrated Public Transport Network. While National Government is making a contribution through the PTNG allocation to the Municipality, there is a substantial shortfall which is not covered by the Grant and which is fully covered by the DTPW. Given the cost of this exercise, the Department is unwilling to replicate the George-model in future municipalities and has developed a Provincial Sustainable Transport Programme to plan and implement a different approach to public transport improvement in partnership with priority local municipalities. The PSTP will support alternative approaches to public transport improvement which are lower in cost, recognise the complexity of industry transition. The Incremental Approach is core to the Programme and includes an initial focus on getting public transport basics right, while progressively moving toward improved public transport services over time. It is a fundamentally different approach to the model pursued in George and that proposed in the Initial Operational and Business Plan for the PTSN.

With regards to the specific focus of this assessment, Cape Town, Johannesburg, George, Pretoria, Polokwane and eThekweni have all considered external options for the provision of services. The typical approach has been to allow bus operations to be run by the private sector (usually a company or companies representing consortia of existing bus and minibuss taxi owners and operators). The contracts governing the bus operations are usually managed by the Municipality via a transport department. The relevant department is also expected to manage contracts governing fare management, station management, infrastructure design and development, fleet management, inspection and bus monitoring (intelligent transport systems) and marketing and communications rather than providing these services internally.

5. Conclusions

5.1 Aspects Reviewed

The above report has provided an overview of the extent of the public transport service envisaged by the PTSN, considered the process that the Municipality must follow in terms of section 78(1) of the MSA, and then reviewed each issue listed by section 78(1). These include the costs and benefits of providing the service, the Municipality's capacity to provide the service, and international and local trends with respect to public transport service provision.

5.2 Conclusions

The conclusions reached from interviewing key municipal officials and considering each of the aspects required by s78 (1) are that the Municipality does not currently have the financial resources or organisational capacity to internally provide a public transport service. The major factors counting against it are the increased budget required to cover the establishment and recurring costs of the service, the significant increase in staffing that would be required and a national shift in the approach to public transport improvement.

Irrespective of the mechanism selected to deliver a public transport service (internal vs. external), the Municipality should consider pursuing an alternative approach to public transport improvement based on the experiences of George, Cape Town and elsewhere.

6. Recommendations

Based on the conclusions reached above, it is recommended that:

1. The Municipality consider an external mechanism for the provision of public transport services in Stellenbosch. This consideration should be conducted in terms of section 78(3) of the Municipal Systems Amendment Act (No 44 of 2003).
2. That the Municipality pursue an alternative approach to public transport improvement based on the principles of the Provincial Sustainable Transport Programme.
3. That the Municipality seek a partnership with the Western Cape Government's Department of Transport and Public Works for support in implementing incremental improvements to public transport and the broader transport system, in line with the principles of the Provincial Sustainable Transport Programme.

11.6.2	LEASING OF EIKESTAD PARKING AREA, CONSIDERATION OF COMMENTS RECEIVED
---------------	---

Collaborator No: 746262
 IDP KPA Ref No: Good Governance and Compliance
 Meeting Date: 22 March 2023 & 29 March 2023

1. SUBJECT: LEASING OF EIKESTAD PARKING AREA, CONSIDERATION OF COMMENTS RECEIVED

2. PURPOSE

That Council takes note of this report and approves the proposals contained herein.

3. DELEGATED AUTHORITY

Municipal Council.

4. EXECUTIVE SUMMARY

The Municipality reviewed parking management models previously implemented, and also reviewed proposals received for the management of parking areas by adjacent landowners. The Municipality subsequently approved in-principal, the short-term lease and management of Eikestad Parking Area by Eikestad Mall until the Public Private Partnership (PPP), currently underway, is finalized.

The Municipality published its intention to lease and outsource the management of the parking area on 26 July 2022, on the Municipal Website, and on 28 July 2022 in the Eikestad News.

Comments were received from 2 organisations namely, the Economic Freedom Fighters (EFF) and Stellenbosch Interest Group (SIG). Meetings were held with both groups to address concerns and to provide clarity.

Although organisations both were not opposed to the proposed leasing, it was requested that the concerns be taken into account in processes that follow.

5. RECOMMENDATIONS

- (a) that Council takes note that a public participation process was followed;
- (b) that Council considers the comments received;
- (c) that Council approves the leasing and management of the Eikestad Parking Area, on a short-term basis with the option of an annual renewal until the PPP process is finalised; and
- (d) that the Municipal Manager be authorised to negotiate and conclude the lease agreement, taking into account inputs from public participation process.

6. DISCUSSION / CONTENTS

6.1 Background

The Municipality had previously commenced formulating its parking strategy and tabled several Council items that detailed the Municipality's approach to implementing its parking strategy. The Municipality also embarked on various models for management of parking areas however on review these were deemed not sustainable nor cost effective.

To continue with efforts to improve on parking management, the Municipality reviewed requests received from adjacent retailers e.g. owners of Eikestad Mall to manage parking areas. These requests were assessed in terms of the Municipality's Parking Strategy and were found to be in alignment with the strategy.

On 23 February 2022, Council reviewed, rescinded and amended a previous decision relating to the management of single level parking areas, so that single level parking areas can be managed through an external service delivery mechanism. Council also approved in principle that the Eikestad parking area be leased on a short-term basis and managed by Eikestad Mall until the PPP process (currently underway) is finalized.

The Municipality subsequently published its intention to lease the area (**ANNEXURE A**), and outsource the management of the parking area, on 26 July 2022 (Municipal Website) and on 28 July 2022 (Eikestad News). Comments had to be submitted before 19 August 2022.

6.2 Discussion

Comments were received from two organisations namely the Economic Freedom Fighters (EFF) and the Stellenbosch Interest Group (SIG).

The EFF provided comments during the public participation process (Annexure B) and a meeting was held on 22 September 2022 to address concerns and provide clarity.

The EFF raised concerns regarding private sector profiteering and stated that the private sector should not be allowed to make a profit through the leasing and management of the parking area. A model was also proposed that would promote job creation for parking management.

Background information was provided on the previous initiatives undertaken by the Municipality, and it was mentioned that it is not sustainable nor cost effective for a municipality to manage the parking area at this stage.

The EFF proposed that where parking management cannot create jobs, income from parking should be set aside for job creation. The EFF also proposed that the lease agreement be set up in a manner that will not allow for profiteering by the private sector.

The Stellenbosch Interest Group (SIG) provided comments during the public participation process (Annexure C) and a meeting was held on 13 October 2022 to address concerns and provide clarity.

Stellenbosch Interest Group (SIG) was also not opposed to the proposal but raised the following as concerns:

- Proposal is inherently flawed as it implies that all parking in (Central Business District) CBD can be management by shop owners.
- The Municipality not being able to manage parking relates to an inability to perform its function.
- Fairness in terms of Supply Chain Processes.
- Roll out of the plan, the allocation of long and short-term bays and the number of bays to be allocated to Eikestad Mall.

Stellenbosch Interest Group (SIG) also stated that privatization of parking was not correct without a competitive process, and that Eikestad Mall would get a foot in the door, which would be a conflict of interest during the Public Private Partnership (PPP) process.

Background information was provided on the Municipality's experiences regarding parking management and confirmation was provided that the lease of the parking area is an interim measure. The Municipality would still manage other parking areas as well as on-street parking areas.

It was mentioned that the lease agreement will conform to municipal processes, and that the allocation of bays will be as per the Municipality's requirements. It was also mentioned that the interim leasing of the parking area and Public Private Partnership (PPP) are separate interventions, the PPP follows strict prescribed processes that ensures fairness and transparency.

6.3 Financial Implications

The Municipality will receive income from the lease of the parking area, that will be comparable to income received through the internal management of the parking bays. It should be noted that, through the lease of the parking area, an improved level of service will be provided to residents and users of the parking area.

6.4 Legal Implications

The recommendations in this report comply with Council's policies and all applicable legislation. Requirements of Asset Transfer Regulations were addressed in the public notice that was published.

6.5 Staff Implications

Existing Municipal staff could be assigned to

6.6 Previous / Relevant Council Resolutions:

35th Council Meeting 2020-02-26: ITEM 13.3

RESOLVED

- (a) that this report be noted;
- (b) that Council accepts that all the requirements of Section 78(3) (Annexure A) in terms of investigating the feasibility of the provision of sufficient parking, has been complied with;
- (c) that Council accepts that parking forms an integral part of the total Mobility concept within Greater Stellenbosch Area and relates to other major parts such as: Traffic Flow, Public Transport (PT), Non-Motorised Transport (NMT), Transit Oriented Development (TOD), and Movement of Disabled Persons (normally seen as a primary part of NMT);
- (d) that Council notes that in order to alleviate the parking process as a whole, matters such as PT, NMT, TOD must also be addressed in synchronisation, as this will directly affect the quantity and positioning of parking;
- (e) that Council, in terms of the Municipal Systems Act (MSA), Act 32 of 2000, as amended, Section 78(4), accepts that the method of providing parking generally be considered as follows:
 - (i) Provision of open one level parking space needs, be performed on an internal mechanism;
 - (ii) Provision of multi storied parking space needs, be performed on an external mechanism.

-
- (f) that Council approves the provision of parking as a first phase as mentioned hereunder, which must be in line with future mobility developments, as the final mobility status can by nature not be resolved at this time;
 - (g) that Council proceed with the initial provision and upgrade of parking spaces as follows:
 - (i) that the legislative process be commenced with to provide multiple level parking, and management thereof, utilising an External Mechanism of parking in the following areas:
 - (1) Eikestad Mall Parking area bounded by Andringa -, Victoria, and Ryneveld Streets. Portion of erf 1692, erven, 1969, 1972, 1973, 1974, 1975, 1976, 6402 and 6636; and
 - (2) Techno Park area, considering the area bounded by Tegno Road, Termo Avenue and Proton Road. Portion of erf 13171
 - (ii) that the following areas, as a first phase, be upgraded and/or developed as a single layer open space parking area, utilising an internal service delivery mechanism:
 - (1) Dennesig Existing Parking Area, entrance in Hoffman Road, Part of Erf 235;
 - (2) Municipal Court Existing Parking Area, entrance from Papegaai Road, **Erf 528**;
 - (3) Aandklas Existing Parking Area, entrance from Du Toit Road Part of Erf 235;
 - (4) New Parking Area Bounded by Borchard Road and Andringa Street to be considered as an extension of the public parking on erf 2529;
 - (5) New Parking Area Bounded by Jan Cilliers Road, Ds Botha Road and Muller Road to be considered as new parking area. Part of Erf 175/0; and
 - (6) Parking area to be upgraded at the old tennis courts, Franschoek, Erf 1538.
 - (h) that Council proceeds with the setting up of a Service Delivery Agreements for the provision of Bulk Parking, as required by Section 80(1) & (2), of the MSA and in particular section 80(1)(b) (which prescribes an SDA with a Private Company) for the areas mentioned under 4.7.1;
 - (i) that the Service Delivery Agreement be approved by Council as a draft SDA prior to Community Participation takes place; and
 - (j) that the matter of providing a synchronised total mobility network be urgently pursued with all the role-players participating in the mobility arena which includes Public Transport, Non-Motorised Transport, Transit Oriented Development, Parking and Universal Access.

Special Council Meeting 2022-02-23: ITEM 8.11.2**RESOLVED (nem con)**

- (a) that the content of this report be noted;
- (b) that it is noted that a MSA section 78 (3) investigation was done to which Council took a Section 78 (4) decision on 26 February 2020;

-
- (c) that Council now review, rescind and replace 4.5 of the 26 February 2020 decision to read as follows:
 “4.5 that Council, in terms of the MSA Act 32 of 2000 as amended, section 78 (4), accepts that the method of providing parking generally be considered as follows:
 A provision of open one level off-street parking space needs, be performed on an external service delivery Mechanism except where the internal mechanism is clearly more viable and effective; “
 - (d) that the two requests of the management of the following parking spaces:
 a Checkers Complex Parking,
 b Stelmark Centre Parking,
 be approved in principle as interim pilot projects for a period of not more than three years.
 - (e) Council confirm that Eikestad multi-level parking will be done through a Public-Private Partnership as envisage in the Section 78 (3) report,
 - (f) that given the project life cycle for PPP process, the parking be leased out on a short-term basis until the PPP process is finalised.
 - (g) that the intention to outsource the management of these areas on an interim basis be advertised for public comment; and
 - (h) that after the public participation process the comments be considered by Council before a final decision is taken.

6.7 Risk Implications

The risks are addressed through the content of the item.

6.8 Comments from Senior Management:

6.8.1 Director: Infrastructure Services

Author of the report

6.8.2 Director: Planning and Economic Development

Supports the item.

6.8.3 Director: Community and Protection Services

I have perused the document and based on my submission to manage parking within Stellenbosch and Franschhoek, my recommendation will be to install 2 booms with a pay station, ticket dispensers on entry and exit linked to the control room, it will be financially beneficial to the municipality. If this is accepted, we could possibly look at employing 4 EPWP security officers (2 per shift) to do patrols in the parking area and make it safer as the income will cover the stipend(CK).

Traffic Services did receive the draft of leasing of Eikestad Parking area and fully support the draft. In terms of Security and safety of the premises the Company responsible for leasing should be required as well to improve the safety of the area by installing CCTV cameras that may be monitored and managed by Municipality Law Enforcement Section (AR).

6.8.4 Director: Corporate Services

As Council clearly intends to only have the parking area managed on short term basis as indicated in the decision of 23 February 2022 the term must be define in recommendation C.

Clarity must be gained as to the amount of parking bays that will be allocated for public parking and the amount used by the Municipality behind main building and the Town Hall and access for municipal staff not having to use the booms.

6.8.6 Chief Financial Officer:

Supports the item.

6.8.7 Municipal Manager:

Supports the item.

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.6.2

- (a) that Council takes note of a public participation process that was followed;
- (b) that Council considers the comments received;
- (c) that Council approves the leasing and management of the Eikestad Parking Area, on a short-term basis with the option of an annual renewal until the PPP process or any other process to build the parking garage decided on, is finalised; and
- (d) that the Municipal Manager be authorised to negotiate and conclude the lease agreement, taking into account inputs from public participation process, including the use of local labour.

ANNEXURE A

MUNICIPAL NOTICE No. 96/2022

NOTICE FOR PUBLIC COMMENT SHORT-TERM LEASE OF EIKESTAD PARKING AREA STELLENBOSCH CENTRAL BUSINESS DISTRICT

1. PURPOSE

The purpose of this notice is to provide information to the public and request input during the public participation process for the short-term lease and management of Eikestad Parking Area.

2. BACKGROUND

Council had previously launched and completed a Municipal Systems Act, Section 78 process to determine the most appropriate method of providing a parking service as required by The Constitution (Schedule 5B, matters referred to Local Government). The Eikestad parking area is earmarked for development through a Public Private Partnership (PPP), which had commenced with the above-mentioned Section 78 Process. Although good progress has been made to date, such as the compilation of a Draft Feasibility Report and Council approvals to proceed etc., Circular 37 from National Treasury (read in conjunction with the PPP Regulations, 309 of 2005) outlines the project life cycle which the Municipality must follow. It is expected that this process may take more than 36 months.

At a Special Council meeting held on the 23 February 2022, Council reviewed, rescinded, and amended a previous decision relating to the management of single level parking area, so that these can be managed through an external service delivery mechanism. Council also approved in principal that, given the project life cycle for PPP process, the parking at Eikestad Mall may be leased out on a short-term bases until the PPP process is finalized.

2. DISCUSSION

Reasons for proposal to granting of rights to use, control or manage the relevant capital asset

The Municipality has implemented various internal mechanisms for the provision of parking, however on review, these were found to be less favourable and not sustainable. Request were received from retail outlets / owners including the Eikestad Mall to manage parking areas, situated adjacent to these retail

outlets. These requests were assessed in terms of the Municipality's Parking Strategy and were found to be in alignment with strategy.

The Municipality intends to improve on the provision of parking and a look at an alternative approach to those previously embarked upon is required. As part of the Municipality's parking strategy the municipality has identified areas where short-term parking, long-term parking and staff parking would be required. The short-term parking requirements aligns favourably with parking areas adjacent to retail outlets. Parking areas adjacent to retail outlets are more suited to being managed by retail outlets, for the following reasons:

- Parking areas adjacent to retail areas are extensively utilized by shoppers, shopping at the retail outlets.
- Retail outlets can attract shoppers (short term parking) by providing incentives or discounts.
- Retail outlets are better able to provide the required equipment / software and manage the logistics associated with parking management.

Expected benefits to the municipality that may result from the granting of the right.

The limited staff resources within the Municipality would be more effectively utilized and more resources could be assigned to service delivery. Where retail outlets attract shoppers by providing incentives or discounts economic development within the Central Business District can be promoted. The current short-term contracts of staff that manage these areas, that is not economically sustainable for the Municipality can then be ended.

Expected proceeds to be received by the Municipality form the granting of the right

The demand for parking is high, however this demand does fluctuate through the year, rental income can be set at an amount higher than the average rate of return for investment.

Expected gain or loss that will be realised or incurred by the municipality arising from the granting of the right.

Complaints had previously been received relating to the processing of payments. The retail outlets will be responsible to appoint the staff and put infrastructure in place for access control purposes, addressing these complaints and saving the municipality these costs.

3.3 Location and context

The parking area is located in the Stellenbosch Central Business District area and is accessed from Victoria Street and Ryneveld Street.

3.4 Public Comment invited:

The public are herewith invited to provide input/comment/alternative proposals to the municipality on

the proposal to enter into a lease agreement with Eikestad Mall Management for the management Eikestad Parking Area on a short-term basis with the option of an annual renewal until the PPP process is finalised.

3.5 Addressing of Comments

Any proposals or comments may be forwarded to: joan.fullard@ Stellenbosch.gov.za.

or

At the office 71 Plein Street, Ecclesia Building Second Floor.

Comment must be submitted on or before 19 August 2022. Any person who are unable to read and write or have any sight disability will be assisted by an official at the office to provide comments should they not be able to provide comments on their own accord.

ANNEXURE B

Johan Fullard

From: Reggie Snyders <speceline@gmail.com>
Sent: Thursday, 28 July 2022 12:56
To: Johan Fullard
Subject: [EX] Short term lease of Eikestad Parking Area: Stellenbosch Central Business District.

Dear Sir/Ms,

Your advertisement in the "Eikestad Nuus" dated 28 July - 3 August 2022 refers.

Municipalities in South Africa must be involve in the creation of jobs to ensure stable environments.

The private sector concentrates on profit making and with you envisaging to privatise parking in Stellenbosch, will have a detrimental effect on the massive unemployment currently experienced.

The following suggestion will not only lead to self-employment, but will also address car break-ins within the CBD and can effect the discontinuing of expensive CCTV camera monitoring in the Eikestad Mall area:

This suggestion is based on an 8 or 14 hour day depending on what Council decides. Allocate 20 - 30 parking bays to the current parking guards who are currently paid by the Municipality. The parking guards must be responsible for the safety of vehicles, painting of bays and further responsibilities as Council decides.

For instance if the cost of parking is R5.00 per 15 minutes, this will boil down to R160.00 for an 8 hour day and R280.00 for a 14 hour day. On a weekly basis the parking attendant will have an average income of R800.00 per week and R1400.00 respectively.

This approach will leave the Municipality with absolute no costs and the only management issue will be to do checking and controlling of the bays and the parking attendants. Important is to make the parking bay attendants part of the decision.

The general perception of the public is that the Municipality is responsible for parking availability and that they, businesses included, are already paying Municipalities to render such services through taxes.

Hope that this submission will find your favourable consideration.

Regards,
Reggie Snyders.
EFF Provincial Deputy Secretary.
0710724288.

ANNEXURE C

Belangegroep Stellenbosch Interest Group

19 August 2022

Johan Fullard
Stellenbosch Municipality
johan.fullard@ Stellenbosch.gov.za

Dear Mr Fullard

PROPOSED SHORT-TERM LEASE OF EIKESTAD PARKING AREA STELLENBOSCH CENTRAL BUSINESS DISTRICT (MUNICIPAL NOTICE No. 96/2022)

The Stellenbosch Interest Group is not per se opposed to the privatisation/semi-privatisation of public space, property and services, but the proposal for short-term lease of Eikestad parking area is conceptually flawed and warrants more detail.

It is argued that "Parking areas adjacent to retail outlets are more suited to being managed by retail outlets". However, this particular parking area does not only cater to the needs of the Eikestad Mall. Due to its centrality it is used as parking area for visitors to the municipality, university, shops and restaurants elsewhere in the CBD (outside the Eikestad Mall). The statement above inherently implies that all the street parking in the CBD can potentially also be managed by the shop owners abutting the parking bays which raises a serious concern regarding the overall parking management strategy of the municipality.

It is difficult to understand why the municipality can't continue providing the service until the new parking area will be developed. By saying there is a lack of staff resources and that there were complaints previously received relating to the processing of payments (no detail is provided however) actually points to a systemic competency weakness at the municipality, not being able to perform basic services and tasks.

How will the proposed plan be introduced? Essentially it implies that Eikestad Mall will be managing the parking (as per the notice) which raises concerns of fairness in terms of the procurement process - monopoly by virtue of location? How many bays will be short-term bays, how many longer-term? If the Eikestad Mall decides to allocate a large portion of the bays to staff working in the mall then it will reduce the general public's parking.

Kind regards

Patricia Botha (Chairperson)

11.6.3	LEASING A PORTION OF THE BERGZICHT TAXI RANK UPGRADE FOR THE DEVELOPMENT OF AN ELECTRIC MINIBUS TAXI (E-MBT'S) CHARGING FACILITIES
--------	---

Collaborator No: 746239
 IDP KPA Ref No: Good Governance and Compliance
 Meeting Date: 22 March 2023 & 29 March 2023

1. SUBJECT: LEASING A PORTION OF THE BERGZICHT TAXI RANK UPGRADE FOR THE DEVELOPMENT OF AN ELECTRIC MINIBUS TAXI (E-MBT'S) CHARGING FACILITIES

2. PURPOSE

Is to inform the Executive Mayor in consultation with the Executive Mayoral Committee about an application of FLX EV to lease a portion of the Bergzicht Taxi Rank with the purpose to create a facility where electric taxis can be charged.

3. DELEGATED AUTHORITY

Executive Mayor in consultation with the Mayoral committee if the lease is valued less than R5 million and for a period of less than 10 years.

4. EXECUTIVE SUMMARY

The Stellenbosch Municipality sought to create places that are attractive and have a distinct identity by fusing the various threads of environmental responsibility, social equity, and economic viability together. With this goal in mind, the Municipality adopted a design of the proposed upgrade of the Bergzicht taxi rank to create a facility that is more environmentally friendly, can be fully sustainable, and uses photovoltaics to generate its own energy to run the facility and feed any excess energy back into the grid.

FLX EV approached the municipality and expressed interest in establishing an E-charging facility for electric minibuses. The design at the Taxi rank already made provision for a space that could be utilized in the future as a charging facility.

Flex EV is a private startup company with support from the Industrial Development Corporation (IDC) and funding from uYilo kick start projects to develop South Africa's first e-MBT public transport interchange. The company will implement all related charging equipment associated with the system with its own capital funds and does not need any funding for the necessary equipment.

The goal is to use electric minibus taxis to decarbonize the minibus taxi industry. For these vehicles to have a sufficient daily range, public charging stations are required. After conducting a thorough investigation into the operations of the 65-minibus taxi (MBT's) that currently uses the taxi rank, it has been found that the taxi rank is the best location for these facilities.

Detailed plans have been developed for the installation of electric minibus taxis (e-MBT) charging stations at the taxi rank using a data-driven methodology. These facilities, which incorporate cutting-edge technologies to effectively address potential electrical grid supply issues, are built to support the daily charging of 60–80 e-MBTs. The facility's main energy supply will be solar-generated energy, with grid-tied electricity as a backup option. The facility will have its own solar power system and will aim to use the extensive solar power generation network of the Stellenbosch municipality on a prepaid basis in order to ensure a sustainable and efficient power supply.

Due to its emphasis on innovation and transformation, Stellenbosch Municipality is the preferred location for the first charging facility. The MBT charging station is slated to become the first public electric minibus taxi charging station in the entire world and is a significant step in the direction of lowering the environmental impact of African paratransit systems.

The Municipality will derive income from the electricity usage by the charging facility and also from the leasing of Bergzicht taxi rank. Clarification needs to be reached as to which of the Infrastructure will be retained by the Municipality at the end of the lease period. FLX EV will be responsible for their own security and surveillance to monitor and manage the e-charging facility.

5. RECOMMENDATIONS

- (a) that the Executive Mayor, in consultation with the Mayoral Committee, notes the application of FLX EV to lease a portion of the Bergzicht Taxi rank on a private treaty basis (**ANNEXURE A**);
- (b) that Council identify the portion of Bergzicht Taxi rank identified (950 square meters) as land not needed to provide the minimum level of basic municipal services;
- (c) that Should Council resolve to lease the area to FLX EV in principle, the intention to lease the portion be advertised for public input/ comments/ alternative proposals;
- (d) that the lease term be considered taking into consideration the capital investment that FLX EV intends to make;
- (e) that the Municipal Manager be mandated to negotiate a market related rental with FLX EV taking into account the capital advantage for the municipality; and
- (f) that the item be returned to the Executive Mayor in consultation with the Executive Mayoral Committee after the public participation process to consider the inputs before a final decision is taken.

6. DISCUSSION / CONTENTS

6.1 Background

When the Comprehensive Integrated Transport Plan was approved in 2016, the Bergzicht taxi rank was already operating beyond its capacity, and work to upgrade it began. After the theatre, which was also on the property, was destroyed, vagrants occupied it illegally, which caused the municipality a lot of problems. Since these illegal occupants were relocated and the dilapidated building were demolished the area was cleaned and is in the best interest of the municipality to utilise the space more effectively. The need for strategic intervention was required and smart technology to create a more environmentally friendly facility and will additionally, lessen the risk to the municipality from illegal occupants settling on the open space.

6.2 Discussion

Electric Vehicles (EVs) are the future of road-based transport in South Africa. The minibus taxi sector accounts for approximately 80% of public transport trips and emits significant amounts of harmful emissions into the atmosphere every year. FLX EV has sources an affordable and viable e-MBT that can be implemented in the South African minibus taxi industry, and consequently, save operators and commuters significant costs, while also reducing air pollution.

The installation of e-MBT's requires charging stations to be placed in already-existing minibus taxi ranks to enable charging during off-peak operating hours. Plans for such facilities, including charging equipment, solar power plants, battery backup systems, electrical grid upgrades, and security measures, have been developed by FLX EV for municipal taxi rank (See **ANNEXURE B & C**).

FLX EV proposes the development of this facility in Bergzicht taxi rank. This facility will be the first of its kind and will facilitate a cleaner and healthier environment for minibus taxi commuters in Stellenbosch.

The municipality will gain a lot from building an electric charging station because it will be the first in the nation and it will boost its revenue stream. The leaser will be responsible for keeping this area maintained, which will relieve municipal staff of their constant battle to keep the area safe and free of unauthorized occupants. This will also benefit the greater Stellenbosch community significantly more given the financial contribution proposed and the additional investments that will be made for the benefit of green transportation in Stellenbosch.

The Bergzicht charging infrastructure will be created as a pilot project and used for operational strategy testing and evaluation. At this facility, the introduction of e-MBTs will be phased in with the eventual conversion of 60–80 Minibus taxis to electricity. The specifics of the lease agreement, such as the monthly payments, renewal options, and ownership of the infrastructure following the lease's expiration, will be covered in separate service level agreement. The charging station's electrical supply will be provided by the Stellenbosch Municipality, and the leaser will be responsible for paying for its use. Both grid-tied electricity and solar-generated electricity will be a part of this supply (from the municipal solar grid).

FLX EV proposes the development of a power purchasing agreement with the Municipality in which FLX EV has the right to buy electricity from Stellenbosch Municipality at an agreed-upon price (See **ANNEXURE A & B**).

6.3 Financial Implications

The market-related rental must be determined, which must be paid each month to the municipality (See **ANNEXURE D**).

6.4 Legal Implications

6.4.1 Asset Transfer Regulations

In terms of Section 34 (1) of the ATR a Municipality may grant a right to use, control or manage a capital asset only after-

- a) The Accounting officer has concluded a public participation process*; and
- b) The municipal council has approved in principle that the right may be granted.

*Sub regulation (1) (a) (public participation process), however, must be complied with only if-

- a) The capital asset in respect of which the right is to be granted has a value in excess of R10M*; and
- b) A long-term right is proposed to be granted (i.e. longer than 10 years).

None of the assets has a value in excess of R10M.

In terms of Regulation 36, the municipal council must, when considering such approval, take into account:

- a) whether such asset may be required for the municipality's **own use** during the period for which such right is to be granted;
- b) the extent to which any compensation to be received will result in a significant economic or **financial benefit** to the municipality;
- c) the **risks and rewards** associated with such right to use; and
- d) the **interest of the local community**

In terms of Regulation 41, if an approval in principle has been given in terms of regulation 34 (1)(b), the municipality (read Mayco) may grant the right only in accordance with the **disposal management system*** of the municipality, irrespective of:-

- a) the value of the asset; or
- b) the period for which the right is granted

*The policy on the Management of Council owned property is deemed to be Stellenbosch Municipality's disposal management System.

6.4.2 Policy on the Management of Council owned property

In terms of paragraph 9.2.2 of the Policy, the Council may dispense with the prescribed, competitive process, and may enter into a private treaty agreement through any convenient process, which may include direct **negotiations**, but only in **specific circumstances**, and only after having **advertised** Council's intention so to act.

One of the circumstances listed in (g) is where unsolicited applications/proposals are received from telecommunication companies to construct or put-up communication infrastructure on Municipal land, such as masts, dishes, etc., subject to approved tariff structure.

In terms of Regulation 36, the municipal council must, when considering such approval, take into account:

- a) whether such asset may be required for the municipality's **own use** during the period for which such right is to be granted;
- b) the extent to which any compensation to be received will result in a significant economic or **financial benefit** to the municipality;
- c) the **risks and rewards** associated with such right to use; and
- d) the **interest of the local community**

In terms of Regulation 41, if an approval in principle has been given in terms of regulation 34 (1)(b), the municipality (read Mayco) may grant the right only in accordance with the **disposal management system*** of the municipality, irrespective of: -

the value of the asset; or

the period for which the right is granted

The policy on the Management of Council owned property is deemed to be Stellenbosch Municipality's disposal management System.

6.5 Staff Implications

The management of the charging facility will be a collaborative between FLX EV and the Stellenbosch Taxi Association (STA), which is currently leasing the administrative building from the municipality but is not affiliated with the municipality and therefore, the municipality won't be affected by any staff implications. The facility is less likely to experience vandalism with the STA involved. This strategy also entails giving the local population job opportunities as security, facility marshals, and charging attendants.

6.6 Previous / Relevant Council Resolutions:

No Previous Council resolutions.

6.7 Risk Implications

FLX EV have conducted a thorough risk assessment, in which the main risk components include:

- **Facility Vandalism** - The risk of Vandalism is solved by the implementation of fencing, CCTV cameras, 24/7 manned security, and coordination with the STA.
- **Load Shedding** -Load Shedding is solved by implementing a combination of power supply systems, including solar power generation and battery backup storage.
- **Uptake of e-M BTs** - The use of the facility is dependent on the number of Minibus taxi owners and operators that are willing to shift to the use of electric minibus taxis. We believe that this risk is mitigated by the benefit that is tied to the use of these vehicles, namely that operators will save between 40-70% of their current operating costs.

6.8 Comments from Senior Management:

6.8.1 Director: Planning and Economic Development

It should be noted that the Bergzicht Taxi facility also accommodates numerous informal traders. As such, the item is supported with the proviso that it does not impinge on the operations of the taxi rank and the ability of the informal traders to trade.

6.8.2 Director: Community and Protection Services

The directorate supports the initiative with the request that the various taxi associations that make use of the facility, be consulted on how the service is eventually to be rolled out and be made accessible to relevant associations.

6.8.3 Director: Corporate Services

Supported that the asset transfer regulations are followed before Council take a final resolution. The period of the lease should take into account that the e-taxis are not prevalent currently and there is no indication of how fast the taxi owners will convert to e-taxis.

6.8.4 Chief Financial Officer:

Supported

6.8.5 Municipal Manager:

Supported

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.6.3

- (a) that the Executive Mayor, in consultation with the Mayoral Committee, notes the application of FLX EV to lease a portion of the Bergzicht Taxi rank on a private treaty basis (**ANNEXURE A**);
- (b) that Council identify the portion of Bergzicht Taxi rank identified (950 square meters) as land not needed to provide the minimum level of basic municipal services;
- (c) that Council resolve to lease the identified portion to FLX EV in principle, provided that the intention to lease the portion be advertised for public input/comments/alternative proposals;
- (d) that a lease term be proposed in the return item taking into consideration the capital investment that FLX EV intends to make;
- (e) that the Municipal Manager be mandated to negotiate a market related rental with FLX EV taking into account the capital advantage for the municipality; and
- (f) that the item be returned to the Executive Mayor in consultation with the Executive Mayoral Committee after the public participation process to consider the inputs before a final decision is taken.

Flx EV

54 Oxford Street

Durbanville

7550

Proposal for Erf 6705

Dear Municipal manager,

The following letter is a proposal for Erf 6705 in Stellenbosch Municipality. Flx EV intend to lease this land to implement an electric minibus taxi charging facilities, that will facilitate the operation of electric minibus taxis in Stellenbosch Municipality. Flx EV propose a long-term lease on Erf 6705, that will encompass a monthly rental payment to the Municipality and electricity purchases (monthly rental amounts and leasing timeframe are to be determined).

The Minibus taxi industry currently act as the primary supplier of public transport journeys in South Africa, and Stellenbosch Municipality, yet no major plans are in place to decarbonise the industry. Consequently, thousands of commuters are subjected to harmful tailpipe emissions that have severe long term health implications.

Flx EV is introducing electric minibus taxis to the South African market, with the goal of reducing harmful tailpipe emissions, reducing transport costs for commuters, and increase the profitability of the industry.

For electric minibus taxis to operate optimally, PTI charging facilities are required to charge vehicles in off-peak periods. Flx EV consider Bergzicht taxi rank as the optimal location for the construction of Stellenbosch Municipalities first PTI charging facilities due to its central location, its high utilisation rate, and the current renovation plans in progress.

The implementation of these facilities will lead to significant economic and health benefits to Stellenbosch municipality and its residents.

For any additional information, please feel free to contact us.

Transport Economist

ANNEXURE B

- Vehicle operation profiles
- Charging equipment
- Charging sockets
- Electrical upgrades
- Charging capacity of facility
- Loadshedding mitigation
- Security strategies

Section 1 – Vehicle operating profile

The Bergicht taxi rank currently has between 65 and 80 Internal Combustion Engine (ICE) Minibus Taxis (MBTs) operating under the Stellenbosch Taxi Association. The vehicles are operational over 8 routes including:

- Doelville
- Devonville
- Elsberg
- Idaville
- Jamestown
- Wittenburg
- Somerset West
- Frick

Fix EV have conducted a data collection program in which the operating characteristics of these vehicles were determined. This data have informed the charging needs of the Electric Minibus Taxis (e-MBTs) that will operate to and from the Bergicht charging facilities. The data revealed that the average ICE MBT operating from the Bergicht taxi rank have the following daily characteristics:

Average Range	138	km
Maximum Trip Distance	99	km
Average Time Operational	05:49:21	(h:m:s)
Average Time Non-operational	09:11:07	(h:m:s)
Total Time Spent in Rank	04:28:35	(h:m:s)
Maximum Consecutive Time in Taxi Rank	01:52:13	(h:m:s)
Average Fuel Consumption	17	Liters
Average Fuel Expenditure	R380	Rands

Section 2 – Charging equipment types and features

Two charging equipment types have been considered for the Bergicht charging facilities, including AC slow chargers, and DC fast chargers. The characteristics of these chargers broadly include:

Charger Types	Slow Charging	Fast Charging
Current	Alternating Current (AC)	Direct Current (DC)
Power Supply	Single-Phase power up to 7.4kW, and three-phase power up to 22kW	Three Phase Power
Charging Speeds	6 to 12 hours	20 to 30 minutes to charge to 80%
Number of Outlets	1	1 or 2 DC charging Outlets. Some Versions have both DC and AC outlets (see figure 15)
Average Device Dimensions	30cm/30cm/100cm (L*W*H)	On Average DC Chargers are 1m/0.8m/1.8m (L*W*H). Size Depends on Manufacturers and Charger Output
Mounting Method	Wall, charging stand, or ground mounted	Ground mounted
Power Range	3.6kW to 22kW	Automotive DC chargers currently range from 30kW to 350kW
Cost	AC chargers generally range between R10 000 and R40 000 per charger	DC chargers have a wide range of prices based on their performance classes. For reference, a 60kW charger range from R40 000 to R500 000 including Value Added Tax (VAT)
Application	Mainly used for overnight charging or at facilities with long dwell times (Offices or residential housing)	DC fast-chargers work optimally in public facilities where charging times are limited (Shopping malls, MBT ranks)

The following factors have determine the type and number of chargers to be installed in Bergicht taxi rank:

- Charging demand – The demand for charging is based on the average daily range of e-MBTs, the average time spent in the rank, the number of e-MBTs using the facility, and the degree to which home charging is possible.
- Availability of space – Spatial restriction apply in this facility, as there are only space for approximately 19 charging bays. In order to increase the capacity of the facility, DC fasters have been implemented.
- Grid upgrades – Due to the expensive nature of electrical grid upgrades, the upgraded capacity is intentionally limited to 1MVA (See section 3).

In Bergicht taxi rank, a combination of AC (Blue chargers) and DC charging (Purple chargers) equipment have been implemented.

Six of these chargers are 120kW DC fast chargers, which will support public charging of e-MBTs throughout operating day, and are capable of recharging an e-MBT to 80% state of charge in less than 60 minutes. Each DC charger has two charging nozzles, that can charge at 60kW concurrently. Based on the vehicle operating data discussed in section 1, MBTs spend on average more than one hour in the Bergicht taxi rank consecutively. This ensures that 60kW DC charging is sufficient for off-peak charging needs.

Along with the DC chargers this facility also house seven 22kW AC slow chargers. The vehicle operating data discussed in section 1, indicates that some MBTs have significant time in the rank during off-peak periods. The AC chargers will facilitate slower and cheaper charging for MBTs with long non-operational time, and overnight charging.

Section 3 – Charging socket types

Charger Type	Description	Diagram
Combined Charging System Socket (type 2)	CCS2 sockets are an extension of type 2 sockets, with the ability to accommodate DC fast charging of up to 350kW. This facility will only support the use of CCS2 charging sockets, as the e-MBTs that will be implemented at the facility come standard with CCS2 charging ports.	

Section 4 – Electrical grid upgrades

In order to support the electricity demand from the EV charging station, the electrical grid of the facility will need to be upgraded. Electrical upgrades can be a costly part of e-MBT charging facility development and have the following prices:

The grid upgrades applied to the Bergicht taxi rank will support the installation of six 120kW DC chargers, and seven 22kW AC chargers, that have a concurrent power requirement of 874kW.

Electrical upgrades are a large cost component in the development of charging facilities. As indicated by the above tables, the cost of electrical upgrades, the maintenance responsibilities, and the additional equipment required, vary based on the degree to which electrical upgrades are required.

The Bergicht charging facility aimed to require less than 1MVA grid upgrades, in order to minimise costs. With facility upgrades of less than 1MVA, greater upstart costs are required for upgrades, but maintenance responsibilities do not fall on the fix EV, and only on Outdoor-Bulk-Metering unit is required as additional electrical equipment. With any upgrades greater than 1 MVA, expensive additional equipment is required.

Section 5 – Loadshedding mitigation

To ensure that the facility will be operational through load shedding, the following strategies will be implemented:

- Implementation of a charge scheduling software – This software will allow the required communication live data to the fix EV servers relating to their state of charge, and their charging needs. Based on this information the fix EV scheduling platform will provide preference charging to certain e-MBTs, in order to ensure sufficient state of charge in load shedding periods.
- Solar power backup systems – The facility will be equipped with a roof-mounted solar power system that will power backup battery packs. This solar power system will be capable of powering half of the facility's chargers for a period of 4 hours, or the full facility for 2 hours.

Section 6 – Charging capacity of the facility

The Bergicht charging facility house 12 DC fast charging points, and 7 AC slow charging points, which is capable of supporting the recharge of more than 140 e-MBTs per operating day.

Based on the operating data collected from the current ICE MBTs, each vehicle travels approximately 130–170km per day. Due to limited home charging capabilities, each e-MBT will be required to use the charging facility on a daily basis.

According to the vehicle operating data, each vehicle spends at least 1 hour consecutively at the Bergicht rank per day. This ensures that the vehicles can recharge to 80% of its capacity (160km) using the fast-charging stations. This recharge time also provides ample range for the e-MBTs to continue with normal operations, without having range restrictions.

Taking into consideration that there are only 12 DC charging points available at one point in time, it is important to consider the total capacity throughout the day. Throughout an operating day, there are 5 hours that are considered to be non-operating, or off-peak hours. It is likely that charging equipment will be in high demand at this time.

With the current selection of charging equipment, the facility can recharge 60 e-MBTs in off-peak hours, and an additional 72 e-MBTs during operating hours. Taking this into consideration, the facility has ample supply to support e-MBT operations in Bergicht taxi rank.

Section 7 – Securing charging facility

In order to protect the expensive charging equipment that will be installed in the Bergicht charging facility, the following strategies will be implemented:

- 24h security – The facility will be equipped with 24/7 manned security.
- CCTV systems – The facility will be geared with 4 CCTV cameras.
- Fencing – The facility will be surrounded with clear-view fencing that will restrict entrance and exit from the facility.
- Entrance and exit booms – The facility will be equipped with two booms at the entrance and exit of the facility.

11.6.4	ACCEPTANCE OF THE FINAL REPORT OF THE MUNICIPAL ELECTRICITY MASTERPLAN (MEMP) ON ELECTRICITY PATHWAYS FOR STELLENBOSCH MUNICIPALITY: MINIMISING ELECTRICITY COSTS WHILST IMPROVING ENERGY SECURITY AND DECARBONIZING POWER SUPPLY
--------	--

Collaborator No: 746353
 IDP KPA Ref No: Good Governance and Compliance
 Meeting Date: 22 March 2023 & 29 March 2023

1. SUBJECT: ACCEPTANCE OF THE FINAL REPORT OF THE MUNICIPAL ELECTRICITY MASTERPLAN (MEMP) ON ELECTRICITY PATHWAYS FOR STELLENBOSCH MUNICIPALITY: MINIMISING ELECTRICITY COSTS WHILST IMPROVING ENERGY SECURITY AND DECARBONIZING POWER SUPPLY

2. PURPOSE

To present to Council the final report of the Municipal Electricity Masterplan (MEMP) on electricity pathways for Stellenbosch Municipality: Minimising electricity costs whilst improving energy security and decarbonizing power supply.

3. DELEGATED AUTHORITY

For notification by the Municipal Council.

4. EXECUTIVE SUMMARY

During the advent of more frequent loadshedding periods by Eskom, Council decided to investigate ways and means to reduce the impact on civil society and businesses by means to co-generate electricity. To this end, the Municipality entered into a Memorandum of Understanding with:

- The University of Stellenbosch
- Council for Scientific and Industrial Research (CSIR) as well
- The Western Cape Government

The Investigation into the best ways forward were made into the following topics:

- Energy Master plan – Requested CSIR to do this investigation
- Cost-of-Supply study – Appointed Consultants to investigate the cost of supply
- Energy Storage Investigation – Appointed the University of Stellenbosch to conduct this viability study
- Electricity Master Plan – Appointed Consultants adjust the network to cater for all future possible additions.

5. RECOMMENDATIONS

- (a) that this report be noted; and
- (b) that Council accepts the report on “MUNICIPAL ELECTRICITY MASTER PLAN (MEMP) - Electricity pathways for Stellenbosch Municipality” as authored by the CSIR.

6. DISCUSSION / CONTENTS**6.1 Background**

The Stellenbosch University, Council for Scientific Industrial Research and the Municipality joined up through the establishment of a Memorandum of Understanding to assist the Municipality in finding solutions in Alternative Electricity Generation (AEG). This process is needed to counter the impact of the current spate of loadshedding on the social and business fraternity of Stellenbosch Municipality.

In order to achieve this, various investigations had to be done to focus the aim of the Municipality to those most viable measures in countering the loadshedding struggle within Stellenbosch.

The following projects were launched:

- Energy Master Plan Investigation – Appointed the CSIR to do this investigation
- Cost-of-Supply Study – Appointed Consultants from our Panel to do this study
- Energy Storage Study – Appointed the University of Stellenbosch to do a viability exercise on batteries and other energy storage mechanisms
- Electricity Master Plan to investigate the capacity of networks with the introduction of various electricity generators – Appointment of Consultants from our panel to do this planning.

This report deals with matter in (a) above.

It is note that study mentioned in (b) has just been completed and the university is currently busy with it (c).

6.2 Discussion

The pace of adding new generation capacity in line with the IRP 2019 has not kept pace with Eskom's deteriorating plant performance, consequently, South Africa continues to experience loadshedding which harms our economy. This in turn creates uncertainty and risk in enterprises/municipalities when planning for future growth or reviewing sustainability and profitability. The shedding of the load was halted by an extended lockdown where a risk-adjusted strategy was implemented in response to a growing Covid-19 pandemic but returned in the winter months and remained present for the last half of 2020.

Loadshedding has increasingly become worse which can be depicted by a graph supplied by a company providing loadshedding time service for the public of South Africa. This graph is shown below:

Figure Indicating the Rapid Increase of Loadshedding Days per Annum

The purpose of the Energy Master Plan therefore is to find alternative methods of energy generation, such that the inadequate National Supply of Electricity can be augmented with the purpose of ensuring viable economic operations within Stellenbosch.

The report considered the following project objectives:

The overall objective of the study is to provide guidance on possible electricity futures for the region.

The report does not stipulate how to get there but provides scenarios and possible pathways.

The main project objective is to assess various electricity pathways for Stellenbosch Municipality. These pathways shall be compared based on a criteria. Such criteria include:

- Minimizing electricity tariffs
- Improving security of supply
- Moving towards long term carbon neutrality

Stellenbosch Municipality has indicated its drive to become one of the greenest energy regions in the country. A MEMP is based on the least-cost techno-economic optimisation of the municipal electrical energy system. Factors that were considered in this optimisation include:

- Demand projections
- Tariff projections
- Local resources (solar and wind)
- Rooftop PV (customer resource) potential and penetration
- Technical performance and costs
- High-level considerations of power network constraint

The Study found the following:

- The analysis showed that rooftop solar PV will likely play a significant role in the electricity future of the municipality. Decision makers should be mindful of this customer resource and promote the responsible and sustainable utilization thereof. Utilities should be careful to not push their customers to deflect with excessively high access charges or unreasonably low FIT (feed in tariffs). Ongoing loadshedding is already causing many South Africans to install batteries for reliable supply/backup. Stellenbosch Municipality is in the position to be able to buffer their customers from loadshedding and expected Eskom tariff increases.

This report was presented to the Directors as well as to the members of MOU on Alternate Electricity Generation.

6.3 Financial Implications

This report has financial implications to the municipality but will only become known once some assessments have been done. Listed projects may also have security of supply benefits as well as savings due to generating own electricity. Various budgets have been created for the projects mentioned above.

6.4. Legal Implications

The recommendations in this report comply with Council's policies and all applicable legislation.

6.5. Staff Implications

No staff positions are affected at this point in time

6.6. Previous / Relevant Council Resolutions

"40TH COUNCIL MEETING: 2021-01-27: ITEM 11.5.1 RESOLVED (nem con)

- (a) that Council approves the investigation into alternate methods of electricity generation and purchases;*
- (b) that Council approves the joint investigation to be done by University of Stellenbosch, Council for Scientific and Industrial Research (CSIR), and the Western Cape Government;*
- (c) that Council accepts the initiating of the following processes as may be required:*
 - i. Municipal Systems Act, Section 78(1) processes*
 - ii. Municipal Finance Management Act, Section 33 investigation processes*
 - iii. Electricity Regulation Act, Section 13; and*
- (d) that Council considers the funding of such investigations and implementation"*

6.7. Risk Implications

Risks such as sufficient electricity supply and proper funding balancing are being mitigated.

6.8. Comments from Senior Management:**6.8.1. Director: Infrastructure Services**

Writer of this report

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.6.4

- (a) that this report be noted; and
- (b) that Council accepts the report on "MUNICIPAL ELECTRICITY MASTER PLAN (MEMP) - Electricity pathways for Stellenbosch Municipality" as authored by the CSIR.

EXECUTIVE SUMMARY

South Africa is experiencing an electricity crisis – supply is not able to meet demand. Loadshedding has become part of everyday life in South Africa, and this may continue for the foreseeable future. Furthermore, the Electricity Supply Industry (ESI) is evolving but the end-state is unknown.

On a utility scale, solar PV and onshore wind are cost competitive, with reduced greenhouse gas (GHG) emissions benefits. These Variable Renewable Energy (VRE) generation technologies are being added to the energy mix all over the world. VRE is not just providing diversity from a technology/resource perspective but also from a geographical one – distributed generation.

CSIR undertook a municipal electricity supply master plan for Stellenbosch Municipality. The study provides electricity pathways up until 2040, similar to the national IRP. The study provides the “what” should be procured and “when”. The “how” and by “who” still needs to be unpacked by the municipality.

Rooftop Solar PV

The geospatial work identified rooftop area for the municipality per customer class. Residential customers ‘house’ almost 60% of the identified space. Installable PV capacity equates to approximately 580 MW of rooftop PV. This is about 8 times the municipality’s MD (maximum demand).

Around 40% of the identified installable rooftop PV capacity would be required to meet all customers’ annual volumetric energy consumption, in terms of magnitude (not timing). Residential, commercial and agricultural customers have adequate roofspace to cover their own annual electricity consumption needs.

The business case analysis shows that rooftop solar PV currently makes sense in most instances. Due to increasing municipal tariffs and declining solar PV costs the business case improves with time. If the current price paths continue, solar PV will make financial sense for all customer classes and scenarios by 2040. Stellenbosch already provides a feed in tariff to its customers. Stellenbosch Municipality is most likely in the initial-Early Adopters stage and already has around 6 MW of embedded PV generation on their network.

The analysis showed that rooftop solar PV will likely play a significant role in the electricity future of the municipality. Decision makers should be mindful of this customer resource and promote the responsible and sustainable utilisation thereof. Utilities should be careful to not push their customers to deflect with

excessively high access charges or unreasonably low FIT (feed in tariffs). Ongoing loadshedding is already causing many South Africans to install batteries for reliable supply/backup. Stellenbosch Municipality is in the position to be able to buffer their customers from loadshedding and expected Eskom tariff increases.

Utility Scale Generation

Contrary to the municipality's current and expected expansion, the demand is forecast to decline by 9% from the current 392 to 356 GWh in 2040. The Eskom tariffs were estimated to increase above inflation and to also shift away from energy dominated charges to higher fixed and demand charges. The municipality's current total Eskom bill is 88% energy related. Assuming the same electricity usage pattern this would decrease to about 70% in 2040.

Five scenarios were considered, namely:

1. Business as Usual (BAU): Continue to solely purchase supply from Eskom, including via the neighbouring Drakenstein Municipality
2. Least Cost Nodal: The municipality is grouped into four supply areas (Stellenbosch, Cloeteville, Franschhoek and Pniel) and each is treated independently. A least cost approach is applied.
3. Least Cost Municipality: Also, a least cost approach, but from a municipality-wide perspective where wheeling amongst the supply areas was investigated.
4. Autonomy by 2030: Investigated to quantify what would be required if Stellenbosch Municipality are forced, or choose, to disconnect from the Eskom network by 2030. This provides the minimum cost to do so as ancillary services and network and system upgrades were not included.
5. Loadshedding Mitigation: Investigate possible technical interventions to reduce the amount of loadshedding experienced by Stellenbosch Municipality's customers

Under the BAU scenario, the total cost of electricity purchases would increase from R 558 million in 2022 to R 881 million in 2040, in real terms a 60% increase, even though demand is expected to decline.

The following alternatives were considered: wind, solar PV, battery storage and peakers (gas turbines and engines). To provide realistic outputs annual MW build limits were enforced on wind and solar PV. Utility-scale build size was taken as 20 MW and 5 MW for wind and solar PV, respectively. The possibility of lower build sizes favoured PV in the smaller load centres. All new builds were limited geographically within the municipal boundaries, and thus, so was wheeling arrangements.

The study showed that by procuring alternatives and diversifying the energy mix, the cumulative cost of electricity could be reduced by 20%. With the addition of low-cost renewables, the unit cost of electricity could be significantly lower than the BAU scenario. Stellenbosch Municipality has the opportunity to lower their demands on the struggling national network, reduce electricity costs and lower their environmental impact. The cost of Stellenbosch Municipality not taking action timeously is high.

Under the Least Cost Nodal plan, the capacity (MW) reliance of Eskom would reduce from the current 100% to 60% by 2030 and 50% by 2040. Over the same period the reduction in energy reliance is greater, namely down to 40% and 30%. It should be noted that the annual build limits of VRE are relatively high so these results could be seen as optimistic. Eskom will continue to play a major role and will supply more than half of the electricity (GWh) over the said period. It was shown that it is not economically optimal for Stellenbosch Municipality to disconnect from the grid.

The Least Cost plan has cost benefits as well as societal benefits derived from reducing CO₂ emissions and consuming less water. The following figure shows the cost savings, cumulative CO₂ emissions and water consumption for Stellenbosch Municipality. Renewables will provide almost half of the electrical energy over the period.

Engineering load flow studies determined the VRE generation with a maximum size of 72 MW can be connected at Stellenbosch substation, 18 MW can be connected at Cloetesville substation and a 29 MW plant can be connected at Franschhoek substation. Due to Pniel receiving supply at 11 kV only a 2 MW plant can be connected there. The wheeling of electricity within the municipal boundaries via Eskom's network was investigated. It was shown that Stellenbosch Municipality could reduce the cost of electricity by a further 8% through wheeling. Wheeling allowed for a greater exploitation of better wind resources and reduced the curtailment of wind. The total cost of electricity should be evaluated, not just the generation costs. Further studies on wheeling from outside the municipal boundaries are recommended.

For the 100% Autonomy by 2030 scenario, a significant amount of peakers are built in 2030 to provide firm capacity. The total annual cost of this scenario peaks at R 857 million, R 300 million of which are diesel fuel costs. The analysis excludes the necessary network/system upgrades; thus the cost estimates are optimistic (low). Cheaper fuel alternatives would dramatically change the costs.

The amount of loadshedding in 2022 is unprecedented. Technical solutions to mitigation loadshedding were investigated. Battery storage was selected over peakers (ICE and OCGT). Only with stage 8

loadshedding, which has limited time available for charging of the batteries, were peakers required to supplement battery storage. It was shown that about 50 MW with 4-hours storage located across the municipality could reduce the amount of unserved energy by about 80%. The overnight capital cost of such facilities, R 1.2 billion, would be twice the municipality's annual bulk purchase account in that year. When compared to the cost of unserved energy at R 93.00/kWh, even if taken at 10% of this value there is a strong case for battery storage. Furthermore, the cost premium of deploying such a facility in 2023 was compared to the techno-economic optimal solution for electricity supply. The cost premium is 11% over the horizon 2022 to 2040. The question decision makers need to evaluate is if this premium is a justified cost to mitigate loadshedding. Further studies are recommended to unpack these possibilities. Additionally, the municipality should engage with the System Operator as to what is permissible during loadshedding.

E1: Cumulative costs, indirect CO₂ emissions and water consumption

The build capacity for the Least Cost Nodal plan is provided in **Table E2**. In the short-term, Stellenbosch Municipality should procure wind and solar PV. Due to relatively small load-centres, the latter is favoured. These are least regret options. The likely limitation will be procurement constraints. Procurement should be based on the value to the municipality and the municipality should not simply

incentivise the lowest flat tariff - generation that maximises savings/value. For instance, electricity supplied during peak periods and the high demand season are of higher value. Put simply: tell the market what you want/need and let the private sector optimise. Rules of the game in terms of grid unavailability and curtailment need to be carefully considered. This is particularly important based on the current electricity crisis and increasing curtailment with likely high levels of VRE penetration.

In the medium term, energy storage systems should also be procured, either as stand-alone systems or as RE hybrids. The latter may have co-optimisation benefits. If loadshedding persists, which it likely will, then energy storage systems should also be procured in the short-term as modelled in the loadshedding mitigation study.

It is not recommended that Stellenbosch Municipality make all the new capacity investments at once, but rather make investment decisions in the short-term and then revise the municipal electricity masterplan once every two to three years to determine the next phase of investment.

E2: Build capacity: Least Cost Nodal (without wheeling)

Built Capacity MW		Wind	PV	Battery (4 hours storage)
Short-term	2022 - 2025	20	65	15
Medium-term	2026 - 2030	0	35	20
Long-term	2031 - 2040	0	25	35
Installed capacity by	2040	20	125	70*

* Not the sum as battery storage lifespan is 10 years

The potential job creation and economic value-added impacts resulting from the deployment of 125 MW utility-scale solar PV and 20 MW wind energy installations during 2022-2040 have been estimated using the IJEDI model. The results indicate that a total of 2,892 and 1,164 FTE jobs can be created during the construction and O&M phases of these energy technologies, respectively. Furthermore, a total economic value added of approximately R 1,358 million and R 721 million can be generated during the construction and O&M phases, respectively. It is evident that these technologies have the potential to deliver social and economic benefits, however, a consistent built out of such projects is encouraged in order to sustain these benefits.

WEPS	Wholesale Electricity Pricing System

1. Background

1.1. International and National Context

South Africa is experiencing an electricity crisis – supply is not able to meet demand. Before it was (just) capacity but, for some time, it is both a capacity and energy shortage. Loadshedding has become part of everyday life in South Africa, and this may continue for the foreseeable future. Furthermore, the Electricity Supply Industry (ESI) is evolving but the end-state is unknown.

On a utility scale, solar PV and onshore Wind are cost competitive, with reduced greenhouse gas (GHG) emissions benefits. These Variable Renewable Energy (VRE) generation technologies are being added to the national energy ‘mix’. VRE is not just providing diversity from a technology/resource perspective but also from a geographical one – distributed generation.

Solar PV is modifiable and thus can work on small-scale. Internationally, the emergence of embedded generation, which can also be referred to as customer resource, is changing the flow of energy (and cash) from the traditional, solely top-down and centralized supply (**Figure 1**) to incorporate some bottom-up and decentralized supply (**Figure 2**). Customers, including municipalities, are no longer captive. In light of these dynamics, municipalities are compelled to re-define their role in the electricity value chain and adapt their funding and operating models.

Municipal Electricity Master Plans (MEMPs) are similar to the national level Integrated Resource Plan (IRP) undertaken by the Department of Mineral Resources and Energy (DMRE). The creation of MEMPs is intended to complement the national level IRP and is a critical foundation to empower municipalities to determine what type of supply, when installed and the boundary conditions to procure/enable energy solutions in the respective jurisdictions. Such MEMPs form the business case for the municipal role in the sustainable energy transition, leveraging municipal competencies and integrating spatially dependent local resources and opportunities.

Figure 1: Centralised utility scale power generation supplying electricity needs of municipalities (status-quo)

Figure 2: Increasing levels of distributed resources would impact the energy landscape where more distributed resources become embedded in municipal networks

1.2. Local Context

Stellenbosch is the second oldest town in South Africa. Stellenbosch Municipality has a population of about 200,000 people and the population is expected to grow at about 2% per year. It is one of the most populated municipal areas in the Cape Winelands District with the highest population density (over 230 people/km²). Their three largest sectors, based on GDP contribution are:

1. Finance, insurance, real estate and business services (21.6%)
2. Wholesale and retail trade, catering and accommodation (20.7%)
3. Manufacturing (16.4%)¹

This growing population challenges existing infrastructure for residential, commercial, and industrial use. The map below shows Stellenbosch Municipality's location in South Africa.

Figure 3: Stellenbosch Municipality located in the Western Cape Province of South Africa

¹ https://www.westerncape.gov.za/provincial-treasury/files/atoms/files/SEP-LG%202020%20-%20WC024%20Stellenbosch%20Municipality_0.pdf

Following the amendments of Schedule 2 of the ERA which now enables municipalities in good financial standing to develop their own power generation projects with or without IPPs, the Stellenbosch Municipality, therefore seeks to develop their MEMP to mitigate against loadshedding and to reduce their dependency on Eskom while pursuing their climate change aspirations. This initiative by Stellenbosch Municipality is part of the Municipal Energy Resilience project² which was launched by the Western Cape government to take advantage of the ERA amendments and aims to assist municipalities to develop their electricity master plan which include purchasing electricity from IPPs. Discussions around the development of the MEMP started in October 2020, with four parties involved being Stellenbosch University, Stellenbosch Municipality, CSIR and the Western Cape government. A memorandum of understanding (MOU) was signed by the four parties in February 2021.

The average wholesale electricity tariff in South Africa has been increasing steeply for the last decade. These rising electricity prices, added to the already described energy security concerns, have resulted in a range of challenges for municipalities in South Africa. This has prompted municipalities to seek alternative energy solutions, including maximizing energy efficiency opportunities, deploying back-up emergency supply options, looking to supplement Eskom wholesale offtake, and enabling embedded generation options such as solar PV for customers.

Least-cost energy optimisation studies are required to select the best resource mix (types and capacities) to inform investment decisions within the boundary conditions and specific objectives of the municipality.

Stellenbosch Municipality has four supply areas, namely:

1. Stellenbosch and surrounding areas (STB)
2. Cloetesville and surrounding areas (CLV)
3. Franschhoek and surrounding areas (FHK)
4. Pniel and surrounding areas (PNL)

Besides Pniel, all electricity is supplied via Eskom's points of delivery (PODs). For Pniel, Stellenbosch Municipality purchases electricity from neighbouring Drakenstein Municipality and sells to their customers in Pniel and the surrounding areas. Electricity masterplans will be developed per supply area

² <https://www.westerncape.gov.za/news/municipal-energy-resilience-project-launched-more-energy-secure-future>

and for the municipality overall. The previous figure provides a graphical representation of the supply regions.

1.3. Project Objectives

The overall objective of the study is to provide guidance on possible electricity futures for the region. The report does not stipulate how to get there but provides scenarios and possible pathways.

The main project objective is to assess various electricity pathways for Stellenbosch Municipality. These pathways shall be compared based on a criteria. Such criteria include:

- Minimizing electricity tariffs
- Improving security of supply
- Moving towards long term carbon neutrality

Stellenbosch Municipality has indicated its drive to become one of the greenest energy regions in the country. A MEMP is based on the least-cost techno-economic optimisation of the municipal electrical energy system. Factors that were considered in this optimisation include:

- Demand projections
- Tariff projections
- Local resources (solar and wind)
- Rooftop PV (customer resource) potential and penetration
- Technical performance and costs
- High-level considerations of power network constraints

1.4. Applied Methodology

The overall process is a least-cost, techno-economic optimisation of supply options to meet demand in the region. The outlook is from the year 2022 to 2040, the reference year is 2021. The study deviates from the national IRP on two aspects:

- Customer resource – the option of embedded generation, namely rooftop PV is explored. This is executed before the generation expansion planning. Note that generation expansion planning only considers utility-scale generation options.

- Regional – the current national IRP is non-spatial; the country is treated as a single node (this is also typically true for town or city IRPs). For Stellenbosch Municipality we treat each supply area as a node which is inter-connected by a simplified electrical network. IRPs answer which technology to build or retire and when to do so. The “where” is not typically dealt with. Our approach considers the local resource and determines optimal placement (location) of generation. For instance, is it better to build a wind farm with a better resource that is located away from the largest demand centre and transmit the power or only build close to the demand centres?

Due to the above extensions to a ‘standard’ IRP in South Africa we believe this work is innovative. The approach provides insights for the local decision/policy makers. Additionally, lessons learnt can also be applied on a national level.

The work is grouped into four workstreams and four phases. The Customer is purposely placed at the top, the Utility at the bottom with Technology and Local Resources separating the two. As energy systems become more dynamic and customer-centric so too should energy systems planning.

Table 1: Structure of the study

	1. Status Quo (Input Data)	2. Forecast and Analysis	3. Capacity Expansion Modelling	4. Impact Assessment (Results)
Customer	Get to know your customer	Demand projections, rooftop PV analysis		
Technology	Technical performance and costs	Learning rates, and socio-economic analysis	Techno-economic optimisation	Determine GHG reductions and impact on the cost of electricity (relative to BAU). Quantify potential socio-economic benefits
Local Resource	VRE resource potential, GIS layers, Eskom electrical network	VRE hourly outputs, electrical network considerations	(PLEXOS modelling)	
Utility	Municipality and Eskom tariffs	Projected tariffs		

1.5. Limitations of the Study

Energy planning is forward-looking, both the inputs to the analysis and the modelling outputs. The future is uncertain, so one should interpret the findings as possible scenarios, not as one truth. The aim is not to predict the future (you cannot) but rather to plan/prepare for the uncertainty thereof.

1.6. Document Structure

This document is structured as follows:

- Section 2: Input Data (Status quo)
- Section 3: Analysis and Forecast
- Section 4: Rooftop PV Analysis
- Section 5: Capacity Expansion Planning
- Section 6: Socio-Economic Analysis
- Section 7: Summary and Conclusions
- Section 8: Recommendation for Further Work

Section 2 and 3 use the four workstreams (Customer, Technology, Local Resource, Utility) as sub-headings.

2. Status Quo

2.1. Customer

2.1.1. Overview

Customer refers to the municipality's customers who are the end-users. Data was sourced via the municipality. The data requirement included the municipality's monthly Eskom and Drakenstein invoices, or a summary thereof. Other than Eskom and Drakenstein, there are no (substantial) electricity suppliers to the municipality. Purchases from Drakenstein are less than 10% of total bulk purchases. Both the inflow (Eskom and Drakenstein invoices) and outflow (customer sales) of electricity services and revenues, from the municipality's perspective, were captured.

2.1.2. Electrical Demand

The total electrical supply is provided in **Section 2.3.1.** and describes the usage per customer class. Three customer classes are provided, namely residential (also known as domestic), commercial and industrial.

A summary of sales data and relative ratios is presented in **Table 2** and **Figure 4**, respectively. Residential is by far the most prevalent class in terms of number of customers – 93%. For sales, the split is more 'balanced' among the three customer classes. As expected, the monthly average usage per customer class increases from residential to industrial. These average monthly usage per sector are typical. It is worth noting the large difference between the average monthly usage of prepaid and conventional meters in the Residential sector, respectively 279 and 729 kWh per month. Conventional Residential customers, on average, consume more than 2.5 times that of Prepaid customers. This alone, makes rooftop solar PV relatively more attractive to conventional meter customers and is discussed further in **Section 4.4.**

Table 2: Summary of Sales for FY 2021/22 (Jul 2021 to Jun 2022)

	Number of Customers (07/21)	Sales (GWh)	Average monthly usage per Customer (kWh)
Residential	33 830	131	327
Commercial	2 007	24.6	1 020
Industrial	346	200	48 120
Sub-Total	35 733	353	599
Munic + Other	335	16.5	4 096
Total	36 068	372	859

**Figure 4:** Customer and sales split

2.2. Local Resources

2.2.1. Overview

Two local resources are considered, namely solar and onshore wind. From these, the potential energy production for solar PV and onshore wind plants are modelled. An environmental constraint analysis found that Stellenbosch Municipality is extensively constrained by agriculture, built-up areas, and environmental / conservation planning features mostly associated with the mountainous areas. This is detailed in the following table.

Table 3: Environmental analysis classes

Feature		Dataset
AVOID	Protected Areas, Nature Reserves, Conservation Areas*	South African Protected Areas Database (SAPAD), Q4, 2021 Western Cape Biodiversity Spatial Plan, 2017
	Critical Biodiversity Areas (CBA 1 & 2, all subcategories)	Western Cape Biodiversity Spatial Plan, 2017
	Rivers and wetlands	South African National Biodiversity Institute (SANBI), National Biodiversity Assessment (NBA), 2018
	Viticulture, Horticulture, Pivot Irrigation, Non-pivot Irrigated Annual Crops / Planted Pastures, Shadenets, Food Gardens	Department of Agriculture, Forestry and Fisheries (DAFF), 2017
	Built-up landcover	GeoTerra Image, South African National Land Cover (SANLC), 2020
CONSTRAINED	Rivers and wetlands 32 m buffer	Generated from SANBI NBA, 2018
	Rainfed Annual Crops / Planted Pastures, Smallholdings, Strip Field Cultivation, Old Fields	DAFF, 2017
	Mines & quarries, Forested Land landcover	GeoTerra Image SANLC, 2020
OPEN	Barren Land, Shrubland, Grassland landcover	GeoTerra Image SANLC, 2020

The high-level environmental constraints are a spatial overlay of available data. It aims to provide an overview of potential areas that need to be avoided or may be constrained for new utility scale wind and solar PV development, and to identify initial sites for subsequent wind and solar resource assessment. In reality and at a finer scale, other opportunities and constraints may be revealed.

The data was aggregated into three classes:

- 1) Avoid: Areas that may be considered as unavailable, potential fatal flaws or critical conflicts for utility-scale renewable energy development;
- 2) Constrained: Areas that may be considered as constrained for utility-scale renewable energy development. In the case of rivers and wetlands, new developments within 32 m of these would require non-consumptive water use authorisation (i.e. procedural constraint). In the case of landcover / uses, these areas may be potential opportunities for new utility-scale renewable energy development sites, but would require a transition to new / multi-purpose land use;
- 3) "Open": Areas that may be considered as potential areas for new development in terms of land availability (open / undeveloped land).

Six potential sites for solar and wind development were identified manually, primarily based on larger tracts of “open” (as far as possible) or “constrained” land. The list of identified sites is not exhaustive and the sites cannot be considered as feasible from a technical or safety/social perspective (especially in the case of wind energy facilities). The sites only aim to serve as a point of departure for further wind and solar resource assessments. These sites are provided below, and locations are shown in the following figure.

Figure 5: Potential sites for solar and wind resource assessments

Sites 4 – 6 are representative of the Stellenbosch, Pniel and Franschhoek areas, respectively. Sites 1 – 3 are located within Eskom supply regions. The resource data for Stellenbosch is also used for Cloetesville, which are located right next to each other.

2.2.2. Solar Resource Assessment

Although the region of Stellenbosch does not have the highest concentration of solar irradiance compared to other regions of South Africa, it is still considered a viable location to install solar PV. To provide some perspective, Stellenbosch has around 15% less GHI than Upington. The specific PV yield gap is even less at about 11%.

The following tables provide a summary of the local solar resource. Due to the tracking of the sun, SAT (single-axis tracking) provides for additional electricity production compared to FT (fixed tilt) and is about 20% more in this case. The maximum variation across the sites is about 10%.

Table 4 to Table 6 present the summary statistics of PV Syst simulations for a fixed-tilt solar PV system (48% GCR), single-axis without backtracker (27% GCR) and single-axis with backtracker (35% GCR). The summary statistics are based on an hourly temporal resolution considering the TMY weather data for each location in Stellenbosch region for a representative 1 MW_{DC} fixed-tilt system and 1 MW_{DC} single-axis tracking system with backtracking. The statistics provided include GHI, POA, resulting expected annual AC energy production and Capacity factor. The capacity factor (calculated in accordance with IEC TS 61724-3:2016 for Photovoltaic system performance – Part 3: Energy evaluation method) is a metric commonly applied to power plants and facilitates comparison between PV and other power plants.

Table 5 and Table 6 shows the single-axis tracking system with 35% GCR generating approximately 19 ~ 20% more energy than the fixed-tilt systems. The single-axis tracking system shows a clear advantage in terms of specific energy (kWh/kWp) due to the orientation of the PV modules relative to the sun. However, the single-axis tracking system with or without backtracking comes with additional capital expense and maintenance costs. This needs to be considered carefully when establishing an investment case.

Table 4: Summary statistics of the solar resource across Stellenbosch locations (fixed tilt, GCR = 48%)

Site	GHI [kWh/m2]	POA [kWh/m2]	Annual Energy [MWh]	Capacity factor
Site 1	2014	2266	1783	20.4%
Site 2	1939	2166	1691	19.3%
Site 3	2013	2260	1760	20.1%
Site 4	1990	2221	1733	19.8%
Site 5	1950	2165	1696	19.4%
Site 6	1864	2076	1625	18.6%

Table 5: Summary statistics of the solar resource across Stellenbosch locations (single-axis tracking, GCR = 27%)

Site	GHI [kWh/m ²]	POA [kWh/m ²]	Annual Energy [MWh]	Capacity factor
Site 1	2014	2266	2190	25.0%
Site 2	1939	2166	2106	24.0%
Site 3	2013	2260	2185	24.9%
Site 4	1990	2221	2148	24.5%
Site 5	1950	2165	2105	24.0%
Site 6	1864	2076	2000	22.8%

Table 6: Summary statistics of the solar resource across Stellenbosch locations (single-axis tracking, GCR = 35%)

Site	GHI [kWh/m ²]	POA [kWh/m ²]	Annual Energy [MWh]	Capacity factor
Site 1	2014	2707	2208	25.2%
Site 2	1939	2599	2119	24.2%
Site 3	2013	2707	2200	25.1%
Site 4	1990	2673	2161	24.7%
Site 5	1950	2615	2118	24.2%
Site 6	1864	2456	2009	22.9%

The following figure shows a relative comparison between the Stellenbosch location's solar PV capacity factor performance relative to other selected jurisdictions (locally and internationally). All Stellenbosch locations exhibit good solar PV capacity factors (whether fixed-tilt or single-axis tracking) and comparable performance to the existing national level solar PV fleet (part of the REIPPPP). All of the Stellenbosch locations outperform the international benchmark countries that were considered (countries that have significant solar PV installed capacity).

Figure 6: Relative comparison of Stellenbosch locations expected solar PV capacity factors and selected other jurisdictions (local and international)

2.2.3. Wind Resource Assessment

A wind resource assessment was done for six sites using the Wind Atlas Analysis and Application Program (WAsP) which was first released by the Danish Technical University (DTU) in 1987. The software is continually being updated and Version 12 was recently released. WAsP is regarded as an industry standard. The user inputs topography, ground cover and climate data which are used to generate estimates of annual energy production, capacity factors and many other parameters at the site of interest. Utility, commercial, and residential scale turbines were evaluated at heights of 80, 35 and 18 meters respectively.

The software draws on several datasets to assess wind resource potential. The terrain elevation and ground cover datasets were both obtained from the Global Wind Atlas (GWA) map warehouse. A generalised wind climate dataset is also required and was obtained from the Wind Atlas of South Africa (WASA) project, specifically a dataset referred to as the 'WASA 2 LIB files'. They contain generalized wind climates across South Africa at a spatial resolution of 3.3 km at heights of 25, 50, 80, 100 and 150 meters.

The following table presents the details of the wind climate files that were used for the six evaluated sites.

Table 7: Wind climate files selected from the WASA2 dataset

Site	Site centroid	Nearest WASA2 lib file	Distance between [km]
Site 1	34° 0'3.93"S 18°47'20.29"E	WASA2_33.997S_18.785E	0.5
Site 2	33°52'50.85"S 19° 0'16.19"E	WASA2_33.869S_19.003E	1.3
Site 3	33°55'33.56"S 18°46'9.60"E	WASA2_33.936S_18.783E	1.7
Site 4	33°50'24.43"S 18°46'37.75"E	WASA2_33.844S_18.780E	0.5
Site 5	33°54'47.67"S 18°53'50.16"E	WASA2_33.902S_18.893E	1.2
Site 6	34° 0'3.93"S 18°47'20.29"E	WASA2_33.997S_18.785E	0.5

Once the above-mentioned datasets are read in, a resource grid is defined. Elevation and groundcover detail are supplied for the total area selected for analysis, with the resource grid being a subsection large enough to cover the site boundary. The user may then place any number and type of turbines in the area of interest to calculate the potential yield. In this analysis, three turbines of each type were placed: one in a position deemed to have a low yield, one in a high yield area and one that represents an average yield. The following figure shows a typical distribution.

Figure 7: Placement of turbines in a low (turbine 01), high (turbine 02) and average (turbine 03) area

The turbines may be selected either from a database provided by the analysis software or specified by the user. The three types of turbines used in this study are shown below:

Table 8: Turbine types used in the study

Name of turbine	Manufacturer	Scale represented	Hub height [m]	Source
V100-2.6 MW VCS 50 Hz	Vestas Wind Systems	Utility	80	WAsP database
Bonus 450 kW MkIII	Bonus Energy	Commercial	30	WAsP database
Kestrel e400n 3500 kW	Kestel Diversified Products	Residential	18	User supplied

Values at 80 m are not readily available, but South Africa has an average annual wind speed of 6.5 m/s at height of 100 m. Within the municipal boundaries the average wind speed is 8.03 m/s, indicating a

good wind resource. The relatively high value could be due to high maxima in the mountainous regions. The mean wind speeds across the six sites at 80 m range from approximately 5.02 to 6.61 m/s. The following tables provide a summary of the local wind resource. In the case of the annual energy production (AEP) and power density, values are provided at a location deemed to have the lowest, highest, and average yield ('worst'; 'best' and 'average' respectively) while the capacity factor and wind speed values are taken from the location with an average yield.

Table 9: Annual energy production, power density, capacity factors and wind speed: **utility-scale**

Site number	Annual energy production (GWh)			Power density (W/m ²)			Capacity factor (%)	Wind speed (m/s)
	Worst	Best	Average	Worst	Best	Average	Average	Average
01	3.920	4.530	4.130	168	205	182	18.1	5.02
02	5.171	7.819	6.825	244	501	388	29.9	6.42
03	6.846	2.328	5.127	437	95	264	22.5	5.57

Table 11: Annual energy production, power density, capacity factors and wind speed: **residential-scale**

Site number	Annual energy production (MWh)			Power density (W/m ²)			Capacity factor (%)	Wind speed (m/s)
	Worst	Best	Average	Worst	Best	Average	Average	Average
01	1.311	2.593	1.870	43	92	64	6.4	3.18
02	2.715	8.759	5.185	99	454	194	17.7	4.78
03	6.628	0.360	3.147	347	6	117	10.7	3.85
04	1.574	2.476	1.987	50	83	64	6.8	3.26
05	0.589	5.424	3.233	17	378	134	11.0	3.75
06	1.176	9.650	7.074	39	465	269	24.1	5.76

The data shown in **Table 9** is further elucidated in the following figure which shows a 'Box and Whisker' graph of the variation in the average utility scale capacity factor at each site. It indicates larger variations of capacity factor at some sites compared to others, with the WASP analysis indicating that the variation per site is mainly due to orography effects.

**Figure 8:** Box and Whisker graph of wind resource capacity factors

The generalised wind climate is essentially a statistical summary of the wind resource at each site, showing the wind direction distribution (as a wind rose) and the wind speed distribution as a graph of wind speed probability. The wind speed distribution is usually represented as a Weibull distribution, which gives a good representation of average wind speed and the variations thereof. The wind roses of the six sites are shown in the following figures.

Site 01

Site 02

Site 03

Site 04

Figure 9: Wind roses of the six considered sites

Because this analysis was performed at generic sites and heights, it does not represent the exact yield that a potential farm may produce. A computer flow model must be conducted before an exact development yield can be obtained, allowing one to precisely estimate the wind climate across the terrain and at various heights. Software such as WAsP and WindPro can be used to model computational flow. This will provide a precise wind farm design as well as the estimated production of each wind turbine generator based on its location.

Furthermore, while the evaluation can be carried out using modelled data, it is recommended that a measurement campaign be carried out using one of the traditional approaches. These include a wind met mast or a Lidar, both of which have grown in popularity as a result of their capacity to be deployed at short notice.

2.3. Utility

2.3.1. Overview

The main supplier of electricity to Stellenbosch Municipality is Eskom. As in the rest of the country, there are also customers in this region that are directly supplied by Eskom. The demand of customers who are supplied directly from Eskom is not considered in this study. Only municipal demand is discussed further.

This section presents the electricity supply by Eskom to the Stellenbosch Municipality. A total of three Eskom Points of Delivery (PODs) exist across the municipality. For Pniel, Stellenbosch Municipality purchases electricity from neighbouring Drakenstein Municipality and sells it to their customers in Pniel and the surrounding areas, also a total of three PODs within the Pniel supply area. All the PODs are on Eskom's Megaflex tariff structure. For modelling purposes, we assume all voltages are larger than and equal to 66 kV and smaller than and equal to 132 kV ($\geq 66 \text{ kV} \ \& \ \leq 132 \text{ kV}$).

Electrical demand, as used in this study, refers to both energy (kWh) and peak capacity (kVA). The following table provides a summary of the Eskom electricity purchases, directly from Eskom and indirectly from Drakenstein Municipality. The top of the table provides energy related metrics and the bottom, capacity.

The municipality has an annual Bulk Electricity Purchase of 392 GWh, which is about 4% of the City of Cape Town's demand (which in turn is about 4% of the national demand (around 250 TWh)). Stellenbosch and Cloetesville PODs constitute 80% of the purchases. Low Demand (LD) and High Demand (HD) seasons³ are also considered to determine if the region follows the national trend of increased usage during the HD season (hence the use of "high"). The seasons are normalised by number of days. Interestingly Franschhoek has a relatively lower HD requirement which may be due to high amounts of tourism in the summer months.

Table 12: Summary of electricity purchases (Eskom and Drakenstein) for 2021/22 (July 2021 to June 2022)

	Stellenbosch	Cloetesville	Franschhoek	Pniel	ALL
	Drakenstein				
	Eskom (1 POD)	Eskom (1 POD)	Eskom (1 POD)	(3 PODs)	
LD GWh	187	42.1	34.3	25.4	289
HD GWh	67.3	16.2	11.6	8.0	103
Annual GWh	254	58.3	45.9	33.3	392
relative	65%	14.9%	11.7%	8.5%	
HD:LD ratio					
(normalised)	1.07	1.14	1.00	0.93	1.06
MD (MVA)	51.2	12.3	9.4	6.9	75.5
NMD (MVA)	60	16	10	9	95

³ Same demand seasons as Eskom are followed, namely high demand is June to August and low demand is the rest of the year

	Stellenbosch	Cloeteville	Franschhoek	Pniel	ALL
	Drakenstein				
	Eskom (1 POD)	Eskom (1 POD)	Eskom (1 POD)	(3 PODs)	
MD:NMD	0.85	0.77	0.94	0.77	0.79
Load Factor	57%	54%	56%	55%	59%
LF x					
MD:NMD	0.48	0.42	0.52	0.42	0.47

*LD (Low Demand), HD (High Demand), MD (Maximum Demand), NMD (Notified Maximum Demand)

The sum of the peak demands in 2021 was 75 MVA. This excludes diversity and is simply the sum of the peak demands for each POD. With diversity, the peak demand for the municipality overall would be lower.

Stellenbosch has the 'best' load factor⁴ of 57%. Having a larger customer base provides for, *ceteris paribus*, greater diversity which would likely translate to a better load factor. The load factor is mostly dependent on the customer mix but Demand Response (DR) measures, such as ripple control, can be employed to improve the load factor. Cloeteville has the 'worst' load factor is likely indicative of a higher residential customer base.

A metric that the municipality has more control over is the Maximum Demand (MD) to Notified Maximum Demand ratio. As with the Load Factor, the ideal is 1 but this would lead to excessive penalties when MD is above NMD. Franschhoek is operating close to its NMD which may cause penalties in the future if not managed correctly.

The following figure illustrates the time of use (TOU) split. The average time of use for the municipality is 41% Off-Peak, 42% Standard and 17% Peak, which are typical values. The supply areas are fairly uniform in this regard. Pniel is slightly different with a relatively higher Off-Peak ratio.

⁴ The load factor is the average load relative to the peak load over a period, one means the two are equal and thus a constant load

Figure 10: Bulk Purchases - TOU energy split

The following figures present the demand duration curves for each supply area and for the entire municipality. The acute 'drop' on the right is due to loadshedding during the financial year considered. Pniel experienced the least amount of loadshedding. Overall, the municipality's demand is above 45 MW for 50% of the time and above 30 MW for 90% of the time.

Figure 11: Demand duration curves: Stellenbosch (left) and Cloeteville

Figure 12: Demand duration curves: Franschhoek (left) and Pniel

Figure 13: Total demand duration curve for Stellenbosch Municipality

The total cost of bulk purchases of electricity purchased for the 2021 financial year was R 536 million. The majority of which is energy related at 88%, 11% for demand charges and less than 1% for fixed costs.

2.3.2. Stellenbosch Municipality Operated Facilities

The municipality does not currently possess its own electricity generation facilities. However, there are discussions underway regarding options linked to landfill sites. When the details of such facilities are available it should be included in further planning iterations.

3. Analysis and Forecast

3.1. Customer Demand Profiles

Section 2.1.2 provided the current electrical demand of the municipality's customers. This section utilises that data to extract representative hourly demand profiles. It should be noted that this data is only used for the rooftop analysis (**Section 4**). For capacity expansion planning (**Section 0**) the hourly demand data that was provided is used.

Aligned to Eskom tariff structures, the profiles are provided per demand season (low and high). To account for weekly variation three profiles per week are considered, namely Weekday (Wk), Saturday (Sat) and Sunday (Sun). Therefore, a total of six daily profiles. The daily profiles have an hourly temporal resolution. The annual demand profiles (8760 hours) are made up of the said profiles 'stitched' together.

The Distribution Profile Mixer (DPM) software was developed for Eskom. The generic demand profiles from this software were used for residential (PC1), commercial (PC4) and industrial (PC6) customers, respectively and is shown **Figure 14**, **Figure 15** and **Figure 16** respectively. The time presented on the x-axis is the end of the hour, for instance 19:00 is the average demand (kW) from 18:00 to 19:00.

Figure 14: DPM residential (PC1) demand profile

Figure 15: DPM commercial (PC4) demand profile

Figure 16: DPM industrial (PC6) demand profile

The process to fit these profiles to the actual customer data is as follows:

1. Low and High Demand ratios of Eskom purchases are noted
2. Annual sales per customer class are noted
3. Apply multipliers to DPM low and high profiles to get the correct seasonal ratio (item 1) and annual sales (item 2)

The fitted profiles plus total losses are summated to derive the municipal demand profile which is equivalent to the Eskom purchases. Loss factors in Eskom tariff book are used, namely 11% for residential, 10% for commercial and 6% for industrial. The loss factors are scaled to achieve the actual total losses.

The derived municipal demand profiles are checked against the Eskom purchases in terms of TOU. The overall alignment is good with an absolute difference of 5.7%, as shown in the following table.

As noted, the annual energy consumption and seasonal variation of replicated profiles are an exact fit to Eskom purchases. The previous table only considers the absolute differences in terms of TOU. Overall, the replicated hourly demand profiles are a good approximation of the actual customer demands. These profiles are inputs to the Rooftop PV Analysis (**Section 0**).

Table 13: Weighted absolute differences between actual and derived Eskom purchases TOU

	Off-Peak		Standard		Peak		Errors
	Actual	Derived	Actual	Derived	Actual	Derived	
Low Demand	42%	39%	42%	44%	17%	17%	5.7%
High Demand	40%	38%	43%	46%	17%	16%	5.6%
Annual (weighted average)							5.7%

3.2. Technology Costing and Learning Rates

Capacity expansion planning is sensitive to, amongst others, technical performance and technology costs. Technology costs are specified in **Section 5.5.3**. For this study two technology scales are considered, namely embedded/distributed and utility scale. For embedded generation, only solar PV rooftop is considered.

3.2.1. Solar PV

3.2.1.1 Utility scale solar PV capital costs and learning rates

Figure 17 and **Figure 18** presents the utility scale solar PV historical capital costs and forecasted learning rates, respectively. The published price for a fixed tilt PV system concentrated around R 13 000 to R 16 000 per kW in 2019 [1], [2], R 16 000 per kW in 2020 [3], [4] and R12 000 to 32 000 per kW in 2022, which are low and high costs published for 2022 [5]. The single axis tracker PV system price per kW published by NREL is R 23 000 for 2020 [6]. By applying a reverse calculation on the published tariffs for REI4P bid window 4 and 5 and using international literature and local experience, R 12 100 per kW is considered to be a reasonable baseline cost price for applications in this study. The forward-looking cost assumption for South Africa, based on the average of published numbers in international literatures [6], [4], [7], [8], indicate a drop in cost of 30%, 46% and 54% by 2030, 2040 and 2050 respectively.

Figure 17: Solar PV system capital costs – utility-scale

Figure 18: Solar PV learning rates - utility-scale

Source: NREL 2019 ATB, CSIRO 2021, BNEF 2017, IRP 2018, CSIR analysis

3.2.1.2 Commercial scale solar PV capital costs and learning rates

Figure 19 and **Figure 20** present the commercial scale solar PV capital historical costs in 2022 ZAR / kW value and forecasted learning rates, respectively. The published price concentrated around R 12 000 to R 20 000 per kW in 2020 based on IRENA for Asian and European regions and CSIR's own experience from the installation of commercial scale rooftop solar PV plants at its campus as part of its Smart Utility Program in 2019 [4] [6]. The price for commercial scale rooftop solar PV in the US seems to be on the very high side compared to the experience in other parts of the world. NREL publish R 27 000 per kW for the US region in 2021 [2]. Lazard published R 23 000 to R 49 000 per kW for the year 2021 [2]. Private communication with an industry body which monitors the regional commercial scale market revealed a mid-range price of R 15 000, R 12 000, and R 11 000 per kW for small, medium, and large commercial installations respectively. R 15 000 per kW is considered as a reasonable baseline cost in 2022 based on international literature review as well as local experience. The forward-looking cost assumption for South Africa, based on the only published number by NREL, indicates a drop of 39%, 46% and 53% by 2030, 2040 and 2050 respectively [6] .

Figure 19: Solar PV system capital costs – commercial-scale

Figure 20: Solar PV learning rates - commercial-scale

Source: NREL 2022 ATB, CSIRO 2021, CSIR analysis

3.2.1.3 Residential scale solar PV capital costs and learning rates

Figure 21 and **Figure 22** present the residential scale solar PV historical capital costs in 2022 ZAR / kW value and forecasted learning rates respectively. The published price concentrated around R 12 000 to 27 000 per kW in 2020 for Asian, European and African region [4] [5], R 29 000 and 49 000 per kW in 2020 globally [6], and R 43 000 to 49 000 per kW in 2021 by Lazard [3]. The price for residential scale solar PV in the US seems to be on the very high side compared to the experience in other parts of the world. IRENA and NREL for US region published R 61 000 and R 46 000 in 2020 and 2021 respectively. Private communication with an industry body which monitors the regional residential scale PV costs revealed a mid-range price of R 37 000 and R 29 000 per kW for small and large residential installations respectively. Based on the international literature review and input from local experience, R 27 000 per kW is considered to be a reasonable baseline cost for application of this study given that the price is closest to IRENA's publication for South Africa [3]. Furthermore, IRENA's costs for commercial scale solar PV matched the CSIR's experience. This is based on CSIR's own PV plants built in 2019 which provide confidence to use the IRENA number for residential scale solar PV [3]. The forward-looking cost assumption for RSA based on the average of published numbers in international literature [4], [6] indicate a drop of 43%, 57% and 65% by 2030, 2040 and 2050 respectively.

Source: NREL 2022 ATB, CSIRO 2021, CSIR analysis

3.2.2. Onshore Wind

Figure 23 and **Figure 24** presents the onshore utility-scale wind historical capital costs in 2022 ZAR / kW value and the forecasted learning rate respectively. The published price concentrated around R 21 000 to R 25 000 per kW in 2021 as published by IRENA, CSIRO, US DoE [3], [4], [9] and R 17 000 to R 23 000 per kW, which are low and high costs published for 2021 by Lazard [3]. NREL ATB published R 24 000 per kW in 2020. By applying a reverse calculation on the published tariffs for the REIPPPP bid window 4 and 5 projects and based on international literature and local experience, R 14 400 per kW is reasonable to be considered as a baseline cost in 2022. The forward-looking cost assumption for South Africa based on the average of published numbers in international literature (NREL ATB, CSIRO) indicate a drop of 20%, 27% and 33% by 2030, 2040 and 2050 respectively [5], [7].

3.2.3. Gas Turbines and Engines

Gas turbines are engines are conventional generation technologies with limited improvement expected in terms of learning rates. The Capex costs are thus assumed to be constant (in real terms). A summary of cost and technical performance is provided in **Section 5.5.3**

3.2.4. Battery Storage

Figure 25 and **Figure 26** present the utility scale battery (with 4-hour storage) historical capital costs and forecasted learning rate respectively. The published price concentrated around R 21 000 to R 24 000 per kW for the year 2019 and 2020 as published by NREL and CSIRO [4], [6]. The US DoE published price is R 30 000 per kW in 2020 [10]. Private communication with an industry body reveals a price of R 23 000 per kW in 2021. Based on international literature and local input, R 22 000 per kW is considered to be a reasonable baseline cost. The forward-looking cost assumption for South Africa based on the average of published numbers in international literature (NREL ATB, CSIRO, BNEF) indicate a drop of 44%, 50% and 56% by 2030, 2040 and 2050 respectively [4], [6], [8].

3.2.5. Summary of Costing

Numerous references/sources for costing and technical performance data were used in the previous sections and this section provides a summary thereof. Further to, and including, the references from the previous costing sections:

- Lazard (2021) Levelized cost of energy analysis – version 15.0 [5]
- NREL (2021) Annual Technology Baseline (ATB) [6]
- EIA (2020) Cost and performance estimates for new utility-scale electric power generating facilities [11]
- IRENA (2020) Renewable power generation costs in 2020 [1]

Learning rates are only applied to the Capex for Renewables. ICE and OCGT costs are assumed to be constant in real terms. The rest of the costing metrics increase with CPI. Wind and solar PV SAT (single-axis tracking) are informed by the in-depth analysis from previous sections which considered South African projects.

Table 14: Summary of costing and performance data for new generating facilities

Capex [\$/kW]	Lazard low	Lazard high	NREL(ATB) low	NREL(ATB) high	EIA	IRENA	Mean	Mean [ZAR*]	Used (ZAR 2022)
Wind	1 025	1350	1 235	1 317	1 265	1 355	1 258	18 868	14 400
Solar PV FT	800					883	842	12 623	12 100
Solar PV SAT		950	1 229	1 338	1 313		1 208	18 113	13 930
ICE					1 810		1 810	27 150	27 000
OCGT	700	925		914	1 175		929	13 928	17 000
Fixed O&M [\$/kW pa]									
Wind	25.60	36.00	41.00	43.00	26.34		34.39	516	500
Solar PV FT	9.50						9.50	143	140
Solar PV SAT		13.00		22.00	15.25		16.75	251	250
ICE					35.16		35.16	527	525
OCGT	7.00	21.25		21.00	7.00		14.06	211	210
Variable O&M [\$/MWh]									
ICE					5.69		5.69	85	85
OCGT	4.00	5.25		5.00	4.50		4.69	70	70
Heat rate [GJ/MWh]									
ICE					8.75		8.75		8.75
OCGT	8.44	10.34			10.45	10.26	9.87		10.0

*assumed 15.0 ZAR:USD exchange rate

A similar procedure is followed for battery energy storage systems (BESS). Lithium-Ion batteries with 4 hours storage are considered for utility-scale projects. An additional for storage was consulted, namely the US DoE (2020) 2020 Grid Energy Storage Technology Cost and Performance Assessment [10]

Table 15: Summary of costing and performance data for BESS facilities

Lithium-Ion batteries with 4 hours storage	NREL (ATB) low	NREL (ATB) high	EIA	US DoE	Mean	Mean [ZAR*]	Used (ZAR 2022)
Capex [\$/kW]	1 147	1 278	1 389	1 643	1 364	20 464	22 000
Fixed O&M [\$/kW pa]	17.00	19.00	1.48	4.03	10.38	156	75
Variable O&M [\$/kWh]				0.5	0.5	7.50	0
Efficiency (round-trip)	85%			86%	85.5%		86%

*assumed 15ZAR:USD exchange rate

3.3. Simple Value Analysis of Local Resources

This section provides a simple LCOE (levelized cost of electricity) calculation and an electricity savings value for three VRE technologies:

- On-shore Wind
- Solar PV fixed-tilt (FT)
- Solar PV single axis tracking (SAT) (north-south orientation)

LCOE provides a simple metric for the cost of a technology – the flat rate/tariff that the electricity should be sold at for the project to break-even (NPV = 0). The following table gives the LCOE values for each VRE technology. Stellenbosch town is used a proxy location for the whole municipality. LCOE is useful metric to compare similar projects. The results show that wind is significantly more expensive than PV, but it should be noted that the capacity factor for wind at Stellenbosch town is low. For wind to have the same LCOE as fixed-tilt PV, the capacity factor would need to be 29%. With this simple calculation, the increased costs of single-axis tracking PV are justified. VREs are capital intensive and thus LCOE is sensitive to the discount rate used.

Table 16: LCOE of VREs at Stellenbosch town: utility-scale (discount rate = 10%)

Metric	Units	Onshore- wind	PV fixed- tilt	PV SAT
Capex (2022)	R/kW	14 410	12 100	13 930
Fixed O&M	R/kW per year	500	140	250
Variable O&M	R/kWh	0	0	0
Fuel	R/GJ	0	0	0
Capacity factor		20%	19%	24%
Lifespan	Years	20	25	25
LCOE	R/kWh	1.25	0.88	0.85

Cost is only one-side of the coin. The electricity savings is based on the avoided cost of the municipality purchasing electricity from Eskom. This depends on the timing of the generation output. The Eskom Megaflex tariff for 2022/23 is used (refer to Figure 29) to calculate the annual avoided cost of energy. The results are presented below.

Stellenbosch is located in a winter rainfall area and thus the difference between high (winter) and low demand (rest of year) is significant. For single axis tracking solar PV, an average winter day (June to August) provides only half of the solar input compared to the rest of the year. Wind generation output provides higher amounts of electricity during peak times and off-peak times. The avoided cost of electricity for the three technologies are similar at about R 1.10/kWh.

Table 17: Avoided cost of electricity of VREs: utility-scale (Eskom Megaflex 2022/23)

	Onshore- wind	PV fixed- tilt	PV SAT	Eskom Tariff (R/kWh)
Low Demand ratio	75%	84%	86%	
High Demand ratio	25%	16%	14%	
HD:LD ratio	1.00	0.57	0.48	
LD Off-Peak	47%	22%	20%	0.66
LD Standard	40%	68%	62%	1.05
LD Peak	13%	9%	17%	1.52
HD Off-Peak	49%	23%	22%	0.77
HD Standard	35%	75%	74%	1.41
HD Peak	15%	2%	4%	4.66
Avoided Cost of Electricity	1.10	1.06	1.10	R/kWh

This section provided an understanding of the cost vs value of VREs. Neither of these two metrics are direct inputs to the capacity expansion modelling done in Plexos, as described in **Section 0**. The technologies are selected to minimise the objective function whilst meeting demand.

3.4. Utility

3.4.1. Municipal Demand Profile

The procedure to construct demand profiles for the customers and, ultimately, the municipality is described in **Section 3.1**. The municipal demand profile is shown below in **Figure 27**. As mentioned, the actual hourly demand profiles are used for capacity expansion planning. For interest's sake the derived profiles and a typical low and high demand days are compared in **Figure 28**. Overall, the match is fair. The difference in the sum of the daily profiles (derived vs actual) is about 5%.

Figure 27: Hourly demand profile for municipality: derived

Figure 28: Hourly demand profile for municipality: weekday derived vs actual (black)

3.4.2. Demand Forecast

Demand is conveniently measured by electrical supply provided and refers to both electrical energy (kWh) and peak demand (kVA). This assumes all demand is met.

Demand generally refers to the supply to be provided by the utility (Utility Supply). Total Demand is calculated with the following equation which shows that without Customer Resource, for instance rooftop solar PV, then Utility Supply is equivalent Total Demand, again assuming all demand is met. However, with the recent adoption of embedded (behind-the-meter) technologies Utility Supply is no longer equivalent to Total Demand.

$$\text{Total Demand} = \text{Utility Supply} + \text{Customer Resource}$$

$$\text{Utility Supply} = \text{Total Demand} - \text{Customer Resource}$$

In South Africa the national demand (Utility Supply) has been decreasing gradually for more than a decade. This could be due to a combination of factors, including higher prices (price elasticity), increased energy efficiency and poor economic growth (income elasticity). Customer Resource can reduce own consumption and provide alternative energy supply (export energy), both of which reduce the

Utility Supply. In addition to a strong business case, the increasing levels of unreliability, in the form of loadshedding, are driving the deployment of **Customer Resource**.

Across South Africa, on average, electricity demand (**Utility Supply**) is decreasing. Stellenbosch Municipality is expanding and is seen as a higher growth region, thus total electricity demand might be increasing. To investigate this, historic data is required. Unfortunately, due to data unavailability this could not be investigated. Similar to other regions, demand is estimated to decrease by 0.5% per year.

3.4.3. Municipal and Eskom Tariff Projections

A key input to energy planning is the projection of tariffs. This section considers the likely evolution of Eskom and municipal tariffs. Almost all the total annual electricity share is on the Megaflex tariff. Therefore, Megaflex is taken as a proxy for the Eskom tariff. For municipal tariffs the increase is calculated with:

$$\text{Munic tariff increase} = \frac{3}{4}(\text{Eskom increase}) + \frac{1}{4}(\text{inflation})$$

There are several fundamental components of the Eskom Megaflex electricity tariff namely:

- Fixed Charges (R/month) to recover overhead costs and costs that vary with size of customer base;
- Energy Charges (R/kWh) to recover variable costs to meet the customer load.
- Demand and Network Charges (R/kW/month) to recover long-run marginal investments required to meet peak demand;

The following figure shows a graphical illustration of the 2022/23 Megaflex tariff. The TOU composition is provided for both low and high demand seasons. There is a significant increase in tariffs from the low to the high demand season, especially for the peak period – three-fold increase. Assuming the same usage as in 2021/22, the average tariff for low and high demand season are R 1.08/kWh and R 1.82/kWh, respectively. The annual average energy charge is R 1.28/kWh. The bulk of the electricity bill would be concentrated in energy charges (88%), the sum of peak demand charges and fixed charges make up the

rest

(12%)..

Figure 29: Eskom tariff (2022/23) with a seasonal time of use periods and tariff composition

The difference between off-peak and peak per demand season is shown. There is a five-fold increase in the high demand season which provides a strong business case for energy arbitrage during the three-month high demand season.

In this study, the Eskom tariff was escalated using CSIR's inhouse assumptions based on Eskom's current debt burden amidst a maintenance backlog and IRP inputs. The following figure shows Eskom's tariff escalation year-by-year until 2040. The estimated increases for the overall tariff are (in nominal terms):

- Up to 2025: **12.5%** increases
- 2026 – 2030: **10%** increase
- 2030 onwards: **7.5%** increases

Figure 30: Assumed Eskom tariff escalation (nominal)

In 2017 and 2020, Eskom released documentation [12], [13] which sets out Eskom's strategic direction and objectives for its electricity tariff structures to provide stakeholders with a view of Eskom's long-term plan of action for tariff structures. Some key strategic objectives for tariffs highlighted by Eskom are summarized below:

- Tariffs to be more cost-reflective in structure.
- Tariffs that incentivize customers to stay connected to the grid
- A tariff that enables better management of demand and supply-side options.

All scenarios considered in this report assumed that the structure of the electricity tariff will be altered such that the share of fixed/demand cost charges increase over time while the share of energy charges reduces, however, the energy charges will continue to make up a large amount of Eskom's revenue as shown in **Figure 31** (the solid black line is the same as overall nominal increase in previous figure). Assuming the same electricity consumption structure, **Figure 32** presents the resulting projected tariff composition. The 88% energy share in 2022 declines to 78% and 69% in 2030 and 2040, respectively. Lastly, the projection of the equivalent, energy rate in real terms is shown in **Figure 33**.

Figure 31: Adjusted tariff drivers between fixed, energy and demand (nominal increases)

Figure 32: Projected Megaflex tariff composition (assuming same usage patterns)

Figure 33: Projected, equivalent energy tariff (real)

3.4.4. Wheeling Charges

A regional optimization (refer to **Section 5.3.2**) approach allows for the wheeling of electricity within the municipality. With a regional approach there is greater freedom to locate power plants in better resource areas, specifically for solar and wind. Wheeling is the usage of Eskom’s network to evacuate power. Additionally, wheeling is a service at a charge/fee. The wheeling charge is taken as relative to the Eskom Megaflex tariff (described in the previous section). This is simply equated to 15% of the total Eskom unit cost ($\text{R/kWh} = \text{total Eskom cost (R)} / \text{total Eskom supply (kWh)}$). The increases in the Eskom tariff translates to higher wheeling charges. The 15% is indicative and is informed by pervious work. The same usage pattern is assumed for the year 2021/22. This translates to a wheeling charge of 22 cents/kWh in 2022 (about \$14/MWh), **Figure 34**.

The wheeling cost is a transaction fee meaning that the placement of generation capacity in a better resource area must first overcome this ‘penalty’ to wheel electricity across the municipality. As noted in **Section 2.2.2**, there is limited variation in the solar resource across the municipality (10% difference between highest and lowest sites), it is thus not expected that wheeling would be deployed for solar power plants. However, there is much greater diversity amongst wind sites.

Wheeling is discussed in general in the next section.

Figure 34: Projected wheeling charge (real)

3.4.5. Interconnection Network

Stellenbosch municipality currently receives supply from Eskom at Stellenbosch Substation at 66kV, at Cloetesville Substation at 66kV, at Franschhoek Substation at 66kV and at Kylemore substation at 11kV. **Figure 35** shows the Eskom HV network which supplies these three substations. For this network the transmission source is at Muldersvlei MTS which in turn supplies Stellenbosch and Safariland substations via 132kV. Cloetesville and Kylemore substations are supplied from Stellenbosch substation at 66kV and Franschhoek substation is supplied from Safariland substation via Wemmershoek at 66kV. The network between Kylemore and Wemmershoek is normally open as shown in the figure below.

Figure 35: Eskom Polkadraai HV Network

The following figure shows the Stellenbosch substation diagram. Stellenbosch substation has 2 x 132/66kV 80MVA transformers and a third 132/66kV 45MVA transformer that is on standby. The municipality takes supply at 66kV at Stellenbosch substation as well as at Cloetesville with another 11kV supply point at Kylemore (Pniel).

Figure 37: Franschhoek substation diagram [Eskom EWOU Single Line Diagram]**Figure 37** shows the Franschhoek substation diagram. Franschhoek substation is supplied via a radial 66kV line from Wemmershoek substation and the municipality takes supply at 66kV at Franschhoek substation.

Figure 36: Stellenbosch substation diagram [Eskom EWO Single Line Diagram]

Figure 37: Franschhoek substation diagram [Eskom EWO Single Line Diagram]

Grid integration studies were performed to determine the maximum amount of generation that can be connected at each of the municipal supply points with the possibility to wheel power generated in one specific area of the municipality to another area by making use of the Eskom grid.

The grid integration studies were performed using Digsilent Powerfactory Software and the latest network data as obtained from Eskom WCOU Planning was used for the simulations.

Four separate simulations were performed for each supply point and for each simulation a renewable energy plant was connected at the specified municipal supply point. The following steady-state simulation studies were performed, and the size of the plant was increased incrementally until one of the grid integration technical limits was reached:

- A. Power flow analysis under various operating scenarios (loading and generation) at the point of connection. The following scenarios were studied:
 - i. High load, high generation
 - iii. Low load, high generation
- B. For each scenario, the following limits and system impacts were studied:
 - i. Equipment thermal loadings
 - ii. Busbar voltage levels at the POS
- C. Rapid Voltage Change (RVC) Test

The technical criteria that were studied and the limits that need to be adhered to are as follows [South African Grid Code, Version 10.0, National Energy Regulator of South Africa, August 2019]:

- Thermal limits: 80% of equipment rating
- Busbar voltage levels at the POS: 0.95p.u. – 1.05p.u.
- RVC limit: 3%

The RVC and busbar voltage level results for the grid integration study for each of the supply points are shown in **Table 18**. These limits were reached before the network thermal limits were reached and are the limiting factors when considering the size of the generator that can be connected. The table shows the maximum generator capacity that can be connected at Stellenbosch, Cloetesville, Franschhoek and Pniel taking account of the technical limits.

For the studies it was assumed that the generator plant would be a certain distance away from the substation. The distances that were assumed, as well as the line conductor that was used for the study, is shown in **Figure 36** and **Figure 37**. Should the distance be different than what was assumed, the POS busbar voltage and RVC values will change.

Table 18: Grid integration study results and maximum generator capacity per municipal supply point

	Maximum generator capacity	Low Load		High Load	
		Voltage at POS BB	RVC%	Voltage at POS BB	RVC%
Stellenbosch	72 MW	1.049	1.45	1.052	1.8
Cloeteville	18 MW	1.056	1.55	1.01	1.6
Franschhoek	29 MW	1.051	2.8	1.03	2.4
Pniel	2 MW	1.055	3.3	1.06	2.7

From the above table, it can be seen that VRE generation with a maximum size of 72 MW can be connected at Stellenbosch substation, 18MW can be connected at Cloeteville substation and a 29 MW plant can be connected at Franschhoek substation. Due to Pniel receiving supply at 11kV only a very small plant (2MW) can be connected there.

4. Rooftop PV Analysis

4.1. Overview

Rooftop PV is a customer resource. To identify the potential of rooftop PV, and ultimately the adoption rate, a three-step process is followed:

1. Determine technical potential based on available rooftops
2. Calculate the business case for rooftop PV
3. Estimate the adoption rate

4.2. Technical Potential

4.2.1. Rooftop Area

To estimate available roof space for rooftop solar PV deployment in the Stellenbosch Municipality, the following spatial datasets were used:

- Open Buildings [14] which depicts buildings footprints and area in m²
- South African National Land Cover (SANLC) [15]
- Informal settlements (supplied by Stellenbosch Municipality)
- Eskom and municipal electricity supply areas (supplied by Stellenbosch Municipality)

The geospatial analysis used to estimate available rooftop space for solar PV deployment in the municipality was executed using Esri© ArcGIS Pro 2.9.3. The process is summarised in the following figure.

Figure 38: Geospatial analysis process for estimating available rooftop space for PV deployment

The Open Buildings data specifies a confidence rating⁵ for each identified building footprint. Building with confidence of > 70 % was found to be reasonably accurate for the purpose of broadly estimating available roof space for solar PV deployment. The building footprints with a confidence rating > 70 % were extracted for subsequent analysis.

The various land cover classes contained in the National Land Cover dataset was used to classify the different customer classes for the municipality. The following detailed land cover classes were categorised and reclassified to represent residential, commercial, industrial, and agricultural customers, as shown in the following table.

⁵ The “confidence rating” provides an indication of how certain the data creators are that a footprint is correctly identified as a building – see <https://sites.research.google/open-buildings/> for more information on the Open Building dataset.

Table 19: Land cover classes used to broadly represent residential, commercial, industrial and agriculture customer classes

Land Cover class	Customer class
residential formal (bare) residential formal (bush) residential formal (low veg / grass) residential formal (tree) roads & rails (major linear) urban recreational fields (bare) urban recreational fields (bush) urban recreational fields (grass) urban recreational fields (tree) village dense (bare & low veg / grass combo) village scattered (bare & low veg/ grass combo)	Residential
industrial landfills mine: tailings and resource dumps mines: extraction pits, quarries mines: surface infrastructure	Industrial
commercial	Commercial
commercial annual crops non-pivot irrigated commercial annual crops pivot irrigated commercial annual crops rain-fed / dryland cultivated commercial permanent orchards cultivated commercial permanent vines fallow land & old fields (bare) fallow land & old fields (bush) fallow land & old fields (grass) fallow land & old fields (low shrub) fallow land & old fields (trees) fallow land & old fields (wetlands) smallholdings (bare) smallholdings (bush) smallholdings (low veg / grass) smallholdings (tree)	Agricultural

The reclassified land cover data was joined spatially with the Open Buildings, Eskom and municipality supply areas and informal settlements to produce a new dataset with each building footprint assigned to its corresponding prosumer class, supply area and formal/informal settlement (residential only) in which it is located. The result of this combination is shown in the following figure. Only intersecting

features were retained in the new dataset – i.e., buildings that did not intersect with one of the prosumer classes (often situated in remote / rural areas) were not included in the rooftop calculations

Inaccuracies in the data may be observed, such as those circled in the figure, for example: (a) gaps where footprints with confidence levels $< 70\%$ were excluded from the analysis, this resulted in some buildings being omitted or only partially included in the analysis; (b) larger buildings / buildings with complex roof structures registering as several smaller footprints; and (c) features (e.g. parking lot) incorrectly registering as part of a building footprint

Figure 39: View of a section of Merriman Avenue in Stellenbosch, showing commercial (yellow) and residential (blue) buildings. Some inaccuracies in the Google Open Buildings data can be observed.

Subsequently, the building footprint area (m²) was summarised to produce estimated total rooftop space, per customer class. The figure below shows total roof space estimates for the entire Stellenbosch municipal area. With residential buildings accounting for approximately half to total roofspace.

**Total estimated roofspace (m²),
Eskom & Municipality-supplied**

Prosumer class	Total estimated roofspace (m ²)		
	Eskom-supplied	Municipality-supplied	Eskom & Municipality-supplied
Agricultural	500,875	138,214	639,089
Commercial	282,578	717,439	1,000,017
Industrial	478,650	188,000	666,650
Residential (formal)	1,486,550	1,285,656	2,772,206
Residential (informal)	239,235	125,096	364,331
Grand Total	2,987,888	2,454,405	5,442,293

Figure 40: Estimate rooftop area (m²) per customer class

Five (5) random sample points of 200 x 200 m, per customer class (totalling in 20 random samples across the municipality) were generated for visual screening to further determine potentially utilisable roof space for solar PV deployment.

The following assumptions and limitations underpin the rooftop area estimation:

- The spatial analysis aimed to provide a coarse estimate of theoretically available rooftop space for solar PV deployment. It does not consider technical feasibility or uptake potential of rooftop PV.
- The spatial analysis is based on freely available spatial data, which are subject to inherent limitations with regards to accuracy and precision.
- Inaccuracies in the land cover data will result in buildings being assigned prosumer classes inaccurately.
- Building footprints in the Open Buildings data seem to be less accurate for dense built-up areas and complex roof structures.
- In some instances, larger buildings seemed to register as several smaller individual footprints in the Open Buildings data.
- Buildings that did not intersect with one of the customer classes (often situated in remote / rural areas) were not included in the rooftop calculations.

4.2.2. Installable PV

Figure 41 briefs the process used to determine the usable roof space for potential solar PV installation. Five (5) random sample points per customer class are generated for visual screening to further determine potentially ‘reasonable’ roof space for solar PV deployment. **Figure 42** presents the random 200 x 200 m sample block selected for visual screening. The sampling attempts to establish how much of the GIS identified rooftop area is ‘reasonable’ for solar PV deployment based on the orientation of roofs in the sample block. In a north-south building, the roof oriented north or any flat roof is considered as 50% roof space available, north facing and east-west oriented roof space is considered 100% available and a mix of north, east and west roof space is considered as 75% roof space available. The shortfall in the consideration is due to exclusion of south facing roof in all applicable cases. This is unique to customer class but the overall “loss” for the region is about 30%. To account for un-usable roof space due to shading, structural and obstructions issues, packing density, etc. a 25% additional loss is applied to determine the usable roof space (from reasonable). Therefore, only a half of the ‘reasonable’ roof space identified with GIS technique is roughly estimated to be usable. The roof space quantified is in square-meters (m^2). To translate to a technical potential installable capacity (kW_{DC}), the power density of standard 500 Wp panel at 2.07 x 1.13 m dimension is considered. For example, if a 100 m^2 is identified as total roof space available, the installable capacity is 21 kW_{DC} considering all the available space is packed with solar PV modules.

Figure 41: The process to determine installable PV

Figure 42: Sample of 200 x 200 m area identified for visual screening

Figure 43 presents the solar PV installation technical potential (kW_{DC}) per customer class, assuming all the usable roof area is deployed with solar PV systems. The total technical installable capacity across the all the consumers is about 580 MWp from the roughly 2.7 million m^2 total roofspace. Specific yield (kWh/kWp) is determined through multiple simulations for various configurations of roof tilt (0 to 50 deg) and orientation⁶ (0 to 90 deg). Average specific yield is used to estimate the potential rooftop PV generation per customer class.

⁶Orientation indicates the direction of built building or roof in reference to true north direction which is termed as 0 deg azimuth. +90 deg is an east facing building and -90 deg is a west facing building. The south facing roof is termed as 180 deg azimuth. Azimuth angle slightly impacts energy productions unless it is not facing true south.

Figure 44 presents the potential rooftop PV generation against electricity demand in 2021, assuming all the usable roof area is deployed with solar PV systems. Obviously, 100 % self-sufficiency cannot be achieved only with PV but this is simply considering the volumetric requirement, not timing. The shape of demand profile plays significant role if only PV system to produce maximum benefit. The commercial class demand profile mostly coincides with peaking PV generation compared to residential class as their peak demand is mostly during early and evening period.

Figure 43: Rooftop PV technical potential

The residential customers have ample roof space to service their own volumetric energy needs through rooftop PV deployment. Just 26 % of the technical potential roof space is sufficient to generate entire electricity demand of residential sector. Similarly, only 8% of roof space is sufficient for commercial and agriculture sector. Industrial consumers need almost double their roof space to cater for their own energy demand. This is reasonable considering industrial consumers having high electricity demand per area footprint in general. The 'line' between commercial and industrial users is somewhat arbitrary so there is likely cross over between these two customer classes. Overall, only 39% of available roofspace identified would be required to meet all the customer's volumetric energy needs.

Figure 44: Rooftop PV technical potential against volumetric electricity demand

4.3. Business Case

The business case is based on financial returns of the PV system. Several key inputs impact the business case. These inputs include:

- solar resource
- cost of the PV system
- load profile of the consumer
- tariff structure

4.3.1. Methodology

The techno-economic simulations were run using NREL's [System Advisor Model](#) (SAM version 2021.12.2) [16]. This software enables techno-economic simulations for a multitude of renewable energy technologies. A PV base model was created in SAM using the 'PVWatts-Battery, Residential' design platform. Next, various scenarios were simulated using the PySAM python library designed for SAM. The critical inputs to the model are documented below in order that they appear in the SAM GUI.

4.3.2. Location and Resource

A weather file for downtown Stellenbosch was downloaded from the [PVGIS website](#) to simulate the expected irradiance and temperature profiles. The monthly daily average solar irradiance and the plane of array irradiance vary with the season. The summer months in Stellenbosch receive more than twice the solar energy compared to winter months.

Table 20: Solar resource metrics for Stellenbosch based on 25-degree fixed tilt facing north

Month	Daily average solar irradiance kWh/m2 per day	Plane of array irradiance kWh/m2
Jan	7.7	239
Feb	7.7	215
Mar	7.1	219
Apr	5.9	178
May	2.8	87
Jun	3.5	105
Jul	4.5	140
Aug	4.5	139
Sep	4.3	127
Oct	6.5	201
Nov	7.2	214
Dec	7.0	239
Annual		2 103

4.3.3. Customer Load Profiles

Load profiles were derived by using the Distribution Profile Mixer. For each class, six (6) daily profiles were generated for each hour of a 24-hour day. These generated profiles consist of weekday, Saturday, and Sunday both the low and high demand season. An annual load profile (8760 hour) was then created using these daily profiles. The following presents the hourly profiles for a full week during each of the six profiles.

Figure 45: Customer demand profiles for Residential, Commercial and Industrial customers

4.3.4. System Design and Project Economics

The PV systems were designed with a 25-degree fixed tilt facing true north for all user classes. The DC:AC ratio for the inverter was 1.2. Based on this design and the weather file, the systems should produce approximately 1,520 kWh AC/year/kW DC. This number can be used as a multiplier to estimate the output for systems of various sizes. The production is expected to decrease by 1% per year over the 25-year simulation period.

The following table shows the annual load and five (5) system sizes simulated for each customer class. The smallest system size was selected to meet approximately 25% of the annual load while the maximum system size was selected to meet approximately 200%. Smaller systems result in a higher self-consumption ratio while the larger systems result in higher levels of electrical energy fed back to the grid.

Table 21: Annual electrical load (demand) per customer class and PV system sizes

Customer Class	Annual Load MWh	Average* monthly load kWh	1 – smallest kW DC	2 kW DC	3 kW DC	4 kW DC	5 - largest kW DC
Residential	8.8	733	1	3	5	7	10
Commercial	17.5	1 458	3	5	10	15	25
Industrial	579	48 250	100	200	350	500	800

*Winter months are higher and summer month are lower

A 1% annual degradation in system output was assumed in the model to simulate reduction in output year-over-year as the system ages.

Economies of scale are included in the installation costs. The installation costs generally decrease as the system sizes increase with user class. The price per watt for a 3 kW versus a 5 kW may not vary significantly, but some savings may be expected for a 10 kW or 25 kW system. Prices from different installers, however, may vary significantly. The industrial class systems should expect a discounted price on a per kW basis for the larger systems of 100 kW and above as the fixed overhead costs are averaged over a larger variable cost of components that make up the system. In this simulation, the prices for installation are expected to decrease over time in real terms. By 2040, the prices are assumed to be less than half the prices paid in 2022.

Table 22: Capex costs by customer class and year of installation

Year	Learning rate	Residential R/kW DC	Commercial R/kW DC	Industrial R/kW DC
2022	1.00	27 000	20 000	15 000
2025	0.78	21 060	15 600	11 700
2030	0.64	17 280	12 800	9 600
2040	0.46	12 420	9 200	6 900

Annual operation costs (Fixed O&M) were set to 300 R/kW DC per year with an increase in line with inflation each year. Replacement costs for inverters, damaged modules, etc. were not included in the financial model. The cost of capital, property tax increase, and insurance rate increases were set to 0 for the simulations. The salvage value at the end of a 25-year lifetime was also set to 0. Tax credits and direct cash payment incentives were set to 0.

The electricity tariffs for residential are Inclining Block Tariffs (IBTs), one-tier for commercial, six-tier time-of-use tariff for the utility customers. The rate increase was calculated assuming a 5.3% per year increase through 2025, 3.4% through 2030, and 1.5% through 2040 in real terms. The following table shows the rate multipliers relative to 2022 rates.

Table 23: Current and projected electricity tariffs (VAT inclusive) for municipal customers

Year	Multiplier	Residential R/kWh	Commercial R/kWh	Industrial R/kWh	Industrial TOU
2022	1.00	1.3578 (<=50 kWh)	2.9902	1.1154	LD-OffPeak
		1.7417 (51-300 kWh)		1.2549	HD-OffPeak
		2.4571 (301-600 kWh)		1.4881	LD_Standard
		2.8934 (>600 kWh)		2.1349	HD_Standard
				2.275	LD-Peak
				7.5154	HD-Peak
2025	1.17	1.8270 (<=50 kWh)	3.4985	1.3050	LD-OffPeak
		2.3435 (51-300 kWh)		1.4682	HD-OffPeak
		3.3061 (301-600 kWh)		1.7411	LD_Standard
		3.8931 (>600 kWh)		2.4978	HD_Standard
				2.6618	LD-Peak
				8.7930	HD-Peak
2030	1.40	2.1861 (<=50 kWh)	4.1863	1.5616	LD-OffPeak
		2.8042 (51-300 kWh)		1.7569	HD-OffPeak
		3.9560 (301-600 kWh)		2.0833	LD_Standard
		4.6584 (>600 kWh)		2.9889	HD_Standard
				3.1850	LD-Peak
				10.5216	HD-Peak
2040	1.66	2.5921 (<=50 kWh)	4.9637	1.8516	LD-OffPeak
		3.3250 (51-300 kWh)		2.0831	HD-OffPeak
		4.6907 (301-600 kWh)		2.4702	LD_Standard
		5.5235 (>600 kWh)		3.5439	HD_Standard
				3.7765	LD-Peak
				12.4756	HD-Peak

The simulation includes a variable for feed-in tariff for excess electrical energy based on the 'net billing with carry over to next month' model. If the system generates excess electricity for a given month, the value of that excess amount is credited towards the next month's bill. Stellenbosch municipality has FIT's which are dependent on the demand season and TOU, as shown below. The FITs are the same for all customer classes.

Table 24: Current and projected electricity feed in tariffs (FITs) (VAT inclusive) for municipal customers

Year	Multi-plier	No escalation	With escalation	TOU
2022	1.00	0.6828	0.6828	LD-OffPeak
		0.7887	0.7887	HD-OffPeak
		1.0761	1.0761	LD_Standard
		1.4525	1.4525	HD_Standard
		1.5638	1.5638	LD-Peak
		4.7939	4.7939	HD-Peak
2025	1.17	0.6828	0.7989	LD-OffPeak
		0.7887	0.9228	HD-OffPeak
		1.0761	1.2590	LD_Standard
		1.4525	1.6994	HD_Standard
		1.5638	1.8296	LD-Peak
		4.7939	5.6089	HD-Peak
2030	1.40	0.6828	0.9559	LD-OffPeak
		0.7887	1.1042	HD-OffPeak
		1.0761	1.5065	LD_Standard
		1.4525	2.0335	HD_Standard
		1.5638	2.1893	LD-Peak
		4.7939	6.7115	HD-Peak
2040	1.66	0.6828	1.1334	LD-OffPeak
		0.7887	1.3092	HD-OffPeak
		1.0761	1.7863	LD_Standard
		1.4525	2.4111	HD_Standard
		1.5638	2.5959	LD-Peak
		4.7939	7.9579	HD-Peak

Two cases were included to consider the impact of feed-in tariff (FIT): no escalation and FIT escalated at the same rate as the tariffs for future years. at the same rate as electricity tariffs.

4.3.5. Results

The following table presents the levelized cost of electricity (LCOE) by year of installation and customer class. LCOE is provided for illustrative purposes. The LCOE is not impacted by the prevailing tariff

structure and feed-in tariff, as it is a cost metric which does not consider value. The LCOE decreases for larger classes because of the assumed discount in CAPEX per kW for the larger installations. The LCOE also decreases over time due to the projected reduction in CAPEX costs.

Table 25: LCOE (R/kWh) by customer class and year of installation

Year	Residential	Commercial	Industrial
2022	1.42	1.11	0.88
2025	1.15	0.91	0.75
2030	0.98	0.78	0.64
2040	0.76	0.62	0.52

The simple payback period accounts for both costs and benefits. Please note that the simple payback period is only based on the metrics at the year of installation. Thus, the actual payback period will be less (assuming tariff increases).

The following figure provide the payback period versus the PV system size for three customer classes and two FIT scenarios based on projected tariffs and CAPEX costs for each of four different years of installation. The simple payback period is the time in years that it takes for cumulative savings to equal the cumulative costs. A lower payback period is expected to drive greater uptake in embedded generation. In this simulation, the payback period increases with system size due to a decrease in annual savings as the self-consumption decreases.

The payback period is shortened when the FIT is escalated at the same rate at the tariff escalation so that excess electricity energy has increased value to the system owner over time compared to the scenario in which the FIT remains constant in nominal terms. The payback period decreases with year of installation due to the projected escalation of the tariff structure and the decrease in CAPEX costs. For example, the payback period for 5 kW DC residential system with no FIT escalation scenario (top left subplot) is 7.3 years in 2022 and 2.7 years in 2040. Overall, the business case is strong with all customers, especially the commercial and industrial (C&I) sector, amongst others, the installation costs on a per kW basis are lower for the larger systems.

The business case analysis shows that rooftop solar PV currently makes sense in many instances. Due to increasing municipal tariffs and declining solar PV costs the business case improves with time. By 2040 solar PV makes financial sense for all customer classes and scenarios.

Figure 46: Simple payback period (years) per customer class, FIT escalation, PV system size and year of installation

4.4. Adoption Rates

4.4.1. Overview

As noted in **Section 4.1**, to estimate the adoption of rooftop solar PV follows first requires quantifying the technical potential of rooftop PV. The technical potential is the physical upper limit of the amount of rooftop PV that could be installed. It is important to note that the said technical potential does not include ground-mount installations.

Section 4.2 found that there is sufficient technical potential to meet the customers' annual energy consumption needs in terms of magnitude. The previous section presented the business case for rooftop solar PV as a customer resource (embedded generation) which is based on energy savings and FIT (sell rates) offered by the municipality. This showed a strong business case for solar PV, especially for commercial and industrial customers. The business case improves with time as technology costs continue to decline and tariffs rise. This section considers how much of the technical potential is likely to be adopted.

Ideally, historic adoption rates could be correlated to actual drivers of adoption. Drivers include the business case, disposable income of customer groups, land use, etc. In South Africa the adoption of rooftop PV is in the early stages, thus historic data is limited. Furthermore, in general, rooftop PV has not been promoted in South Africa by utilities/government like in other parts of the world, such as in developed countries like Germany, Spain and the USA. Many countries subsidized rooftop PV to make it financial attractive to electricity customers. This 'carrot' approach provides for better formal records. In short, there is limited good quality data in South Africa to apply statistical methods to extract drivers and trends for rooftop PV adoption. Fortunately, the municipality has been proactive in this matter and their historic data is considered in the next section.

The recent LA100 study by NREL [17] estimated rooftop solar PV adoption based on the Bass diffusion model (commonly known as a s-curve). NREL's dGen tool uses various inputs to determine the diffusion of rooftop PV. The primary economic metric employed is the payback period (does it make financial sense for me?). Non-economic factors include:

- Proximity to previous adopters (does my neighbour have rooftop PV?)
- Income (do I have the necessary funds?)
- Building type, for example single-family vs multi-family (do I 'own' the roof and will I live here long enough to reap the benefits?)

The decision to adopt is a binary one and is calculated each year. The NREL algorithm estimates the probability of adoption of each agent (single decision maker per premise) per year.

It is assumed that only installations that make economic sense are 'viable' for adoption. Economic viability is taken as an installation with a payback period of less than 7 years. From the previous section it is evident that many of the instances have a payback period of less than 7 years and all by 2040. The adoption rate can be estimated by applying a s-curve. The figure below shows the categories of adopters

(blue line) and the market share. The five categories are successive groups of consumers adopting a new technology, in this case, rooftop PV. The municipality is most likely in the initial-Early Adopters stage (**Figure 47**), but this will vary across socio-economic and customer classes.

Figure 47: Diffusion of innovation (example)

LA100 predicts that customers in that region will adopt between 34% and 40% of the total economic potential by 2045. Los Angeles is a wealthier and more environmentally conscious region so the said estimate may seem high for the municipality, but Los Angeles is not experiencing ongoing loadshedding.

4.4.2. Analysis and Results

Stellenbosch municipality estimates their current embedded generation, almost entirely solar PV, at 6 MW. This is about 9% of their peak demand, which in the South African context is high. For instance, the City of Cape Town has about a 7% ratio. As Stellenbosch has affluent areas, this relatively high penetration is not unexpected. With a specific yield of 1,520 kWh AC/year/kW DC (17% capacity factor (refer to **Section 4.3.4**)), the electrical output of such installations is about 8,900 MWh per annum which is approximately 2.5% of municipality sales.

Table 26 presents a summary of the exports from RE embedded generators for 2021/22. Overall, the magnitude is low, only around 0.25% of municipality sales. It should be noted that this is not the total generation but excess that is not used for self-consumption. Based on the mentioned approximate 8,900 MWh output, the excess ratio is about 10%. This is low and may imply that (or a combination of):

- Some embedded generators do not export into the network
- Customer demand profiles are well suited to solar PV output, this is typical for commercial customers
- Customers are installing relatively small installations compared to their demand
- Customers have installed storage (most likely batteries) for higher self-consumption ratios

As noted in **Section 4.3.2**, the summer months in Stellenbosch receive more than the twice the solar energy compared to winter months. Thus, the low HD:LD ratio of 0.62 is not unexpected: high demand season (winter) months provide, on average, only 62% of exports compared to low demand (rest of year) months. The portion of output during peak times is very low, for instance 2% during the high demand season when Eskom tariff is high. Stellenbosch municipality providing a TOU signal to FIT will promote higher value electricity purchases.

Table 26: Summary of RE exports from RE embedded generation (imports for the municipality)

MWh	High			High		
	Low Demand	Demand	Annual	Low Demand	Demand	Annual
Off Peak	226	58	284	29%	35%	30%
Standard	496	103	599	63%	63%	63%
Peak	60	3	63	8%	2%	7%
Total	783	164	946			

Unfortunately, historic data on embedded generators, such as the number of installations and capacities, has not been made available at the time of writing. Thus, no informed estimates on the adoption of rooftop PV could not be made. It is reasonable to expect the growth rate of embedded generation to increase, especially in response to ongoing and increasing loadshedding.

5. Capacity Expansion Planning

5.1. Overview/Approach

We conducted a high-level resource assessment at said sites. The local resources determine the following key characteristics:

- I. Expected hourly solar PV, wind production profiles, and
- II. Expected solar PV, wind capacity, and energy yields

We consider and analyse the typical years for each of the locations. A blend of multiple years of satellite data are assembled to represent a representative year. The outcomes of the resource assessments described in I and II above form serve as an input in the optimization of the electricity supply mix.

5.2. Least-Cost Optimization of the Energy Mix

The high-level methodology follows the same approach implemented at a national level for the integrated resource plan (IRP), as shown in the following figure.

Figure 48: Methodology applied when undertaking long-term energy planning

The South African power system will be simplified to an external wholesale electricity provider of capacity, energy, and/or system services to the municipality. The municipality is modelled as four node injection points whereby each node represents one of the supply areas. Each node is provided with a representative electric demand profile which is perpetuated into the future to cover the simulation horizon 2022-2040. Power imports from Eskom at each node are competing with new supply options in

the least cost optimization, the outcomes of which determine the type, quantity and the timing of new supply technologies based on performance characteristics and cost. Optimization is done at each node simultaneously to determine the electricity mix for each from which we then add all the new capacity build to get the total build for the municipality. This should not be confused with an optimization on the regional level, which is discussed later.

The following figure shows that the least-cost plan falls at the investment level which minimises the sum of the investment cost and the production cost. Investment costs include new capital investment costs while production costs include all costs associated with operating existing and new generation capacity investments.

Figure 49: Illustration of the capacity expansion planning optimization

This will be simulated in a long-term capacity expansion planning modelling framework with additional unit-commitment and economic dispatch production cost modelling capability (PLEXOS) using data supplied by the municipality and supplemented with publicly available data. Moreover, data such as the expected wholesale tariff trajectory to inform the municipality wholesale energy, capacity, and system services offtake are important parameters to consider when making investment decisions in new supply capacity. The CSIR will use the annual forecasted wholesale electricity tariff with specific reference to municipality offtake. This will be based on CSIR's view on annual tariff escalation as discussed in the tariff section. For more details the interested reader is referred to **Section 3.4.3**.

Detailed operational constraints are considered including hourly chronology. Other key input assumptions include the expected performance of the demand forecast (**Section 3.4.2**), and the expected new generation capacity that is already committed/planned to come online, if any.

The cost of unserved energy this is the balancing mechanism in optimization wherein the associated cost of unserved energy (COUE) is utilized as a penalty for shortages experienced, resulting in a natural balance of existing capacity, new capacity, and minimized shortages.

5.3. Scenarios

Development of an electricity system model to evaluate alternative energy mix scenarios with the current "as-is" system was developed. This entailed the optimisation of additional supply that can compete on cost and performance characteristics with import from Eskom to minimize electricity costs.

The following scenarios were analysed:

1. Business-as-usual (BAU)
2. Least cost
 - a. Nodal
 - b. Regional (across the whole municipality)
3. 100% Autonomy
4. Loadshedding avoidance

With all scenarios, annual build limits for wind and PV were set. This provides a more realistic view in cognisance of procurement and technical integration realities. For optimisation, the following build limits for wind and solar PV were set relative to maximum demand, as shown in the following table. Solar PV allows for smaller utility-scale plants. For wind, a minimum unit-build size of 20 MW was implemented. Beyond just limiting each node, the annual build limit for the region (whole municipality) was limited to 20 MW for wind. For regional optimisation, an overall solar PV limit of 35 MW was set.

Table 27: Annual build limits for wind and solar PV each

Supply Area	Wind [MW]	Solar PV [MW]
Stellenbosch		20
Cloetesville		5
Franschhoek		5
Pniel		5
Total	20	35

5.3.1. Business-as-Usual (BAU)

In this scenario, the historical electricity demand profile for each supply area was perpetuated to cover the study horizon between the years 2022 and 2040. The demand from the four node injection points representing each supply area's demand was met by grid imports from Eskom. No additional supply/demand-side options were included in this scenario other than Eskom power imports. The current structure of the tariff composition is altered by increasing the share of fixed cost charges while reducing the share of energy charges in the total cost of electricity. However, the bulk of Eskom's energy charges still makes up a large percentage compared to total fixed charges (refer to **Section 3.4.3**). The outcomes of this scenario include the total cost of electricity, CO₂ emissions, and water consumption. These outcomes set a benchmark against which other study cases are compared.

5.3.2. Least Cost

OPTIMISE NODE (NO WHEELING)

New supply options are introduced in the BAU scenario to compete with Eskom imports for energy share at each supply area. We still assumed that the current tariff composition remains as described in the business-as-usual case.

This scenario assumes the same input assumptions as the BAU, but with the option of building additional generation capacity (solar PV, wind turbine, diesel-fired open cycle gas turbine, diesel-fired internal combustion engine, battery storage) only if it is economically viable to do so. This scenario thus represents a least-cost capacity expansion of each of the individual supply areas under these conditions.

OPTIMISE MUNICIPALITY (WITH WHEELING)

This scenario is the same as the previous, but optimisation is done for the municipality as a whole, not as individual supply areas (nodes). Regional optimization investigates the role that wheeling could play.

5.3.3. Autonomy by 2030

New supply options were introduced in a manner similar to that of the Least Cost scenario, without wheeling, but subject to a constraint that 100% supply autonomy must be achieved from 2030 with no reliance on Eskom. The current tariff composition remains as described above.

5.3.4. Loadshedding Mitigation

Investigate possible interventions to reduce the amount of loadshedding experienced by Stellenbosch Municipality's customers. The current tariff composition remains as described above.

The previous scenarios have an hourly temporal resolution and a time horizon from 2022 to 2040. To accurately capture loadshedding schedules, the temporal resolution needed to be refined to 30 minutes. The time horizon is shortened to 3 years from 2022 to 2025.

With other scenarios, the supply from the national electricity network is assumed to be 'perfect': always available and an infinite source of supply. Currently this is not the case. Loadshedding is time-based interruption of supply to customers on a rotational basis implemented by the System Operator and distribution control rooms in order to prevent a national, regional or local blackout. Sections of the network are switched off according to a schedule. This is done to ensure network stability when supply is not able to meet demand. Loadshedding is also known as manual load reduction. Loadshedding has become common practise in South Africa, but it should be remembered that it is an emergency load reduction measure.

Stellenbosch is part of a 16-block region and makes up two of those blocks, namely Stellenbosch town and the rest of the municipality, including Cloetesville, Franschhoek and Pniel. This means that up to 65% of Stellenbosch municipality's supply is turned off at a time.

The unavailability of Eskom supply is modelled as planned maintenance with complete outages - during a loadshedding event, the complete Eskom supply is 'offline'. The frequency and timing of loadshedding is dependent on the stage, currently there are eight stages. Each stage equates to about 5% of demand. The modelling considered stages one, two, four, six and eight. To provide seasonality these stages are assumed to occur for a full winter (June) and summer (November⁷) month.

To address the urgency of the matter, batteries and Peaker technologies including ICE and OCGT, are able to come online one year earlier in July 2023, instead of July 2024. The objective of the modelling is to quantify the potential impact of these technologies to mitigate against loadshedding and at what cost. The costs are compared to both the BAU and Least Cost Nodal solutions. The modelling procedure is:

1. Change model horizon to three years: 2022 to 2025
2. Change temporal resolution to 30 minutes
3. Fix Eskom capacity (MW) to current values
4. Include loadshedding schedules: stage one, two, four, six and eight

⁷ December and January are not good candidates for summer months due to the holiday season in South Africa

5. Assume loadshedding occurs for one complete winter month (June) and one complete summer month (November) each year
6. Run model without any interventions to quantify unserved energy (the technical reference case)
7. Bring project start date one year earlier for batteries and Peakers, which can thus be built from July 2023. These are the only candidate generators and batteries.
8. Run model to find optimal techno-economic solution to mitigate loadshedding
9. Quantify loadshedding mitigation in terms of unserved energy reduction relative to technical reference case
10. Take loadshedding solution/builds as committed builds for Least Cost Nodal solution. Rerun Least Cost Nodal solution with said committed builds
11. Quantify the cost premium to mitigate loadshedding over the time horizon 2022 to 2040

5.4. Exclusions

The modelling framework considers all primary cost-drivers directly relevant within the electricity sector. It is important to note exclusions from the modelling framework which are not included in the optimisation, these are:

- Network infrastructure requirements for each scenario. The modelling framework is capable of co-optimisation of generation and transmission, but this has not yet been included in this scope of work. Network constraints are considered for the wheeling scenario but network expansion is not considered.
- Power flows in the transmission and distribution network are not considered in detail
- System services (stability, reactive power and voltage control, black-start requirements)
- Mid-life generator major maintenance and overhauls for any technology
- End of life decommissioning costs for any technology
- Rooftop, carport, and ground stability

5.5. Input Assumptions

5.5.1. Overview

The inputs to both the rooftop PV analysis (**Chapter 4**) and capacity expansion planning (**Chapter 0**) are provided in **Chapter 2** and **Chapter 0**. Specific to this section, the following inputs are employed:

- Technology Costing and Learning Rates (**Section 3.2**)
- Demand Forecast (**Section 3.4.2**)
- Eskom Tariff Projection (**Section 3.4.3**)

The economic parameters that are used as input for the modelling are provided in next section.

5.5.2. Economic Parameters

For economic parameters, this study assumed the following:

- 2022 exchange rate at R15.00 to \$1 (USD). All technology costs shown in **Table 28** are in January 2022 Rands.
- WACC of 10% as calculated by 70% Debt at 8% and 30% Equity at 14.5%

A Cost of Unserved Energy (COUE) value of R 93.00/kWh (R 87.50/kWh in 2018) as per the National Energy Regulator of South Africa (NERSA) study [18] is considered. COUE is utilized for long-term energy planning purposes as part of the least-cost objective function to balance investment in new capacity and utilization of existing capacity. The inclusion of COUE ensures that an acceptable level of system adequacy is achieved. This is because of the natural balance achieved via optimisation where the high cost of unserved energy is avoided by building additional capacity and dispatching existing capacity optimally to meet expected demand.

5.5.3. New Technology Costing and Technical Assumptions

This section provides a summary of costing and technical performance data used for new technologies. For details, please refer to **Section 3.2**. All technology costs shown in the following table are in January 2022 Rands.

Key input assumptions include overnight capital cost, Fixed Operations and Maintenance (FOM), Variable Operations and Maintenance (VOM), fuel costs and efficiency (heat rate). The modelling framework (PLEXOS®) does not consider the Levelised Cost of Electricity (LCOE) as an input parameter but considers all cost components explicitly as listed above. The LCOE can at a high level be used to compare alternative technologies.

Table 28: New-build technology cost and technical assumptions

	Wind	Solar PV FT	Solar PV SAT	ICE	OCGT	L-Ion 4hrs
Net Rated Capacity (MW)	100	100	100	20	100	10 MW / 40 MWh
Project Start Date (earliest)	2025	2024	2024	2024	2024	2024
Lifespan [Years]	20	25	25	30	30	10
Capex [R/kW]	14 410	12 100	13 930	27 000	17 000	22 000
Fixed O&M [R/kW pa]	500	140	250	525	70	75
Variable O&M [R/MWh]				85	70	
Fuel Cost [R/GJ]				400 (R15/l of diesel)	400 (R15/l of diesel)	0
Heat Rate [GJ/MWh]				8.75	10.0	
Efficiency (round-trip)						86%
Capacity degradation per cycle						0.025%
Planned Outage Rate				3%	2%	
Unplanned Outage Rate				1%	1%	
Emissions Factor (diesel) [kgCO ₂ /GJfuel]				71	71	
CO ₂ Emissions (kg/MWh)				621	710	

5.6. Results

5.6.1. Business-as-Usual (BAU)

Figure 50 shows the peak demand (MW) and load (GWh) for the municipality per supply area. This is the demand that needs to be met. The total peak demand is simply the sum of the supply areas. The actual peak demand for the municipality includes diversity and is currently about 65 MW. In the BAU scenario, demand is entirely met by Eskom.

Figure 51 presents the split between fixed and variable costs. In 2022, the total cost of electricity purchases is R 558 million. Even though the demand is forecast to decrease, the costs in real terms rise due to above inflation Eskom tariff increases. The evolution of Eskom tariffs is evident with the significant growth in fixed costs from less than 10% to 24% by 2040. The annual, equivalent energy charge increases from R 1.28/kWh to R 1.88/kWh in real terms.

Figure 50: Peak demand (left) and load

Figure 51: Fixed and variable total cost of electricity

The national CO₂ emissions and water factors (per unit MWh) drop significantly due to the reduction in coal generation and increased renewables in South Africa, as envisioned in the national IRP as illustrated in the following figure. Most of the shown reduction, for instance 65% for absolute CO₂ emissions, is due to the said national improvements. A part of the reduction is also due to the decreased demand as shown in **Figure 50**. Eskom supplied electricity is becoming less CO₂ and water intensive.

Figure 52: Indirect CO₂ emissions and indirect water usage, per unit on the right y-axis

5.6.2. Least Cost

OPTIMISE NODE (NO WHEELING)

The results for the collective municipality are presented which are the sum of the optimal plans per supply area. In this section no wheeling between areas is possible/allowed – the supply areas are isolated. The following section considers the potential role of wheeling.

The table below presents the consolidated municipality view for installed capacity and generation mix. The installed capacity increases significantly with mostly VRE but the total of the firm and dispatchable capacity remains fairly constant. The annual build limits for wind and PV (refer to **Table 27**) are only binding in the ‘first’ year that PV and wind can be built, namely 2024 and 2025, respectively. It should be noted that the annual build limits are relatively high compared to the municipality’s demand.

Figure 53: Installed capacity and energy share: Least Cost Nodal

As evident in **Figure 54**, the demand is ‘saturated’ with VREs with relatively large amounts of new builds. By integrating batteries, higher penetration of VREs is present. There will be curtailment in the optimal solution, especially as the relative cost of VRE decreases. The amount of curtailment is dependent (but not necessarily limited to) the annual build limits, the cost of energy storage systems and the profile of VRE outputs relative to demand.

The reliance on Eskom reduces significantly. The capacity ‘sourced’ from Eskom drops to 75% and 50% by 2025 and 2034, respectively. The modelling shows that Eskom will still have a major contribution/role. Over the time horizon, Eskom and VRE provides, respectively, 51% and 49% of the electricity generation.

Figure 54: Curtailment factor for wind and solar PV: Least Cost Nodal

Figure 55 presents the cost of electricity, on the left is absolute and right is relative. Please note that the order of the 'stacking' is changed: Eskom variable and non-Eskom fixed swop from left to right. This is done to group fixed and variable costs.

In 2022, the total cost of electricity purchases will be R 558 million and is entirely Eskom costs (Pniel is via Drakenstein municipality with a markup). The cost structure changes significantly from Eskom to non-Eskom and from variable to fixed costs - 100% Eskom and 90% variable in 2022 to 43% Eskom and 24% variable.

In the short-term, there is no variation from the BAU as interventions can only start in 2024. But the cost increases of the BAU are diluted with the increased penetration of VREs. It should be remembered that demand is also declining. The cost of electricity, per unit, significantly reduces compared to the BAU scenario (**Figure 56**). With the current complete reliance on Eskom and the projected well above inflation increases, this is a significant turnaround.

Figure 55: Cost of electricity: Least Cost Nodal

Figure 56 compares the BAU and Least Cost Nodal scenarios. On the left are the fixed, variable and total costs for both scenarios. In summary, the Least Cost Nodal increases the fixed costs and decreases the variable costs. Collectively, the NPV of the cost of electricity over the horizon is reduced by 18%. These benefits continue after 2040.

On the right of the figure is the total electricity unit price, which illustrates the significant ‘dilution’ of well above inflation Eskom tariff increases, due to the discussed interventions. This is in strong contrast to the increasing BAU scenario.

Figure 57 presents the absolute CO₂ emissions and water usage. The cumulative savings for CO₂ and water is 2.0 and 1.8 million tonnes respectively.

Figure 56: Cost of electricity: BAU vs Least Cost Nodal

Figure 57: Indirect CO2 emissions and indirect water usage: BAU vs Least Cost Nodal

OPTIMISE MUNICIPALITY (WITH WHEELING)

The previous section presented the results of finding the optimal solution for each supply area/node, as if it is the only node. However, in reality these supply areas are connected via the Eskom network. A municipality-wide optimization was undertaken to investigate the role wheeling could play. It should be noted that wheeling was limited to within the municipal boundaries.

Technical information of the regional Eskom network is provided in **Section 3.4.5**. **Table 18** provides maximum generator capacity per municipal supply point. These constraints are enforced. For costing purposes, a wheeling fee of 15% of the total Eskom cost per unit was added. This translates to a wheeling charge of 23 cents/kWh in the year 2022 and 40 cents/kWh in 2040 (in real terms). Please refer to **Section 3.4.4** for details.

The results (with wheeling) are compared to the nodal results of the previous section (without wheeling). The installed capacity and energy mix of with (left) and without (right) wheeling are presented in **Figure 58** and **Figure 59**. The option of wheeling:

- Increases
 - wind capacity
- Decreases
 - solar PV capacity

- battery storage
- reliance on Eskom
- Shifts to better wind resources

Wheeling does not reduce solar PV capacity per se, but it provided the option to build utility-scale wind plants at relatively small load centres with better wind resources and wheel the electricity to other supply areas. For instance, the 40 MW wind farm built at Franschhoek which has the best wind resource, Table 29.

Figure 58: Installed capacity: Least Cost Nodal (left) vs Least Cost Munic (with wheeling)

Figure 59: Energy share: Least Cost Nodal (left) vs Least Cost Munic (with wheeling)

Table 29: Placement of wind and solar PV plants: Least Cost Nodal vs Least Cost Munic (with wheeling)

Installed MW 2022 - 2040					
Wind			PV		
Without wheeling	→	With wheeling	Without wheeling*	→	With wheeling
Stellenbosch	20	20	70	↓	55
Cloeteville	-	-	20	↓	15
Franschhoek	-	↑	20	↓	-
Pniel	-	-	15	↓	10
Total	20	↑	125	↓	80

*"Without wheeling" has limits per node and per technology (Table 27), whereas "with wheeling" has a global limit per technology

The following figure presents the curtailment factors for wind and PV separately. Even though there is more installed wind when wheeling is allowed, the curtailment of those plants is lower than when wheeling is not allowed. This shows an advantage of a regional approach. The curtailment of PV increases with wheeling, this is most likely due to the significant increase in wind generators.

Wind curtailment factor %

PV curtailment factor %

**Figure 60:** Curtailment factor for wind and solar PV: without (blue) vs with wheeling

The following figure provides the cost of electricity⁸. Overall, wheeling provides for 8% lower total cost of electricity than without. This is, *inter alia*, dependent on the wheeling fee, grid constraints and the diversity of the local resources. Wheeling also further reduces CO₂ emissions and water consumption by about 20%.

Figure 61: Cost of electricity: without (left) vs with wheeling

Figure 62 shows the reduction in the reliance on Eskom of Stellenbosch municipality. The reliance on Eskom is installed capacity taken relative to the start year (2022). Solid lines represent with transmission and broken lines show nodal/without transmission results. As mentioned, wheeling allows for a greater reduction in reliance on Eskom in terms of energy and costs. The 'weaning' of Eskom capacity is slower than Eskom energy. The VRE and Storage shares are relative to energy. The VRE share is the sum of solar PV and wind. The two scenarios are similar, with wheeling providing a higher VRE share. This is due to increased installations of VRE and the exploitation of better wind resources.

⁸ Peak demand reductions and associated Eskom cost reductions due to wheeling are not included. Before such cost reductions can be realized, Eskom would need to be consulted.

Figure 62: Eskom reliance and energy share: without (broken lines) vs with wheeling

5.6.3. Autonomy

New supply options were introduced in a manner similar to the Least Cost plan but subject to a constraint that 100% supply autonomy must be achieved from 2030. This scenario shows what would be required if the municipality is either forced or chooses to disconnect from the Eskom network. Wheeling is excluded as that would require the Eskom network.

Figure 63 shows the required installed capacity and resulting energy share for the municipality to achieve 100% autonomy. As expected, a lot of Peakers need to come online in 2030 as no other technology options are available to provide firm and dispatchable capacity. This is the only scenario when Peakers, ICE (internal combustion engine) and OCGT (open cycle gas turbine), are built. OCGT facilities are cheaper per kW but due to the higher efficiency of ICE the former is deployed far more. To reduce expensive generation from Peakers that have high fuel (diesel) costs, large amounts of VREs are built. This leads to high curtailment factors.

Figure 63: Installed capacity and energy share: Autonomy by 2030

The following figure presents the cost of electricity, on the left is absolute and right is relative. The spike in 2030 to R 857 million annual spend is due to the introduction of Peakers which have a R 300 million diesel fuel cost. With less VRE the fuel cost would be higher. Please note that this excludes the necessary network/system upgrades and ancillary services and the results should be taken as optimistic (low). A comparison of the scenarios is provided in the next section.

The Autonomy scenario provides the highest CO₂ and water savings. The cumulative savings for CO₂ and water relative to BAU is about 60%.

Figure 64: Cost of electricity: Autonomy by 2030

5.6.4. Loadshedding Mitigation

The amount of unserved energy due to loadshedding is dependent on the stage of loadshedding and for how long loadshedding is implemented. To provide some perspective, on a national level there were 1,169 hours of loadshedding implemented last year, realising 1,775 GWh of actual energy shed. The amount of loadshedding in 2022 is unprecedented. The disruption to people's lives and their ability to make a livelihood is high, and increasing.

If loadshedding occurs over a period, say for a month, the outage ratio (number of hours offline vs total hours) is nearly linear to the stage of loadshedding. The case of Stellenbosch town (block 2) is presented below. Because the loadshedding schedule 'shifts' from day to day the outage ratio (time based) is similar to the ratio of unserved energy (energy based).

Figure 65: Outage ratio per loadshedding stage

As mentioned, one winter and one summer month is modelled with loadshedding per year. Therefore, the outage and unserved energy ratios would be about 1/6th of the above graph. An example of a loadshedding schedule is provided in the following table. For the week shown, Stellenbosch town would experience an outage ratio of 42% for Stage 6. The loadshedding schedule that a customer 'sees' is only dependent on the stage and day of the month, there is no seasonal variation.

Table 30: Example of loadshedding schedule for Stellenbosch town (block 2): Stage 6

Time off	Time on	D1	D2	D3	D4	D5	D6	D7
00:00	02:30					X	X	X
02:00	04:30	X	X	X	X	X	X	
04:00	06:30	X	X					
06:00	08:30							
08:00	10:30					X	X	X
10:00	12:30	X	X	X	X		X	X
12:00	14:30		X	X				
14:00	16:30							
16:00	18:30					X	X	X
18:00	20:30	X	X	X	X			X
20:00	22:30			X	X			
22:00	00:30							
Total hours offline (42%)		9.5	10.5	10.5	9.5	9.5	10.5	10.5

The objective of the modelling is to quantify the potential impact of the deployment of generation and/or storage technologies to mitigate loadshedding and at what cost. The first thing to note with loadshedding is that the capacity required to avoid or mitigate is not dependent on the stage. For instance, on the 1st day of the month at 10:00 Stellenbosch town will be shed for 2 and half hours according to the stage 6 schedule. Whichever stage, Stellenbosch town is (completely) shed for at least 2 and half hours. Thus, the back-up capacity required is only dependent on if loadshedding is being implemented or not and the demand to be met at the time of loadshedding. The duration and frequency of loadshedding, which is dependent on the stage, and the demand to be met at the time of loadshedding would inform the energy requirement, for instance the hours of battery storage installed or the volume of the diesel tank.

It was found that battery storage was selected over Peakers. Only with stage 8 loadshedding, which has limited time available for charging of the batteries, were Peakers required to supplement battery storage. It could be that batteries with greater storage, for instance 6 hours (instead of 4), would have sufficed. As expected, the amount of battery capacity (MW) is not sensitive to the stage of loadshedding. About 50 MW with 4-hours storage is required to significantly reduce the amount of unserved energy by about 80%. Details are provided in **Table 31**. The costs of such interventions are also provided, for instance the technical solution to mitigate stage 4 loadshedding is 55 MW battery capacity

at a once off build cost of R 1.13 billion which would be about double the total bulk purchases cost in 2023 for Stellenbosch municipality. The annualised build cost of R 185 million is about 30% of the said account.

Table 32 provides a summary of the total costs and some of the benefits. Due to losses with charging and discharging, batteries are net loads. In the modelling scenario this additional load is sourced from Eskom. Depending on the frequency of loadshedding and the operating regime of the facility, energy arbitrage benefits are expected to overcompensate for these additional purchases. The value of avoiding unserved energy is dependent on many factors and varies across customers. The published Cost of Unserved Energy of R 93.00/kWh [18] is used for explanatory purposes. Even if taken at 10% of this value there is a strong case for battery storage.

Table 31: New builds in 2023 of battery storage and Peakers (ICE) to mitigate loadshedding

	Battery	ICE	Build Cost	Annualised Build Cost	Fuel Cost (diesel)	Unserved energy reduced	
	MW	MW	R million	R million	R million	MWh	%
Stage1	50	-	1 031	168	-	3 510	84%
Stage2	55	-	1 134	185	-	7 480	89%
Stage4	55	-	1 134	185	-	15 860	89%
Stage6	65	-	1 340	218	-	20 190	78%
Stage8	60	15	1 642	244	18.5	28 350	83%

Table 32: Total annual costs and benefits of technical interventions for loadshedding mitigation

Per year	Total Build and Opex R million	Value of avoided USE* R million
Stage1	168	326
Stage2	185	696
Stage4	185	1 475
Stage6	218	1 878
Stage8	263	2 637

*USE (unserved energy), Cost of USE = R93.00/kWh

The future is unknown and to account for uncertainty, decision makers may favour low or ‘least’ regret options. To test this, the technical solution for loadshedding stage 4, (55 MW battery storage deployed in 2023), is inputted as committed builds in the Least Cost Nodal model/scenario (refer to **Section 5.6.2**) and optimised. The outputs are compared in the figure below to Least Cost Nodal. The two solutions are similar, the biggest variation is the deployment of large amount of batteries with loadshedding mitigation.

The question is: what is the cost premium⁹ to install batteries early to mitigate loadshedding? **Figure 67** shows the cost to be comparable. The cost premium is 11% over the horizon 2022 to 2040. The second question decision makers need to evaluate: is that a justified cost to mitigate loadshedding? Further studies are recommended to unpack these possibilities.

Figure 66: Installed capacity: Least Cost Nodal (left) vs loadshedding mitigation

⁹ We know it is non-optimal solution as Least Cost Nodal had the option to follow this approach but ‘choose’ not to

Figure 67: Cost of electricity: Least Cost Nodal (left) vs loadshedding mitigation

5.6.5. Electricity Cost Summary

The following table and figure provides a summary of the generation expansion plan scenarios studied. The lowest cost of electricity supply is provided by Least Cost Munic which allows wheeling via Eskom's network. The cost premium when wheeling is excluded is 8%.

Table 33: Summary of generation expansion plan scenarios

Sum over		BAU		Relative		Relative		Auto	Relative
2022 - 2040		LC Nodal		BAU		LC Munic		nomy	BAU
Eskom	GWh	7 070	3 705	-48%	2 759	-61%	2 119	-70%	
Non-Eskom	GWh		3 561		4 464		5 111		
Total	GWh	7 070	7 266	2.8%	7 223	2.2%	7 230	2.3%	
Costs	R billions	14.6	11.7	-20%	10.7	-21%	13.8	0.3%	
CO2	10 ⁹ kg	4.7	2.6	-43%	2.0	-56%	1.7	-63%	
H2O	10 ⁹ kg	4.4	2.7	-40%	2.1	-52%	1.6	-64%

6. Socio-Economic Benefits of VRE and Battery Storage

This section provides a summary of the socio-economic analysis.

6.1. Background & Description

The deployment of renewable energy technologies provides various socio-economic benefits such as job creation, gross domestic product (GDP) growth, skills development, improved health among others. Globally, job creation and GDP growth have been cited among the key considerations to support the deployment of renewable energy. The main objective of this section is to quantify the potential job creation and economic growth for the deployment of solar PV, wind, and battery storage technologies in the jurisdiction of Stellenbosch Municipality.

6.2. Methodology

A quantitative approach is used to quantify the potential socio-economic benefits of deploying renewable energy and battery storage technologies. The International Jobs and Economic Development Impacts (I-JEDI) model developed by the National Renewable Energy Laboratory (NREL) was used and adapted by the CSIR to quantify the potential socio-economic impacts of solar PV and wind energy technologies. The input data required for the model included project size (MW), exchange rates, component cost data and local content for various equipment and segments of the entire value chains. The input data was acquired via primary and secondary research. The model outputs include jobs creation numbers (direct, indirect, and induced), total earnings, gross output value and gross domestic product (GDP) or economic value creation.

Furthermore, since the I-JEDI model does not have a specific development for battery storage, the employment benefits for this technology were sourced from an international study conducted by the Solar Foundation [19]

6.3. Results

6.3.1. Overview

This section details the results from modelling of socio-economic impacts from deployment of wind energy, solar PV and battery storage technologies using I-JEDI model. The results for estimated job and GDP contribution are displayed in terms of direct, indirect, and induced. The I-JEDI model distinguishes between construction and operations & maintenance (O&M) periods of the specific technologies.

Construction jobs are temporary and generally last for approximately 24 months, while O&M jobs are sustainable and increase with installed capacity. O&M periods are typically 20-25 years for both solar PV and wind technologies. Furthermore, the jobs are also calculated on a full time equivalent (FTE) basis.

It is envisaged that the municipality will install the technologies with the capacities during 2022 – 2040 tabulated in the table below. These capacities were used as input into the I-JEDI models.

Table 34: Modelled capacities (in MW's) for installation of solar PV, battery storage and wind technologies within the municipal jurisdiction for the period 2022-2040 (Least Cost Nodal)

Year	2024	2025	2026	2027	2028	2029	2030	2031	2032
PV	35	30	10		5	5	15	10	
Wind		20							
Battery		10	5	15	5			15	5
Year	2033	2034	2035	2036	2037	2038	2039	2040	Total
PV					5			10	125
Wind									20
Battery		10	5	10	5	10		10	105

6.3.2. Utility-Scale Wind and PV

The estimated number of job creation over the period 2022-2040 from the deployment of total capacity of 125 MW solar PV are 2,329 jobs (719 direct, 778 indirect and 832 induced jobs) and 713 jobs (213 direct, 260 indirect and 241 induced jobs) during the construction and O&M phases, respectively. The deployment of 20MW of wind technology is estimated to create 563 construction jobs (178 direct, 188 indirect, and 197 induced) and 451 O&M jobs (138 direct, 147 indirect, and 166 induced). These numbers are illustrated in more detail in the following figure.

Figure 69: Modelled job creation for deployment of capacities from solar PV and wind technologies

Figure 70 illustrates the total GDP and value creation which can be generated over the period 2022-2040 during the construction and O&M phases of the deployed capacities of solar PV and wind in the municipal jurisdiction. GDP growth for construction period equates to a total of R1,122 million and R236 million respectively for solar and wind capacities. While during the O&M phases the total GDP value is estimated at R310 million and R411 million, respectively for solar and wind.

However, it should be noted that the inconsistent procurement of additional capacity affects the annual jobs creation and GDP growth as depicted.

Figure 70: Modelled GDP growth for deployment of capacities from solar PV and wind technologies

6.3.3. Battery Storage

The installation of 105 MW capacity of battery storage over the period 2022 – 2040 has the potential of creating about 121 and 243 direct and induced jobs, respectively. This is based on an application of 1.15 direct jobs/MW and 2.31 induced job/MW, which were calculated using information from the literature review. A consistent build out of battery storage projects is encouraged to ensure that jobs are consistently created. The following figure illustrates the job creation from the installation of capacities detailed.

Figure 71: Potential job creation during the installation of battery storage

6.4. Conclusions

The potential job creation and economic value-added impacts resulting from the deployment of 125 MW utility-scale solar PV and 20 MW wind energy installations during 2022-2040 have been estimated using the IJEDI model. The results indicate that a total of 2,892 and 1,164 FTE jobs can be created during the construction and O&M phases of these energy technologies, respectively. Furthermore, a total economic value added of approximately R 1,358 million and R 721 million can be generated during the construction and O&M phases, respectively. It is evident that these technologies have the potential to deliver social and economic benefits, however, a consistent built out of such projects is encouraged in order to sustain these benefits. The economic value-added associated with battery storage could not be quantified due to the limited available information and models for the technology.

7. Summary and Conclusions

7.1. Rooftop PV Analysis

The geospatial work identified rooftop area for the municipality per customer class. Residential customers 'house' 54% of the identified space. Installable PV capacity equates to approximately 580 MW of rooftop PV. This is about 8 times the municipality's MD (maximum demand).

Around 40% of the identified installable rooftop PV capacity would be required to meet all customers' annual volumetric energy consumption, in terms of magnitude (not timing). Residential, commercial and agricultural customers have adequate roofspace to cover their own annual electricity consumption needs.

The business case analysis shows that rooftop solar PV currently makes sense in most instances. Due to increasing municipal tariffs and declining solar PV costs the business case improves with time. If the current price paths continue, solar PV will make financial sense for all customer classes and scenarios by 2040. Stellenbosch already provides a feed in tariff to its customers. Stellenbosch Municipality is most likely in the initial-Early Adopters stage and already has around 6 MW of embedded PV generation on their network.

The analysis showed that rooftop solar PV will likely play a significant role in the electricity future of the municipality. Decision makers should be mindful of this customer resource and promote the responsible and sustainable utilisation thereof. Utilities should be careful to not push their customers to deflect with excessively high access charges or unreasonably low FIT (feed in tariffs). Ongoing loadshedding is already causing many South Africans to install batteries for reliable supply/backup. Stellenbosch Municipality is in the position to be able to buffer their customers from loadshedding and expected Eskom tariff increases.

7.2. Capacity Expansion Planning

7.2.1. Techno-Economic Analysis

Contrary to the municipality's current and expected expansion, the demand is forecast to decline by 9% from the current 392 to 356 GWh in 2040. The Eskom tariffs were estimated to increase above inflation and to also shift away from energy dominated charges to higher fixed and demand charges. The municipality's current total Eskom bill is 88% energy related. Assuming the same electricity usage pattern this would decrease to about 70% in 2040.

Under the BAU scenario, the total cost of electricity purchases would increase from R 558 million in 2022 to R 881 million in 2040, in real terms a 60% increase, even though demand is expected to decline.

The following alternatives were considered: wind, solar PV, battery storage and peakers (gas turbines and engines). To provide realistic outputs annual MW build limits were enforced on wind and solar PV. Utility-scale build size was taken as 20 MW and 5 MW for wind and solar PV, respectively. The possibility of lower build sizes favoured PV in the smaller load centres. All new builds were limited geographically within the municipal boundaries, and thus, so was wheeling arrangements.

The study showed that by procuring alternatives and diversifying the energy mix, the cumulative cost of electricity could be reduced by 20%. With the addition of low-cost renewables, the unit cost of electricity could be significantly lower than the BAU scenario. Stellenbosch Municipality has the opportunity to lower their demands on the struggling national network, reduce electricity costs and lower their environmental impact. The cost of Stellenbosch Municipality not taking action timeously is high.

Under the Least Cost Nodal plan, the capacity (MW) reliance of Eskom would reduce from the current 100% to 60% by 2030 and 50% by 2040. Over the same period the reduction in energy reliance is greater, namely down to 40% and 30%. It should be noted that the annual build limits of VRE are relatively high so these results could be seen as optimistic. Eskom will continue to play a major role and will supply more than half of the electricity (GWh) over the said period. It was shown that it is not economically optimal for Stellenbosch Municipality to disconnect from the grid.

The Least Cost plan has cost benefits as well as societal benefits derived from reducing CO₂ emissions and consuming less water. The following figure shows the cost savings, cumulative CO₂ emissions and water consumption for Stellenbosch Municipality. Renewables will provide almost half of the electrical energy over the period.

Engineering load flow studied determined the VRE generation with a maximum size of 72 MW can be connected at Stellenbosch substation, 18 MW can be connected at Cloetesville substation and a 29 MW plant can be connected at Franschhoek substation. Due to Pniel receiving supply at 11 kV only a 2 MW plant can be connected there. The wheeling of electricity within the municipal boundaries via Eskom's network was investigated. It was shown that Stellenbosch Municipality could reduce the cost of electricity by a further 8% through wheeling. Wheeling allowed for a greater exploitation of better wind resources and reduced the curtailment of wind. The total cost of electricity should be evaluated, not just the generation costs. Further studies on wheeling from outside the municipal boundaries are recommended.

For the 100% Autonomy scenario, a significant amount of peakers are built in 2030 to provide firm capacity. The total annual cost of this scenario peaks at R 857 million, R 300 million of which are diesel fuel costs. The analysis excludes the necessary network/system upgrades; thus the cost estimates are optimistic (low). Cheaper fuel alternatives would dramatically change the costs.

The amount of loadshedding in 2022 is unprecedented. Technical solutions to mitigation loadshedding were investigated. Battery storage was selected over peakers (ICE and OCGT). Only with stage 8 loadshedding, which has limited time available for charging of the batteries, were peakers required to supplement battery storage. It was shown that about 50 MW with 4-hours storage located across the municipality could reduce the amount of unserved energy by about 80%. The overnight capital cost of such a facility of around R 1.2 billion would be twice the municipality's annual bulk purchase account in that year. When compared to the cost of unserved energy at R 93.00/kWh, even if taken at 10% of this value there is a strong case for battery storage. Furthermore, the cost premium of deploying such a facility in 2023 was compared to the techno-economic optimal solution for electricity supply. The cost premium is 11% over the horizon 2022 to 2040. The question decision makers need to evaluate is if this premium is a justified cost to mitigate loadshedding. Further studies are recommended to unpack these possibilities. Additionally, the municipality should engage with the System Operator as to what is permissible during loadshedding.

Figure 72: Cumulative costs, indirect CO₂ emissions and water consumption

The build capacity for the Least Cost Nodal plan is provided in **Table 35**. In the short-term, Stellenbosch Municipality should procure wind and solar PV. Due to relatively small load-centres, the latter is favoured. These are least regret options. The likely limitation will be procurement constraints. Procurement should be based on the value to the municipality and the municipality should not simply incentivise the lowest flat tariff - generation that maximises savings/value. For instance, electricity supplied during peak periods and the high demand season are of higher value. Put simply: tell the market what you want/need and let the private sector optimise. Rules of the game in terms of grid unavailability and curtailment need to be carefully considered. This is particularly important based on the current electricity crisis and increasing curtailment with likely high levels of VRE penetration.

In the medium term, energy storage systems should also be procured, either as stand-alone systems or as RE hybrids. The latter may have co-optimisation benefits. If loadshedding persists, which it likely will, then energy storage systems should also be procured in the short-term. Loadshedding mitigation provides guidance on the way forward.

It is not recommended that Stellenbosch Municipality make all the new capacity investments at once, but rather make investment decisions in the short-term and then revise the municipal electricity masterplan once every two to three years to determine the next phase of investment.

Table 35: Build capacity: Least Cost Nodal (without wheeling)

Built Capacity MW		Wind	PV	Battery (4 hours storage)
Short-term	2022 - 2025	20	65	15
Medium-term	2026 - 2030	0	35	20
Long-term	2031 - 2040	0	25	35
Installed capacity by	2040	20	125	70*

* Not the sum as battery storage lifespan is 10 years

7.2.2. Socio-Economic Analysis

The potential job creation and economic value-added impacts resulting from the deployment of 125 MW utility-scale solar PV and 20 MW wind energy installations during 2022-2040 have been estimated using the IJEDI model. The results indicate that a total of 2,892 and 1,164 FTE jobs can be created during the construction and O&M phases of these energy technologies, respectively. Furthermore, a total economic value added of approximately R 1,358 million and R 721 million can be generated during the construction and O&M phases, respectively. It is evident that these technologies have the potential to deliver social and economic benefits, however, a consistent built out of such projects is encouraged in order to sustain these benefits. The economic value-added associated with battery storage could not be quantified due to the limited available information and models for the technology.

8. Recommendations for Further Work

The study provides the “what” should be procured. The “how” and by “who” still needs to be unpacked by the municipality.

Various aspects could not be considered in this study, either as it was outside of scope or due to time constraints or lack of data. Recommendations for further work include:

- Studies on loadshedding mitigation should be expanded., including stochastic modelling. System Operator requirements during loadshedding should be considered carefully.
- The impact of climate change on the local solar and wind resources should be considered
- Further tariff projections could consider a more aggressive shift away from the energy cost driver to fixed/demand components
- Historic data on embedded generation should be provided to perform the adoption rates analysis. This section can also be expanded to include consumer behaviour and potentially extract lessons learnt from other parts of the world
- Site selection for wind and PV plants should be taken further
- On-site wind measurements in strategic locations
- Demand Response investigations should be undertaken. The cost of implementing such strategies should be compared to alternatives, such as Peakers and battery storage
- It would be useful to the municipality to translate the findings of this study to sustainable tariff design
- The study provides possible electricity future scenarios, but no guidance on how to achieve this is offered. Transaction advisory assistance could assist the municipality with potential procurement programmes. The procurement strategy should be explored to answer questions like:
 - How to promote quick responses to the ongoing electricity crisis?
 - Eskom is the single Buyer in RE4P model, should Stellenbosch Municipality be the only Buyer?
 - What enabling programmes would best serve Stellenbosch Municipality customers?
 - What role does wheeling from outside municipal boundaries have?
 - Should Stellenbosch Municipality transition to becoming a network service provider and how best to do so?

11.6.5	ACCEPTANCE OF STELLENBOSCH MUNICIPALITY'S ELECTRICITY RINGFENCING AND COST OF SUPPLY STUDY FINAL REPORT
---------------	--

Collaborator No: 746224
 IDP KPA Ref No: Governance and Compliance
 Meeting Date: 22 March 2023 & 29 March 2023

1. SUBJECT: ACCEPTANCE OF STELLENBOSCH MUNICIPALITY'S ELECTRICITY RINGFENCING AND COST OF SUPPLY STUDY FINAL REPORT

2. PURPOSE

To present to Council the final report of Stellenbosch Municipality's Electricity Ringfencing and Cost of Supply Study for acceptance and approval.

3. DELEGATED AUTHORITY

For notification by the Municipal Council.

4. EXECUTIVE SUMMARY

During the advent of more frequent loadshedding periods by Eskom, Council decided to investigate ways and means to reduce the impact on civil society and businesses by means to co-generate electricity. To this end, the Municipality entered into a Memorandum of Understanding with:

- The University of Stellenbosch
- Council for Scientific and Industrial Research (CSIR) as well
- The Western Cape Government

Conducting an electricity Cost of Supply Study has been identified as one of the three investigations to be done.

The electricity Cost of Supply (COS) study contains 2 main components.

- Ringfencing electricity. The key objective of this part of the study is to establish the true cost and revenue of electricity supply in the municipality.
- The Cost of Supply study. The objective of the cost of supply study is to know the cost of supplying customers on each tariff and to compare this with the revenue from current tariffs and thus the cross-subsidies.

This report describes the details relating to the two components of the study undertaken for Stellenbosch Municipality. It contains the detailed results for the whole area.

5. RECOMMENDATIONS

that Council accepts the report on "ELECTRICITY RINGFENCING AND COST OF SUPPLY STUDY" - as authored by the Neil Lyners and Associates Consulting Engineers;

- that Council note the recommendations made in the report regarding the pricing and setting of future electricity tariffs;
- that Council adopts the final cost of supply study report, as the report to be used in future to develop new electricity tariffs and derive percentage increases on the existing electricity tariffs.

6. DISCUSSION / CONTENTS**6.1 Background**

In October 2022, Stellenbosch Municipality appointed Neil Lyners and Associates Consulting Engineers to conduct an Electricity Distribution Ringfencing and Cost of Supply Study. The Cost of Supply Study is needed.

- (a) to enable the municipality to develop cost reflective electricity tariffs. The COS report will determine the current cost to supply electricity and the anticipated cost of service for the next financial years in order for the municipality to move towards cost reflective tariffs within the subsidised model so as to be in a better financial position to render the services as required by a municipality.
 - (b) To comply with The Electricity Pricing Policy (EPP) policy position 23 states that: *“Electricity distributors shall undertake COS studies at least every five years, but at least when significant licensee structure changes occur, such as in customer base, relationships between cost components and sales volumes. This must be done according to the approved National Energy Regulator of South Africa (NERSA) standard to reflect changing costs and customer behaviour”.*
 - (c) Due to a major change in the municipal electrical network that took place in February 2019, where the municipality inherited customers in the Dwarsrivier area from Drakenstein Municipality.
 - (d) To develop tariffs for the alternative Electricity Generation systems to counter the impact of the current spate of loadshedding on the social and business fraternity of Stellenbosch Municipality.
 - (e) To cater for the Wheeling of electricity from external electricity generators situated outside Stellenbosch Municipality’s electricity distribution network.
- Various investigations had to be done to focus the aim of the Municipality to those most viable measures in countering the loadshedding struggle within Stellenbosch.

The following projects were launched:

- e. Energy Master Plan Investigation – Appointed the CSIR to do the investigation and the work is completed.
- f. Cost-of-Supply Study – Appointed Neil Lyners to do the Cost of Supply Study
- g. Energy Storage Study – Appointed the University of Stellenbosch to do a viability exercise on batteries and other energy storage mechanisms.
- h. Electricity Master Plan to investigate the capacity of networks with the introduction of various electricity generators – Appointed GLS Consulting and the work is ongoing.

This report deals with matter in (ii) above.

6.2 Discussion

The methodology used to conduct the cost of supply study is based on NERSA’s Cost of Supply Framework and NRS058. The following steps in Figure 1 based on NERSA’s Cost of Supply Framework were used to conduct the cost of supply report.

Figure 1 indicating the step to follow when conducting a cost of supply study

Even though the report follows the NERSA framework, but it must be realised that it is an over implication of a much more complex process and thus feature many more steps. It is also noted that NRS058 was developed largely by an Eskom employee who only undertook cost of supply in Eskom. The issues of ring-fencing of electricity from the rest of the municipality do thus not feature in NRS058. For a proper study, ringfencing has been done to determine the true costs and revenues and specifically overheads that should be charged to electricity by the municipality. This means that the trial balance of the municipality and the NERSA D-form figures will be different due to a proper ringfencing process being followed.

Because it is best to do cost functionalization as early as possible in the process, it is done as part of the ringfencing study. In other words, the costs within electricity are identified and then costs are allocated from the various support functions in the municipality towards each of the various functions in electricity. More details on the methodology applied to do the ringfencing are found in the actual COS report.

The Study found the following:

- Poor customers are seriously subsidised.
- All consumers on domestic categories are undercharged because of the lack of fixed charges.
- All consumers on commercial categories are also undercharged.
- All consumers on agricultural categories are overcharged.
- All bulk consumers on time of use (TOU) and not on TOU are overcharged.
- Streetlights and municipal tariffs are slightly overcharged.
- Availability charges are slightly low.

This report was presented to the employees of Electricity Department and Finance department. The Director: Infrastructure Services and the Chief Financial Officer also attended the presentation.

It should be noted that the scope of work for Neil Lyners and Associates Consulting did not include the last step "rate design". Another consultant, BBEnergy Consulting, was appointed to do tariff determination prior to the appointment of Neil Lyners. BBEnergy is in progress to do rate design based on this Cost of Supply Study.

6.3 Financial Implications

This report has financial implications to the municipality but will only become known once electricity tariffs have been developed in line with the key findings and recommendations of this report.

6.4. Legal Implications

The recommendations in this report comply with Council's policies and all applicable legislation.

6.5. Staff Implications

No staff positions are affected at this point in time

6.6 Previous / Relevant Council Resolutions

"40TH COUNCIL MEETING: 2021-01-27: ITEM 11.5.1 RESOLVED (nem con)

- (a) *that Council approves the investigation into alternate methods of electricity generation and purchases;*

- (b) *that Council approves the joint investigation to be done by University of Stellenbosch, Council for Scientific and Industrial Research (CSIR), and the Western Cape Government;*
- (c) *that Council accepts the initiating of the following processes as may be required:*
- i. Municipal Systems Act, Section 78(1) processes*
 - ii. Municipal Finance Management Act, Section 33 investigation processes*
 - iii. Electricity Regulation Act, Section 13; and*
- (d) *that Council considers the funding of such investigations and implementation"*

6.7. Risk Implications

Risks such as sufficient electricity supply and proper funding balancing are being mitigated.

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.6.5

- (a) that Council accepts the report on "ELECTRICITY RINGFENCING AND COST OF SUPPLY STUDY" - as authored by the Neil Lyners and Associates Consulting Engineers;
- (b) that Council note the recommendations made in the report regarding the pricing and setting of future electricity tariffs;
- (c) that Council adopts the final cost of supply study report, as the report to be used in future to develop new electricity tariffs and derive percentage increases on the existing electricity tariffs.

Disclaimer, Confidentiality and Copyright :

This report was prepared for the Client based on information obtained from the Client including existing services information, meter readings of historical electricity consumption, data of equipment installed, asset registers, electricity purchase and sales data and related information as was required as part of the project.

Lyners, its members and staff accept no responsibility for :

- Correctness of the information provided.
- Any matters outside the agreed scope of work.

The contents of this report are confidential. Any third party which uses or considers any information, calculations or statement in this report does so at their own risk.

Copyright of this report vests with Lyners, unless otherwise agreed to in writing and no part of this report may be reproduced copied or transmitted in any form or by any means whatsoever to any person without written permission by the copyright holder.

EXECUTIVE SUMMARY

As described in the guidelines of the National Energy Regulator of South Africa (NERSA), a Cost of Supply (COS) study is one of the most important considerations in establishing and designing electricity rates that are implemented to provide the service required by customers and recover costs incurred by the municipality. The objective of COS study is to apportion all costs required to service customers among each customer class in a fair and equitable manner, thereby developing cost reflective tariffs.

This will enable the municipality to gain the following knowledge :

- The real cost of supplying different customers
- The difference between costs and tariffs and thus subsidies applied
- The costs of various activities such as purchases, network and customer services, personnel costs etc

This knowledge will empower the municipality then to :

- Formulate pricing policy in view of the new information obtained
- Change tariffs to comply with the new policy set
- Formulate specific strategies of addressing cross-subsidies
- Develop management practices to address the high cost items
- Develop marketing strategies to target opportunities offered by different tariffs
- Develop strategies which will facilitate the introduction of customer choice
- Develop pricing strategies to integrate renewable energy into the system

Neil Lyners & Associates was appointed by Stellenbosch Municipality in September 2022 to do the above Cost of Supply Study for implementation in the 2023/24 financial year.

This study was done with the assistance of energy specialist Hendrik Barnard (of the company Elexpert) who is a national energy expert on Cost of Supply Studies and Electricity Tariffs.

1. INTRODUCTION.

Stellenbosch Municipality (Stellenbosch) sanctioned a comprehensive electricity Cost Of Supply (COS) study which contains 2 main components, more than that required by NERSA:

- Ringfencing electricity. The key objective of this part of the study is to establish the true cost and revenue of electricity supply in the municipality.
- The Cost of Supply study. The objective of the cost of supply study is to know the cost of supplying customers on each tariff and to compare this with the revenue from current tariffs and thus the cross-subsidies.
- Normally the Tariff study would be done as an integrated project together with the first two steps but Stellenbosch has appointed a different consultant to undertake this part.

This paper describes the details relating to all two components of the study undertaken for Stellenbosch Municipality. It contains the detailed results for the whole area.

2. INITIAL ASSESMENT

This section summarises the findings in terms of the existing tariffs and related issues. This was determined through analysis of the existing tariffs and discussions with electricity staff:

Domestic consumers.

- The domestic tariffs are all Inclining Block (IBT). This means that at low usage consumers are subsidised and at high consumption levels consumer are overcharged.
- The highest Block rate is massively overstated and will cause massive energy losses when consumers reduce consumption.
- Furthermore, pre-payment consumers using less than 600 kWh/m do not pay any fixed or capacity charges. This also means subsidising low usage consumers.
- The differential between those consumers using less or more than 600 kWh/m has no relation to cost.
- There are no capacity charges to encourage demand management by small consumers.
- These two factors cause the municipality to lose much more revenue than that saved when consumers use less electricity either because of behaviour, more efficient appliances, solar geysers or installation of renewable power at their premises.
- The first block price does not even cover the marginal cost of Eskom energy purchases, making no contribution to Eskom demand and access charges or local network costs.
- Conventional consumers are charged higher basic charges than pre-payment consumers. There is no basis for such price differences.
- There is no differentiation between 1 and 3 phase whereas costs differ.

Commercial consumers:

- The prepaid 20 Amp tariff has no fixed charges thus subsidising low usage consumers.
- Conventional consumers are charged higher basic charges than pre-payment consumers. There is no basis for such price differences.
- There are no capacity charges and tariff capacity differences are inadequate to facilitate any capacity savings.
- The energy rates are exceeding energy cost by close to 100%.
- The municipality is thus also exposed to net revenue loss when consumers reduce energy consumption.
- Municipal tariffs have no basic charges.

Rural consumers.

- The energy rates are too high and the fixed charges too low and no capacity differentiation.
- This exposes the municipality against net revenue losses when consumers reduce consumption.

Bulk consumers.

Non-TOU

- More than 50% Bulk consumers still on non-TOU tariffs.
- These consumers should all be on TOU.
- The maximum demand charges are exorbitant and energy charges too low.

TOU.

- It is obvious that access and demand charges for LV are not cost based as they are the same.
- Cost differentiation between LV and MV capacity and demand charges is understated.
- Levels will be assessed as part of cost of supply study.

Sport tariff.

- This is obviously a subsidy tariff for irregular usage consumers. Need to investigate.

Streetlight tariff.

- There should be a maintenance charge to cover the operating and maintenance cost.
- The energy charges is too high.

Wheeling charges.

- To be investigated.

Availability charge.

- To be evaluated.

3. METHODOLOGY SUMMARY

The NERSA cost of supply Framework describes the steps as shown in **Figure 1**. It is considered to be an oversimplification and does not cover all aspects.

Figure 1

NRS058, the National Standard Specification “Cost of Supply Methodology for application in the Electrical Distribution Industry”, which was developed many years ago but never received final approval due to a legal dispute, shows the framework as in the **Figure 2**.

Figure 2

Later in the NRS058 standard, a procedure diagram is provided as is shown in **Figure 3**. The NERSA framework does not feature any of these very important steps.

Figure 3

This report will thus follow the NERSA framework, but it must be realised that it is an over implication of a much more complex process and thus feature many more steps. It must also be remembered that NRS058 was developed largely by an Eskom employee who only undertook cost of supply in Eskom. The issues of ring-fencing of electricity from the rest of the municipality do thus not feature in NRS058. For a proper study, Ringfencing must be done.

It is however proposed that anybody who really wants to appreciate the complexity of this cost of supply study should read the Interim NRS058 before reading this report.

Before starting with the ringfencing study, some background calculations need to be done as detailed in the next few sections.

4. NETWORK CAPITAL COST ANALYSIS

The first step in analysing network assets is to develop a Reduced network diagram (RND). **Figure 4** illustrates this for the Stellenbosch network. Most rural supplies in the area are provided by Eskom.

Table 1 shows the RND in table form. All costs and customers will be linked to these networks in the cost of supply study.

Table 1

STELLENBOSCH			
			Table 1
NETWORK CONSTRUCTION			
PRIMARY DESCRIPTION	SECONDARY DESCRIPTION	NETWORK CODE	VOLTAGE
Distribution	LG Distribution	N2	66 KV
Distribution/retic transf	Distribution subs	N3	66 to 11 KV
Reticulation	Reticulation urban	N4	11 KV
Retic/LV transf	Retic subs urban	N5	11 KV to 400 V
LV	LV urban	N6	400 V

The following comments in this respect:

The following should be noted in terms of the asset registers:

- There is no technical network asset register:
- There is a financial asset for the whole municipality:
 - This asset register is perfect for use in the financial statements but not structured to reflect the costs for the cost of supply study:
 - Assets are grouped per project and not per type of equipment.
 - Assets are not provided with details such as capacity, lengths, quantities.
 - Many assets do not have any historical values.
 - No replacement values are provided.
 - Allocation of asset categories badly done: network assets categorised as furniture, etc.

The following was then done:

- The asset register was analysed and data re-sorted as best as possible.
- The results were then compared.
 - It was found that the HV and HV/MV values were very incomplete and HV/MV very much understated.
 - Details were then obtained from the municipality and the assets were then detailed for the HV and HV/MV assets.

The summary results of the electricity asset register are shown in Table 2.

The current values (equivalent for replacement values) were determined by escalating the historic cost up to present day using the inflation rates as shown in the Table 3:

Table 3

SOUTH AFRICAN CPI						
Year-	Inflation %	5-year Avg.%	10-year Avg.%	%	Years from 2021	Cumm from 2021
2000	6.99	6.66	8.94	6.99%	22	226.18%

The following in this respect:

The consumer connection costs are calculated as follows:

- The number of consumers per connection type is obtained from the saes analysis.
- The estimated cost of the connection (cable / line and DB) and meter is determined.
- These combined make up the capital costs assisted with each consumer.

CRC depreciation – Calculated using the NERSA prescribed life expectancy.

ROA - Return on Assets. The 3.5% is a real rate return considered internationally acceptable. This component is to cover the average cost of capital, including interest and return.

The process followed is to calculate the Total capital provision as by international standards (depreciation plus ROA also called levelised cost) and then the ratio of these provisions relative to the total actual provision.

Then apportion the current total provision (depreciation and interest) to the various asset categories using these ratios. These values will be used as a basis for the cost of supply analysis.

5. SALES.

NERSA requires the source data for **all** tables. The Tables below provides the source data from municipal billing and pre-payment vending reports. Table 9 shows streetlight details. There are a few lights that have not yet been converted to LED's. The quantities shown below assume all lights have been changed to LED's. The cost of supply study will use the historic figures but in future that newly calculated or actually measured quantities should be used for internal billing purposes.

Table 9

FRANSHOEK STREETLIGHTS				
Watt	Number	Total Wat	h/day	kWh/y
36	1075	38700	11.5	162 443
55	38	2090	11.5	8 773

108	113	12204	11.5	51 226
275	203	55825	11.5	234 325
279	150	41850	11.5	175 665
Total	1843	169749		712 521
STELLENBOSCH STREETLIGHTS				
Watt	Number	Total Wat	h/day	kWh/y
36	6304	226944	11.5	952 597
75	227	17025	11.5	71 462
108	121	13068	11.5	54 853
144	893	128592	11.5	539 765
279	190	53010	11.5	222 509
216	81	17496	11.5	73 439
Total	7816	456135		1 914 627
Grand total	9 659	625 884		2 627 148

The calculated kWh/y is much less than the quantity used in the sales reports. This could be because many of the lights have been changed to LED's during this period.

The summary of prepaid sales per tariff is shown in Table 10 below.

			Actual 2021/22	Budget 2022/23		
Total Income			826 834 953	953 307 161		

It is clear that there are some discrepancies between these various documents. For the cost of supply study NERSA requires that the source documents for all data used must be provided. Because of that the sales report data will be used.

6. CUSTOMER CONSUMPTION PATTERNS.

The sales are then analysed even further to determine the number of consumers per consumption block. This is important when deliberating about categorising consumers and developing appropriate tariff structures and consumer impact. The few tables and graphs below show a section of the analysis for each of the residential tariffs. In each case it shows the number of consumers on the vertical axis and the consumption block on the horizontal axis. Each show the number of consumers in each block and the communicative consumers up to that level of consumption.

Domestic Lifeline 01 Formal						
	10.00	20.00	30.00	40.00	50	100
Cum kWh average	-	28	164	164	164	264
kWh average	-	28	137	-	-	99
Cum Cust average	1	3	8	8	8	9
Cust average	1	2	5	-	-	1
Block	50	350	600	> 600	Total	Check
kWh/y	1 970	9 100 330	9 142 339	4 160 654	22 405 293	22 405 293
Customers	8	3 387	1 653	420	5 468	5 468

This clearly shows more than 400 consumers using on average more than 600 kWh/m and should not be treated as lifeline (subsidised).

Domestic Lifeline 01 Informa						
	10.00	20.00	30.00	40.00	50	100
Cum kWh average	-	42	70	70	161	1 308
kWh average	-	42	28	-	92	1 147
Cum Cust average	-	3	4	4	6	19
Cust average	-	3	1	-	2	13
Block	50	350	600	> 600	Total	Check
kWh/y	1 932	12 485 560	830 493	371 566	13 689 552	13 689 552
Customers	6	6 728	166	31	6 931	6 931

This is clearly poor consumers with most using close to 150 kWh/m. 31 consumers still use more than 600 kWh/m.

Domestic Lifeline 02 Formal						
	10.00	20.00	30.00	40.00	50	100
Cum kWh average	-	-	-	-	44	44
kWh average	-	-	-	-	44	-
Cum Cust average	-	-	-	-	1	1
Cust average	-	-	-	-	1	-
Block	50	350	600	> 600	Total	Check
kWh/y	532	283 079	754 775	348 356	1 386 742	1 386 742
Customers	1	95	131	33	260	260

This clearly shows consumption levels of typical domestic consumers.

Domestic Low 01 (Dom 2)						
	10.00	20.00	30.00	40.00	50	100
Cum kWh average	340	1 327	3 384	7 023	11 647	92 685
kWh average	340	987	2 057	3 639	4 624	81 038
Cum Cust average	48	116	199	302	404	1 437
Cust average	48	68	83	103	102	1 033
Block	50	350	600	> 600	Total	Check
kWh/y	139 762	22 426 043	21 074 932	4 651 067	48 291 803	48 291 803
Customers	404	8 603	4 223	441	13 671	13 671

Although this tariff is called domestic low, there are 441, >30%, consumers using more than 600 kWh/m.

Domestic Low 02						
	10.00	20.00	30.00	40.00	50	100
Cum kWh average	-	-	21	21	69	1 215
kWh average	-	-	21	-	48	1 146
Cum Cust average	-	-	1	1	2	16
Cust average	-	-	1	-	1	14
Block	50	350	600	> 600	Total	Check
kWh/y	828	1 178 768	727 258	132 998	2 039 852	2 039 852
Customers	2	432	139	13	586	586

Once again there are a few consumers using more than 60 kWh/m.

Domestic Regular 01 (Dom 3)						
	10.00	20.00	30.00	40.00	50	100
Cum kWh average	3	37	86	157	204	1 973
kWh average	3	34	50	70	48	1 769
Cum Cust average	1	3	5	7	8	30
Cust average	1	2	2	2	1	22
Block	50	350	600	> 600	Total	Check
kWh/y	2 452	466 282	3 663 380	21 624 673	25 756 787	25 756 787
Customers	8	178	574	1 541	2 301	2 301

This is a very typical domestic consumption much with more than 60% consumers using more than 600 kWh/m. More than 90% of the energy is consumed in excess of 600 kWh/m. This is where there is big risk for the municipality when these consumers reduce consumption and / or install renewable energy systems thus causing revenue loss at the highest block price.

Domestic Regular 02						
	Average					
	10.00	20.00	30.00	40.00	50	100
Cum kWh average	-	-	-	-	-	-
kWh average	-	-	-	-	-	-
Cum Cust average	-	-	-	-	-	-
Cust average	-	-	-	-	-	-
Block	50	350	600	> 600	Total	Check
kWh/y	-	7 453	88 644	422 897	518 994	518 994
Customers	-	3	13	36	52	52

The same revenue risk exists for these consumers.

DOM4		Average				
	10.00	20.00	30.00	40.00	50	100
Cum kWh av	- 14 918	- 14 803	- 14 563	- 14 283	- 13 956	- 10 461
kWh average	- 14 918	114	241	280	326	3 496
Cum Cust av	78	85	95	103	110	157
Cust average	78	7	10	8	7	47
Block	50	350	600	> 600	Total	Check
kWh/y	-167 476	1 931 244	7 531 119	24 580 444	33 875 332	33 875 332
Customers	110	558	1 363	1 817	3 848	3 848

The same revenue risk exists for these consumers.

The same revenue risk exists for these consumers.

The following very important conclusions can be made from this data:

- There is merit in providing for a different consumer class for the domestic using less than 350 kWh/m.
- This could be done by implementing a capacity limit of say 20 Amps.

7. CUSTOMER / SALES / REVENUE ANALYSIS.

Before one can start classifying costs, some calculations need to be done which will be used in the classification process. It starts off with the analysis of customers, tariffs and revenue.

Table 14 shows the 2021/2022 and 2022/2023 tariffs. The current tariffs are used to ensure that any restructuring that was done during the last tariff change is incorporated.

Table 14

STELLENBOSCH ELECTRICITY TARIFF SCHEDULE						
		2021/2022	2022/2023			
Tariff Code	Details	Exclude VAT	Exclude VAT	Restructured	Increase	
	1. Domestic

These figures all make sense and gives confidence to the sales data. Specifically the average consumption levels per consumer and the annual and monthly load factor of Bulk consumers.

Table 19

Table 19 shows the calculated revenue by multiplying the 2021/2022 consumption by the 2022/2023 tariffs.

It shows an increase of 7.7% which is very close to the average price increase of 7.47%. This gives high confidence in accuracy of the data.

8. NETWORK LOSSES.

The losses in the network are required in various instances. The first step is to determine the amount of energy flowing through each of the networks for each representative load profile. This is done by obtaining the kWh from each customer category from the actual consumption table and allocating it to the relevant point on the network. The result is shown in Table 21.

Table 21

												Bulk	392 350 191
												Difference	5.56%
													370 536 024
													-21 814 167

The next step in the process, to calculate the losses of every network component, is as follows:

- An estimate is made about the loss % for every network component. This is done by considering the impedances of individual network components, the numbers involved and the loads flowing through it.
- The total infeed loads are then added to the relevant losses for every network through which it flows and are then added to the loads through all other networks to yield the total load.
- The initial estimated loss factors are then modified until the total load, as calculated, is equal to the total load supplied in bulk.

The resultant calculations are shown in Table 22 and Table 22.

Table 22

It is important to note that the losses refer to all losses from the Eskom infeed points right down to the customers connected on the LV network and include non-technical losses.

Table 23

STELLENBOSCH				
NETWORK LOSSES				
Supply position	Per Network Estimate	Per Network Adjusted	Network Point	Total at Supply Point
N0			S0	0.00%
N1	0.00%	0.00%	S1	0.00%
N2	0.00%	0.00%	S2	0.00%
N3	1.50%	0.98%	S3	0.98%
N4	2.50%	1.64%	S4	2.64%
N5	3.00%	1.97%	S5	4.65%
N6	6.00%	3.93%	S6	8.77%
N7	0.00%	0.00%	S6	8.77%
Total losses				5.56%

These load loss factors will be used in calculating the costs per tariff cost category.

9. BULK SUPPLY ANALYSIS.

Stellenbosch buys all its power from:

- Eskom at 3 x 66 kV points at: Franschhoek, Cloetesville and Stellenbosch.
- Drakenstein at 3 x 11 kV points: FRG, Riversmeet and Victor Verster.

All points are charged at Eskom Megaflex.

These actual kWh and Rand values are summarised to represent the total purchase costs for Stellenbosch from Drakenstein in **Table 24** and Eskom in **Table 25**.

The following should be noted in this respect:

- The bottom of the Table 25 shows a comparison of the consumption quantities from the bills with that calculated from the $\frac{1}{2}$ hourly load profiles. It shows a very small differences which gives confidence to the accuracy of the bills.

The first set of profiles which will be analysed are the purchase profiles. The $\frac{1}{2}$ hourly profiles for the 2021/2022 financial year were obtained from Drakenstein and Eskom for each of the points of supply.

Figure 5 shows the total $\frac{1}{2}$ hourly KVA purchases (Y-Axis) for all of the Stellenbosch bulk points of supply added together over the 12 months (X-Axis).

Figure 5

The following observations can be made from this:

- It shows a drop in consumption during the month of December which co-insides with the drop in university / school and business activity during this period.
- The extensive periods of no load confirms the load shedding during this period.

Figure 7 shows the annual load duration curve. This shows the highest to the lowest $\frac{1}{2}$ hourly kVA (Y-axis) for all the $\frac{1}{2}$ hours of the year (x-axis) and gives an indication of the potential to reduce the peak demand.

Figure 6

This shows that there is reasonable opportunity to save on maximum demand charges by only cutting out the peaks for a few hours in the year. Although the potential looks limited for the combined load, it will become clear that there are great opportunities to reduce peaks at each individual Bulk point of supply. Analysis shows that close to 4 MW can be further reduced by managing less than 100 peak hours in the year. This shows the importance of applying demand side management in the pricing signal to customers.

Figure 7 shows the ½ hourly kVA values (Y-axis) for the following average weeks (7 day ½ hours per week = x-axis) of the total Eskom supply in the year:

- Average for whole year.
- Average for high-demand period
- Average for low-demand period.

Figure 7

The following can be said in this respect:

- This is similar to other town profiles with morning and evening peaks.
- It shows higher demands during the mornings during High demand period (Winter) period. This could be from all the municipal and other business activities during the cold winter mornings.
- With the hot summers there are higher morning peaks co-incident with air-conditioning usage.
- It shows lower consumption on Saturdays and Sundays.
- Very low levels of consumption during the night.

Figure 8 Error! Reference source not found. shows the ½ hourly kVA values (Y-axis) for every week of the year (7 day ½ hours per week = x-axis). This is a very important graph as the previous average graph easily hides very important information.

Figure 8

The following can be seen from this:

- On the highest peak day of the year, the morning peaks are more dominant.
- It also shows that there are only a few days in the year where the demand actually exceeds 65 MW. That leaves massive opportunity to save more than 5 MW with very limited effort.
- This is a clear message that the key focus for demand reduction must be on the morning peaks but the rising evening peaks cannot be ignored specifically in local networks.
- Although the municipality has extensive geyser control system and relays in place it is not clear from the load profile that it is being used effectively to control those few peaks every month that are contributing to the high maximum demand and access charges.

10. REPRESENTATIVE LOAD PROFILE ANALYSIS.

Extensive work is required in respect of load profiles. This refers to the way electricity is used by different customer categories and through different networks. The data used is 12 months of ½ hourly data.

The representative load profiles refer to the typical load profile of customers in a tariff category. The typical profiles that are accepted and for which data is separately available include the following:

- MVatHV
- LPU MV
- LPU LV
- MunicS
- Agricu
- Commer
- Reside
- NPA
- Sports
- DomRDP
- SSEGIm
- SSEGEx
- Lights

The following process was followed to obtain representative load profiles:

- Various annual ½ hourly load profiles were obtained from the meters of Stellenbosch large customers, mini substations, feeders and Substations.
- These were identified into the various representative load profile categories.
- The profile for streetlights was calculated by using the on times from the day-night switches operating the streetlights.
- These were then used to calculate the relevant representative load profiles.

The consumer / substation / feeder profiles used are listed in Table 26.

Table 26

Figure 9 shows the normalised (average demand 1 kVA) $\frac{1}{2}$ hourly kVA values (Y-axis) for the average week (7 day $\frac{1}{2}$ hours per week = x-axis) for each of the representative load profiles.

Figure 9

It is important to note that the annual representative load profiles and not the week average, are used for the simulations. These profiles are then used to simulate the load profiles at each of the representative networks.

10.1. Network profiles.

To be able to calculate the load on a particular network one firstly has to calculate the profile at every infeed point on the network. This is calculated by:

- Multiplying the total load for every representative load profile being fed in at that point with the representative load profile ratio to establish the total load of every profile.
- The values for every representative profile are then added together.

The next step is to calculate the loads going through every network component.

- Calculate the load being taken at the infeed point of every network by adding the losses to the load being taken from the outgoing side of that network.
- Calculate the load through each individual network by adding the load infeed at the outgoing side of that network to the load going through the next network.
- This is an integrated process starting with the last points on the networks from where loads are taken and working upwards towards the main supply point to the distributor.
- This should be done for every half hour of the year, yielding an annual half hourly profile going through every network.

The result is an annual profile at N2 (the Bulk supply point).

10.2. Profile re-conciliation.

It is essential that an assessment be made of the accuracy of the representative load profiles used. This is done by:

- calculating the annual load profile from the LV network up to HV network:
- multiplying consumption at each point on the network times the per unit representative load profile at that point.
- adding up from the LV network up to the highest voltage network including losses at each point up calculations
- and comparing that with the annual purchase load profile.

Table 27 below shows the maximum demand with date and time for the actual purchase profile and the N2 profile. The maximum demand occurs within ½ hour of each other but differ by 4 months. The actual maximum differs by about 6%.

Table 27

N2 Max	N2 Max date	N2 Max
71 827.91	2022/06/14 12:00	71 827.91
Σ kVA at Peak	Σ Own Max	Max
72 068.74	93 243.15	
		1
Purchase Max	Max date	
74 181.02	2022/02/15 12:30	74181.02
Σ kVA at Peak	Σ Own Max	
69 787.67	103 071.34	

Figure 10 shows the ½ hourly kVA profile of the peak week for purchase Vs N2. It shows a very good correlation in terms of the peak and hour and day of the week.

Figure 10

This concludes the analysis of load profiles. The various network profiles will thus be used to determine the capacity on each of the networks. These results will be used later on specifically as basis for the kVA units per network.

10.3. Representative Profile Quantities.

The TOU quantities for each of the representative load profiles were then calculated. The per unit representative load profile quantities for the year are then multiplied by the total kWh for each representative load profile. The results are shown in Table 28:

The process followed in the model can be described briefly as follows:

- The ½ hourly kWh and kvarh per unit figures as calculated for each annual profile from above is used as starting point. The per unit value means that each actual half hourly value is divided by the total number of half hours in a year (365 days x 24 hours = 8760).
- In other words, if the total number of kWh used by this profile of customers are multiplied by the per unit values and then again divided by 8760, the full picture for this profile is obtained.
- For each profile the kVA values are then calculated. This is done by calculating the square root of the 1/2 hourly kWh and kvarh and multiplying by 2.
- For each half hour the excess kvarh are then calculated by obtaining the amount of kvarh exceeding the kvarh associated with the kW peak for than ½ hour with a power factor of 0.85.
- The ½ hourly kWh, kvarh and kVA figures are then sorted and summed by:
 - For each month.
 - Season: High and Low.
 - TOU period: Peak, Standard and Off-peak.
 - Excess kvarh during peak and standard periods only.
- The sum of the maximum demands incurred during each month is then calculated as well as the highest maximum demand during the whole year.
- From these the Annual Load Factor (LF) and Excess kvarh % of total kWh are calculated.
- These values are then calculated for each profile.

Table 28

The following should be noted in this respect:

- The average Load factor refers to the total kWh per year divided by the sum of the monthly maximum demand in the year times the total hours in the year. (Total kWh for year) ÷ (Sum 12 kVA maximum demands x hours in year).
- The Annual LF refers to the total kWh per year divided by the highest maximum demand in the year times 12 times the total hours in the year. (Total kWh for year) ÷ (Highest maximum demand in year x 12 x hours in year).

- The % values in each of the TOU periods refer to the % of consumption relative to the total consumption.
- The reactive energy refers to the kvarh as calculated in the Eskom Megaflex tariff. (Sum of: kvarh – 30% of kWh for each ½ hour in peak and standard periods).

This data will be used to calculate the load demands of each profile and the kWh's used in the different time periods.

10.4. Network Profile Quantities.

The network profiles calculated above are now further processed. The maximum demand and TOU ratios are required for further analyses and the results obtained are shown in Table 29.

Table 29

NETWORK QUANTITIES	YEAR TOTAL						HIGH SEASON			LOW SEASON			YEAR TOTAL	
BILLING CYCLE	P&S	ENERGY	MAX DEMAND	MAX DEMAND	MAX DEMAND P&S	Monthly KVA LOAD FACTOR	P	S	O	P	S	O	Max	kVA Load factor
MONTH	kvarh	kWh (FOR)	kW	kVA	kVA	%	Wh (FOR)	Wh (FOR)	Wh (FOR)	Wh (FOR)	Wh (FOR)	Wh (FOR)	kVA	LF

Total N3	322 852	388 791 705	776 109.76	794 688.34	794 688.34	66.60%	4%	11%	11%	12%	31%	31%	71 828	61.79%
Total N4	320 208	385 608 135	769 754.69	788 181.14	788 181.14	66.60%	4%	11%	11%	12%	31%	31%	71 240	61.79%
Total N5	897 569	251 334 782	515 793.11	528 460.98	528 160.33	65.42%	5%	12%	11%	12%	30%	31%	49 162	58.36%
Total N6	988 827	180 040 531	398 001.63	405 727.20	405 503.27	61.38%	5%	12%	12%	12%	29%	31%	39 995	51.39%

These values have the same meaning as in Table 28.

These values will be used to calculate the peak demands at every point on the network and thus to calculate the per unit R/kVA for each network.

11. RINGFENCING.

Before one can calculate the revenue requirement, a ringfencing study needs to be completed to determine the true costs and revenues and specifically overheads that should be charged to Electricity by the municipality. This means that the trial balance of the municipality and the NERSA D-form figures will be different due to a proper ringfencing process being followed.

Because it is best to do cost functionalization as early as possible in the process, it is done as part of the ringfencing study. In other words, the costs within electricity are identified and then costs are allocated from the various support functions in the municipality towards each of the various functions in electricity.

11.1. Key focus areas

There are a host of practices that affect the accuracy of the cost and revenue of current LG electricity distributors. The following ones will take the key attention:

The focus will firstly be on the larger items and thus the 20% of items that have 80% of the impact.

Services being supplied by Electricity to the rest of the LG where no charge is levied to cover the cost of supplying such service. The services involved here include the following: Electrical maintenance of LG facilities such as water works, sewerage works, buildings, houses etc.

Electricity equipment and other resources being used by the rest of the LG with no charge. This typically includes the following: Heavy vehicles, large machinery, meter readers etc.

Public lighting including streetlights, high mast lights, robots, parking lot lights, etc. This service is considered a LG service and not part of electricity supply although the service is provided by Electricity.

Electricity for own use by LG. Many municipalities have a different set of tariffs for the supply of electricity for use by its own facilities, such as municipal buildings, stores, sewerage supplies, water pumping and

sometimes also for staff. If these tariffs are not cost reflective it has the effect of distorting the true electricity supply cost/revenue and thus surplus. In some cases, an overcharge is made to the LG in the tariff and in other cases an undercharge.

Services provided to Electricity by the LG. Typical services include the following: Meter reading and billing, revenue collection, general accounting and administration, telephones, stores, etc. The extent to which this is done, differs significantly between various distributors. The big problem here is the extent of allocation of these costs made to the electricity department:

- Administration and overheads are allocated in terms of turnover instead of more realistic allocation factors, such as the number of staff, the own costs, area of office space etc. The problem with this is that the purchase cost of electricity is close to 70% of the revenue and the tax (surplus) being levied by the LG on electricity makes up a further approximately 20%. This method overstates the true share of the cost by the electricity department by more than 50%.
- Metering and billing costs should typically be allocated according to the share of the cost of the billing system with the number of transactions or actual processing time. Where the revenue is used as a basis, a misallocation is again made.
- A wide range of other methods are being used to allocate the other costs. There are internationally accepted methods that should be used to allocate the costs to ensure a fair burden on the electricity department.

Funding of capital expenditure. Assets in municipalities are mainly funded directly from profits / retained income and various grants received by the municipality. Some assets are still funded from external loans. The capital expenditure does not form part of the income statement, except in subsequent years when it appears as depreciation.

Government Grant funding. A large portion of LG income is from Government Grants. These are used to subsidise charges to residents but also to fund operating and capital costs. This distorts the normal profitability of departments and complicates the fair allocation of costs and revenues. Proposals will however be made in this respect.

There are a host of practices that affect the accuracy of the cost and revenue of current LG electricity distributors. The focus will firstly be on the larger items and thus the 20% of items that have 80% of the impact. It is one matter to develop a generic methodology to be applied. Things are always different because of the following:

- The way the municipality operates and is structured.
- The availability of data in the required format / level of detail.
- The need to focus on big values that have a significant impact.

11.2. Methodology applied

The process starts with an analysis of the Total Municipal Trial Balance for the completed financial year. These are the figures that are used as the basis for the compilation of the Annual Financial statements.

In analysing the Stellenbosch data the following key steps were followed to achieve accurate ringfencing:

- The data was ordered as follows:
 - The head office, support and administrative functions. These are not considered primary service delivery but act as support to the various line functions and as such the line departments should cover their costs.
 - Community services, the economic/trading services. These are considered the primary service delivery to the community and need to carry all costs of the overheads and service departments.
- The various sub-departments and cost categories are grouped to make viewing practical.
- The various accounts are also grouped to a level that still allows a good understanding of what the exact transactions are which may require adjustment / re-allocation.

This process is illustrated graphically in **Figure 11** below.

STELLENBOSCH RINGFENCING PROCESS

Table 30 shows the trial balance per group before any adjustments.

Table 30

[illegible]

All the main transactions were analysed and any area where costs / revenues were not transacted correctly were identified. These were checked with the municipality and the required adjustments were made. The trial balance was found to represent the true picture accurately.

Table 31 below shows more details per account for electricity only.

New Total Revenue						(161 470 787)	(23 204 899)	(34 804 632)	-	(45 910 908)	(133 369 852)	(158 266 640)	(766 773 684)		(2 066 732 341)
New net income						135 803 061	(1 897 747)	4 644 467	-	63 113 016	(4 141 607)	2 985 507	(148 949 261)		(103 467 541)

The following cost adjustments were made:

- Depreciation Roads Infrastructure – this is moved to Roads
- Depreciation Water Supply Infrastructure – this is moved to Water
- Contribution to Provisions – This is provision for bad debt. Although it is considered very high no change is made.
- Indigent Relief – this is Equitable share allocation to Eskom consumers for FBE. This should be a direct allocation from Finance to Eskom and have nothing to do with Stellenbosch electricity supply. It will however be retained here as the equitable share amount exceeds the FBE granted to own consumers.
- Municipal Services – Apparently this is for services provided by other departments to Electricity. No changes made.

The following revenue adjustments were made:

- Integrated National Electrification Programme Grant – This is a capital grant and should off-set capital expenditure – moved to Finance.
- Provincial Infrastructure Grant – This is a capital grant and should off-set capital expenditure – moved to Finance.
- Development Charges – These are supposed to cover the cost of new capacity due to new developments / loads expenditure – moved to Finance.
- Equitable Share – The amount for Free Basic Electricity (FBE) 100 kWh/m is calculated to be equal to R 21 776 345.24 and the amount paid to Eskom for FBE is equal to R6 134 237. The actual equitable share amount paid to Electricity is equal to R31 849 510. An adjustment is thus made to only reflect the actual amounts of FBE paid.

11.3. Overhead cost allocation

The next step is to calculate the fair portion of the municipal overheads that should be covered by the electricity department. It was previously stated that no overhead costs have been allocated to Electricity. The next section does a calculation of a fair amount which should be allocated to all the line functions in the municipality by overhead and service departments. The first step is to calculate the ratios of various possible allocation factors using actual data.

Various ratios were analysed. The problem found was that in many cases the data required was inadequate in terms of not reflecting the required departments or in many cases were all grouped together. It is however believed that these ratios provide a fair means of allocating overhead costs.

The table below then shows the following:

ALLOCATER DATA.

- This refers to the various allocation bases which are to be used.
- The first line shows the data used
- The second line shows the ratio which will be applied in allocating the service department costs to that line department.
- This is calculated by dividing the line department units by the total units of all line departments.

ALLOCATION TO LINE DEPARTMENTS

- This shows the amounts allocated from each service department to the various line departments.
- The first column shows the name of the Service department.
- The second column shows the basis for allocation of the cost. Various basis were considered and inputs from staff was obtained at the workshops. Unfortunately, only those where data was provided could be used.
- The third column shows the percentage of the service department costs to be allocated on the basis.
- The cells in yellow shows the amounts allocated from the service department as a (-).
- The other cells show the amounts allocated to each line department.
- The last column shows that the net amounts sum to zero.

NEW NET INCOME

- This shows the new costs / revenue per department after the cost allocations.
- The subsequent new net income.

Table 33 below shows the overhead cost category and the cost allocation ratio that will be used to allocate to the various line functions as well as the % to be applied in respect of each of the factors.

NEW REVENUE			(161 470 787)	(23 204 899)	(34 804 632)	-	(45 910 908)	(133 369 852)	(158 266 640)	(772 907 921)			(2 066 732 341)
NEW NET INCOME			250 630 789	-	-	214 433 950	103 869 676	56 090 611	130 561 440	(59 238 800)			(103 467 541)

The resultant trial balance thus shows that all overhead costs have been allocated to the line departments. The net revenue remaining in Budget and treasury and other line departments can be used to cross subsidise those services that make a loss.

The result for electricity department is shown in Table 37 below.

Table 37

ELECTRICITY SUMMARY	Rand
Bad Debts Written Off	373 181.99
Bulk Purchases	528 011 715.18
Prepaid Electricity Vendors	6 674 918.56
Contracted Services (rest)	5 494 423.09
Operational Cost	11 694 528.34
Depreciation and Amortisation	35 345 335.31
Employee Related Cost	30 486 079.72
Interest, Dividends and Rent on Land	5 226 962.96
Inventory Consumed	3 804 693.25
COST ADJUSTMENTS	- 3 153 178.15
ALLOCATION TO LINE DEPARTMENTS	85 126 825.76
Allocation from Technical Services	3 764 275.58
TOTAL COST	712 849 761.60
Interest, Dividend and Rent on Land	- 1 484 988.60
Operational Revenue	- 868 988.28
Service Charges	- 742 643 362.02
Transfers and Subsidies	
Sales of Goods and Rendering of Services	- 3 261 746.48
Capital	- 14 467 664.49
Equitable Share	- 31 849 510.20
REVENUE ADJUSTMENTS	21 668 339.10
Total Revenue	- 772 907 920.97
NET INCOME	- 60 058 159.37

The items are then grouped as per the NERSA requirements as shown in Table 38.

Table 38

RINGFENCED	Rand
Bulk purchase costs	528 011 715
Operating cost	33 612 487
Shared cost	88 891 101
Depreciation	32 192 157
Interest	5 226 963
Repairs & Maintenance	24 542 156
Impairment loss	373 182
Total cost	712 849 762
Revenue	- 772 907 921
Surplus actual	- 60 058 159
Surplus %	7.77%

These figures will be used for the cost of supply calculations.

12. REVENUE REQUIREMENT.

This section calculates the revenue requirement for Stellenbosch using the NERSA method. The calculation of the revenue requirement is shown in Table 39

Table 39

.

Table 39

NERSARR	Rand
Bulk	528 011 715.18
Operating cost	33 612 486.76
Shared cost	89 710 460.56
Depreciation	32 192 157.16
Interest	5 226 962.96
Repairs & Maintenance	24 542 156.20
Impairment loss	373 181.99
Sub-total cost	713 669 120.81
Surplus: 15%	107 050 368.12
Revenue requirement	820 719 488.93
Current revenue	772 907 920.97
% Structure increase	6.2%

The following important comments in his respect:

- The shared cost of R88 mill is very high. This represents 93% of own costs excluding bulk purchases.
- Without any shared costs the surplus would be equal to 19%.
- NERSA need to still get their heads around this issue and issue guidelines in this respect.
- NERSA is unlikely to accept this high value. Various options were considered but this issue needs to be further discussed.

Based on this and all the adjustments it is clear that the current Stellenbosch tariffs recover the NERSA formula revenue requirement depending on the treatment of shared costs. It is thus proposed that the next part of the study which relate to tariff structures, not total revenue requirement, be based on the current tariff levels.

13. COST OF SUPPLY

The next step is to allocate the electricity costs between the various cost functions. The table below firstly shows the cost adjustments and then the method used and the actual allocation of cost per function. The next step is to functionalise the various costs between the various cost drivers. The 4 types of functions in electricity namely:

- Purchases
- Networks and
- Customer services.
- Streetlights.

13.1. Cost Categorization

The next step is to classify these costs into the different cost types / drivers. The electricity costs, from a tariff point of view are classified as one of the types below:

- R/kWh in terms of the different TOU periods namely, peak, standard and off-Peak.
- R/kVA costs also separated by dedicated and shared per network.
- R/customer as per customer category.
- Rand / light in the case of streetlight maintenance costs.

The way in which these costs are functionalised / classified is shown in Table 40.

Table 40

COST FUNCTIONALISATION				
		R/kWh	R/kVA	R/Customer
Purchase		All Energy charges levied to munic	All demand and access charges levied to munic	None
Network costs	Capital provision	None	All	None
	Operating and maintenacne	None	All	None
Customer Services		None	None	All

The % values show the estimated % of time that each staff member spends on each of the respective activities are shown in Table 42. This has been developed based on the experience of the Electricity department.

Table 41

ELECTRICITY STAFF		Networks									
		HV		All work related to the HV network: Cables / lines, switching							
		HV/MV		All work related to HV/MV substations including switchgear.							
		MV		All work related to the MV network: Cables / lines, switching							
		MV/LV		All work related to MV/LV substations including switchgear.							
		LV		All work related to LV network up to but excluding Kiosks to consumers.							
		Consumer services		All work relating to the supply to consumers including, kiosks, service connections, breakers, meters and all services such as meter reading, billing, revenue collection, vending, etc..							
		Streetlights		All work relating to provision of streetlights.

TOTAL COST		533 185 038	37 698 351	7 396 682	16 054 076	25 339 616	29 363 399	49 079 870	21 518 382	706 621 020

The following points are of note:

- There is a small portion of customer services costs which can be classified in R/kWh. The problem is that the true cost really depends on the number of customers and not the amount of kWh purchased. All customer services costs are therefore classified as R/Customer.
- A portion of the Eskom costs relate to the demand or maximum capacity taken from the network. This will be classified as such later on in the process of detailed cost calculations.

These costs will now be used as a basis for the detailed cost calculations to follow.

13.2. Cost allocation: phase 1

The next step is to allocate the support costs (operations, maintenance and administration) relating to the networks and technical customer services. The operating costs per different cost type, network and customer category are shown in Table 44.

Table 44

	Total	32915	33 728	12 542 108			
Sub-Total							25 084 217
GRAND TOTAL							147 865 104

The following should be noted in this respect:

- The operating costs are as per the ringfenced trial balance.
- The network costs are then allocated as follows:
 - According to the Network capital revenue requirement at first pass.
 - These figures are then adjusted based on inputs from staff to reflect the real case of support costs per network.
- The customer services costs are then split between:
 - Metering according to different connections and metering.
 - This is done by giving a weighting to each of the types of connections. The following in this respect:
 - This is a difficult number to determine because records are not kept of difference in these costs.
 - This has been done based on experiences elsewhere and inputs from staff.
 - An example is the amount of come backs that have been experienced with pre-payment meters compared with conventional 1 phase meters.
 - Another example is that the Bulk meters are not read by normal meter readers but by the Distribution staff.
 - The effective cost per meter is thus calculated.
 - Billing and customer services according to size of customer.
 - This is again done by giving a weighting to each size of customer. The following should be noted in this respect:

- This is one of the most difficult assumptions because records are not kept of customer service costs per size of customer.
 - This has been done based on experiences elsewhere and inputs from staff.
 - An example is that a customer > 50 kVA is a 3 phase customer which means there is a more sophisticated meter or 3 single phase meters that need to read and thus 3 readings to be entered into the billing system compared with only one for a customer < 50 kVA which are mostly 1 phase customers.
 - Staff also indicated that bigger customers have more queries on their electricity bills, and they thus spend more time on them.
 - These assumptions are subjective but the best available considering the staff inputs.
- The effective cost per size of customer is then calculated.

13.3. Cost allocation: phase 2

Stellenbosch purchases all its energy from Eskom on TOU at Megaflex.

For these reasons the Megaflex tariff will be used as a basis to calculate the cost of supply and specifically the energy costs and unit rates.

The summary of the relevant Megaflex LG rates is shown in Table 45.

Table 45

Megaflex			2022/2023
> 900km			
≥ 66kV & ≤ 132kV	Transmission network access	R/kVA/m	R 12.42
	Network access charge:	R/kVA/m	R 8.65
	Network demand High:	R/kVA/m	R 16.00
	Network demand Low:	R/kVA/m	R 16.00
TOU: High Demand Season (June -Aug)	Peak	c/kWh	R 481.44
	Standard	c/kWh	R 145.83
	Off-peak	c/kWh	R 79.21
TOU: Low Demand Season (Sept-May)	Peak	c/kWh	R 157.03
	Standard	c/kWh	R 108.08
	Off-peak	c/kWh	R 68.54
Electrification and rural		c/kWh	R 11.73
Affordability		c/kWh	R 0.00
Urban low voltage subsidy charge [R/kVA/m]		R/kVA/m	R 21.18
Reliability service		c/kWh	R 0.55
REACTIVE ENERGY (c/kvarh)	High Demand	c/kvarh	R 21.19
	Low demand	c/kvarh	R 0.00

These values will be used as the initial per unit energy and Demand / Access charges.

13.4. Cost allocation: phase 3

The next step is to add the capital cost to the operating costs and then allocating it to the various cost drivers as is shown in Table 46. The cost of the actual streetlights plus overheads is allocated on a per light basis.

Table 46

The following should be noted in this respect:

- The streetlight maintenance costs are allocated per streetlight.
- All network costs are allocated on the R/kVA basis.
- All customer costs are allocated on the R/customer/month basis.

Based on experience the non-co-incidental peak demand method was used as basis to allocate all network costs to customer categories.

The total costs have to be divided by the total number of units applicable to that cost. The units required for this purpose should be derived from the network load and customer details.

To be able to allocate the network costs as a per unit cost (R/kVA), the kVA for each network is required. This was calculated by building up the total load profile of each network starting at LV and working up to the high voltages. It must be noted that the Purchase values differ from the billing data as it is calculated from the load profile data.

The allocation units to be used are shown in Table 47. The network kVA and kWh quantities were obtained from the Quantities tables. The sales data was obtained from the sales data.

The costs obtained up to now reflect the cost of every separate network segment. To have a more practical set of charges these must be set for every network supply position stating the total charges at each point. This involves the network cost closest to the supply position plus all the networks up to that point plus the losses incurred in the networks up to that point. The values stated therefore reflect the total per unit cost of supply at that network supply point. The resultant costs are shown in Table 49.

The following should be noted in this respect:

- Own costs increase by CPI.
- The surplus is the actual surplus.
- The surplus reflects the current surplus which NERSA would allow under normal circumstances.
- The R/kVA costs are split here between the dedicated and shared portion as follows:
 - Dedicated refers to networks which cannot really be shared with other customers. For example, if a development is done based on a particular after diversity maximum demand (ADMD) and supplies to various small and large customers are installed, if customers change their loads the costs do not change, and these networks cannot be used to supply other customers and thus are considered dedicated.
 - Assumptions about this is subjective but also reflects the realities in each municipality. Where there is ongoing growth and customers continue to use the power installed this is not a problem.

- In areas where economic growth is bad and customers reduce their demands, the risk of revenue loss is higher to municipalities as there are less customers to share the unused capacity with.
- Because of the higher Access demand values, the split is set at 30%.
- These values show the total network costs at each position on the network including the costs and losses of all higher voltage networks up to that point. In other words when a demand of say 10 kVA is incurred at a LV point of supply, the demand at the point of purchase which is increased by the total losses up to that point. Losses thus effect the network and energy costs.
- It is important to note that these are per unit values. For example, the energy costs for each profile will be calculated by using the Eskom energy rates, plus the losses up to each relevant network multiplied by the % of kWh in each TOU period multiplied by the total number of kWh for that profile.
- The Eskom and own network costs are calculated by:
 - Multiplying the sum of the monthly maximum demands by that profile by the Eskom maximum demand and own maximum demand per unit costs.
 - Multiplying the highest annual maximum demand by the Eskom access charge plus losses and the own Access costs.

Before one can go from the costs per tariff cost category to costs per tariff, we need to know the statistics of the loads associated with the various tariffs. Representative load profiles were calculated from available data. These were then analysed and the necessary details calculated under the load profile section.

The following comments in this respect:

- The quantities shown represents the quantities associated with each representative load profile at the relevant network where it is supplied from.
- For example, the kWh represents the kWh used by streetlights supplied from the LV network. The Sum of maximum demands represents the sum of the sum of the 12 highest maximum demands incurred on the network, the Annual maximum demands is the highest maximum demand that Streetlight supplies placed on the network in the year.
- Because the individual maximum demand method is used, the maximum demand values of each profile are used irrespective of when it was incurred.
- These quantities will be used to calculate the per unit charges.

The next step is to now calculate the various per unit charges which should apply in respect of the different customer, network and energy charges relevant to the various periods. This makes use of:

- The position at which the customer is supplied to determine:
 - the R/kVA network costs plus R/kVA Eskom costs.
 - the losses % to be added to Energy and Eskom Demand/Access.
- The type of metering and size of supply to determine the metering and billing / customer service costs.

This is shown in Table 50.

The consumption values of the various customer categories were previously calculated. These quantities are broken up into the detailed cost categories and not billing quantities. This is done by using the representative load profile, load factor and consumption per TOU period.

- The ratio of consumption Peak, Standard, Off-peak
- and the load factors of the different representative load profiles
- are obtained from the representative load profile quantities.

The consumption quantities per TOU period are shown in Table 52.

The following should be noted in this respect:

- The kVA for small customers represents the total maximum kVA placed on the network and not the actual installed capacity of customers. The peak values are calculated from the representative load profile quantities. This corresponds to using the individual maximum demand method for allocating network costs. If the average and access method was used, these values would be slightly different.
- The subsidised quantities: Basic and Free Basic Electricity (FBE) quantities are removed as we calculate costs.
- These quantities have been adjusted so that the same revenue as before is generated.

Table 53 to ensure that the target revenue is achieved.

Table 54

Basic adjust	Cap/MD djust	kWh adjust
9.09%	9.09%	0.00%

The following very important point must be noted:

- In the sales analysis it was shown that the calculated revenue using the sales data and tariff data does not exactly achieve the revenue as indicated in the trial balance.
- This is because of inaccurate data provided because of various reasons including journals made in Rand values but not in sales volumes.
- The target sales revenue will thus not be that in the trial balance but that calculated from current tariffs plus adjustments.
- The adjustments are to add back the income foregone from FBE and deduct the additional revenue from streetlights which is an internal revenue.

The target revenue from the new cost reflective tariffs is shown in Table 55

- Table 56.

Table 55

Figure 13

14. Tariff Structure Analysis

The cost of supply analysis shows the total cost vs revenue impact of the various tariffs. This section compares the current tariff components with the costs for the same tariff components. This is illustrated in Table 57Table 57.

15. SUBSIDY ANALYSIS

The extent of the cross-subsidy impact on other consumers is calculated in Table 58 below.

Table 58

SUBSIDY ANALYSIS							
Tariffs to be subsidised	Customers	Tot Cost	Current revenue	Shortfall	FBE	Subsidy	% SUBSID
Domestic: Life Line PP	10 701	108 081 202	41 322 861	66 758 341	16 128 158	50 630 183	123%
Domestic: Regular PP 20 Amp	11 121	128 863 316	76 202 265	52 661 051	-	52 661 051	69%
Domestic: Regular PP <600 kWh/m	-	-	-	-	-	-	#DIV/0!
Domestic: Regular PP >600 kWh/m	1 987	62 862 872	61 532 045	1 330 827	-	1 330 827	2%
Domestic: Regular 60 Amp 1 & 3 ph	3 607	85 325 045	81 967 098	3 357 947	-	3 357 947	4%
Domestic: Renewable Energy (DOM5) SSEG with export	13	564 290	514 090	50 200	-	50 200	10%
TOTAL		385 696 724	261 538 359	124 158 365	16 128 158	108 030 207	
Total revenue excluding subsidy customers		615 686 748					
Total subsidy as % of Base revenue						17.55%	

This subsidy % is of non-subsidised revenue. We can thus say that the current cross-subsidy to domestic consumers, but specifically low usage (poor) consumers is more than 17% of non-subsidised revenue. This is considered close to unsustainable and should be reduced in the proposed future prices.

16. ESKOM MARGINAL COSTS

Table 59 shows the calculation of the marginal Eskom purchase costs domestic and RDP consumers. The marginal costs do not refer to the average Eskom purchase price but the price of the domestic customers on

its own. In other words, the impact that domestic customers have on increasing the access charge, maximum demand charge, energy charges during the various periods and the reactive energy charges.

Table 59

The following in this respect:

- The Megaflex charges are those applicable to Stellenbosch municipality.
- The TOU consumption ratios and load factors were calculated from the representative load profiles.
- The monthly vending costs is the total vending cost divided by the number of customers divided by 12. This is then converted to a c/kWh for each domestic tariff category.
- This shows that the marginal cost of Eskom purchases for indigent customers is more than 178 c/kWh in 2022/2023 values.
- The NERSA low benchmark does not even cover the marginal Eskom cost.
- If only the marginal vending costs is added it comes to more than 187 c/kWh.
- It is now clear that the first block domestic energy prices at 136 and 175 c/kWh does not even cover the marginal purchase costs and makes no contribution to the customer service and network costs. The perception that the revenue is made up in the more expensive block 3 and 4 is a myth as more and more consumers are using less than the size of the 2nd block.

17. KEY FINDINGS

The following key findings can be made in terms of the tariff levels and structures:

- Poor customers are seriously subsidised. This is because of the lack of fixed charges, the low first block energy rates and FBE.
- All domestic categories are undercharged because of the lack of fixed charges, the low first block energy rates.
- All Commercial categories are generally also undercharged.
- Agricultural consumers seem to be overcharged but remember that the true rural costs could not be isolated and thus the possible higher costs could not be calculated.
- All Bulk consumers, TOU and non-TOU at LV and at Mv are all overcharged.
- Streetlight and municipal tariffs are lightly overcharged.

- Availability charges are slightly low.

18. PRICING IMPLICATION.

In view of the findings from the COS study the following recommendations are made in respect of Pricing and setting of tariffs:

- It should be in line with the National Electricity Pricing Policy.
- All tariffs should be set as close as possible to the cost of supply.
- Indigent customers as registered in terms of indigent policy.
 - These customers limited to 20 Amps will continue to be charged on an IBT tariff with no fixed charges.
 - Free Basic Electricity (FBE) of 50 kWh/m off-set by equitable share but calculated based on the full cost not the first block price.
- Cross subsidisation of low usage domestic customers (poor but not indigent) customers could be done as follows:
 - Customers be limited to 20 Amps.
 - Retain IBT structure.
 - No FBE is granted.
- All small customers (domestic / business) > 20 Amp should have a fully cost reflective tariff:
 - A basic charge to reflect the fixed metering, billing, revenue collection and customer services costs.
 - A capacity charge based on the installed / limited capacity of the customer. In other words, the total network costs as calculated for that tariff before (using the relevant demand allocation method), is now divided by the customers' actual capacity. (note: The Rand/kVA figures cannot be used for tariff calculates as these refer to the actual ADMDs. The full network costs should be divided by the installed capacities.)
 - An energy charge that covers the full energy cost, losses and surplus mark-up.
- All large customers should be charged on a TOU tariff with structure and TOU slots as per the Eskom Megaflex tariff applicable to Stellenbosch including changes over time:
 - Basic charge.
 - Capacity charge based on the highest of the following:
 - Notified demand or highest **annual** maximum demand to cover Eskom Access charge plus dedicated municipal network costs.
 - Maximum demand charge based on **monthly** highest maximum during Peak and Standard Periods only. (the municipality insist to also apply the demand charge during off-peak periods. The consultant supports not charging the maximum demand charge during off-peak periods as it has been shown in other areas that some consumers can increase their consumption during these periods without jeopardising the municipal costs or infrastructure.)
 - Energy charges for:
 - High Demand (June, July and August) and Low demand (all other months)
 - Peak, Standard and Off-peak (See diagram below)
 - Reactive energy charge based on kvarh in excess of 30% of kWh during all peak and Standard period for both seasons.
 - Public holidays treated as the day they fall on.
 - The tariffs should be differentiated for:
 - small consumers (<100 kVA),
 - Bulk consumers at LV,
 - Bulk consumers at MV.
- Availability charges be slightly adjusted.

19. PRICING ISSUES RELATING TO WHEELING.

The current wheeling charges are shown in the Table 60 below.

Table 60

9. External Wheeling		
Customer received power at low voltage (<400V) in c/kWh	25,95	28,00
Customer received power at medium voltage (>400V) in c/kWh	22,48	24,26

A concern was raised that the municipality will lose revenue when this wheeling charge is applied. The following comments in this respect.

- The wheeling rate is not the big factor that will impact any revenue losses but the wheeling pricing policy.
 - The important principle supported is underpinned by the following principle: **The network costs are paid by the consumers and not be the wheelers.**
 - This is based on the principle that the costs are driven by the forward load, in other words that flowing to the consumers.
 - If additional maximum demand and access charges are going to be levied for the same networks, the maximum demand and access charges will have to be reduced to consumers.
 - It must also be noted that in most cases, all cases if wheeling contracts are managed correctly, the loads on the networks will be reduced at the higher voltages than that where the wheeler injects power.
 - This means that the losses on the higher voltage networks will also be reduced.
 - Furthermore the Eskom and Drakenstein supply maximum demand and access demands cannot be increased but will most probably decrease.
- The proposed wheeling pricing policy should thus state the following:
 - The consumer who receives the wheeled power (financially), the off-taker, must continue to pay the full tariff charges in respect of:
 - The basic charge to cover the basic consumer service costs such as service connection, metering, billing, etc.
 - An additional basic charge to cover any additional metering / admin costs.
 - The network charges: maximum demand and access (capacity) charges. These to be based on the consumers maximum monthly demand and the Access demand (highest of notified or highest maximum demand incurred since connection).
 - Energy charges for units provided by the municipality and not by the wheeler. (Shortfall).
 - The wheeler will pay the following charges:
 - The basic charge to cover the basic consumer service costs such as service connection, metering, billing, etc.
 - No access or maximum demand charges unless the demand on any of the networks are increased in any direction (normal flow or reverse flow.)

With this policy the municipality is protected against any revenue losses relating to customer services and networks. This will include part of the surplus made on electricity contained in these charges. The question thus remains what about the energy. The following should be noted in this respect:

- The potential loss to the municipality on energy only relates to the markup on energy.
- This is because instead of the municipality buying the power in bulk and selling it to the consumer it will be provided by the wheeler.
- The question thus is what the markup on energy is and what should it be. The following in respect to what it should be: The items which have merit as add on include the following:
 - The electricity surplus which raises many questions:
 - Is it the actual surplus as is currently made as calculated from a ringfenced cost of supply study?
 - The target surplus which must obviously be within the NERSA benchmark?
 - Cross subsidies to the poor which also raises many questions:
 - How should this cross-subsidy be calculated?
 - Should the rate change as the subsidy % change?
 - Should there be some cap on this level?
 - Should the cross subsidies not be done by way of the equitable share or other national grants?
 - **The network losses.** The following be noted in this respect:
 - The important point here is that the amount of energy injected into the system will be less than that reaching the consumer.

- Currently the markup is in the consumer energy bill which is obviously the smaller quantity after losses.
- In cases where injection is at the same voltage as off-take this impact would be minimal.
- In cases where injection is at a higher voltage as off-take the bill quantity will be less.
- If the wheeling charge is thus levied at the point of injection there would be a slight overcharge in respect of the losses of the particular agreement.

The actual markup on energy is different for every consumer category due to the recovery of network and customer services through the energy charge in some cases and where tariffs are not cost reflective. It is thus not really possible to calculate the current markup.

The next complication relates to whether the wheeling charge should be set as a % of sales or as a R/kWh. The following in respect:

- The current markups are mostly in % such as the surplus and cross subsidy to the poor.
- The typical markup on TOU energy charges is different in R/kWh and many cases in % values.
- The problem to charge the markup as a % of that it must be a % of energy sales. In the case of wheeling that would not be known as the price of energy is the subject of a private agreement between the wheeler and the off-taker.

An attempt will be made to evaluate the current wheeling charges by.

- The actual surplus made according to the COS study is 7.7%. The NERSA benchmark is between 10 and 20%.
- The cross subsidy to the poor is 17.55% at the moment. This should be reduced with the implementation of more cost reflective tariffs and limitation of poor consumer capacity.
- The average losses equals to 5.81%. This should however be excluded if the wheeling charge is levied on injected energy.
- The markup should be set as $(1+7.7\%)*(1+17.55\%) = 26.6\%$

The calculation of the actual markup is shown in the Table 61 below. It compares well with the theoretical calculated %.

Table 61

WHEELING CALCULATIONS		
Theoretical markup on selling volume		33.96%
BULK DETAILS		
	2021/2022	
Energy	Rand	kWh
Franschhoek	R 45 911 731	147 192 674
Cloetesville	R 58 265 658	151 146 736
Stellenbosch	254 086 227.00	59 924 206
FRG	19 736 191	18 163 100
RIVERSMEET	15 668 831	13 575 710
VICTOR VERSTEL	1 838 499	2 347 765
	395 507 137	392 350 191
R/kWh 201/2022	R 1.0080	8.61%
R/kWh 2022/2023	R 1.0948	
FROM COS STUDY: Markup on sales volume		
Energy charges	554948964.1	371520214
Energy price R/kWh	R 1.4937	
Energy markup R/kWh	R 0.3989	
As % of energy cost	36.4%	
% of energy revenue	26.7%	

The calculated wheeling charge based on the assumptions made here looks more than the current wheeling charges.

20. SMALL SCALE EMBEDDED GENERATION (SSEG) PRICING INPUTS

The important issue in respect of SSEG customers is that they must be on a cost reflective tariff with fixed and capacity / demand charges close to cost plus TOU energy charges. A new TOU tariff for small consumers, <100 kVA, should be developed. Any consumer can select this tariff, but all SSEG consumers must be on this tariff. It be subject to an application and payment for the supply and installation of a 4 wire, 4 quadrant TOU meter.

The SSEG Feed-in tariff, which caters for consumers who want to feed-in to the network, should be as follows:

- An additional basic charge to cater for the additional metering & administration costs to administer the feed-in.
- The energy credit rates are set at 90% of Eskom Megaflex TOU energy rates (excluding the non-TOU energy rates).
- The feed-in rate applies to any customer wanting to feed-in irrespective of whether they have a LV or MV connection.
- Various other conditions apply.

Currently SSEG consumers are on the standard domestic or commercial tariff if they do not wish to feed-in. This is problematic as the standard energy charges reflect a different load profile of a consumer with SSEG, especially if they are grid tied only (No batteries).

An analysis was done to determine the suitability of the 90% of Eskom TOU energy rates as feed-in rates and the impact of load shifting by SSEG consumers.

- The Tariff energy markup was shown to be about 26% or **40 c/kWh**.
- Savings in feed-in energy.
 - Losses = 5,8%
 - Eskom non-TOU energy rate =
 - 'Electrification and rural network subsidy charge [c/kWh] = 10.8
 - 'Ancillary service charge [c/kWh] = 0.55
 - 10% TOU energy price discount = 10% of (aver R1.098/kWh) = 10.1 c/kWh
 - Total = $10.8 + 0.55 + 20\% \times 94 \text{ c/kWh} = \mathbf{30.15 \text{ c/kWh}}$

Thus if the feed-in rate is too low consumers will simply shift load from the evening to the day when they have surplus energy. That will mean that for every kWh shifting $40 + 30.15 = 60.15 \text{ c/kWh}$ of net revenue would be lost.

It must also be remembered that the industry is moving towards a competitive market where consumers will be allowed to buy their energy and sell their excess energy in the market. If the price paid for feed-in energy is too low, it will simply be sold to other traders. This means the savings that could be achieved by the municipality will be lost.

Eskom is paying its consumers at 100% of its TOU energy rates and this is becoming the norm. For Stellenbosch to become less dependant on Eskom bulk supply it must maximise the amount of energy it can purchase from its own consumer surpluses.

Currently the industry standard is that the value of feed-in energy may not exceed the value of energy purchased by the consumer within a financial year. This is an MFMA requirement. It is well known that Cape Town obtained approval from National Treasury to purchase more surplus energy from consumers than the value they buy. The following in this respect:

- Care should be taken not to buy such energy at a price that exceed the opportunity cost of savings in Bulk purchase costs from Eskom and Drakenstein. (Cape town incentive price is close to that).
- A provision must be made that in cases where network problems are experienced such purchase amounts will be limited.
- The municipality must implement measures to start monitoring the harmonics characteristic of inverters now being installed.
- In time filters should be investigated to overcome the harmonic problems that could be created in areas with significant amount of surplus renewable energy feed-in.

21. CONCLUSIONS

This detailed Ringfencing and Cost of supply study presented many different challenges. All these have been addressed and the results obtained are considered 90% accurate. The current tariffs were found needing major changes. These will send a clear signal about the value of capacity which in time will assist the municipality in controlling its costs which are largely dictated by capacity.

The COS study must now be workshopped internally and be approved by Council and then be submitted to NERSA. Once the budget process starts the proposed tariffs need to be submitted to proper public participation. Only once NERSA approval and public participation process is completed can implementation begin.

22. ANNEXURE

22.1. Allocation of network costs to tariff categories.

Before proceeding to calculation of unit costs the issues of how to allocate network costs to different tariff categories need to be explored. NRS058 explores various methods. It is the consultant's expert view that the method that best allocates costs to the category of customers who cause the high demand and thus high costs should be based on each category of customer's contribution to the system peak. Various approaches could be followed in this respect such as not just using one single peak demand but maybe the average of the highest week or average of the 12 highest demands etc. The problem is that this requires very accurate data. The work in previous sections have already illustrated the problems with the data obtained reflected mainly in the fact the peak in the Eskom profile data and that from the simulated profile differ such that one is in the morning and the next in the evening. This caused the requirement to analyse the impact using the different methods. The results for the allocation of network costs at the highest voltage level network are reflected in Table 62

This shows the following:

The following in this respect:

- All methods yield similar results.
- The energy ratio method seems out of line with the other methods, as is to be expected.
- The average and access method and Non-co-incident methods are almost identical.
- From the profiles it is clear that the annual peak demands are mainly caused by residential customers.
- The co-incident peak demand methods best reflect this reality which will show domestic costs even higher.

For simplicity's sake and close results with the Average and access method the non-co-incident peak demand method was used as basis to allocate all network costs.

22.2. Definitions.

Ampere (A): The unit in which electric current is measured being the rate of flow of electric current through a conductor and which is comparable to the rate of volume of water flow through a pipe.

Capacity utilisation. – This refers to the extent to which the capacity that has been installed for a customer has been utilised by the customer.

Charges. – This refers to different charges that a customer has to pay such as a charge for energy or charge for installed capacity.

Clients. – This refers to other contacts of the utility such as contractors, consultants, etc.

Connection fee: The minimum, once-off, up-front payment for new or additional capacity

Consumers. – This refers to any user of electricity whether it be an illegal connected supply, unpaid supply or third-party person.

Cross subsidy. – This refers to cases where one set of customers are subsidised by another set of customers because their tariff does not cover their cost of supply.

Customer. – This refers to a consumer that is legally connected to the electricity network, is contracted with the supply utility and is paying their dues.

Demand charge: A R/kVA or R/kW charge which is time and/or seasonally differentiated and is applied to the chargeable demand registered during the month.

Demand tariffs. – This refers to tariffs that charge for the maximum demand taken by the customer every month.

Diversity Factor: This is defined as the ratio of the sum of individual consumers' non-coincident maximum demands to the total maximum demand of a group, which is an indication of the extent to which the same capacity can be used for different consumers

Electrical Energy – This refers to the amounts of units of electricity consumed. This is normally measured for a month.

Gigawatt (GW): Equal to one thousand MW or one million kW.

Inter tariff cross subsidies. – This is where one category of customers is cross-subsidising another category of customers.

Intra tariff cross subsidies. – This is where there is cross subsidisation between the different customers within a particular customer category such as high usage customers cross-subsidising low usage customers.

kWh (kilo Watt hour) – This is the unit of measure for energy. It means 1000 of Watt hours. In other words, if a 100 Watt globe was burning for 10 hours.

Kilovolt-Ampere (kVA): The product of volts and amperes times 1 000, i.e. $V \times A \times 1\,000$. This is a measure of "apparent" electrical power.

Kilowatt (kW): The product of kVA and power factor which is a measure of "true" electrical power. The expression for kW is $V \times A \times \text{power factor} \times 1\,000$.

Kilowatt-hour (kWh): The total amount of energy used in one hour by a device that requires one kilowatt of power for continuous operation, i.e. the product of kilowatts and hours.

kVA (kilo Volt Ampere) – This is the unit of measure for maximum demand. It includes the real and reactive components of power.

kW (kilo Watt) – This is also a unit of measure for maximum demand but only the real component. Here the calculation is done over a 1-hour period. The maximum demand taken by ten 100-Watt globes equals to 1 kW.

Load factor. – This refers to the amount of electricity consumed by a customer in a billing period relative to the amount of energy that could have been consumed had the appliances been kept on all the time. This indicates how effective the capacity had been used.

Load factor (LF) annual: Total kWh/y divided by the highest maximum demand in the year times 12 times the total hours in the year. $(\text{Total kWh for year}) \div (\text{Highest maximum demand in year} \times 12 \times \text{hours in year})$.

Load factor (LF) average monthly: Total kWh/y divided by the sum of the maximum demands of all months in the year times 12 times the total hours in the year. $(\text{Total kWh for year}) \div (\text{Sum of 12 maximum demands in year} \times \text{hours in year})$.

Life line. – This refers to a tariff that provides support, subsidy, discount to customers. This is usually not available to all customers and provide more support at low consumption levels and become more expensive at high consumption levels.

Maximum demand. – This refers to the maximum demand that the customer places on the network normally averaged over a half hour period.

Megawatt (MW): Equal to one million Watts or 1 000 kW.

Network voltage. – This refers to the voltage at which the network operates. This voltage is usually higher to transfer large amounts of power.

Network capacity. – This refers to the maximum rating of the network equipment that has been installed to supply a customer. This is expressed as kVA or A (Amperes).

Point of delivery (POD): A physical point on the electrical network, where electricity is delivered to a customer, usually the metering point.

Point of supply: It could be a single point of delivery to a customer or a specific group of points of delivery on the System from where electricity is supplied to the customer.

Power Factor (PF): The ratio kW / kVA indicates the ratio of “true” electrical power to “apparent” electrical power, i.e. the ratio of useful work to the total quantity of volts and amperes supplied.

Reactive energy charge: In case of Megaflex, it is levied on every kvarh which is registered in excess of 30% of the kWh supplied during the specified periods of the month.

Supply voltage. – This refers to the voltage at which customers are supplied. The supply voltage for households is usually 240 V (volt).

Single energy rate tariff. – This refers to a tariff that only has one charge and that is a simple energy charge eg. 25 c/kWh.

Seasonal tariffs. - This refers to tariffs where the price for electricity consumed during different seasons of the year is different. This is because there is a much higher demand for electricity typically in Winter making it more expensive to provide.

Tariff. – A tariff is the combination of various charges as mentioned above to make up a tariff applicable for a specific customer category.

Tariff structure. – This refers to the type of charges in the tariff as well as the relative sizes of the different charges.

Tariff restructuring. – This refers to the process of changing the charges in a tariff but also the relationship with other tariffs.

Two part tariff. - This refers to a tariff that has a single energy rate plus a fixed charge, sometimes called a basic charge. For example, the tariff has a basic charge of R100/month and an energy rate of 105 c/kWh.

TOU (Time of Use) tariffs. - This refers to tariffs where the electricity consumed at different times of the day is measured separately and are charged for differently.

Time-of-use (TOU) tariff: A tariff that has different energy rates for different time periods and seasons in order to reflect different cost of supply at different times more accurately.

Voltage discount. – This refers to a discount applied to customers supplied at higher voltages because it is cheaper to supply, and the customer incurs more costs to transfer the energy for their own applications.

Voltage (V): Measure of electric pressure that drives electric current through a conductor.

Watt (W): The unit of electrical power or energy transfer equivalent to one ampere flowing due to an electrical pressure of one volt at unity power factor, $W = V \times A$

22.3. Abbreviations

<	less than	CRC	Current replacement cost.
≤	less than or equal to	ROA	Return on Assets

11.6.6	STATUS UPDATE AND MAINTENANCE PLAN OF THE STELLENBOSCH WASTEWATER TREATMENT WORKS
---------------	--

Collaborator No: 746259
 IDP KPA Ref No: Governance and Compliance
 Meeting Date: 22 March 2023 & 29 March 2023

1. SUBJECT: STATUS UPDATE AND MAINTENANCE PLAN OF THE STELLENBOSCH WASTEWATER TREATMENT WORKS

2. PURPOSE

To inform the Executive Mayor and Mayoral Committee about the current status and maintenance plan at the Stellenbosch Wastewater Treatment Works (WWTW) for this financial year.

3. DELEGATED AUTHORITY

FOR NOTIFICATION.

4. EXECUTIVE SUMMARY

The Municipality experienced a temporary outage at the Stellenbosch WasteWater Treatment Works (WWTW) on 9th February 2023 due to a pump issue as a result of wear and tear due to loadshedding. This was resolved within two hours of the outage being experienced.

A secondary temporary outage was experienced on 28th February 2023, due to an unplanned breakdown in the mechanical screens works. The Municipality immediately activated our internal maintenance team as well as the service provider to repair the screens and unblock the flow. The repair was completed by 17.30 the same day on 28th February 2023.

It is further recorded that the second outage was unrelated to the first outage and that this was not a continuous flow of treated effluent from the first to the second outage.

The status of maintenance items at the plant at present are as follows:

All flow has been stabilized and operations have resumed to acceptable treated effluent discharge standards.

Mechanical Membranes: All 48 mechanical membranes have been inspected by the Infrastructure Water Services Senior Manager and will be inspected by our qualified water treatment service provider. All but one is operational, which is not a risk at present.

Inlet Screens: The Inlet screens are being manually raked by staff where required. Our specialist service provider has also been to site to repair the one defective inlet screen.

Fine Screens: Three of the four repaired fine screens are operational at present. The fourth screen requires a bearing to be replaced and this is being sourced at present.

Emergency overflow sludge Ponds: Emergency ponds are only an emergency facility for unplanned spillages and have been maintained in order to ensure that they are fit for purpose should the need arise again.

The Telemetry SCADA (Supervisory Control and Data Acquisition) software system is in working order and may require an upgrade within the next financial year.

5. RECOMMENDATIONS

- (a) that the Executive Mayor and Mayoral Committee to note that the status of the plant, in light of recent outages, is intact and operational; and
- (b) that longer term maintenance items which may be required will be packaged and presented in terms of budget, staff and equipment items and will be presented in preparation for the 2023-24 budget process.

6. DISCUSSION / CONTENTS**6.1 Background****6.1.1 Stellenbosch WWTW process overview**

The Stellenbosch WWTW uses state-of-the-art process units and equipment to treat a large (35 MLD million litres per day design capacity) volume of wastewater from the Stellenbosch Town area. The upgraded Works started treating wastewater in 2017 and is designed to cater for the expansion of the town until 2035.

The main processes are:

- ***Inlet Work*** (Screening, De-gritting & Fine Screening)
- ***Flow Splitter***
- ***Activated Sludge Plant*** (Anoxic, Anaerobic & Surface Aeration Zones, Recycling Pumps, Secondary Settlers & UV Disinfection)
- ***Membrane Bio-Reactor*** (Anoxic, Anaerobic & FBDA Aeration Zones & UF Membrane Units)
- ***Dewatering Plant*** (Aerobic Digester & Belt Presses)
- ***Maturation/Emergency Ponds.***

The complexity and size of the Treatment Works requires the requisite skills complement, process controller staff complement, enabled by the current operation and maintenance budget.

6.1.2 Legal requirements on Process Controllers

Regulation 17 from the Water Services Act 108 (1997) requires a Class A Wastewater Treatment Works to have the following staff complement:

- 1 X Class V per shift as Supervisor of Process Controllers
- 1 X Class IV per shift as Process Controller
- 1 X Class III per shift as Process Controller
- 1 X Class II per shift as Process Controller
- 2 X Class I per shift Process Controllers
- 1 X Trainee Process Controller (Class 0) 1 X Class III per shift

The Stellenbosch WWTW requires 4 X Shifts (12 hour per shift) to ensure overtime remains sustainable and allow for staff to take leave.

The Stellenbosch WWTW therefore requires a total Process Controller staff complement of:

- 4 X Class V as Supervisors of Process Controllers
- 4 X Class IV per shift as Process Controller
- 4 X Class III per shift as Process Controller

- 4 X Class II per shift as Process Controller
- 8 X Class I per shift Process Controllers
- 4 X Trainee Process Controller (Class 0) 1 X Class III per shift

6.1.3 Industry standards on WWTW Infrastructure maintenance

The industry standard for maintenance on large Wastewater Treatment infrastructure is between 6 and 11% of Capital Value per year. The Capital Spend on this site was approximately R450 million. The required maintenance budget per year for this treatment works is equal to R27mil per year (based on 2017 values).

Effective maintenance also requires the following elements:

- Comprehensive Asset Management System
- Maintenance Planner/Manager
- Minimum of one dedicated Maintenance Team that consists of the following technical staff members:
 - Millwright, Electrician, Artisan/Fitter and 2 Artisan Assistance.

6.2 Discussion

6.2.1 RECENT OUTAGES EXPERIENCED:

The Municipality experienced a temporary breakdown in the mechanical screens at the Stellenbosch WWTW works on 28 February 2023. This caused all the flow from the Membrane section to be diverted to the Activate Sludge Plant (ASP) section.

However, the full flow was too large for the ASP section to handle and the result was that some of the sludge overflowed along with the clean (treated) effluent.

The Municipality immediately activated our internal maintenance team as well as the service provider to repair the screens and unblock the flow. The repair was completed by 17.30 the same day on 28th February 2023. The levels of the emergency ponds had returned to normal and the spillage was stopped.

This was not raw/untreated effluent which was discharged from the plant, but only the sludge that overflowed together with the treated effluent (clean water). It also needs to be stated that the above spillage was not a 10-day spillage as purported on social media by some residents but was remedied the same day.

There was a separate outage on the 9th February 2023 due to a pump issue as a result of continued load shedding. This outage was experienced due to equipment operating under additional wear and tear, due to the constant on-and-off switching as a result of loadshedding. This issue was resolved immediately on site within two hours.

6.2.2 CURRENT MAINTENANCE ITEMS RESPONSE:

The status of maintenance items at the plant at present are as follows:

6.2.2.1 All flow has been stabilized and operations have resumed to acceptable treated effluent discharge standards.

6.2.2.2 Mechanical Membranes: All 48 mechanical membranes have been inspected by the Infrastructure Water Services Senior Manager and will be inspected by our qualified water treatment service provider. All but one are operational, which is not a risk at present.

6.2.2.3 Inlet Screens: The Inlet screens are being manually raked by staff where required. Our specialist service provider has also been to site to repair the one defective inlet screen.

6.2.2.4 Fine Screens: Three of the four repaired fine screens are operational at present. The fourth screen requires a bearing to be replaced and this is being sourced at present.

6.2.2.5 Emergency overflow sludge Ponds: Emergency ponds are only an emergency facility for unplanned spillages and have been maintained in order to ensure that they are fit for purpose should the need arise again.

6.2.2.6 The Telemetry SCADA (Supervisory Control and Data Acquisition) software system is in working order and may require an upgrade within the next financial year.

6.2.2.7 Landscaping will also be effected with existing on-site staff and maintenance teams from other Municipal Departments.

6.3 Financial Implications

No financial implications for the current 2022-23 budget since current maintenance activations will be handled within the existing municipal budget.

This item is for notification and status update purposes only. A follow-up item will be prepared for the 2023-24 budget if necessary.

6.4 Legal Implications

The recommendations in this report comply with Council's policies and all applicable legislation.

6.5 Staff Implications

None at present. The current organogram and existing funded posts as well as critical funded posts are being prioritised and filled at present.

6.6 Previous / Relevant Council Resolutions:

None.

6.7 Risk Implications

Continuous loadshedding puts additional strain on the system which we want to mitigate through additional generators. Generators, however, is not designed to cope with prolonged outages.

6.8 Comments from Senior Management:

None requested.

**RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE
EXECUTIVE MAYORAL COMMITTEE ADOPTED FOR NOTIFICATION TO COUNCIL :
2023-03-22: ITEM 7.6.6**

- (a) that Council notes that the status of the plant, in light of recent outages, is intact and operational; and
- (b) that longer term maintenance items which may be required will be packaged and presented in terms of budget, staff and equipment items and will be presented in preparation for the 2023-24 budget process.

11.6.7	REQUEST FOR APPROVAL OF THE DRAFT COMPREHENSIVE INTEGRATED TRANSPORT PLAN 2022-2026
--------	--

Collaborator No: 746231
 IDP KPA Ref No: Governance and Compliance
 Meeting Date: 22 March 2023 & 29 March 2023

1. SUBJECT: REQUEST FOR APPROVAL OF THE DRAFT COMPREHENSIVE INTEGRATED TRANSPORT PLAN 2022-2026

2. PURPOSE

That Council approves the Draft Comprehensive Integrated Transport Plan (CITP) 2022-2026.

3. DELEGATED AUTHORITY

Municipal Council.

4. EXECUTIVE SUMMARY

The Provincial Minister of Transport and Public Works had designated Stellenbosch Municipality as a Type 1 Planning Authority, in terms of the National Land Transport Act 2009, Stellenbosch Municipality must therefore compile a Comprehensive Integrated Transport Plan (CITP). CITP's are valid for a five-year period, are overhauled / reviewed every 5 years and are updated annually.

The CITP is strategic in nature and focusses on the longer-term outcomes as derived from national, provincial legislation as well as from local policies and inputs. The CITP guides the restructuring and development of the transportation network and services. Extensive consultations had been carried out with the public and with interested and affected parties in order to achieved the desired outcomes of the CITP. Outcomes from the CITP includes:

- Improved mobility, access and travel times;
- Reduction of congestion and parking challenges;
- Affordability of transport to all users of the system,
- An increased use of non-motorised transport (NMT).

The CITP also presents the Municipality's long term transport vision and objectives, and provides the strategy that would enable the Municipality to realise its transport vision. The proposed draft transport vision for the Municipality is:

Stellenbosch Municipality has an integrated, effective and sustainable transport system, which unlocks economic opportunities and is accessible, safe, reliable and affordable to all communities serviced by the Municipality.

5. RECOMMENDATIONS

- (a) that Council notes that extensive consultations had been carried out with the public and with interested and affected parties;
- (b) that council takes note of the proposed draft transport vision;
- (c) that the Draft Comprehensive Integrated Transport Plan (CITP), attached as **ANNEXURE A**, be accepted;
- (d) that Council grants approval for the draft CITP to be published for public comment;
- (e) that the comments received from the public be considered before approval of the CITP; and

- (f) that the CITP, once approved by council, be submitted to the Provincial Minister of Transport and Public Works for final approval.

6. DISCUSSION / CONTENTS

6.1 Background

The Provincial Minister of Transport and Public Works had designated Stellenbosch Municipality as a Type 1 Planning Authority, in terms of the National Land Transport Act 2009, Stellenbosch Municipality must therefore compile a Comprehensive Integrated Transport Plan (CITP). CITP's are valid for a five-year period, are overhauled / reviewed every 5 years and are updated annually.

The last CITP for Stellenbosch Municipality was prepared for the period 2016-2020, with the last annual update completed in June 2020. An update of the CITP for the period 2022 to 2026 commenced in January 2022 and represents its 5 yearly **review / overhaul**.

6.2 Discussion

The Comprehensive Integrated Transport Plan (CITP) presents the municipality's long-term transport vision and objectives, as well as provide the strategy that would enable the municipality to realise its transport vision.

The Comprehensive Integrated Transport Plan (CITP) is strategic in nature and focusses on the longer-term outcomes as derived from national, provincial legislation as well as from local policies and inputs. The CITP therefore guides the restructuring and development of the transportation network and services. Outcomes from the CITP includes:

- Improved mobility, access and travel times.
- Reduction of congestion and parking challenges.
- Affordability of transport to all users of the system.
- An increased use of non-motorised transport (NMT).

The review / overhauling of the CITP requires (amongst others) that:

Every aspect of the previous CITP must be re-examined to see if it is still up to date.

- Revisions and updates of the previous CITP where necessary and relevant new aspects added.
- Preparation of a new Transport Register.
- Reflect new revisions of the municipality's Spatial Development Framework (SDF).
- Provide a revised Public Transport Plan dealing with the restructuring of the public transport network of services.
- Provide an update of progress made with previously proposed action plans and projects, and propose additional plans and projects.

The most significant development initiative in Stellenbosch is the Adam Tas Corridor Development (ATC). The Adam Tas Local Spatial Development Framework was adopted by Council in 2021. The CITP proposes that the transport impacts of development proposals contained in this local spatial development framework, be carefully considered, and proposes that specialist transport studies be undertaken to best support and unlock this development initiative.

Public consultations are essential to the successful development of a CITP. Below is a summary of consultation sessions previously held:

1. Context Setting and current realities (understanding needs, gaps and issues)

- Workshop 1 – 6 April 2022 – various Departments of Stellenbosch Municipality
- Workshop 2 – 4 May 2022 – Stellenbosch Taxi Association (TA) & Kayamandi TA
- Workshop 3 – 3 May 2022 – officials from PRASA, US, CWDM, WCP
- Two open days for the public and any interested and affected party to attend, held in Stellenbosch and in Franschhoek.

2. Feedback on Future Transport Solutions (strategic approach and projects)

- Workshop 4 – 29 November 2022 – Feedback session to the TA & Kayamandi TA
- Workshop 5 – 29 November 2022 – Feedback session to Internal Stellenbosch Departments
- Workshop 6 – 30 November 2022 - officials from PRASA, US, CWDM, WCP

6.3 Financial Implications

Project cost estimates are high level estimates, further approval processes, such as project prioritizations, budget and municipal approval processes are required before any listed project / intervention is taken forward by the Municipality.

6.4 Legal Implications

The recommendations in this report comply with Council's policies and will ensure Municipal compliance in terms of the National Land Transport Act 2009.

6.5 Staff Implications

This report has no additional staff implications to the Municipality.

6.6 Previous / Relevant Council Resolutions:

Previous Comprehensive Integrated Transport Plans including its annual updates had been approved by Council, as well as by the Provincial Minister of Transport and Public Works.

6.7 Risk Implications

This report addresses risks associated with Transport within the Municipal area, and endeavours to mitigate such risk.

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.6.7

- (a) that Council notes that extensive consultations had been carried out with the public and with interested and affected parties;
- (b) that council takes note of the proposed draft transport vision;

-
- (c) that the Draft Comprehensive Integrated Transport Plan (CITP), attached as **ANNEXURE A**, be accepted;
 - (d) that Council grants approval for the draft CITP to be published for public comment;
 - (e) that the comments received from the public be considered before approval of the CITP;
and
 - (f) that the CITP, once approved by council, be submitted to the Provincial Minister of Transport and Public Works for final approval.

1 INTRODUCTION

1.1 Legal Basis for the Preparation of Integrated Transport Plans

Stellenbosch Municipality has been designated as a Type 1 Planning Authority and therefore a Comprehensive Integrated Transport Plan (CITP) needs to be prepared, updated and overhauled in terms of the National Land Transport Act 2009.

In terms of Government Gazette No. 881, National Land Transport Act 2009, Minimum Requirements for the Preparation of Integrated Transport Plans, 26 July 2016, CITPs are to be prepared every 5 years. CITPs need to present the municipality's long-term transport vision and objectives, as well as provide strategy that would enable the municipality to realise its transport vision. Once the first ITP had been prepared, selected aspects are to be updated on an annual basis, synchronised with the annual updating of the Integrated Development Plan (IDP). A complete overhaul of an ITP needs to be done every 5 years.

The last CITP for Stellenbosch Municipality was prepared for the period 2016-2020, with the last annual update completed in June 2020. An review of the CITP for the period 2022 to 2026 commenced in January 2022 and this update represents a 5 yearly **Overhaul**. The overhauling of the CITP requires *inter alia* that:

- every aspect of the previous CITP must be re-examined to see if it is still up to date,
- the previous CITP revised and updated where necessary and relevant new aspects added,
- a new Transport Register be prepared,
- reflect new revisions of the municipality's Spatial Development Framework (SDF),
- provide a revised Public Transport Plan dealing with the restructuring of the public transport network of services, and
- provide an update of progress made with previously proposed action plans and projects and propose additional plans and projects.

1.2 Purpose of the CITP

Generally, transportation planning is strategic in nature and focussed on the longer-term outcomes as derived from national, provincial and local policies and inputs and guides the restructuring and development of the transportation network and services. The desired outcomes of the CITP include:

- Improved mobility, access and travel times;
- Reduction of congestion and parking challenges;
- Affordability of transport to all users of the system, and
- An increased use of non-motorised transport (NMT).

Further, these outcomes need to be pursued in the context of promoting environmental sustainability, social inclusion, improved traveller security and integration with land use development. Resilience in relation to changes in the external environment, as well as the efficiency benefits offered by technological advancement and development are also important considerations in planning the future municipal transport system.

Transformation of a municipal transportation network takes time and requires substantial investment and resources to develop significant pieces of infrastructure. Given the fact that the CITP is a plan for a 5-year period, there needs to be a realistic view and understanding of what can be done and implemented within this timeframe and with the resources and budgets available. However, the manner in which the municipal transportation network is developed over the next 5 years should not prevent or preclude the restructuring thereof in pursuit of the longer-term vision and objectives for transport in Stellenbosch.

1.3 Area Covered by the Stellenbosch CITP

Stellenbosch Local Municipality covers approximately 830km² and forms part of the Cape Winelands District (CWD) municipal area and borders the Drakenstein, Breede Valley and Theewaterskloof Local Municipalities as well as the Cape Town Metropolitan Municipality on the West as shown in **Figure 1-1**.

Figure 1-1: Stellenbosch Local Municipality Locality

The municipal area includes the towns of Stellenbosch and Franschhoek, as well as the settlements of Klipmuts, Koelenhof, Kylemore, Johannesdal, Pniel, Jamestown and Raithby as shown in Figure 1-2. The 2020 Socio-economic Profile published by the Western Cape Government and quoting 2019 figures, indicate the municipality has a population of 193 000 inhabitants and contains 49 000 households. 80% of the population is between the ages of 15 and 65. The population is projected to grow to 210 000 by 2024. Close to 90 000 of the municipality's inhabitants stays in the town of Stellenbosch and its suburbs, whereas 18 000 stays in Franschhoek. The average household size is 3.7 persons, with the population density of the Municipality being 232 people/km².

The town of Stellenbosch is linked to the N1 in the north by the R44 and to Somerset West in the south. The R310 links it to Cape Town Metro in the west and Groot Drakenstein in the north-east. Franschhoek is connected to the rest of the municipal area by the R45.

Figure 1-2: Stellenbosch Local Municipality

A railway line and commuter service link the town of Stellenbosch to Paarl, just across the northern municipal border and extends to Cape Town.

1.4 Institutional and Organisational Arrangements

The Western Cape Provincial Land Transport Framework underwent its most recent upgrade in 2016. The Province is currently in the process of appointing a team to do a new update. The Province is part of the stakeholder engagement process of the CIP overhauled.

The District Integrated Transport Plan, which addresses transportation in the Cape Winelands District which Stellenbosch forms part of, must be prepared by the Cape Winelands District Municipality (CWD). The coordination and integration of this DITP and the Stellenbosch CITP is therefore important. The District Municipality also has a shared responsibility for municipal roads in the district as a whole, as well as regulating road-based passenger transport services in the district. The District Municipality formed part of the stakeholder process.

The Municipal Council have adopted the 5th generation Integrated Development Plan (IDP) 2022-2027 in August 2022, which contains a section on transportation. Alignment between the CITP and IDP is essential and needs to be coordinated, as the IDP provide the basis for the annual municipal budget.

PRASA plans and operates the commuter rail services between Stellenbosch and neighbouring municipalities. Although a route network of scheduled long- and short-distance road-based public transport services was included as one of the key strategies in the CITP 2016-2020, at present no scheduled and/or subsidised road transport services are operated within the municipality.

The following Municipal partnerships have been established and relate to Transportation:

- ICLEI (International Council for Local Environmental Initiatives) - A partnership between the City of Cape Town, ECLEI and Stellenbosch Municipality to discuss developments in Transport, Waste and Electricity Generation, towards ensuring sustainability.
- IPC (Integrated Planning Committee) - The IPC is a working group between the City of Cape Town, Stellenbosch, Saldanha Bay, Overstrand, Theewaterskloof, and Drakenstein Municipality that discuss all transport related matters to effectively promote regional planning;
- LTAB (Land Transport Advisory Board) - is a partnership between political leaders to discuss Land Transport related matters that affect transport in the area.
- The Mobility Forum and NMT Working Group - this group was established to discuss transport related matters that affect the Stellenbosch municipal area, including all relevant governmental institutions and other role-players.
- NMT (Non-motorised Transport Working Group) -
- Western Cape Government Department of Environmental Affairs and Development Planning – A partnership around the implementation of the Adam Tas Corridor Catalytic initiative.
- Western Cape Department of Public Works, Roads and Transport – As part of the Provincial Sustainable Transport Programme (PSTP) the Western Cape Department of Public Works, Roads and Transport identified Stellenbosch as a priority municipality for the development of a sustainable transport system. The emphasis will be the development of a public transport system. The emphasis will be the development of a public transport system and the development of infrastructure to improve non-motorised transport.

1.5 Liaison and Communication Mechanisms

- Periodic meetings with internal municipal departments
- Periodic meetings held with Provincial Roads Department
- Periodic meetings held with the University of Stellenbosch
- Taxi Liaison Committee meetings are periodically held
- Stake Holder Consultations and Public Participation during the Annual Updates of the CITP
- Periodic Meetings with the NMT Working Group
- Municipal Processes such as the public participation processes of the IDP

1.6 Contents of the ITP

The contents and format of the overhauled CITP 2022-2026 for Stellenbosch Municipality complies with the Minimum Requirements for the Preparation of Integrated Transport Plans, 26 July 2016 and consists of the following chapters:

- Chapter 2 – a summary of relevant and applicable policy directives and legislation that enabled the review and potential update of the longer-term transport vision and objectives for Stellenbosch Municipality;
- Chapter 3 – a description of the transport system within the Stellenbosch Municipal area, which also forms the core of the Transport Register;

- Chapter 4 – a summary of the relevant spatial development frameworks and the inter-action between land use development and transport;
- Chapter 5 – provides for a description of transport user needs assessment, which is largely based on the stakeholder engagement process;
- Chapters 6 to 11 – the review, update and development of new plans and strategies for the various components of the Stellenbosch transport network and services;
- Chapter 12 – a summary of the existing funding strategy and budgets, and
- Chapter 13 – provides a description of the stakeholder engagement and consultation process.

In addition to providing transport vision statement and objectives, a preferred longer-term transport scenario and a future transport concept are also described in Chapter 2, which provides the basis for the strategies and projects contained in Chapters 6 to 11.

During this overhaul of the CITP, limited additional surveys and counts were done and most of the information contained in the Transport Register was either taken from the last CITP update or from data collected prior subsequently, but not forming part of the overhaul process. A CITP overhaul process often is based on outputs from a travel demand forecast, which would then form the basis for certain proposals and projects put forward in such a plan. However, for the overhaul of this CITP no travel demand forecasting model was used.

The most significant new development initiative and local spatial development framework that will in future have a significant impact on the transport system in Stellenbosch is the Adam Tas Corridor (ATC), as described in Chapter 4. The Adam Tas Local Spatial Development Framework was adopted in 2021 and it therefore was key to assess the transport proposals contained in this local spatial development framework, as well as consider the impact that this development will have on the Stellenbosch transport system and the manner in which the development of the transport system can best support and unlock this development initiative.

2 TRANSPORT VISION & OBJECTIVES

2.1 Introduction

The Transport Vision and Objectives for the Stellenbosch Municipality needs to be:

- Aligned with the latest National and Provincial Policy and Legislation;
- Aligned with Transport Vision(s) and Objectives of the Western Cape Province as expressed in its latest Provincial Land Transport Framework (PLTF), the Cape Winelands District Municipality, as well as the transport related policies and objectives in the Stellenbosch Municipality Integrated Development Plan (IDP) 2022-2027;
- Promote and support the integration of transport and land use development as put forward in the Spatial Development Framework (SDF/s);
- Be underpinned by policies and strategies applicable to transportation and aimed at promoting of sustainability;
- Take cognisance of latest technological advancements to improve the efficiency of transport;
- Consider needs identified through the Stakeholder Engagement process, and
- Address gaps and deficiencies in the municipal transport system.

2.2 Context Setting

As part of setting the context for the development of the **Vision and Objectives**, the legislation and policies applicable to transportation in Stellenbosch is summarised below, as well as the general vision(s), policy statements and objectives contained in the various transportation planning frameworks and plans developed at the national, provincial and district municipal level. The mode specific objectives are mostly provided and expanded on in the mode specific chapters.

The background and transport context in this Chapter is further extended with a summary of the legislation, policies and strategies developed at various spheres of government, with the aim of promoting sustainability.

2.2.1 Legislation

The purpose and scope of the National Land Transport Act (NLTA) of 2009 is:

- to further the process of transformation and restructuring the national land transport system initiated by the Transition Act;
- to give effect to national policy;
- to prescribe national principles, requirements, guidelines, frameworks and national norms and standards that must be applied uniformly in the provinces and other matters contemplated in section 146 (2) of the Constitution, and
- to consolidate land transport functions and locate them in the appropriate sphere of government.

The NLTA further prescribes in *Chapter 4 – Transport Planning* of the Act, that land transport planning must be integrated with the land development and land use planning processes, and the integrated transport plans required by this Act are designed to give structure to the function of municipal planning mentioned in Part B of Schedule 4 to the Constitution, and must be accommodated in and form an essential part of integrated development plans, with due regard to legislation applicable to local government, and its integrated transport plan must form the transport component of the integrated development plan of the municipality.

Types of plans required by this Act includes:

- A National Land Transport Strategic Framework prepared by the Minister;
- Provincial Land Transport Frameworks prepared by the MECs, and
- Comprehensive Integrated Transport Plans prepared by planning authorities.

The Municipality of Stellenbosch is subject to the requirement of item c) above which is to develop an integrated transport plan. This requirement will be complied with by means of the Comprehensive Integrated Transport Plan (CITP) development.

The NLTA Minimum Requirements for the Preparation of Integrated Transport Plans of 2016 further stipulates the desired outcomes of an Integrated Transport Plan (ITP or CITP) and guides the planning authorities to understand which improvements are needed to achieve these desired outcomes, as summarised below. The desired outcomes of ITPs are improved accessibility, reduction of congestion, improved affordability of transport, improvement of travel times, increased use of NMT and solving problems relating to parking.

The improvements needed to achieve the desired outcomes of the ITPs, are:

- Proactive Transport planning;
- Facility planning;
- Better informed law enforcement;
- Infrastructure planning (road and rail upgrades required etc.);
- Integration of public transport services, and
- Land-use/spatial planning.

2.2.2 Policy

The National Transport Policy White Paper presents the broad goal of transport in South Africa to be the smooth and efficient interaction that allows society and the economy to assume their preferred form.

The White Paper's vision for South African transport is a system which will: "Provide safe, reliable, effective, efficient, and fully integrated transport operations and infrastructure which will best meet the needs of freight and passenger customers at improving levels of service and cost in a fashion which supports government strategies for economic and social development whilst being environmentally and economically sustainable".

The following broad goals are set by the National Government's transport policy to achieve this vision:

- To support the goals of the Reconstruction and Development Programme for meeting basic needs, growing the economy, developing human resources, and democratising decision-making;
- To enable customers requiring transport for people or goods to access the transport system in ways which best satisfy their chosen criteria;
- To improve the safety, security, reliability, quality, and speed of transporting goods and people;
- To improve South Africa's competitiveness and that of its transport infrastructure and operations through greater effectiveness and efficiency to better meet the needs of different customer groups, both locally and globally;
- To invest in infrastructure or transport systems in ways which satisfy social, economic, or strategic investment criteria, and
- To achieve the above objectives in a manner which is economically and environmentally sustainable and minimises negative side effects.

The policy further expands on specific goals and objectives for the following six areas grouped into *Infrastructure* and *Operation and Control* as listed below:

- Infrastructure
 - Transport infrastructure (all modes)
- Operation and Control
 - Land passenger transport;
 - Land freight transport;
 - Civil aviation;
 - Maritime transport, and
 - Road traffic and safety.

The Revised White Paper of the National Transport Policy reformulated the vision for South African Transport in the 2017 draft as follows:

"A transport system that provides equitable and reliable access for all in an economically and environmentally sustainable manner to advance inclusive growth and competitiveness of the country."

This vision will be achieved if the government succeeds to provide a transport system that can/will:

- Facilitate the movement of goods and people;
- Enable equitable access to personal economic opportunities and social services;
- Support economic and environmental sustainability and inclusive growth, and
- Advance national, regional, and global competitiveness of the country.

To achieve this, there must be adequate supply of transport infrastructure and services in relation to demand. Furthermore, for the users of transport, the supply should be **accessible, cost effective, time efficient and reliable, safe and secure**.

The 2017 draft revision White Paper concluded that the policy goals and objectives of 1996 are still relevant today.

2.2.3 Western Cape Provincial Land Transport Framework (PLTF) – 2016/17-2020/21

As for all plans and frameworks, the PLTF strategy for coordinating provincial transport across all modes and sectors was developed in alignment with the following:

- A legal framework;
- A strategic and policy framework, and
- The “status quo” for transport in the Western Cape.

In considering these listed strategy outputs the following goals and respective objectives have been developed for the PLTF:

- PLTF-1: Establish and operationalise a Provincial Transport Management Forum (PTMF) to manage and coordinate trans-modal and transversal transport across the Western Cape
 - Appoint the core and second-tier groups;
 - Finalise the entity name, mission and mandate, modus operandi;
 - Review the PLTF strategic goals and KPIs, and amend as required;
 - Institute PLTF monitoring and reporting from the outset, and
 - Assess organisational options, whether legal/regulatory enablement of the PTMF is necessary and take appropriate action.
- PLTF-2: Develop a transversal plan to promote transport safety and security for road, rail and NMT
 - Develop a road safety plan addressing issues such as compliance with road safety regulations, education and awareness;
 - Develop a rail safety plan covering the network, stations and intermodal interchanges;
 - Develop a plan to ensure regulatory compliance for vehicles, covering registration, licencing, overloading;
 - Develop a plan for collective management of unrest occurrences, e.g. MBT/Bus conflict, other civil unrest affecting transport, and
 - Develop an NMT masterplan and ensure it is incorporated appropriately at all levels of government. Ensure that it promotes commuter safety and mobility, via provision of dedicated NMT facilities, e.g. cycle paths, pedestrian paths, bridges, signals.
- PLTF-3: Promote and coordinate integrated transport
 - Monitor IPTN progress at MyCiTi and GoGeorge;
 - Develop strategies for implementing the actual “integration” across more modes, e.g. integrate route scheduling and fare management across Metrorail, other non-contracted bus services, MBTs, and
 - Develop lower budget IPTN-equivalents for less affluent municipalities/districts.
- PLTF-4: Develop transport plans to respond to rural socio-economic challenges and development objectives
 - Review the draft PPTIF proposal and finalise the rural transport development approach and plan;

- Ensure that appropriate aspects of the NMT masterplan are incorporated in all rural transport plans and transport development projects, and
- Review options to assume control of “scholar transport” and integrate with public transport to improve efficiency.
- PLTF-5: Develop key trans-modal strategies to promote economic efficiencies within transport
 - Develop a strategy to promote a shift from private to public transport;
 - Develop a strategy to promote a shift of freight from road to freight rail;
 - Focus infrastructure maintenance on highest priority road and rail networks, and
 - Develop coordination mechanisms within spatial, road and rail planning to improve commuter access to public transport.
- PLTF-6: Optimise transport fund sourcing and allocation
 - Review transport funding priorities, and revise funding allocation as required;
 - Ensure all available State funding sources are fully exploited, via rigorous socio-economic analysis and substantiation;
 - Explore alternative funding sources, e.g. strategic partnerships, special grants, green technology opportunities, and
 - Identify opportunities to optimise funding by applying demand management and user-pay principles.
- PLTF-7: Roll out the PLTF strategic goals and objectives to all transport entities.
 - Identify the PLTF goals and objectives that are applicable to each transport entity (e.g. PRASA, Metrorail, TCT, and District & Local Municipalities;
 - Incorporate the PLTF goals into current and future transport plans, and
 - Monitor and ensure implementation.

2.2.4 District Integrated Transport Plan (DITP) of Cape Winelands

The Cape Winelands District Integrated Transport Plan for 2016 – 2021 contains the district and local municipalities vision for transport.

“**Innovative Mobility**” was the Transport Vision as stated in the previous DITP of 2011-2016 and has remain the same for the 2016-2021 plan. The vision is supported by the mission statement of “**A sustainable transport system which provides access for social and economic opportunity**”, which suggests that sustainable transport is a system with low negative environmental impacts yet high positive social value, and which supports efficient economic development. The Cape Winelands District Integrated Transport Plan proposes how to translate these principles into practical applications.

2.2.5 Stellenbosch Municipality 5th Generation Integrated Development Plan 2022-2027 (IDP)

Stellenbosch introduced the One Plan (20-30 Years), which is a strategic plan put in place to strengthen and enhance the IDP. The IDP is to be reviewed on in a 5-year cycle, based on progress made with the implementation of the One Plan, updates to the Spatial Development Framework, Sectoral Plans, Infrastructure Plans and Financial Strategies. The CIP is one of the sectoral plans that forms part of this 5-year update cycle, with the IDP providing a guiding framework for the next CIP update and the CIP update to be taken into the following IDP as one of the sectoral plans.

The Vision of Stellenbosch is portrayed in terms of Figure 2-1, where Stellenbosch Municipal area is envisaged as an Integrated “**Valley of Opportunity and Innovation**”. The vision is supplemented by the mission of the Municipality; to deliver cost-effective services that will provide the most enabling environment for civil and corporate citizens. In order to achieve the vision and mission, 5 Strategic Focus Areas were identified as outlined in this figure.

Figure 2-1: Vision and Strategic Focus Areas for the Greater Stellenbosch

The following key priorities in the latest IDP have relevance to the integrated transport planning for Stellenbosch, namely:

- Fostering a customer centric approach to basic services;
- E-governance (SMART CITY) – Stellenbosch and partners are in the process of planning for the first smart city in the Cape Winelands – with a view to optimise existing infrastructure;
- Critical road infrastructure upgrades are required from a safety and developmental point of view;
- The Adam Tas Corridor Development – an excellent private-public partnership for sustainable urban development and inclusive growth, and
- Continuing to improve on a safer environment, through adding to our existing cameras and surveillance networks, as well as supporting and creating more neighbourhood watches.

The IDP indicate that the manner that the vision should be translated for transport and addressed in the CITP is shown in Figure 2-2.

Figure 2-2: Translation of the Vision into the development of the Transport System

More specifically aimed at making progress towards the realisation of Vision from a transport perspective, the IDP proposed the following four strategic transport interventions, which is unpacked more extensively in Figure 2-3:

- **Towards a Car-Free Living** – refers to strategies that encourage more effective modes of travel such as public transport, NMT, and other mechanisms to increase the number of passengers per vehicle
- **Travel Demand Management** - refers to strategies that manage overall demand for travel during peak periods, such as congestion pricing and parking management
- **Infrastructure and Operational Enhancements** - refer to capacity improvements to transport infrastructure but only as part of the overarching transport philosophy in Stellenbosch, and
- **Optimal Land Use and Interconnected nodes** - refers to integrated land use and transport planning, which supports and promotes transit orientated development (TOD).

Figure 2-3: Strategic Transport Interventions provided in the IDP

2.2.6 Previous Stellenbosch Municipality CITP(s)

The previous CITP for the Municipality of Stellenbosch echoes the Strategic Focus Areas of the IDP and enhances the transport elements of the various focus areas. The key action areas that were identified to expand the IDP Strategic Focus Areas to include transportation is as follows:

- Road infrastructure improvements;
- Effective public transport system;
- Walking and cycling network improvements;
- Freight network improvements;
- Travel demand management, and
- Streamlined governmental and administrative processes to facilitate the implementation of much needed transport solutions.

The key action areas as listed above were further focused on key areas of implementation action for transport in within the Stellenbosch Municipality and includes:

- A well-functioning road network with good regional access;
- An effective public transport system with good regional access and local public transport, and
- A walkable and cyclable centre of town.

2.2.7 Stellenbosch Spatial Development Framework (SDF)

The Stellenbosch SDF of 2019 aims to achieve the following:

- Enable a vision for the future of regions and places that is based on evidence, local distinctiveness and community derived objectives;
- Translate this vision into a set of policies, priorities, programmes, and land allocations together with the public-sector resources to deliver them;
- Create a framework for private investment and regeneration that promotes economic, environmental and social well-being for a specific region or area, and
- Coordinate and deliver the public-sector components of this vision with other agencies and processes to ensure implementation.

Listed below are the specific spatial policies to support the MSDF concept and settlements plans:

- Maintain and grow the assets of the Stellenbosch Municipality's natural environment and farming areas;
- Respect, preserve and grow our cultural heritage, the legacy of physical artefacts and intangible attributes of society inherited from past generations maintained in the present and preserved for the benefit of future generations;
- Direct growth to areas of lesser natural and cultural significance. Allow future opportunity to build on existing infrastructure investment, on the opportunity inherent in these systems when reconfigured, augmented or expanded;
- Clarify and respect the different roles and potentials of existing settlements;
- Ensure a balance approach to transport in Stellenbosch Municipality, that appropriately serves regional mobility needs and local level accessibility improvements;
- Develop all settlements as balanced, inclusive, appropriately serviced, communities, negotiable through NMT and exhibiting a positive relationship with surrounding nature and agricultural land;
- Actively seek conditions to enable the private and community sectors to align their resources and initiatives with the MSDF principles and proposals, and
- Focus major development energy in Stellenbosch Municipality on a few catalytic development areas that offer extensive, inclusive opportunity.

2.2.8 Promotion of Sustainable Transport

Sustainable Transport is the planning and provision of services and infrastructure for the mobility of people and goods in a manner that is safe, accessible, and affordable for all. Sustainable Transport is efficient and resilient, while minimising the environmental impact and advancing economic and social development to benefit today's and future generations. Sustainable Transport aligns fully with key imperatives of poverty alleviation and reduced inequality and is therefore key to achieving a **Just Transition**.

The specific approaches contributing to Sustainable Transportation includes the:

1. **Society** - where Sustainable Transport will facilitate equitable and safe access to opportunities;
2. **Economy** - where Sustainable Transport will be affordable and support a vibrant economy inclusive of growth. and
3. **Environment** - where Sustainable Transport will limit the impact on the environment.

The above three pillars should be applied for the integration of urban and land use planning with transportation and can be achieved by implementation of the spheres of NMT, Public Transport, Travel Demand Management and Transport Oriented Development.

Applicable legislation and policies to take into consideration in the vision and objectives to develop Sustainable Transportation include:

- Green Transport Strategy 2018 – 2050;
- Nationally Determined Contribution (NDC), and
- Western Cape Government (WCG) 2019 Greater Cape Metro Regional Spatial Implementation Framework.

The abovementioned documentation is summarised as follow:

- Green Transport Strategy 2018 – 2050
The transport Sector contributes 10.8% (cities +/-40%) SA's Green House Gas (GHG) emissions and the strategy is therefore integral to achieving the National Development Contribution (NDC) targets for reducing GHG emissions. The stated Goal is: "... **substantially reduce GHG emissions and other environmental impacts from transport sector by 2050**". This can be achieved by having at least a 20% migration of persons/passengers from private to public transport and NMT and 30% migration of freight from road to rail.
- Nationally Determined Contribution (NDC)
The Presidential Climate Commission (2021) provides the overarching approach to reducing GHG emissions to stay below 2°C and achieve a Net Zero worldwide by 2050. The Energy Sector will be the initial focus leading up to 2030 whereafter the Transport Sector will follow. It should be ensured that current planning does not lock out opportunities to shift.
- Western Cape Government (WCG) 2019 Greater Cape Metro Regional Spatial Implementation Framework
The framework provides long term strategic direction and coordination to the overall growth, spatial development, land use management, and conservation. The framework sets out the region's spatial agenda through 9 levels including *Integrated Transport and Mobility*. The specific strategies to be developed for include:
 - Regional Public Transport;
 - NMT;
 - Freight Logistics, and
 - Freeways.

Some changes in the external environment to consider in the planning of Sustainable Transportation include:

- The Climate Change dialogue that is rapidly shifting;
- The concept of 15-Minute Cities where all amenities are within a 15 – 20 minute walking or cycling distance;
- The need to consider NMT (walking and cycling) and Public Transport and not only Electric Vehicles as key enablers in reducing GHGs;
- The recognition of the need for a Just Transition addressing inequality issues in the accessing of opportunities, and
- The implications of evolving technology supporting the **Active Mobility** space such as e-bikes, pedelecs, e-scooters, cargo bikes and so forth.

2.2.9 The Fourth Industrial Revolution (4IR)

The Fourth Industrial Revolution (4IR) can be described as the application of technology to merge the physical and digital world. The 4IR is characterized by the speed at which it is evolving and its presence in almost every industry and country. As a result of the 4IR the world experiences the transformation of entire systems of production, management, and governance. Breakthroughs in fields such as artificial intelligence (AI), robotics, the Internet of Things (IoT), autonomous vehicles, 3-D printing, nanotechnology, biotechnology, materials science, energy storage, and quantum computing to list a few (Schwab, 2016).

The 4IR has an impact on businesses, the government, people, but most importantly for this study an impact on transportation and the future of it.

A 4IR product/development that can be classified as one of the outcomes with most significant impact on the transportation system is Autonomous Vehicle Technology (AVT). AVT is the idea of a vehicle that is fully automated with no human control required. It is expected that the use of AVT will result in operational efficiencies, lower freight costs, improved fuel efficiency and reduced delivery times. An example is where AI and IoT based radar, laser and camera systems allow freight vehicles to navigate pathways so as to effectively reduce any dysfunctionalities or accidents while optimizing fuel consumption (Ranawat, 2020).

Some beneficial key changes took place in the way an ordinary consumer interacts with the transportation industry because of Artificial Intelligence. These changes include (Ranawat, 2020):

- The introduction of smart cashless and cardless payment using radiofrequency identification (RFID) or near field communication (NFC) that can be applied in various scenarios;
- Secure booking systems that are enhancing mobility as a service for instance Uber, and
- Multi-channel Customer Assistance, AI and IoT have enabled mobility service authorisers to convey transport related information with consumers including Estimated Time of Arrival (ETA) and virtual assistants.

With the automation of systems, it became possible to optimise transport operations more efficiently than before as high-quality data and analytics significantly became available and improve transportation planning through increased visibility. With the new access to rich data generated daily it became possible to anticipate demand, plan more effectively and track distribution in real time (Logistics & Transport, 2020).

Even though South African logistics and transportation companies are still exploring innovations from the Second and Third Industrial Revolutions, a solid foundation needs to be created to support the implementation of 4IR technology.

2.3 Vision

The stakeholder participation process engaged participant on the importance on matters and aspects directly and indirectly related to transportation in Stellenbosch. The outcome of this process is summarised in

Sustainable and Integrated Transport for All

Figure 2-4.

Sustainable and Integrated Transport for All

Figure 2-4: Stakeholder Engagement and Participation Process Summary

It can be concluded that transport is not an end in itself, but a facilitator of wellbeing and property, giving people access to opportunities such as work, health, education and social and recreational activities. A well-functioning transport system facilitates equitable access to key opportunities and services.

Taking cognisance of the existing policy and legislative framework summarised in sections above, identified user needs and the stakeholder engagement process, the proposed Vision for transport for Stellenbosch Municipality is as follows:

Stellenbosch Municipality has an integrated, effective and sustainable transport system, which unlocks economic opportunities and is accessible, safe, reliable and affordable to all communities serviced by the municipality.

2.4 Objectives

Pursuant in achieving the Vision and addressing user needs, issues and gaps, the following Objectives for the transport system for Stellenbosch Municipality over the next 5 years and beyond are proposed:

<p>Sustainable Mobility for All</p> <ol style="list-style-type: none"> 1. Adequate mobility and inclusion of all communities, road users and pedestrian groups: <ul style="list-style-type: none"> • Commuters; • Scholars and Students; • Tourists, and • Mobility impaired and persons with disabilities. 2. All mobility options available to travellers are: <ul style="list-style-type: none"> • Safe; • Accessible; • protects the environment, and • preserves heritage. 	<p>Land Use and Transport Integration</p> <ol style="list-style-type: none"> 1. Densification at public transport nodes and along key transport corridors; 2. Higher density housing developments within or close to the core and nodes, well served by public transport; 3. Diversify types of land use at new nodes to reduce travel, and 4. Mixed use developments well served by NMT.
<p>Road Infrastructure & Parking</p> <ol style="list-style-type: none"> 1. Provides adequate capacity and safe mobility of all modes of transport on all routes, roads and streets; 2. Reduced congestion; 3. Minimises the impact of through traffic; 4. Reduce the impact of extensive on-street parking of private vehicles; 5. Parking developments that tie-in with and promotes the use of public transport; 6. Acceptable maintenance; 7. Include Universal Design principles, and 8. Maintains the character and heritage of the Stellenbosch and Franschhoek Towns. 	<p>Public & Non-motorised Transport</p> <ol style="list-style-type: none"> 1. Affordable, safe, secure and attractive public transport services; 2. Access to all communities and areas within the municipal boundary; 3. Enhance the role of commuter rail; 4. Safe and convenient first- and last mile (1LM) travel of public transport users; 5. Safe and convenient infrastructure & facilities for travellers using NMT as a primary mode, and 6. Promote car free living in the Stellenbosch Municipal area.

Freight Transport	Safety & Security
<ol style="list-style-type: none"> 1. Designated, controlled and policed freight route through the Municipal Area, 2. Routes for transportation of hazardous freight, and 3. Efficient over-load control. 	<ol style="list-style-type: none"> 1. Prioritise safety and security of <u>all</u> users; 2. Monitored, controlled, and executed; 3. Behaviour change programmes to improve mutual consideration of different road users, and 4. A gendered lens on safe mobility.
Institutional, Funding and Communication	
<ol style="list-style-type: none"> 1. Integrated Planning that has broad buy-in and is achievable, understandable, and communicable; 2. Transport budget allocations in line with future vision for the municipal transportation system; 3. Inter-governmental collaboration and coordination; 4. Partnerships with private sector; 5. Programmes, projects and plans include innovation, introduction of technologies that will promote efficiency and sustainability, and 6. Communication strategy and responsive and accountable feedback loops between users and the Municipality. 	

2.5 Preferred Future Transport Scenario

2.5.1 Scenario Development

A preferred scenario was developed to guide the strategies, implementation plans and key projects for the CIP. The process commenced with the identification of a number of high-level scenarios that were narrowed down to the following two scenarios:

- **Scenario 1: Improved Current Trajectory**
- **Scenario 2: Focussed Investment on Public Transport and Non-motorised Transport**

These two scenarios were further unpacked, assessed and measure against the transport Vision and Objectives, in order to decide on a preferred scenario. Based on the assessment, it is proposed that the Scenario 2, with a focus on public and non-motorised transport, is the preferred approach to be taken by the Municipality in the further development of its transport system.

Although the two scenarios are not mutually exclusive and Scenario 1 could be a first step and provide a basis for pursuing Scenario 2, there is a risk with following such an approach, as the Municipality may remain locked into very much a "business as usual" scenario, which could then impact on its ability to change tack towards a more public transport and non-motorised transport investment focus later.

The preferred scenario is aligned and in support of the future transport system as described in a number of strategies and plans already adopted by the Municipality, which articulates its support for more focussed investment in public and non-motorised transport, such as:

Strive towards car-free living in Stellenbosch

A traffic management approach that favours more vulnerable road users, the introduction of measures to reduce traffic flow in the CBD and develop more pedestrian-friendly or pedestrianised streets in the CBD, should be pursued.

This approach can only really be successful if it is underpinned by a CBD public transport distribution service.

Achieve a modal shift in the Stellenbosch CBD towards public transport, walkability and cyclability

Achieving a modal shift towards public transport, walking and cycling will require that streets must be transformed into vibrant pedestrian-friendly space with supporting land use, sidewalks that are universally accessible, traffic management in favour of pedestrians, cycling and public transport.

Parking in the CBD reduced over time by introducing differential parking tariffs with more affordable parking at the outskirts of the CBD.

Creating dignified living spaces in previously disadvantaged areas

Pedestrian footways/paths and cycle networks are required to connect people to civic amenities, schools, public transport facilities and markets. These should be quality environments, bringing dignity to the public space.

2.5.2 Description of Key characteristics of the preferred scenario

The key characteristics of the preferred scenario, Focussed Investment on Public Transport and Non-motorised Transport, are described as follows:

Mobility for All

- Roads and streets are for all (not only private vehicles) with selected streets dedicated to walking and cycling with vehicular access restricted/not allowed;
- Travellers within the municipal area have a variety of viable and safe mobility choices, ranging from NMT, public transport, MAAS options and private vehicles;
- Travellers exercise a wider variety of mobility choices than for choice users only relying on their private vehicles;
- Congestion is reduced as a result of travellers making different choices;
- More commuters travelling from outside the Municipality to work in Stellenbosch use public transport to do so;
- In addition to using mini-bus taxi services, commuters also use scheduled public transport available on certain key routes and within core areas;
- Travellers that cannot afford any other transport, use well developed and safe NMT facilities;
- Residents living in new decentralised nodal developments on core public transport routes can rely on scheduled public transport to commute to work, go to university, school, etc.;

- Students mostly use park-&-ride facilities, shuttle bus services or walk/cycle between the university and their places of residence;
- Although many scholars are picked up and dropped off at schools by private vehicles, other modes are available to them to travel conveniently and safely to school and back, such as walking and cycling;
- Tourists mostly use private vehicles and MAAS to access the Stellenbosch Town, but then use park-&-ride facilities, shuttle bus services or NMT to move around, and
- The elderly and people with physical disabilities have very limited mobility options.

Sustainable Transport

- A significant reduction in transport related green-house emissions is due to both a reduction in the need to travel and a shift towards sustainable modes;
- Travel is reduced due to the integration of land use and transport throughout the municipality;
- Shift from private to public transport by choice-users has and is taking place as a result of viable and safe public transport and/or MAAS options;
- Shift from motorised to non-motorised transport is taking place because of improved NMT infrastructure and facilities, and
- Behaviour change strategy being implemented.

Land-use & Transport Integration

- The need to travel is reduced by more mixed-use land use development;
- Development of the transport network and land use development is better integrated, with the main driver being sustainability;
- Adam Tas corridor development continues as planned and is supported by scheduled public transport services along key routes;
- Continued densification within the Urban Edges and focus on brownfield redevelopment;
- New high density housing developments is supported by scheduled public transport services;
- Existing higher density housing areas to be expanded through land-use diversification to better support need for convenience, commercial and public facilities, and
- Transit -Oriented development nodes are established around transport nodes (for instance at rail stations) where modal transfers can be facilitated.

Road Infrastructure & Parking

- The road network is developed and redeveloped such that streets within Stellenbosch Town, provide for different types of functionalities, some providing for

higher levels of mobility for private vehicles and others providing more for access, public transport and specifically NMT;

- Upgrades, redevelopment and development of roads makes adequate allowance for all mode of transport (cross-section, servitude boundary to boundary, urban design);
- Bypass road options for through traffic are developed and evaluated through a strategic environmental assessment;
- Parking requirements related to new development are scaled down in favour of public transport and NMT facilities considering all socio-economic and environmental costs/benefits;
- Park-&-ride facilities have been developed to serve the Stellenbosch Town and Franschhoek;
- On-street parking has been reduced and/or taken away on certain functionality type streets;
- Where available, on-street parking has been made more expensive to encourage motorists to park-&-ride and/or use NMT, and
- Continued and improved road maintenance.

Public Transport

- Commuter rail is reintroduced and provides a viable public transport option for both captive and choice users to areas surrounding/outside the Municipality;
- Commuter rail is expanded (possibly including LRT between SSW and SB on current line);
- Provincially subsidised bus services are extended to link areas from outside the Municipality, not served by rail;
- A scheduled shuttle service link park-&-ride facilities with key destinations with the Town CBD and University (dedicated US student shuttle service was absorbed into this service) – also in Franschhoek;
- Scheduled public transport services link key nodes within the municipal area, including the Town CBD, i.e. Adam Tas Corridor and Jamestown;
- Unscheduled public transport, mainly mini-bus taxis provide for the demand for public transport where scheduled services do not exist, and
- Student transport – evaluating re-introduction of e-scooters (may be e-bikes) as on campus mobility platform.

Non-motorised Transport

- Pedestrianisation of some streets in the Stellenbosch Town CBD;
- Further development of bike paths and pedestrian routes linking outlying communities and neighbourhoods with economic opportunities within the Municipality;
- Expanded NMT essential infrastructure, including previously “missing links”;
- Pedestrian routes are well integrated at public transport interchanges;
- Cycle facilities within Stellenbosch Town, along with bicycle parking and safe storage;
- A bike-sharing scheme has been introduced;
- Improved NMT facilities around schools, with scholars walking and bicycling, and
- Decluttered sidewalks to promote NMT and Universal Access as part of urban design.

Freight Transport

- Whilst freight by road remains the main transport mode, the role of rail in this respect is re-evaluated;
- Strategic freight network;
- Klapmuts truck-stop development;
- Effective overloading control, backed by law enforcement (weigh-in-motion mats)/technology introduction;
- Regulated and enforced routes for the transportation of dangerous goods, and
- First and last mile services – EV support.

Safety & Security of Travellers

- Behaviour change programmes to improve mutual consideration of different road users;
- Stellenbosch municipal area is a 24/7 complete user-friendly town;
- Road safety and awareness is improved;
- Security is improved at public transport ranks, interchanges and major NMT routes throughout the municipality;
- Safety training for taxi associations and taxi drivers;
- Safety dialogues between taxi associations, taxi drivers and potential new users;
- Safe and healthy sanitation at public transport ranks;
- Safety grading system for public transport;
- Vulnerable road users are prioritised at points of intersection;
- Speed limited and traffic calming around schools;
- Visible policing;
- Urban design which includes safety-in-design considerations;
- Perceptions of safety (personal public safety) and security is significantly improved;
- A gendered lens on safety and security, and
- Map and respond to user patterns, elderly, youth, people with disabilities, women and children.

Technological Advancement & Innovation

- Traffic management systems and information available for traffic and congestion management;
- Technology applied for commuter safety at interchanges and key NMT routes;
- Technological advancement in vehicle propulsion systems reduce emissions;
- Public charging facilities are available for EVs in collaboration with private sector, and
- Preparing to introduce new technology into transportation system (autonomous vehicles, 4IR and big data, electric vehicles and charging stations, e-bikes/scooters for hire, also student focussed).

Funding

Additional funding allocated and secured through partnerships with public and private entities for;

- the development and improvement of NMT infrastructure and facilities in general, but specifically along provincial routes, as well as at and around new private developments, and
- public charging facilities available for electric vehicles, in partnerships with the private sector.

Institutional Arrangements & Communication

- Communication mechanism focusses on behaviour change and accountability framework through relationship building and trust (culture of mutual respect, high expectations and trust). It should include a clear public engagement and education programme;
- SDPs include provision for public transport (where applicable) and NMT;
- Zoning implications such as building lines and parking requirements consider the safe NMT infrastructure and facilities;
- TIAs are based on person trips (not vehicle trips) and include NMT;
- Municipal by-laws are aligned with IDP strategic objectives;
- Partnerships for the development and management of transportation with the various sectors of government, as well as the private sector are in existence;
- Development and implementation of communication strategy in support of the scenarios;
- Responsive and accountable feedback loops between users and city;
- Development and implementation of communication in support of the scenarios, and
- Responsive and accountable feedback loops between users and the city.

Preservation of Heritage

Balanced approach is followed towards mobility and preservation of heritage, specifically with consideration given to the development of NMT infrastructure.

2.6 Future Transport Concept

To provide a framework and guidance to the mode specific strategies and plans contained in Chapters 6 to 11 of the CITP, the Vision, objectives and preferred transport scenario were translated into a Future Transport Concept consisting of a number of building blocks that will enable the future development of public and non-motorised focussed integrated transport system for Stellenbosch Municipality. The Concept and its building blocks are:

1. Development of **park-&-ride facilities** for travellers traveling to Stellenbosch from outside the municipal area, with e-vehicle charging facilities
2. Introduction of **scheduled shuttle services**, linking;
 - park-&-ride facilities;
 - Krigeville school precinct;
 - key nodes; Kayamandi, Stellenbosch CBD, University, rail stations and higher-density residential areas;
 - higher-density corridors, such as Adam Tas Corridor, and
 - to Somerset-West (as a later phase).
3. Reinstatement and expansions of **commuter rail** (possible additional stations in ATC)
4. Partial or full **pedestrianisation of some streets** within the Stellenbosch Town CBD and Franschhoek
5. Establishment of a “**core**” **bicycle network** with related infrastructure and facilities with the introduction of a Bike Sharing Scheme
6. Development and **redevelopment of streets and roads**, which provides for different types of functionality, some providing more for access, public transport and NMT and others providing for higher levels of mobility for private vehicles
7. **Reduced on-street parking**
8. Needs of the elderly and people with disabilities as pedestrians are catered for in the development and redevelopment of streets (layout and cross-section, fence-to-fence)
9. **HOV facilities** and public transport priority measures on arterials, such as the R44
10. **Bypass road options** for through traffic be considered
11. **Integrated traveller safety and security framework** in place with active monitoring and management through application of technology
12. **Deployment of ITS solutions** to promote convenient travel, TDM, information sharing, public transport ticketing, freight vehicle over-load control, etc.

3 TRANSPORT REGISTER

The objective of the Transport Registry is to provide an overview of the current land transport system operations within Stellenbosch Municipality. It reflects various aspects of the area which include demographics, the transport system status quo, system management, performance levels, and the status and condition of transport facilities. This will assist in understanding the transport system, as well as its ability to meet the needs of the community by providing effective and efficient transport services and infrastructure.

The register will further assist in pinpointing the shortcomings and identifying strengths, weaknesses, and opportunities.

3.1 Demographic and Socio-Economic Characteristics of Stellenbosch Municipality

3.1.1 Population

Stellenbosch's population totals 196 036 persons in 2021, and is expected to increase to 209 854 by 2025, equating to an average annual growth rate of 1.7 % for the period. Stellenbosch has an ageing population. The highest growth for the aged cohort is an average annual rate of 3.6% for the period 2021 to 2025. This is more than double the growth in the working age cohort (1.6%).

Source: Western Cape, Social – Economic Profile 2021

Figure 3-1 has been taken from the IDP 2022-2027.

Source: Western Cape, Social – Economic Profile 2021

Figure 3-1: Age Cohorts and Dependency Ratio

3.1.2 Population Density

Stellenbosch has a population density of 234 people / km².

3.1.3 Learner growth rate and schools

Learner enrolment in the Stellenbosch area increased with the same rate as population as the growth rate (1.7%). There are 39 schools in the Stellenbosch area.

3.1.4 Health Facilities

In 2020, the Stellenbosch municipal area had 8 primary healthcare facilities which comprise of 7 fixed clinics and 1 community day care centre. There is also a district hospital, 9 ART treatment sites and 13 TB clinics.

3.1.5 Income Levels

The Gross Domestic Product (GDP) per capita is on a downward trend across most local municipal areas. The Gini-coefficient (measuring income inequality) has worsened in the Stellenbosch Municipal area and increase from 0.614 in 2014 to 0.631 in 2020.

3.1.6 Basic Service Delivery

Access to affordable transportation is not currently measured in basic service delivery and is believed to be a gap in the approach to service delivery as access to public facilities and amenities is facilitated by affordable transportation.

3.1.7 Economic Growth and Employment

In 2019, the economy of the Stellenbosch Municipal area was valued at R 16.759 billion (current prices) and employed 78 449 people. The economy is expected to decline with 6.7% (and even more due to the impacts of loadshedding) with a significant number of jobs being lost.

The finance, insurance, real estate, business services and wholesale and retail trade, catering and accommodation and manufacturing are the main drivers of the Stellenbosch economy. The former two grew by 2.4% and 2.1% respectively between 2015 and 2019. The largest decline is expected in the construction industry which is expected to decline by 19.8%.

It is estimated that total employment in 2020 was expected to be 73 790 workers of which 73.6% is in the formal sector while 26.4% is informally employed. The average growth for the formal sector is 0.4% and for the semi-skilled sector 0.5%. Low-skilled employment contracted at an average annual rate of 1.4% per annum. Overall, formal and informal employment contracted by 0.4% and 2.1% respectively between 2016 and 2020 (and is expected to continue or the contraction rate may even increase).

3.2 General Overview of the Transportation System

3.2.1 Modal split

The 2016 CIP indicated a vehicle modal split with a high bias towards private "light" vehicles. However, the more recent National Household Travel Survey of 2020 (Department of Statistics, 2020) data was analysed at a Transport Zone level, to try and get more up to date information on transport in Stellenbosch. **Table 3.1** shows the modal split for the Transport Analysis Zones that constitute the Stellenbosch area.

Table 3.1: Modal Split for Stellenbosch

Description	Percentage
Train	4
Bus	0.5
Taxi	63
Car/bakkie/truck/lorry driver	28
Car/bakkie/truck/lorry passenger	2
Walk	1
Total	100

3.2.2 Public Transport System

In the absence of passenger rail services in Stellenbosch at present, public transport in Stellenbosch Municipality consists mainly of minibus-taxi services and limited services by Golden Arrow Bus Service (GABS). The minibus-taxi operators transport the majority of commuters not only within the municipality's boundaries but also between areas from outside of the municipality such as Somerset West, Kuils River, and Paarl. There is a large prevalence of unlicensed minibus-taxi operators operating on routes within the municipality. Golden Arrow Bus Services provides 6 services into and out of Stellenbosch. Passenger rail services were provided by Metrorail, a member of PRASA, and provided a minimal passenger service of around two trains per peak hour, stopping at seven train stations within the Stellenbosch municipal boundaries.

Stellenbosch University (SU) provides a weekday shuttle service exclusively for students and staff between various campus and parking facilities. Tygerberg resident students are also able to book a shuttle seat in advance between the Tygerberg and Stellenbosch campus.

Other public transport services include the long-distance commercial bus services provided by, Translux, and Intercape and on-demand transport services provided by e-hailing companies such as Uber. There are also various tourist related transport services. (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020).

3.2.3 Institutional and Organisational Structure of the Public Transport Industry

As indicated above, the minibus-taxi is the main mode of public transport in Stellenbosch. The industry in Stellenbosch has organised itself into three associations:

- Stellenbosch Taxi Association;
- Franschhoek Taxi Association, and
- Kayamandi Taxi Association.

There are also limited scheduled bus services in Stellenbosch Municipality. These are operated by Golden Arrow Bus Services (GABS) in terms of an operating contract with the Western Cape Government.

The passenger rail service, (currently not operating in Stellenbosch) is operated by Metrorail a division of PRASA.

Although Stellenbosch Municipality does not have direct control over these management entities, it is important for them to foster good relationships with transparent and regular liaison.

3.2.4 Minibus Taxis

Minibus taxis provide unscheduled flexible services that can adapt to transport demand. This makes it the dominant public transport mode in Stellenbosch. Minibus taxi vehicles do not display routes, origin, destination, or fares. Fares are paid in cash. The capacity of minibus taxis ranges between 12-16 (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020).

The main minibus taxi hubs in Stellenbosch Municipality include Stellenbosch, Kayamandi, Franschhoek and Klapmuts. **Figure 3-2** shows the taxi ranks within Stellenbosch Municipality (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020).

Figure 3-2: Taxi Ranks within Stellenbosch University

(Source: Update of the Comprehensive Integrated Transport Plan for Stellenbosch Municipality, 2020)

The passenger volumes at the various taxi ranks were observed during surveys in 2019. The counts only include AM and PM peaks (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020).

Table 3.2 reflects the minibus-taxi passenger volumes.

Table 3.2: Minibus Passenger Volume

Rank	W/day	%	Fri	%	Sat	%	All pay	%	Total	%
Bergzicht	3568	42	4599	47	2988	44	4726	55	15972	47
Kayamandi	1835	21	1842	19	1417	21	2023	24	7118	21
Du Toit Station	1023	12	1140	12	967	14	1116	13	4246	13
Stellenbosch Station	1058	12	1141	12	212	3			2411	7
Franschhoek	590	7	562	6	617	9			1769	5
Klapmuts WC			103	1				8	103	
Klapmuts	481	6	373	4	596	9	671		11	6
Total	8645		9760		6797		8536		13374	

It was identified that minibus routes in Stellenbosch were problematic. **Table 3.3** shows the various problems, together with the best way forward.

Table 3.3: Minibus Route Problems and Solutions

Minibus Taxi Route Problem	Best Way Forward
<ul style="list-style-type: none"> • Inaccurate and lack of correlation or consistency between all database sources i.e. PRE database, taxi associations, and municipality making it difficult to verify the actual number of routes • Routes were established more than 20 years ago; they are therefore no longer relevant with new or changing land use • Road network and other infrastructure changes (consolidation of ranks) have occurred making route descriptions no longer valid • No correlation or accuracy of the number of OLs • Not accurate vehicle registration numbers or owner information • No maps of routes make it difficult to confirm actual route alignments • There are duplicate or multiple route numbers between the same origin and destinations (OD) pair 	<ul style="list-style-type: none"> • Multiple route numbers for the same O-D pair were consolidated into one route number • Where there were minor route variations or “vias” between the same O-D pair these were included in the one route number with a few road link options • Where the B destination was a neighbourhood without a rank the route was modified to allow collection and feeding within the boundaries of the neighbourhood • Route numbers that were no longer viable due to a shift in rank location or lack of demand were deleted. • The final consolidated route description took into account all route variations between O-Ds as well as the actual routes recorded as part of the onboard surveys.

Table 3.4 and **Table 3.5** summarise the revised route structure for local routes. These changes were made based on the above principles. This revision allowed for a consolidation of routes between the same O-D. A total of 16 local routes which serve the following local neighbourhood destinations and towns within the municipal area.

- Between Stellenbosch and Kayamandi, Idasvalley, Cloetessville, Jamestown, Koelenhof, Vlottenburg, Lynedoch Station, Devon Valley, Elsenberg, Jonkershoek and the R310;
- Between Stellenbosch and Klapmuts, Pniel, Kylemore, Lanquedoc, Franschhoek;
- Between Franschhoek and surrounding residential areas and farms, and
- Between Klapmuts and surround residential areas, Simondium and Muldersvlei and Elsenburg.

Table 3.4: Revised Local Routes for Stellenbosch Municipality

TA	New #	Route Name	Consolidate Route #s	Route Numbers Removed

	673	Stellenbosch-Elsenburg	16.9	41	00:41
	Y48	Stellenbosch-R310	18.0	95	00:19
Franschhoek	A96	Franschhoek - Franschhoek Plase	No data		
	G60	Klapmuts- Muldersvlei- Stellenbosch	8.8	52	00:17
	G61	Klapmuts - Simondium	22.6	42	00:54
	Z47	Franschhoek - Stellenbosch	8.9	40	00:22
Kayamandi	676	Stellenbosch - Kayamandi	22.6	42	00:54

Passenger waiting times usually serves as a measure or indicator for service quality. The average waiting time was recorded at the various ranks. It is based on the time a person enters the queue and when the vehicle departs. **Table 3.9** summarises the average waiting time during peak periods at the various ranks. Typically, the average waiting time during peak hour ranges from 1 minutes to 54 minutes. The analysis shows that Bergzicht station has the longest wait time of 54 minutes. On average Klapmuts Winelands Centre has the highest waiting time of 25.50 minutes and Franschhoek Rank has the least waiting time of 4.72 minutes.

Table 3.9: Average Passenger Waiting Time

Rank Number	Rank Name	Average Wait Time During Peak Hour (minutes)
1	Bergzicht	14.34
2	Franschhoek Rank	4.72
3	Kayamandi	7.91
4	Du Toit	8.14
5	Klapmuts	14.10
6	Klapmuts Winelands Centre	25.50
7	Stellenbosch Station	10.95
8	Average Waiting Time	9.60

The general services characteristics of the minibus-taxi operations in Stellenbosch as conveyed by the taxi associations during the stakeholder consultation process are summarised as follows:

- Peak: 6am - 9am and 2pm – 5pm;
- These patterns are fairly regular patterns due to daily commuters;

- Age of typical passengers during peak period 18 – 45;
- Off-peak show much less predictable usage patterns;
- Mix of ages, sometimes older passengers above 60 (on social grant days mostly), and
- R44 route is quieter on Mondays when many restaurants are closed.

During the stakeholder consultations held with the minibus-taxi associations on 3 May 2022, the associations indicated that people are using e-hailing services and lift clubs because they collect at drop them at their destination. These services are reliable and convenient, users perceive them as safe. The taxi associations indicated that they have a schedule that taxis follow. Stellenbosch Taxi Association taxis leave every half an hour from ranks between 9am and 5pm, even if they are not full while Kayamandi Association indicated that from 6am their taxis depart every 15 minutes from ranks even if not full.

The associations further indicated that they have not fully recovered from the impact of COVID-19. They have lost 40% of their income since COVID-19 as some people have lost their jobs, others are working from home and people opt for lift clubs or e-hailing services to minimise the risk of contracting COVID-19. Many operators have had vehicles repossessed as they could not keep up with repayments. The representatives indicated that they are experiencing an increase in the number of people who are using their services as a result of an increase in petrol prices. They have also shared that there are more people using public transport around social grant collection dates.

3.2.5 Commuter Bus Services

Golden Arrow runs limited services into and out of Stellenbosch as shown in [Table 3.10](#). It was indicated by the company that certain services had to be cancelled owing to a reduction in subsidy from the provincial Department of Transport.

Table 3.10: Commuter Bus Service in Stellenbosch¹

Code	Origin	Destination	Distance	Days	Times
MKC2	Stellenbosch	Town Centre	57.2	MO-FR	17H00
MKC6	Stellenbosch	Town Centre	63.6	Cancelled	
MKC7	Town Centre	Stellenbosch	63.3	Cancelled	
MKC8	Town Centre	Stellenbosch	63.6	Cancelled	
MKC9	Town Centre	Stellenbosch	61	Mon-Fri	05H30
RRB5	Macassar	Somerset West	26.4	Cancelled	
RSA2	Stellenbosch	City	62	Cancelled	
RSA3	City Golden Acre D Line	Stellenbosch	62	Cancelled	
RSA4	Stellenbosch	City	63.3	Mon-Fri	05h00
RSA5	City Golden Acre D Line	Stellenbosch	64.1	Mon-Fri	17h10
RUG2	Kuils River Term	Polkadraai	12.8	SAT	11h30
RUG3	Polkadraai	Kuils River Term	12.9	SAT	08h25

Detailed route descriptions are provided in [Appendix A](#).

3.2.6 University Shuttle Services

During weekdays, Stellenbosch University offers shuttle services for students and staff to and from various campus destinations to decentralised parking facilities. This service focuses on the following needs:

- Transport between the general parking areas on the edge of campus and central campus during the day;
- Transport to and from service divisions and departments on the edge of campus (e.g. Food Science and Welgevallen), to and from central campus, and
- Transport of congress attendees to and from the general parking areas on the edge of campus.

¹ e-mail correspondence received from Mr Eckhard Scholtz, Schedules Manager at GABS, on 24 May 2022.

Tygerberg students can book the services between the campus collection point and a nearby shopping centre, currently Tyger Valley between Monday and Wednesday, and to Parow Centre on Thursdays (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020). The daily central campus service runs between 07:00 -17:30 and a booked evening service is available from 18:00 to 02:00. The service focuses on transport from parking areas to campus, transport from departments to and from the central campus, and the transport of congress attendees to and from the general parking areas (Update of The Comprehensive Integrated Transport Plan (CITP) For Stellenbosch Municipality, 2020).

In 2017 The University also offered a night shuttle service to Kayamandi. This service operates twice a day, namely at 18:00 and 20:00 (<https://www.matiemedia.org/night-shuttle-service-kayamandi-fully-operational/>)

3.2.7 Rail

3.2.7.1 Infrastructure and Services

The rail network in the Western Cape is extensive and provides linkages between various points within the province. The Stellenbosch municipal railway system consists of 18km of railway line. There are seven (7) railway stations in the municipal area namely Klapmuts, Muldersvlei Koelenhof, Du Toit, Stellenbosch, Vlootenburg, and Lynedoch (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020). The stations can be seen in **Figure 3-3**.

Figure 3-3: Railway line in Stellenbosch

(Source: Comprehensive Integrated Transport Plan for Stellenbosch Municipality, 2016)

At present (May 2022) there are no railway services running in the Stellenbosch municipal area. However, there were limited rail services in operation during the previous update of the CITP (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020), with the rail services originating from the northern line through the Stellenbosch Municipal area, with two trains per peak hour. From Monday to Friday, 25 trains operated daily, in each direction whereas Saturday and Sunday 15 and 13 trains operated respectively.

Table 3.11 shows the outdated fares for rail as of 2015.

Table 3.11: Rail Rates

Station	km Zone	Single		Week		Month	
		Metro Plus	Metro	Metro Plus	Metro	Metro Plus	Metro
Lynedoch	30/40	R15.50	R9.50	R127	R61	R394	R184
Vlottenburg	41 – 135	R18.50	R12	R152	R78	R471	R239
Stellenbosch	41 – 135	R18.50	R12	R152	R78	R471	R239
Du Toit	41 – 135	R18.50	R12	R152	R78	R471	R239
Koelenhof	41 – 135	R18.50	R12	R152	R78	R471	R239
Muldersvlei	41 – 135	R18.50	R12	R152	R78	R471	R239
Klapmuts	41 – 135	R18.50	R12	R152	R78	R471	R239

The rates are based on km zoning pricing, with distances ranging between 136-200km.

As per rail passenger surveys conducted in 2007 and 2012, there was a substantial reduction in rail ridership with a decrease of 13%. This data is outdated, and this figure could be considerably higher. **Table 3.12** illustrates the decrease in rail ridership (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020).

Table 3.12: Rail Ridership

Station	Boarding		Alighting		% Difference 2007 to 2012
	2007	2012	2007	2012	
Klapmuts	1692	1468	1646	1426	-13.3%
Muldersvlei	3919	3713	3213	3722	4.2%
Koelenhof	651	686	576	614	5.9%
Du Toit	2808	2863	2589	2695	3.0%
Stellenbosch	2209	2471	2553	2286	-0.1%
Vlottenburg	448	482	505	544	7.7%
Lynedoch	653	624	793	811	-0.8%

Although there are at present no rail services running, stakeholders such as the Municipality has expressed views that the public transport system in the Stellenbosch area must have a rail component so that communities have access to such rail options where warranted.

3.2.7.2 Planned re-introduction of rail services in Stellenbosch

At a meeting with PRASA's Western Cape Regional Management on 8 April 2022, firm plans and timelines for the re-introduction of passenger rail services in Stellenbosch were shared with the project team. According to this plan the following actions and timelines are applicable:

- Full services started on 31 March 2022 on the Northern Corridor, from which the line to Stellenbosch branches off;
- PRASA is in contact with Transnet as the owner of the line to repair the damage to OHTE infrastructure on the Paarl line;
- PRASA is aiming to reintroduce services from Bellville to Eerste Rivier by June 2022 and then from Eerste Rivier to Muldersvlei by from 1 September 2022;
- PRASA aims to introduce services based on the same timetables and fare structure as before the cessation of services, and
- Diesel locomotives will be considered if electric traction is not feasible in the short term.

PRASA also expressed the desire to work closely with Stellenbosch Municipality to determine demand levels and ensuring effective service delivery. It was also indicated that PRASA was aware of the proposed initiatives on the redevelopment of the Adam Tas corridor which proposes the redevelopment of the Van der Stel sportsground and the possibility of relocating the station towards the sportsground. However, no formal communication has been directed to PRASA in this regard. PRASA expressed the

clear desire to become part of this (and other) TOD initiatives in a structured and co-ordinated manner. they did express the view that this initiative.

With regards to the rail line infrastructure PRASA indicated that there is sufficient space in the current rail reserve for the doubling of the Eerste Rivier to Strand line, but this development is totally dependent on demand on the section.

3.2.8 Other Public Transport

Other Public Transport include long-distance and cross-border transport, non-motorised transport (NMT), and health transport services.

3.2.8.1 Long-Distance and Cross-Border Transport

In the recent past, three (3) commercial bus services provided services to and from Stellenbosch, namely Greyhound, Translux, and Intercape (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020). However, Greyhound announced in February 2021 that all services in South Africa will be ceased.

The operators mainly travel on the national routes (N1, N2, and N3) between major cities. The Translux bus currently operates along four routes through Stellenbosch which depart from the Stellenbosch Station while Intercape operates from Cape Town on routes throughout South Africa and to neighbouring countries. (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020). Langeberg Bus Service also offers services into and from Stellenbosch to various destinations in the Western Cape.

3.2.8.2 Tourist Services

There are various operators that offer tourist services in and around Stellenbosch. **Table 3.13** shows the schedules and tour types offered by three tour bus operators in the Stellenbosch Area (Stellenbosch and Franschhoek CBD Tour Bus Study, 2018)

Table 3.13: Tour Bus Operators

Tour		Days	Departure Time	Return Time
Cape Explorer	Full-day	Monday, Wednesday, Friday, Saturday	08:25 to 09:00	17:30
Hylton Ross	Full-day	Weekdays and weekends	08:00	18:00
Hylton Ross	Half-day	Weekdays and weekends	13:45	18:00
Springbok Atlas	Full-day	Weekdays and weekends	08:30	17:00
Springbok Atlas	Half-day	Weekdays and weekends	14:00	18:00

Apart from the above tour operators, there are also operators like Stellenbus Tours, Sunbird Tours, A2B Tours, Oak Leaf Shuttles, Wynland Toere, Camino Tours and Stellenbosch Wine Tours to name a few. There is also a Guided Bike Tour of Stellenbosch service.

Table 3.14 shows the inbound and outbound tour bus movements for the period 16 May – 22 May 2018. It should be noted that these volumes are pre-COVID-19 and are also outside traditional high traffic periods such as the Easter Weekend (Stellenbosch and Franschhoek CBD Tour Bus Study, 2018).

Table 3.14: Daily Tour Bus Screen-Line Counts: Stellenbosch

Direction	Wed, 16 March 2018	Thu, 17 May 2018	Fri, 18 May 2018	Sat, 19 May 2018	Sun, 20 May 2018	Mon, 21 May 2018	Tue, 22 May 2018
Inbound	55	49	79	53	27	56	39
Outbound	39	37	79	63	27	63	56
Total	94	86	158	116	54	119	95

3.2.9 Non-Motorised Transport (NMT)

NMT includes walking, cycling, animal-drawn vehicles, wheelchairs, and all other transport that does not utilise a motor or engine for movement. The most common forms of NMT in Stellenbosch are walking

and cycling. Figure 3-4 shows the definition of NMT (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020)

$$\begin{aligned}
 \text{NMT} &= \text{Pedestrians} && \& \text{Cyclists} \\
 &\text{incl. People with special categories of need} && \& \text{Cyclists} \\
 &+ \text{electrically powered (=motorised) personal vehicles, such as e-scooters,} \\
 &\text{e-bikes, pedelecs, power chairs/mobility scooters, etc.}
 \end{aligned}$$

Figure 3-4: NMT Definition

Stellenbosch has a very attractive environment for NMT, as it has a walkable CBD with short distances between residential areas. The demand for NMT transport is further increased due to the University of Stellenbosch being within the CBD where students primarily walk between venues. There are 120 km of sidewalks and 30km of cycle infrastructure which makes up 80% of NMT infrastructure in Stellenbosch Municipality. More than half of the infrastructure is in the town of Stellenbosch (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020).

Although the CBD is relatively pedestrian-friendly the ever-increasing traffic and parking in the CBD as well as old street infrastructure with no dropped kerbs pose a threat for disabled people using wheelchairs and people using trolleys/ prams, skateboarders, and cyclists.

Figure 3-5 and Figure 3-6 show the NMT infrastructure in Stellenbosch Municipality (Update of The Comprehensive Integrated Transport Plan (CITP) For Stellenbosch Municipality, 2020).

Figure 3-5: Existing Sidewalk Infrastructure in Stellenbosch with Cycle Facilities (Green)

Figure 3-6: Existing Sidewalk Facilities in Kylemore/Pniel/Franschoek and Existing Cycle Facilities (Green)

Around 30% of roads in the municipality have sidewalks, however, cycle infrastructure has shared facilities with pedestrians and in many cases, sidewalks are too narrow and lack continuity (i.e. condition and connectivity) (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020).

3.2.10 Health Transport Services

The HealthNET (Health non-emergency Transport) provides a provincial function for non-emergency patients between home and facilities. Bookings are made online through the provincial health care facility (hospital/clinic). There is a total of 90 HealthNet vehicles operational in the Western Cape. **Table 3.15** shows the list of Healthcare Facilities and Locations in Stellenbosch Municipality (Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020).

Table 3.15: List of Healthcare Facilities and Locations in Stellenbosch Municipality

Stellenbosch Hospital	80 Merriman Street, Stellenbosch, 7600

3.2.11 Learner Transport Services

Apart from the Western Cape Department of Education's learner transport contract services, private operators also provide specific learner transport to several schools in and around Stellenbosch. Such operators include (but are not limited to) the following:

- GEM Shuttles and Transport (Pty) Ltd and Stubbs Tours (Stellenbosch and Pniel);
- Somerset West Bus Fund;
- Eljosa;
- Trisvana Charter and Scholar Services;
- Bettina Shuttle, and
- P Jagers Transport.

3.2.12 Levels of satisfaction with aspects of the transport system and different modes

The NHTS (2020)² asked households to indicate their levels of satisfaction with the various public transport modes. **Table 3.16** to **Table 3.18** show the satisfaction levels of households in Stellenbosch, with each table highlighting the top five issues that households are not satisfied with.

² data for the NHTS were collected mid-Jan to mid-March 2020, i.e. pre-COVID-19.

Table 3.16: Household Satisfaction (Metrorail)

Metrorail				
	#	Description	Satisfaction	Value ³
TOP 5 ISSUES	1	The travel time by train	Dissatisfied	3,2

^[1] Interpret with caution as the sample size is only 5.

3.2.13 Average travel times

Table 3.19 indicates the average household travel times as recorded during the NHTS (2020). For walking, the average walking time to use public transport is reflected.

Table 3.19: Average Household Travel Times by mode of transport

Description	Values in minutes	
	Stellenbosch	South Africa

Trip purpose	Work	35	45
	Food and grocery shops	18	19
	Other shops ^[1]	34	97
Walking time to Public Transport	Train	30	
	Bus	12	
	Taxi	17	
	Average	20	

^[1] For example, furniture or clothing shops

3.2.14 Main public transport problems and issues

In this section the main transport problems and issues are presented based on two main sources of information. General problems and issues as identified by households during the NHTS (2020) are discussed in section 3.3.9.1 and the issues identified during the first set of stakeholder engagements (April and early May 2022) are presented in Section 3.3.9.2.

3.2.14.1 Transport problems identified by Households

Households were asked to indicate the two main issues they have with transportation. The following are their answers *ranked from most frequently reported to least frequently reported*. The top concerns are accessibility followed by safety as shown in **Table 3.20**.

Table 3.20: Transport problems identified by Households (NHTS, 2020).

Issue	Description	Value ^[1]
1	No buses available	1,609587083
2	No taxis at specific times e.g. late at night	1,758052308
3	Congestion	1,773643932
4	Reckless driving by taxi drivers	1,795727861
5	Crime	1,827836179
6	Trains are not reliable	1,830560928
7	No trains available	1,863039273
8	Overload	1,879875536
9	Parking	1,920780422
10	Trains too far	1,947657893
11	Rude drivers	1,960541586
12	Taxis too expensive	1,970515516

^[1] Where 1 = Yes and 2 = No. Therefore, the closer to 1, the more of an issue.

3.2.14.2 Transport problems identified during the stakeholder consultation process

During peak traffic, congestion levels along arterial roads are high. This is especially problematic for minibus taxis, since public transport users' trips typically involve several chains, and therefore are already longer in duration than private transport users' journeys. In addition, minibus taxis must load and off-load passengers along the route, resulting in further delays. Minibus taxi association leaders have expressed strong desire for dedicated HOV (high occupancy vehicle) lanes to be added along key arterial roads to alleviate this issue.

Increasingly students are contributing to traffic congestion levels in Stellenbosch, since there have been relaxations of parking eligibility criteria by Stellenbosch University (previously first year students were not permitted to park on campus, however, this policy was withdrawn). Since Stellenbosch University does not have sufficient parking on campus to accommodate students' vehicles, most students park in streets and parking lots in and around Stellenbosch (exacerbated by reduction from R8 per hour to R4 per hour due to political pressure exerted after the initial increase to R8).

There are not enough laybys/dedicated stopping bays for minibus taxis in central parts of Stellenbosch.

Relocation of the “Die Braak” minibus taxi rank (which was very centrally located) to Bergzicht means that most passengers do not disembark at the rank, but rather in the street close to the old “Die Braak” rank, where minibus taxis are no longer permitted, but do so anyway due to the needs of their passengers. In addition, those passengers who then need to return home via taxi must walk an additional kilometre to get to Bergzicht (which is far especially when carrying shopping).

Stellenbosch University indicated that in response to protests and disruption caused by minibus taxi operators, university properties which were accessed by students via university operated shuttles were sold. The minibus taxi operators argued that the shuttles were encroaching on their routes and taking business away from them. The shuttle service was however for students/staff only, and not a paid for service.

Criminal syndicates in the area have vandalised and stolen significant amounts of copper cabling and signalling equipment along Metrorail lines servicing the municipality, therefore despite travel demand returning post-COVID-19, service cannot resume.

Roads are automobile oriented, with inadequate provisions for NMT modes. This is especially problematic for school children and parents, who are not adequately protected from motorised traffic. In addition, those wanting to use push scooters and skateboards on public roads are in contravention of by-laws. Stellenbosch Municipality plans to implement NMT facility upgrades in historic centre have been met with resistance from residents, due to heritage concerns.

In the post-COVID-19 era, many restaurants continue to have outdoor dining tables on the sidewalks, however this further reduces space for pedestrians. Proposals to remove parking bays to extend sidewalks have been put forward by the municipality, but some business owners in the area are strongly opposed to this, due to their concern that reduced street parking will result in a reduction in customers/patrons.

Many higher order roads fall partially under the jurisdiction of the municipality, and partially under the jurisdiction of provincial government. A lack of coordination means that maintenance along these roads, particularly along portions under the jurisdiction of provincial government, is poor. Compounding the issue is incompatibility in terms of infrastructure specifications of the two spheres of government. For example, while the municipality uses LED lighting, the province still uses sodium lighting.

Littering was cited as a major concern at taxi ranks, deterring potential choice users of minibus taxis further, and likely motivating captive users to seek alternative/private transport modes as their financial circumstances improve.

Property developers are constrained by current legislated minimum parking requirements even in central parts of Stellenbosch, hampering potential for densification through mixed-use redevelopment.

It is understood that much of the traffic congestion during peak periods is a result of through-traffic, rather than vehicles starting/ending their journey within Stellenbosch (it is for this reason that several bypasses are being planned).

A lack of affordable central housing was identified to be a primary contributing factor for high levels of commuting by those who work in Stellenbosch (but who are unable to afford to live in Stellenbosch). Similarly, schools are far from most outlying residential areas, increasing the need for travel.

Most planned affordable and low-income housing projects are greenfield developments in peripheral locations, which would perpetuate the need for longer distance travel. Some of the planned smaller affordable housing projects in more central areas have been heavily resisted by property owners in these areas (including the mayor), due to fears that such development would reduce property values in the area.

A lack of adequate provision for the circulation of vehicles in informal settlements makes it challenging for motorised public transport to service these areas. In addition, fire and rescue services are often unable to access these sites during emergencies, resulting in far larger scales of damage that there might have been otherwise.

Suspected extortion rackets are operating at some minibus taxi ranks, whereby vehicles and their occupants are “held hostage” by rent seekers, who only allow vehicles to depart once a ransom has been paid. In addition, it is alleged that sometimes drivers who are members of one association prevent drivers who belong to competing associations from entering taxi ranks.

3.3 Roads and Traffic

The Stellenbosch Municipal Area is located within the district municipality of Cape Winelands, both municipalities included in the Western Cape Province. This placement indicates that the roadway infrastructure and associated traffic conditions of the roadways within the Stellenbosch Municipal boundary are shared (to an extent) between authorities. Within this chapter, Chapter 3.4, a summary of

the roadways and associated conditions with specific regard to the Municipality of Stellenbosch is provided.

3.3.1 Road Network and Infrastructure

The total road network of Stellenbosch Municipality totals to 312 km of which the town of Stellenbosch consists of 160.1 km access roads and 52.9 km collector roads. The next largest extent of road network is Franschhoek (32.2 km) and then Klapmuts (20.8 km). **Table 3.21** illustrates the kilometres of the Stellenbosch Municipality road network by functional class (Review of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, June 2020).

Table 3.21: Kilometres of Stellenbosch Municipality Road Network by Functional Class

	Functional Class (road length in km) – Source 2020 CITP Review				
Town	Arterial	Distributor	Collector	Access	Total
Devonvale	0.0	0.0	0.0	7.8	7.8
Franschhoek	0.0	0.0	2.9	29.3	32.2
Klapmuts	0.0	0.0	0.0	20.8	20.8
Kylemore	0.0	0.0	0.7	6.0	6.7
La Motte	0.0	0.0	0.0	4.6	4.6
Lanquedoc	0.0	0.0	1.6	7.1	8.7
Meerlust	0.0	0.0	0.0	1.0	1.0
Pniel	0.0	0.0	0.0	10.6	10.6
Raithby	0.0	0.0	0.0	2.8	2.8
Stellenbosch	4.0	0.0	52.9	160.1	217.0
TOTAL	4.0	0.0	North 58.1	250.4	312.5

The major roads serving the town of Stellenbosch can be defined as a radial network, combining in the central town to form a single north/south route through the town – the R44/Adam Tas Road, which is largely under provincial control, whilst the municipality is responsible for a section through Stellenbosch – refer to **Figure 3-7**. Three routes from the north and east plus three from the south and west feed into the central Adam Tas Road. This major road layout resulted from the topography of the area and the farming activities to the west. It does confirm that **the R44** is the access route with the highest significance in the Municipality, which is confirmed by the modelling results from the 2019 Stellenbosch RMP – refer to **Figure 3-8**. The R44 forms a southerly link to Somerset West, as well as a northerly link to Paarl. The six major routes serving central Stellenbosch from the surrounding areas are:

- M12/Adam Tas Road - a westerly link to the City of Cape Town;
- R310/Adam Tas Road – a westerly link to the City of Cape Town;
- R44 south – a southerly link to Somerset West;
- R310/Helshoogte Road – an easterly link to Franschhoek;
- R44 north – a northerly link to Klapmuts and Paarl, and
- R304/Klipheuwel Road – a northerly link to the N1 freeway and also Cape Town.

The most important secondary routes for central Stellenbosch are those providing access into the town (from the major network):

- Dorp Street – Access from Adam Tas to central town;
- Merriman Street – Access from Adam Tas to central town;
- Bird Street – Access from R304 and northern areas to central town;
- Van Reede/Piet Retief – Access from R44 and southern areas to central town, and
- Cluver Street – Access from the R310 to central town.

Figure 3-7: Radial layout of major and secondary roads serving central Stellenbosch

Figure 3-8: Modelled traffic volumes for am peak period for 2018 – Stellenbosch Roads Master Plan (2019) – confirming major north/south traffic demand on western side of Stellenbosch - through R44/Adam Tas/R304

A more detailed summary of the Stellenbosch Municipality and all its major connectors are provided in [Table 3.22](#) and [Figure 3-9](#) illustrates the network of roads in the full municipal area (Review of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020).

Table 3.22: Stellenbosch Municipality Roads and Connections

Road Name	Connectivity
-----------	--------------

R45- R43-R62 route	Connects the Saldanha Industrial Development Zone and the N2 via Worcester
R46-R62	Connects movement to and from the northern areas of the Western Cape along the N7 towards the N2
R300	Provides connection between the N1 and the N2 on the western side of the Drakenstein Mountain
R44	Provides connection between the N7 in Malmesbury, with the N1 and the N2 as well as linkages to Paarl in the north and Somerset West/Khayelitsha in the south. The R44 further extends from Wellington in the north of the Drakenstein Municipality, continues through Agter-Paarl, intersects with the N1 just north of Klapmuts, continues through Stellenbosch and Somerset-West to Kleinmond in the Overberg District Municipality.
R310	Internal east-west connection to Kylemore and Pniel.
R45 and R310	Provides connectivity between Franschhoek and Paarl
R304	Extends from the Atlantis area on the West Coast, around the northern and eastern side of Durbanville, to eventually link into Stellenbosch – forms an important link with the N1 and the Koelenhof node
M12	Also known as the Polkadraai road, the M12 extends from Parklands and crosses the N1 in the Platteklouf area. It then extends eastwards into Stellenbosch.

Figure 3-9: Network of Major Roads in Stellenbosch Municipal Area

3.3.2 Road Conditions

Of the Municipal Road Network approximately 98% of the total road length is bitumen paved roadways with remainder block paved roads (1.8%) and concrete paved roads (0.02%). The road conditions are summarised in **Table 3.23** (CITP 2016).

Table 3.23: Road Conditions

Element	Condition (% of total)				
	Very Good	Good	Fair	Poor	Very Poor
Road Surfacing	31	26	25	15	4
Structural Condition	51	32	5	9	4

Also refer to Section 7.3.

3.3.3 Traffic Volumes and Congestion

Traffic surveys have been done in October/November 2022 in the municipal area, largely to compare with previous observations and to determine any discernible effects due to the COVID-19 epidemic of 2020/21. The counts were done at 15 intersections and divided into three groups as shown below. The detailed survey information for each intersection is shown in **Appendix B**.

Traffic volume surveys – five major access points to Stellenbosch but excluding the direct vicinity of the Stellenbosch CBD

Figure 3-10 shows the location of the five major access points where traffic volume surveys were done.

Figure 3-10: Location of five major access points to Stellenbosch town where traffic volume surveys have been done in 2022

1. Techno Park / R44;
2. R310-Adam Tas / Dorp Street;
3. R310-Adam Tas/R304/R44/Bird Street;
4. R44/Helshoogte Road
5. Helshoogte Road/Cluver Street

The surveys were undertaken during the following times (the exact days are shown in [Appendix B](#)):

- Tuesday/ Wednesday, 12 hour counts from 06:00 to 18:00;
- Thursday, 3 hour AM peak counts from 06:00 – 09:00
- Thursday, 3 hours PM peak counts from 15:00 – 18:00

Traffic volume surveys – nine major (but smaller) nodes in the Stellenbosch Municipal area

Figure 3-11 shows the location of nine major intersections where traffic volume surveys were done.

6. R310-Baden Powell/ Annandale (for the Lynedoch area);
7. R44/Winery Road (for the Raithby area);
8. R304/Bottelary Road (for the Koelenhof area);
9. R44/Kromme Rhee Road (for the Koelenhof area);
10. R101-Old Paarl Road/R44 (for the Klapmuts area);
11. R310-Helshoogte Road/R45 (for the Franschhoek-Stellenbosch-Paarl link area);
12. R45/R301 (for the Wemmershoek area);
13. R45/Lambrecht Road (for the Franschhoek area and entrance into Franschhoek);
14. Helshoogte Road in vicinity of Kylemore and Pniel to determine through traffic of these areas.

These surveys were undertaken during the same times as indicated for (a) above (the exact days are shown in [Appendix B](#)).

Figure 3-11: Location of nine major intersections in Stellenbosch Municipal area where traffic volume surveys have been done in 2022

Traffic volume surveys – one location in Franschhoek over the weekend peak period

Figure 3-12 shows the location of one intersection in Franschhoek where traffic volume surveys were done over a weekend.

15. Weekend peak period survey in Franschhoek at the intersection of R45-Huguenot St / Lambrechts Rd / Excelsior Rd on a Saturday, 3 hour counts from 09:00 to 12:00.

Figure 3-12: Location of one Intersection in Franschhoek where traffic volume surveys have been done over a weekend in 2022 (R45/Excelsior/Lambrechts)

Table 3.24 shows the inbound and outbound traffic volumes for the weekday am peak hour for 2017, 2018 and 2019 (from Update of the CIP for Stellenbosch Municipality, 2020), compared with the 2022 traffic surveys. Some locations are not directly comparable, but the conclusions below can be made.

Table 3.24: Inbound and Outbound Traffic Volumes (Weekday AM Peak Hour)

Road	2017		2018		2019		2022	
	In	Out	In	Out	In	Out	In	Out
R44 (opposite Paradyskloof)	2468	1372			2286	1849	2418	2135 (just north of Techno Park)
R44 (south of Technopark)	2497	782			3167	1157	3216	1279
R44/Van Reede (north of Technopark)			2229	1896	2336	1949		
R310 (west of R44)	665	491			1465	1045		
R310 (before Polkadraai)	665	491					1083	393 (Annandale to M12)
R310 (Devon Valley Road inter)	1725	1463						
R310 (at Dorp Street)			1984	1200	2161	1233	2290	1410 (South of Dorp)
R304 (north of Kayamandi)	1266	429					1293	862 (Just south of Bottelary)
R304 (at George Blake Rd)			1183	674		752	908 (Just west of R44)	
R44 (north of Helshoogte)	1447	479					2011	998

Road	2017		2018		2019		2022	
	In	Out	In	Out	In	Out	In	Out
R44 (at Helshoogte)			1344	695	1586	742	1919	985
R310 Helshoogte (east of Cluver)	530	258					793	1005
R310 Helshoogte (at La Colline Road)			508	792	652	1244		
R45 at R310 Helshoogte Road (north of R310)							815	542

Comparing traffic volumes with previous counts is a bit risky due to some uncertainty with the exact location of all previous counts. It is also true that at some locations the traffic demand exceeded the capacity in the past and also now (congestion present for a long time), so the volumes are limited by the capacity and cannot increase further. The following conclusions can be made wrt the **morning peak hour**:

R44: The counted volumes from the south into Stellenbosch are the same (due to capacity constraints north of Techno Park – around 1200 veh/h/lane) or higher (south of Techno Park) as counted in 2017 – the volumes out of Stellenbosch are slightly higher, indicating more economic activity in Techno Park than in the past.

The counted volumes on the northern (Paarl) side are higher than ever in the past into Stellenbosch and even out of Stellenbosch – the current volume of 1000 veh/h/lane entering from the north must be close to the capacity of that section.

R304: The counted volumes inbound just south of Bottelary are the same as in 2017 (although not at the same location), but the outbound volume is higher, which indicates higher interaction from Stellenbosch to the north and west (N1 and Cape Town) – similar to trend on R44.

The inbound volume at the R304 (Bird) intersection with the R44 is lower than in 2018, but in view of the queuing present there it can be accepted that it presents the current capacity of the R304 (Bird) at that location. The outbound volume is higher than observed before.

R310 (from west): The inbound volume just south of Dorp is slightly higher than reported before (estimated at capacity with the current 1150 veh/h/lane observed there). The outbound volume is slightly higher than reported before.

At the R310 (Helshoogte) intersection just to the east of Cluver both the in and outbound volumes are substantially higher than reported for 2017, which indicates a much stronger interaction to the east with Pniel and Franschhoek. The outbound volume is even higher than inbound, which is considered strange.

R45 (north of R310): The movement from the north (Paarl side) is high (close to capacity) with about half of the vehicles turning right towards Pniel and the other half proceeding in the Franschhoek direction.

The R45 in Franschhoek (Main Street) shows similar volumes (around 200 veh/h/direction in the weekday morning peak hour than during a Saturday morning between 11:00 and 12:00. This street in central Franschhoek is narrow and has substantial friction due to the on-street parking and high pedestrian traffic. Based on the counts, it is estimated that some spare capacity still exists.

Overall Conclusion: The counts were done during the latter part of October 2022 and the first half of November 2022. It is possible that the university's activities could already have slowed down at this time. Even so, the observed volumes are generally higher than reported before, which indicates very little, if any, remaining impact from the COVID-19 pandemic. At a number of locations the volumes are basically the same as those observed previously which is attributed to oversaturation, i.e. the capacity of the sections has been reached (resulting in differing degrees of queuing being experienced).

There are five major locations where traffic from outside Stellenbosch can enter the central town – they are the five locations listed under Section 3.3.3 (a). There are smaller other links into central Stellenbosch not included here, e.g. the George Blake link through Plankenburg and the Blaauwklippen link past the east of Jamestown. Their role as feeders into Stellenbosch is considered relatively small, though.

At the five locations there are eight road links (see **Figure 3-13**) feeding into/out of the central part of Stellenbosch. To obtain an idea of the traffic volumes entering/leaving the central part of Stellenbosch from outside the central town (Kayamandi, Voeltjesdorp, Cloeteville, Idas Valley, Jamestown, Techno Park and Weltevrede excluded from central town) the counts on a cordon around the town (see **Figure 3-13** and **Figure 3-14**) have been extracted and are shown in **Table 3.25**. The observed flows at all of these locations contain an element of through traffic, the extent of which is unknown at present (no origin/destination surveys have been done). There is also an element of double counting in **Table 3.25** – e.g. traffic entering the cordon from the R44 south, do exit the cordon at the Techno Park link. Even so, Table 3.25 shows a summary of the total traffic volumes (all types of vehicles) on the eight external links which have been observed:

Table 3.25: Inbound and Outbound Traffic Volumes (to/from central Stellenbosch) over defined cordon (Weekday and AM and PM Peak Hours)

	AM P Hour (veh/h)			PM P Hour (veh/h)			Est daily volume (2 way)
	In	Out	Total	In	Out	Total	Total veh/day (split 50/50)
R44 south Techno Park	3216	1279	4495	1643	2900	4543	45 000
Techno Park Road	260	1896	2156	1572	264	1836	20 000
R310 west of Dorp	2290	1410	3700	1741	1628	3369	35 000
R304 west of Adam Tas/R44	752	908	1660	757	1426	2183	19 000
Lang Street South (Cloeteville)	528	273	801	235	346	581	7 000
R44 north of Helshoogte	2011	998	3009	1335	1540	2875	29 000
Rustenburg Street (Idas Valley)	1252	523	1775	581	881	1462	16 000
Helshoogte east of Cluver	793	1005	1798	604	921	1525	17 000
TOTAL	11 102	8 292	19 394	8 468	9 906	18 370	188 000

Figure 3-13: 2022 AM Peak Hour Cordon counts on the major feeder routes to central Stellenbosch

Figure 3-14: 2022 PM Peak Hour Cordon counts on the major feeder routes to central Stellenbosch

From the above the following can be concluded wrt the major road links crossing a cordon around central Stellenbosch:

1. The most important external route into/out of central Stellenbosch is the R44 from/to Somerset West in the south. Approximately 4500 vehicles enter/leave central Stellenbosch on this route in the peak hours. At a typical average vehicle occupancy of 1.5 persons/vehicle, this implies approximately 6750 persons in the peak hours, and at a typical ratio of 10% of daily traffic in the peak hour, the daily (24 hour) two way volume is estimated at 45 000 vehicles/day – note this is to the south of the Techno Park intersection – the total two way volume on the R44 just north of this intersection is basically the same due to the movements to/from Techno Park – refer to **Appendix B**.
2. Techno Park Road carries high numbers of traffic in the peak hours which is only possible due to the recent partial widening to two lanes per direction. The planned construction of a new link from Techno Park Road to the R310 can be expected to put the road under further pressure.
3. The R310 linking with Kuils River and the N2 is the second largest feeder from outside Stellenbosch with about 3500 vehicles/hour in the peak hours and 35 000 vehicles/day in both directions.
4. It is known that substantial queuing occurs at some of these locations, so the actual traffic demand (at least in the peak hour) is in fact higher than the counted volumes (or put differently, the demand is exceeding the peak hour capacity at some of these locations). The most obvious location is the R304 entrance into Stellenbosch where long queues are present (in and outbound) during both the morning and afternoon peak hours. This is also illustrated through the equal entering volumes of just above 750 vehicles/hour in the am and pm peak hours, which is the capacity of the eastbound leg of the R44/R304 intersection – to the west of the R44. This location, with Bird Street only one lane/direction, can be considered the biggest bottleneck in Stellenbosch.
4. On a daily basis approximately 188 000 vehicle trips, or approximately 282 000 person trips (at 1.5 persons/vehicle) are crossing the defined cordon around the central part of Stellenbosch from outside of the central part of the town – as mentioned all of the traffic from/to Kayamandi, Voeltjesdorp, Cloetesville, Idas Valley, Jamestown, Techno Park and Weltevrede are included in the number. Should it be assumed that 25% of this traffic is through traffic, i.e. no destination in central Stellenbosch, then it implies that the person trips to/from central Stellenbosch (from outside the defined cordon into/out of central Stellenbosch) are:
 - During the peak hours: approximately 21 000 (directional split +-60/40)
 - During the day: approximately 210 000

Should the percentage of through trips be lower than 25%, and allowance is made for minibus taxi trips, these numbers will be higher.

5. The highest percentage of trucks occurs on the R44 at the R44/Bird intersection during the afternoon off peak hour (not shown in [Appendix B](#)). Also at the R44/Techno Park intersection, a reasonable number of trucks are present, although percentage wise it is low. Between 14:00 and 15:00 on 26 October 2022 the number of trucks on the R44 travelling north and south was:

	R44/Bird	R44/Techno Park
Northbound	66 out of 620 total vehicles (11%)	38 out of 1343 total vehicles (3%)
Southbound	52 out of 652 total vehicles (8%)	54 out of 1618 total vehicles (3%)

The origin/destination of these vehicles is not known. It is considered that it could be an indication of a reasonable through traffic component for trucks on the R44 through Stellenbosch.

6. High numbers of minibus taxis were found at three intersections (refer to [Appendix B](#)):

	AM peak hour	PM peak hour
R44/Techno Park		
Northbound:	175 of 2250 vehicles (8%)	85 of 1511 vehicles (6%)
Southbound:	54 of 1174 vehicles (5%)	71 of 2079 vehicles (3%)
R310/Dorp		
Northbound:	106 of 1459 vehicles (7%)	41 of 1131 vehicles (4%)
Southbound:	97 of 1037 vehicles (9%)	71 of 1068 vehicles (7%)
R44/Bird		
Eastbound (to CBD)	63 of 464 vehicles (14%)	31 of 444 vehicles (7%)
Westbound (from CBD)	52 of 332 vehicles (16%)	54 of 497 vehicles (11%)

The highest percentage of minibus taxis has been observed on Bird Street at the R44/Bird/R304 intersection. This clearly illustrates the importance of minibus taxi movement on Bird Street and the demand for these services to/from Kayamandi. The highest numbers of minibus taxis have been observed at the R44/Techno Park intersection – approximately 230 minibus taxis north and south during the morning peak hour. Minibus taxi numbers also exceed 200 veh/h on the R310 at the Dorp Street intersection during the morning peak hour. Minibus taxi numbers are higher at all these locations during the morning peak hour than during the afternoon peak hour.

3.3.4 Parking

The most recent investigation into the parking situation in Stellenbosch was completed in June 2021 by Messrs SMEC (Stellenbosch Bulk Parking). It focused on Stellenbosch CBD (as defined – refer to

[Figure 3-15](#)) and Techno Park. The CBD by and large excluded the Stellenbosch University campus.

Figure 3-15: Stellenbosch CBD as defined in 2021 Parking Study

Sections 3.1 and 3.2 of the SMEC study describe a VISSIM model (microscopic simulation) that was built to model the existing traffic flows in Stellenbosch. It employed existing counts from the municipality – source is MPA Traffic Counts Report of R310 and R44 corridors of 2019. Section 3.3 of the study shows that many intersections are operating beyond their capacity, and the results of the study will be used to determine the best access and egress arrangements to the parking garage.

Figure 3-16: Formalised bus system and park and ride concept as suggested in Stellenbosch SDF

Section 4.3 describes a parking demand study done for the Stellenbosch CBD. It refers to the park and ride concept, together with a formalised bus system, suggested in the Stellenbosch SDF as shown in Figure 3-16. It found that there are 686 on street and 1087 off-street parking spaces (total 1773) available in the CBD. A survey of parking utilisation done in September 2020, i.e. in the COVID-19 restriction period, indicated that the overall maximum parking utilisation was 55% (p105). It was found that some on street parking locations did reach full saturation (p107). Based on further surveys in 2021, the prediction for 2023 indicated a possible shortage of 113 parking spaces (p137). It was further predicted that a shortage of an additional 222 parking spaces could be expected for 2028 (p139).

Section 4.4 eventually concluded that depending on the scenario assessments, the CBD could require between 145 and 298 additional parking spaces between 2021 and 2028.

Section 4.5 describes the parking survey for Techno Park. Due to COVID-19, it was done differently to the CBD. Questionnaires were sent to the approximately 90 companies having offices there. Based on this it was concluded that there are 1857 parking bays available and a demand for 2577, which implies a shortfall of 720 parking bays (p147).

Section 5 describes the evaluation of the optimum locations for additional parking in the CBD and Techno Park. A facility of 120 to 300 parking spaces (in a multi-story structure) at the Eikestad Mall (p155) and 150 to 200 spaces (open at-grade parking) at a Location 5 in Techno Park (p170) were identified as the optimum solutions. Rest of Section 5 is devoted to potential designs for these facilities.

Section 6 is devoted to a financial value assessment for the two envisaged facilities. In Section 8 it is finally concluded that the Eikestad Parking Garage should be considered a viable option for a PPP project to be registered at National Treasury (p231), and that an at-grade parking facility at Techno Park is not viable as a PPP but should rather be considered as a conventional project.

3.4 Freight Transport

Figure 3-17 shows the heavy vehicle volumes on the major roads. During the number plate survey that was undertaken for Stellenbosch Municipality, the heavy vehicles were surveyed during the PM peak period – 3PM to 6PM ((Update of the Comprehensive Integrated Transport Plan (CITP) for Stellenbosch Municipality, 2020). This provides a limited snap-shot of the heavy vehicle operational hours.

Figure 3-17: Heavy Vehicle Volumes Sourced from Number Plate Survey (2018)

Freight routes shown entering the Stellenbosch Municipal Area from Cape Town are Bottellary Road (the M23) and Polkadraai Road (the M12). The R44 from north and south of Stellenbosch, the R304 and the R310 west and east, the R101 and the R45 and the R301 in the Franschhoek Valley also carry significant volumes of freight to/from areas within Stellenbosch Municipality.

The Freight Strategy of the CWDM reported on the location of wine cellars and other agri-processing plants, as well as the location of industry in the Stellenbosch area, and has concluded that the main routes that connect Stellenbosch to Somerset West (the R44), Kuils River (R310), Klappmuts (R44), Brackenfell (R304) and Franschhoek (R310), as well as R45 between Franschhoek and Paarl, carry a

significant amount of freight. In addition, secondary routes that provide access to farming areas off these routes also carry freight in the form of inputs into agri-processing (e.g. delivery of bottles) and distribution of the finished product (e.g. delivery of wine to the Cape Town Harbour for export). These roads in particular are impacted by the heavy vehicles that use them i.e. the Stellenbosch link to Parow (where distribution centres are located) via M12 (Stellenbosch Arterial).

Heavy vehicles do impact the already congested access roads through Stellenbosch particularly to access local industrial areas. Deliveries to businesses in the Stellenbosch CBD have been noted as being particularly problematic during peak travel times.

There is only one weigh bridge in the immediate area, which is located just before the N1 on-ramp to Cape Town off the R304 north, in Joostenberg Vlakke – refer to Figure 3-18 for the location.

Figure 3-18: Location of Existing Weighbridge

There are currently no facilities to impound heavy vehicles and therefore law enforcement in respect of overloaded vehicles is limited. Typically, the vehicles are fined for overloading, but are then allowed to continue as there is no secure facility to impound them until the load can be off loaded onto another vehicle. The damage to the road network thus continues.

4 SPATIAL DEVELOPMENT FRAMEWORK

4.1 Introduction

This chapter provides an overview of the Spatial Development Framework (SDF) and related documentation which inform the spatial component of the CIP. The aim is to ensure alignment between transport planning and spatial planning. The documents that will be discussed in this chapter are the following:

- Western Cape Provincial Spatial Development Framework 2014;
- Stellenbosch Municipal Integrated Development Plan 2017 – 2022;
- Stellenbosch Municipal Spatial Development Framework, Nov 2019, and
- Adam Tas Local Spatial Development Framework, 2021.

4.2 Policy Directives

4.2.1 Western Cape Provincial Spatial Development Framework 2014

Growing the economy is the WCG's number one development priority. The PSDF's role is to open-up opportunities for inclusive economic growth in urban and rural areas. Mindful of the complexity of undoing an entrenched spatial legacy, the PSDF takes on the challenge of restructuring the Western Cape's urban and rural landscapes so that they offer socio-economic opportunities for all – especially those previously restricted in accessing these benefits.

The PSDF sets the precedent for all spatial planning and development in the Western Cape Province and is based on the following guiding principles:

- Spatial justice;
- Sustainability and resilience;
- Spatial efficiency;
- Accessibility, and
- Quality and liveability.

A provincial vision for spatial development is identified which is built on OneCape 2040's vision of a "highly-skilled, innovation driven, resource efficient, connected, high opportunity and collaborative society." This vision is formed around 6 themes namely; Educating Cape, Working Cape, Green Cape, Connecting Cape, Living Cape and Leading Cape.

To address the spatial challenges identified in the PSDF the following goals have been identified:

- Greater productivity, competitiveness and opportunities in the provincial space-economy;
- More inclusive development of its urban and rural areas;
- Strengthened resilience and sustainability of its natural and built environments, and
- Improved effectiveness in the governance of its urban and rural areas.

4.2.2 Stellenbosch Municipality's Spatial Development Framework

The Stellenbosch Spatial Development Framework is dated November 2019. The vision for the municipality as per the IDP and the SDP is centred around conservation, resilience, inclusive municipal area and compact urban settlements. The spatial proposals in the SDF are aimed at achieving these principles.

4.2.2.1 Broad Land Use

A large portion of the municipality is designated as public and private conservation areas and fertile agricultural land. The agricultural land within the Stellenbosch Municipality, constitute some of the country's highest yield agricultural land in terms of income and employment generation.

Over the last couple of years, the office development market has seen very little growth. The retail property has been sporadic with several spikes in building activity with short to medium term throughs.

The main settlements in the Stellenbosch Municipality are the historic towns of Stellenbosch, Franschhoek and Klipmuts. Several smaller villages exist throughout the municipality, including

Jamestown, Pniel, Johannesburg, Lanquedoc, Lynedoch and Raithby. New nodes are emerging agricultural service centres, for example, Koelenhof and Vlottenburg. Figure 4-1 provides an overview of the settlement hierarchy in the municipality and the linkage priorities.

Figure 4-1: Stellenbosch Hierarchy of Settlements, Linkages and Investment Priorities

4.2.2.2 Built Environment

Residential densities in Stellenbosch town, Klappmuts, and Franschhoek are slightly higher than what they were in 2015. The average density for each of the aforementioned urban centres in 2015 were 8,17, 10,22 and 9,94 units per hectare, respectively. The targeted density for the urban centres is 25 units per hectare.

The relocation of large industrial land users from Stellenbosch town (to Klappmuts) presents a significant opportunity to restructure Stellenbosch town.

4.2.3 Stellenbosch Municipality SDF Principles

The SMSDF is based on the following seven principles:

1. Maintain and grow the assets of Stellenbosch Municipality's natural environment and farming areas;
2. Respect and grow our cultural heritage, the legacy of physical artefacts and intangible attributes of society inherited from past generations maintained in the present and preserved for the benefit of future generations;
3. Clarify and respect the different roles and potentials of existing settlements;
4. Address human needs – for housing, infrastructure, and facilities – clearly in terms of the constraints and opportunity related to natural assets, cultural assets, infrastructure, and the role of settlements;
5. Pursue balanced communities. All settlements should be balanced;
6. Focus energy on a few catalytic areas that offer extensive opportunity and address present risk, and
7. Focus energy on a few catalytic areas that offer extensive opportunity and address present risk.

Figure 4-2 shows the hierarchy of towns within the Municipality and where the nodes are located. This will influence where the transport proposal for the Municipality should be focused.

Figure 4-2: Consolidated Concept Capturing the 7 Principles Mentioned above

4.3 Transport Related Spatial Challenges

A number of transport related spatial challenges are identified in the SDF. It is highlighted that transport planning practices at the provincial level has maintained a regional mobility lens with the bulk of planning efforts and funding allocated to road infrastructure expansion and rehabilitation responding to demand-side growth, largely attributable to unconstrained low occupancy private vehicles at the cost of local mobility. Too little focus is on progressively improving the efficiency of existing road space usage through shifting modes and altering travel patterns. This approach has very high financial, economic, social and environmental cost, is unsustainable and exclusionary to most of the local population. This also has an adverse consequence for managing transport at the local level, where trips are generated.

The provision of public transport, non-motorised modes and travel demand management programmes are generally considered as municipal functions and not a core responsibility and competence of the Province. Given the extent of transport issues in the Municipality, it has limited institutional capacity and funding for the management of these transport issues. As a result, sustainable transport approached have been overlooked in favour of traditional engineering solutions.

4.4 Summary of Development Proposals and the Implications on Transport

According to the Implementation Framework, the Priority Areas are Stellenbosch and Klapmuts.

Stellenbosch Municipality's Spatial Proposals for both the Municipality as well as the Primary nodes are centred around the following:

- Residential densification and infill development within the urban areas;
- Support mixed land use in settlement centres;
- Promote Public NMT development, and
- Support the proposals of the Adam Tas Corridor Plan.

In terms of sectoral or thematic focus, the spatial development priority in all settlements should be to:

- Upgrade the servicing and transformation of informal settlements;
- Provide housing for lower-income groups in accessible locations (specifically through infill of vacant and underutilised land or redevelopment of existing building footprints);
- Expand and improve public and NMT routes. • Improve public and community facilities and places (e.g. through clustering, framing them with infill development to improve edges and surveillance, prioritisation for landscaping, and so on), and

- Expand the recognition, restoration, and exposure of historically and culturally significant precincts and places (both in the form and use of precincts and places).

The Spatial Development Framework outlines proposals for the Stellenbosch Municipality as a whole, moving down the hierarchy of urban settlements, starting with strategies for the higher-order settlements first and ending with the smaller urban settlements.

Figure 4-3 shows the structuring elements that will impact the growth of the Municipality, the agricultural west, and the conservation east. Urban growth in the east will be more difficult because of the surrounding conservation areas. The SDF further shows the settlement pattern of the Municipality.

4.5 Adam Tas Corridor

The Adam Tas project is a catalyst project in the approved Stellenbosch Municipality Spatial Development Framework and Integrated Development Plan.

4.5.1 Vision

The working vision for the Adam Tas Corridor is:

- “A proactive intervention to address needs in Stellenbosch, including fixing the mistakes of the past and enabling equitable access to urban opportunity for all citizens;
- An integrated, inclusive environment for living, work, and enjoyment;
- A pro-active partnership between the public, private, and community sectors in response to citizen needs and national, provincial, and municipal policy;
- A place which embodies and expands our best knowledge of what constitutes good, equitable, and efficient settlement, and
- A ‘new town in town’ in Stellenbosch; integrating currently fragmented parts of the town, exploiting underutilized resources, and based on non-motorized and public transport.”

Figure 4-3: Stellenbosch Municipal Spatial Development Framework

4.5.2 Adam Tas Corridor Development Framework

The Adam Tas Corridor Local Spatial Development Framework divides the study area into eleven different precincts. Each precinct accommodates a mixed land use. The density and make-up of the land use is summarised in **Table 4.1**.

Table 4.1: Land Use Bulk Summary

Land Use	% Allocation	Minimum Bulk (m2)	Maximum Bulk (m2)
Residential	40	1 262 667	1 774 524
Commercial	29	903 938	1 232 070
Light Industry	16	500 076	669 315
Sports	3	104 551	143 809
Public Facilities	12	375 427	526 881
	TOTAL	3 146 659	4 346 599

The density applied is split into four different categories, namely:

- Very high density (160 units per hectare);
- High density (140 units per hectare);
- Medium (120 units per hectare), and
- Low (100 units per hectare).

It is important to note that Distell decided to relocate to and consolidate many of its operations in Klapmuts. Distell proposes to develop a beverage production, bottling, warehousing and distribution facility. Distell proposes to develop a beverage production, bottling, warehousing and distribution facility on Paarl Farm 736/RE, located north of the N1, consolidating certain existing cellars, processing plants, and distribution centres in the Greater Cape Town area. The farm measures some 200 ha in extent. The beverage production, bottling, warehousing and distribution facility will take up approximately 53 ha. Figure 4-4 shows Adam Tas Corridor Densification Proposals.

An Adam Tas Overlay Zone was developed and was submitted to the Municipal Mayoral Committee on 19 October 2022. The Committee noted the Overlay Zone and recommended to the Council that a public participation process on the Overlay Zone commences. After the conclusion of the public participation process, the Adam Tas Corridor Report should be resubmitted to Council together with comments received.

4.5.3 Transport Proposals for the Adam Tas Corridor

Transport proposals associated with the Adam Tas Corridor evolved over the past five years, either forming part of spatial development frameworks or mobility, road network and transport studies. These are summarised in the following sections.

Figure 4-4: Adam Tas Development Corridor Densification Proposals

4.5.3.1 New Gateway for Stellenbosch 2017

This spatial and mobility framework for the central section of the Adam Tas Road Corridor was developed for the Municipality and the Western Cape Government in 2017. The aim was to investigate the feasibility of a Transit Orientated Development (TOD) for the Adam Tas Road Corridor. The main components of the transport proposals are:

- A new station and public transport hub adjacent (just west) to the redeveloped Van Der Stel Sports Grounds, accessible at grade;
- Lowering of Adam Tas Road in a tunnel where it passes the redeveloped site on the western side - approximately 500 metres in length;
- Linking of Merriman Street with George Blake Street through an elevated interchange, thereby eliminating the present dangerous George Blake at grade rail crossing, just north of the existing station;
- The consolidation and upgrading of the Adam Tas/Alexander Street intersection, allowing a free flow underpass for the R44, and
- A new link from the extended Merriman Street is shown (southwards) parallel to the rail line, which could provide improved access to the Bosmans Crossing area from the north.

4.5.3.2 Stellenbosch Roads Master Plan Update 2018

An update of the Stellenbosch Roads Master Plan was completed in August 2019. The following points from the Master Plan are relevant to the Adam Tas Corridor:

- The section of Adam Tas Road between the intersection of the R44 and Merriman Street, as well as George Blake Street, is operating “beyond capacity” and should be investigated further for possible improvements;
- Traffic modelling for 2040, for this section of Adam Tas Road, indicates that it could become the busiest road section in Stellenbosch;
- To accommodate the expected future traffic, it was proposed that the section be widened to three lanes per direction, and
- The road improvement that may have the largest impact on the Adam Tas Corridor is the development of the Western Bypass.

It was confirmed that high priority planning was required with respect to:

- Reconfiguring Adam Tas Road intersections with the R44/Alexander and Merriman Streets;
- Reconfiguring and improving the Adam Tas/George Blake Street intersection, and
- Dualling of Lower Dorp Street between the R44 and Adam Tas Road.

4.5.3.3 Stellenbosch Spatial Development Framework (SDF) 2019

The Stellenbosch SDF was completed in July 2019. The SDF actively supports the Adam Tas Corridor and states that this is the most significant redevelopment opportunity within Stellenbosch Town, stretching from Droë Dyke and the Old Sawmill sites in the west along Adam Tas Road and the railway line, to Kayamandi, the R304, and Cloeteville in the north. It clearly identifies the Adam Tas Road and the Van Der Stel Sports Grounds as part of the potential corridor development. Conceptually, the Adam Tas Corridor is the focus of “building a new town”.

A general statement on transport is made in that a change in transport patterns should be pursued through “changes in the mode of travel” and “changes in transport demand in terms of the trip itself”. It is considered that, should there be no new public transport interventions and proceeding in the same fashion as in the past, it is unlikely to result in a different end state.

The Stellenbosch station is identified as a potential public transport node. The provision of more frequent and reliable rail service in the Adam Tas Corridor is stated to be critical. It is interesting to note that two proposed light rail stations (not discussed anywhere in detail) are shown in figures, one to the north, just east of Kayamandi and the other to the west in the vicinity of Devon Valley.

4.5.3.4 Adam Tas Corridor Local Spatial Development Framework (LSDF) 2021

The Adam Tas Corridor local Spatial development Framework (LSDF) was completed in 2021. It is stated in the LSDF that approaching the movement, access and parking should occur within a framework of emerging global transport trends, including:

- Significant shifts in policy to accommodate the transformation of the way transport is sourced;
- A significant shift to the use of public transport;
- Potential shift away from private vehicle ownership and a potential increase in car-pooling and rental pools;
- An increase dependency on electric/hydrogen vehicles and the increasing obsolescence of the petrol/internal combustion engines, and
- Inter-dependencies and collaboration between the public and private sector.

The approach to the transport servicing of the corridor strongly indicates that transportation has to be “transformed”. The movement network is shown in **Figure 4-5**.

Figure 4-5: Adam Tas Corridor Movement Network Structure

The key aspects of the Adam Tas Corridor movement network are stated to be:

- A continuous central vehicular route between precincts, from the Sawmill via Oude Libertas, Bosman's Crossing, Bergkelder, Plankenbrug, to Kayamandi and incorporating elements of Distillery Road, George Blake Road and Rand Road. The road should accommodate NMT and public transport functions;
- Adam Tas Road/R44 maintaining its role as a “mobility” route;
- Vehicular intersections with Adam Tas Road/R44 (at grade and grade separated in the vicinity of Bergkelder/Van der Stel);
- A NMT route following the Plankenbrug and Eerste River Corridors and linking to the existing/proposed systems for Stellenbosch town;
- The existing rail, incorporating the two existing stations (Stellenbosch and Du Toit, both upgraded) and two new ones proposed at Droe Dyke/Sawmill and Kayamandi North, and
- Nine new pedestrian crossings along ATC with crossing intervals of between 400-600m (from an operating perspective, these crossings will need to be grade separated, preferably underpasses given the high clearances and ramp lengths required for overpasses).

The LSDF states that the reality of having to accommodate parking serving Stellenbosch Town and the ATC are while expecting to progress towards lower private vehicle dependence and use over time requires innovative transitional arrangements, including the provision of parking in a form enabling ready conversion in future to other uses. Centralised parking facilities, delinking the provision of parking from the specific entity served would be required.

The underlying objectives of the ATC project are to pursue an environment prioritising public transport and NMT. The LSDF assumes that PRASA will continue to reinstate operations of the railway corridor service with new rolling stock and the implementation of new rolling stock for increased demand, as well as the ultimate doubling of the railway line between Eerste Rivier and Muldersvlei Stations. The LSDF also envisages the development of subsidised public transport services linking the ATC precincts and railway stations with the University and the Stellenbosch CBD. (Such a system will have to be developed in an incremental manner until such time as it can be incorporated in a Stellenbosch Municipality IPTN. It is also foreseen that the transformation of the Stellenbosch minibus taxi industry into Association based Companies by means of contracted services.

The LSDF provides proposed phased transport infrastructure improvements per precinct. An estimate of the total bulk infrastructure costs (all services) has been made and it amounts to R1.368 billion. Similarly, the total development contributions have been estimated as R1.44 billion, which is considered a "good indication that the development could be feasible".

5 TRANSPORT NEEDS ASSESSMENT

The transport needs assessment refers to the following sources:

- The transport needs set out in the June 2020 Review of the CIP (still considered relevant);
- An assessment of the Transport Status Quo in the Stellenbosch municipal area;
- Taxi Association Stakeholder engagements;
- Other Sources, including recent work on commercially available floating car data, the Roads Master Plan (2019), the Traffic Surveys of 2022 and the Bulk Parking Study of 2021, and
- Stakeholder Consultation Process 2022.

5.1 Transport Needs Assessment from June 2020 CIP Review

The transport needs identified during the 2020 Review of the Stellenbosch CIP are described in the sections below.

5.1.1 A need for an improved public transport system

The vision for Stellenbosch Municipality as well as all five of the strategic focus areas (Valley of Possibility, Green and Sustainable Valley, Safe Valley, Dignified Living and Good Governance) on some level all need a good public transport system. In the public meetings issues around improved regional services between Paarl and Stellenbosch, security on public transport particularly at ranks was emphasised as well as increased job creation and training youth.

5.1.2 Better accommodate all people including those with disabilities

The existing transport system in Stellenbosch Municipality has made limited provision i.e. infrastructure or services for people with special needs. For example, public transport vehicles (road based MBTs, buses or rail) are not equipped to accommodate universal access. There is not a comprehensive network of pathways and sidewalks and not all intersections are treated to accommodate people with disabilities (dropped kerbs and tactile paving). Accesses into buildings are not ubiquitously equipped with ramps for wheelchairs and prams.

5.1.3 Provide walking/cycling paths and green spaces

Numerous requests were raised in the public meetings held in October 2019 during the previous update of the CIP, for the provision of more sidewalks (particularly in Raithby), running or cycle routes. Safe raised road crossings particularly in school precincts as well as and rail crossings (Vlottenburg, Old Paarl Road) were presented as needs. Suggestions for bollards and enforcement to prevent parking on pavements as well as the beautification of open spaces were made.

5.1.4 Upgrade roads infrastructure

Improvements and upgrades of the existing road networks was also a common theme in the public meetings. Specific areas of concern included:

- Resurfacing of roads, (The Municipality rolls out an annual resurfacing programme to address road repair requirements including those identified through public meetings));
- Increased visibility of street names
- Upgrade of intersections (Adam Tas/R44 / Alexander), and Adam Tas/R44/Merriman
- Street lighting (in the areas of Curry, Pine, Primrose, Eike, Jakaranda, North-End, Silvia and Vredelust Streets).

5.1.5 Additional parking and park/ride facilities

Another need identified at public meetings were additional parking or park and rides (Parking embayment opposite Community Market/ Flea market at the corner of Rustenburg Road and Sonneblom Street).

5.1.6 A need for better road safety, traffic calming and improved law enforcement

A request for a focus on road safety and traffic introducing more traffic calming mechanisms particularly around schools (R45, R310 traffic Calming – Meerlust, Wemmershoek, Maasdorp R45, speed humps in

Lanquedoc, Vredelust Street, c/o Crombie and Last Street, c/o Gone and Cornelius Street, Klapmuts) as well as the installation of road signs (Mostertsdraif) was made. Also required are increased levels of traffic law enforcement to improve road safety conditions.

5.1.7 A Need for More Jobs and Skills Training

High levels of unemployment and low skills levels was also another common theme of concern at the public meetings. A request that the municipality find ways to increase economic opportunities and job creation particularly for youth.

More detail on the problems and needs relevant to the various plans and strategies of the CIP are provided in the following chapters respectively.

5.2 Assessment of the Transport Status Quo

As part of the National Household Travel Survey (NHTS) 2020 respondents were asked to indicate the two main issues they face in relation to the transport system in Stellenbosch. The two most raised concerns were in relation to accessibility to transport and personal safety. Table 5.1 shows responses given most frequently:

Table 5.1: Transport problems identified by Households (NHTS, 2020)

Issue	Description
1.	Non-availability of buses
2.	Non-availability of minibus taxis at certain times of the day, such as late at night
3.	Traffic congestion during peak periods
4.	Reckless driving by taxi drivers
5.	Personal safety and crime
6.	Commuter rail services not available and/or reliable
7.	Overloading of vehicles
8.	Lack of parking
9.	Rude taxi drivers
10.	Transport is too expensive

As Table 5.1 provides an indication of transport user views, the more specific needs related to the various components of the transport system is described in the following paragraphs.

5.2.1 Public Transport Problems and Needs

The transport modal shares of minibus-taxis, buses and commuter rail were 63%, 0.5% and 4% respectively, according to the National Household Travel Survey of 2020. This implied that nearly 70% of all trips within the Municipal area is undertaken by means of public transport.

Passengers undertaking these trips are mostly “captive” to public transport and do not have any other travel option, except walking or cycling if the travel distances are not too long.

The challenges that public transport users face on a daily basis include having safe and convenient access to public transport services, the affordability of fares and the availability of services outside peak periods. Limited services are available outside the peaks, as the demands, which impacts on the viability of operations and operators are therefore hesitant to provide services outside peak periods. Virtually no services are available later in the evenings.

There are not enough laybys/dedicated stopping bays for minibus taxis in central parts of Stellenbosch. Limited public transport facilities at stops, such as shelter are available. Universal access of vehicles remains a challenge as well. The lack of amenities and facilities for example for informal traders at some ranks has been high-lighted as needs in a number of interactions with stakeholders.

To promote sustainable mobility, it is important that travellers start to make different mobility choices, where those are available to them. This *inter alia* implies shifts from private to public transport. The convenience and perceived quality of existing services are obstacles to attracting “choice” users to and travellers with other travel options to public transport. The informal nature and that fact that services are

not scheduled and predictable is also a deterrent for people with different travel options to use existing public transport.

Very little information is also available to non-regular users on service routes, fares and how to access services, which also provides barriers to access. Consideration needs to be given to incentivise public transport operators to improve and maintain the quality and safety of operations, as well as the user experience in general.

During peak traffic, congestion levels along arterial roads is high. This is problematic, as trips typically involve some waiting time and trips therefore are already longer in duration than private transport users' journeys.

During a stakeholder engagement with the local minibus-taxi associations it was mentioned that the industry had lost 40% of their income due to COVID-19 and as a result thereof, some operators had their vehicles repossessed due to not being able to meet repayments. The associations also shared that they have experienced an increase in passenger demand due to passengers choosing public transport over private vehicles due to an increase in petrol prices. More people are also receiving social grants due to job loss during the COVID-19 pandemic, also resulting in an increased patronage to reach grant collection points.

Minibus taxi association leaders have expressed strong desire for dedicated HOV (high occupancy vehicle) lanes to be added along key arterial roads to alleviate this issue. There are not sufficient laybys.

The minibus-taxi associations indicated that they are willing to work towards a more formalised service, as they acknowledge that passengers are more inclined to utilise their services if the service is predictable and offers a ticketing system which removes the existing cash-based fare system. The associations also propose that the industry be consulted when it comes to the planning in providing parking solutions, taxi ranking facilities and new developments such as malls and residential areas.

During the COVID-19 Lock-down period commuter rail services were suspended and have not been reintroduced due to infrastructure challenges. Given the significant number of people travelling across the Municipal borders on a daily basis, the current lack of commuter rail service to and from Stellenbosch is a challenge and these services need to be reinstated and if possible, even be extended.

Greater collaboration between key role-players and stakeholders is required to improve public transport and address the challenges and needs.

5.2.2 Road Infrastructure

Congestion on the road network during peak periods and often extending beyond normal peak hours poses a significant challenge to the mobility on many roads within the Stellenbosch municipal area and specifically the Stellenbosch CBD. The roads and road links where the service levels are significantly impacted by congestion have been identified and confirmed through the Roads Master Plan 2019, traffic surveys and observations done towards the latter end of 2022.

The 2019 Roads Master Plan indicated that the traffic demand in 2081 already exceeded the capacity on the following links in peak periods:

- The R304 between Bottelary Road and the R44;
- The R44 (south) between Paradyskloof and the Van Reede intersection;
- Bird Street between the R44 and Du Toit Street;
- Merriman and Cluver Streets between Bird Street and Helshoogte Road;
- Dorp Street between the R44 and Piet Retief Street;
- Adam Tas Road between its junction with the R44 and Merriman Street;
- Piet Retief Street;
- Van Reede and Vrede Streets between the R44 and Piet Retief Street;
- Alexander Street between the R44 and Bergzicht Street, and
- George Blake Street.

The following links were identified as also being under pressure in 2018:

- The Welgevonden access road;
- Lang Street into Cloetesville;

- La Colline access off the R310, and
- The Technopark access road.

The EMME/4 travel demand forecast modelling, used for the Roads Master Plan and that was based on land use projections for 2040, indicated that quite a number of further roads improvements may be required to maintain acceptable levels of service and mobility. This is further unpacked in Chapter 7. (It is a bit unclear to what extent alignment with sustainable transport prerogatives were considered in the modal split/choice inputs in the travel demand model.)

A paper based on work done by Bruwer for a doctoral thesis on commercially available floating car data in Stellenbosch, provides very good real time information on congestion in Stellenbosch for 2020, both before and after the COVID-19 pandemic started in March 2020. This analysis confirmed that all the major routes coming into Stellenbosch are under traffic pressure during peak periods, namely the R44 (north and south), R310 (west and around Cluver Street), R304, as well as most of the road sections identified in the Roads Master Plan. Whilst congestion was much better during the COVID-19 period (not shown here), it is concluded that by 2022 they have largely returned to February 2020 levels – refer to Section 3.3 and [Figure 5-1](#).

Figure 5-1: Indication of congestion in Stellenbosch in February 2020 (Bruwer, Andersen)

The results of the 2022 traffic surveys have been discussed in Section 3.3 above. Based on previous reports, observations during the surveys and also at other times, it can be stated that the traffic demand exceeds the capacity of the major network servicing central Stellenbosch for varying lengths of time during the morning and afternoon peak periods. The surveys basically confirm the findings of the work done by Bruwer/Andersen, as well as for the 2019 Roads Master Plan.

5.2.3 Parking

The Parking Study for Stellenbosch completed in 2021 and the outcome of this study is discussed in Section 3.3.4. The aim of the study was “to paint an exact picture of the existing parking situation within Stellenbosch Municipality and to focus on providing parking facilities for Techno Park and the CBD”.

Increasingly, students are also contributing to traffic congestion levels in Stellenbosch, since there have been relaxations of parking eligibility criteria by Stellenbosch University (previously first year students were not permitted to park on campus, however, this policy was withdrawn). Since Stellenbosch University does not have sufficient parking on campus to accommodate students' vehicles, most students park on-streets and at parking areas in and around Stellenbosch.

Considering the parking situation in Stellenbosch, there are at least two major issues which have not been addressed:

- Parking on the university campus – both students and personnel. It is known that a possible parking structure along Merriman Street was suggested by the University about two decades ago, and
- The feasibility of the park and ride facilities suggested in a number of recent studies, including in the current Stellenbosch SDF.

The parking needs identified for the CBD and Techno Park point to the feasibility of two facilities:

- It was concluded that depending on the scenario assessments, the CBD could require between 145 and 298 additional parking spaces after 2021. A facility of 120 to 300 parking spaces (in a multi-story structure) at the Eikestad Mall (p155) was identified as the optimum solution.
- Based on questionnaires sent to the approximately 90 companies having offices in Techno Park, it was concluded that there are 1 857 parking bays available and whereas there is a demand for 2 577, which implies a shortfall of 720 parking bays. A facility of 150 to 200 spaces (open at-grade parking) at a Location 5 in Techno Park were identified as the optimum solution for this shortfall.

The important conclusion that can be made from this is that whilst the previously proposed park and ride facilities for Stellenbosch appear to be a good solution for addressing congestion, there is no evidence to support the feasibility of the concept. There is no evidence of similar successful projects elsewhere, but it should remain an option for future consideration.

5.2.4 Non-motorised Transport

Stellenbosch has a very attractive environment for NMT, as it has a walkable CBD with short distances between residential areas. The demand for NMT transport is further increased due to the University of Stellenbosch being within the CBD where students primarily walk between venues.

Although the CBD is relatively pedestrian-friendly the ever-increasing traffic and parking in the CBD as well as old street infrastructure with no dropped kerbs pose a challenge to people with mobility impairments, persons using wheelchairs and with using trolleys, prams, skateboarders, and cyclists.

Around 30% of roads in the municipality have sidewalks, however, cycle infrastructure has shared facilities with pedestrians and in many cases, sidewalks are too narrow and lack continuity (i.e. condition and connectivity).

Whilst cycling in Stellenbosch is popular in terms of the South African context a significant proportion of cyclists are recreational/sports cyclists and those riding on roads prefer the higher order provincial roads. Sections of the cycling network have been implemented but these are not coherent. The main barriers to cycling are safety in traffic, the lack of suitable infrastructure, crime and, in the case of lower income communities, access to bicycles.

In summary, the key concerns and needs related to NMT are:

- Better integration between land use and transport planning, to reduce travel distances and enable greater use of NMT;
- Most choice-users opt to use private vehicles for trips, even if such trips are relatively short and walkable;
- The lack of proper, convenient and safe NMT infrastructure connect outlying communities with their local towns and CBDs;
- NMT needs to be considered an essential element and the foundation of any and all transport and development planning and it should be a requirement for all developments to fully integrate NMT;
- Significant pedestrian movements are across major roads / a rail line, often without adequate or safe crossings;

- Although there has been progress in developing NMT (and cycling) infrastructure routes are not coherent and continuous,
- Cycling is often deemed unsafe from traffic safety perspective and the lack of awareness of other road users, and
- Funding allocation for NMT is limited and NMT infrastructure is often provided as an afterthought.

5.2.5 Freight Transport

Freight movements within and through the Stellenbosch municipal area are significant and contribute to some of the negative externalities of the transport system. The prevailing general freight transport and logistics issues prevalent in the municipal area are:

- non-availability rail freight services, which means that all freight is transported by road;
- high volumes of road freight vehicles that contribute to congestion and impact on the extent of road maintenance, due to higher axle loads;
- effective law-enforcement due to manpower limitations;
- truck movements, off-loading and parking in the Stellenbosch CBD, and
- road safety concerns.

The following matters were identified during the previous CITP update that should be addressed to reduce the negative impact of freight movements and improve freight and logistics are:

- Identification of a Strategic Freight Network of routes (including routes for abnormal loads and hazardous freight);
- Infrastructure improvements, such as truck stops for truck holding and parking;
- Mechanisms for improved law-enforcement, to more efficiently regulate and control freight movements, and
- Movement of appropriate freight from road to rail in the longer term.

Consideration should also be given as to how technology and innovation can be deployed to better manage and control freight movements through and within the municipal area.

5.3 Transport Needs Identified during Stakeholder Consultation Process

A number of themes arose from the stakeholder consultation process, which adds to the understanding of the transport needs in the Stellenbosch Municipal area.

5.3.1 Climate change

Some stakeholders stated the importance that the CITP considers climate change to ensure sustainability of interventions proposed. Although there were no practical suggestions about this from stakeholders, it is agreed that this is a core principle, both in the immediate and longer term. The plan must provide guidance in terms of what is possible to ensure that proposed interventions are sustainable and responsive to the rapidly changing environment.

5.3.2 Integrated land use

The municipality and developers must follow the mixed land use approach to address traffic congestion issues, reduce the need for people to use cars to access services. One way to do this is to bring services closer to people to reduce their need to travel by vehicle. It is important that building plans are not centred on measures that accommodate increased private vehicle usage, but on designing spaces that are responsive to identified challenges and incentivise less use of cars.

5.3.3 Integrated public transport system theme

The development of an integrated public system by partnering with the taxi industry and other modes of public transport was raised. Suggestions such as a universal ticketing system must be explored further, including integrating such plans with Provincial stakeholders. Therefore, it is important that the different stakeholders continue to engage to establish and improve relationships and explore what is possible in this regard.

5.3.4 Congestion

Congestion was a feature of almost all inputs. Stakeholders all struggled with it, describing their journeys in and out of Stellenbosch as arduous and time-consuming, as well as having an impact on productivity. All measures to reduce dependency on private vehicles, must be included.

Adopting measures to move to NMT and integrated public transport will have a positive impact on congestion, but planning must support this, in particular as it relates to parking. Parking is inexpensive and this is seen as being responsive to the needs of private vehicles, whereas the opposite is needed.

Congestions is also exacerbated by tourist buses that clog narrow streets. The idea of park and walk or park and connect with public transport should be pursued (this in conjunction with taxi associations). Stakeholders also said that if they could easily move to and from Stellenbosch by train they would prefer to do that than to sit in traffic.

5.3.5 Behaviour Change Communications

This theme looks at the importance of shifting behaviour to reduce traffic congestion. This will entail having an effective communications plan to educate both internal and external stakeholders about the future impact of planning around the increase of motor vehicle usage as the main sources of transport.

It should also include communications to encourage significantly increased use of public and non-motorised transport and to reduce the use of cars to a minimum. Communication with specific stakeholders, such as the University – to assist in motivating students to adopt cycling and walking in Stellenbosch, and Taxi Associations – to innovate and improve services so as to encourage more people, including potentially, tourists, to use their services, must also be undertaken.

Communication should also be used to create greater awareness about safety of cyclists and pedestrians, emphasising their roles in reducing congestion.

5.3.6 Non-motorised Transport

Some stakeholders are quite keen to explore alternatives to motorised transport. The municipality must take the steps to support this through recommendations such as taking away side parking to widen sidewalks.

The plan must address concerns raised about the safety of cyclists, pedestrians, the elderly, and people living with disabilities. It is important that people living with disabilities can easily move in public spaces. Stakeholders have indicated that the installation of fibre lines have had some negatives impacts on people who use wheelchairs as the pavement was not properly fixed.

The plan must also look at addressing cycling lanes and ensuring that these are safe for cyclists. A significant challenge is that the lanes are not connected into a full route, meaning that cyclists are at risk at intersections and traffic circles. The “Fietsry Stellenbosch” cycling map is available to input into the plan. Enabling more people to walk by ensuring that they are safe and there is enough space for them to walk. There is a big tree near the zebra lines cross on Azaliahof street which makes it difficult to cross the road.

5.3.7 Personal Safety and Security

This was raised as a concern with regards to safety in public transport and public spaces. It was stated that the shift from private vehicles to public transport will only be achieved, if safety can be prioritised and achieved.

It is essential that engagements with the public transport sector continue to explore ways to improve services and safety of commuters. This will not only have an impact on the safety of commuters but will also enable more opportunities for public transport providers such as taxis.

The University indicated that safety is one of their biggest concerns for their students and it should be prioritised in transport plans. It is also important that the safety of pedestrians and cyclists is prioritised. Well-lit pedestrian routes, both in the town and in surrounding townships and settlements, would assist with this. Public toilets, designed and maintained to be safe and clean, would also assist in making pedestrians safer.

5.4 Future Travel Demand Estimation

The scope of this overhaul of the CITP did not include any projection or estimations of future travel demand by means of modelling. Based on existing trends however, “business as usual” with private vehicle trips continuously growing, congestion will also continue to increase together with the negative

externalities and impact of transport on the social and natural environment. This will also further aggravate the private vehicle parking problems.

The implementation of key interventions that will firstly curb the growth and secondly turn around the trend of private vehicle usage is essential. Such interventions should be aimed at changing travel habits and enabling shifts in modal choices from the use of private vehicles to public transport and from motorised transport travel to NMT.

6 PUBLIC TRANSPORT PLAN

This chapter of the report serves as a summary of the full Public Transport Plan (PTP) which is attached to the main body of the report as [Appendix A](#).

6.1 Introduction

The IDP provides Stellenbosch Municipality's vision for the Municipality and for it to be a "Valley of Opportunity and Innovation". In support of this and the Transport Vision articulated in Chapter 2, a well-functioning, accessible, convenient, and comprehensive public transport is integral to the realisation of this. The strategic focus areas, as well as their transport elements, gaps, and actions required, are presented in [Table 6.1](#).

Table 6.1: Strategic Focus Areas

Focus Area	Transport Elements needed to respond to Strategic Focus Areas	Gap	Actions Required
Valley of Possibility	Would require well functioning network of transport services and infrastructure.	Current road network hinders growth possibilities. Congestion will discourage economy and cause business to locate elsewhere.	Road network improvements. Identification of effective freight network and supporting infrastructure. Effective public transport and NMT systems for access to opportunities.
Green and Sustainable Valley	Would require sustainable transport modes and practices.	Not effective public transport or walking and cycling modes.	Public Transport, walking and cycling network and other improvements. Manage travel demand to improve air quality.
Safe Valley	Would require safe and secure transport system.	Currently safety and security a challenge within public transport and use of walking/cycling modes	Road safety projects to improve safety practices. Establish safe and secure public transport and NMT systems.
Dignified Living	Would require transport system which serves all including minority, poor and marginalised.	Public transport which services marginalised is limited.	Implement public transport systems that are accessible and affordable for all.
Good Governance and Compliance	Would require effective management structures and enforcement within transport.	Current governance and compliance not effective impacts delivery of transport.	Streamlined governmental processes with accountability for effective implementation of transport solutions.

6.2 Policies and Strategies

The following legislation and policy directives (as discussed in Section 2) are applicable to the CITP:

- National Land Transport Act, 2009 (and the updated Act, once the current proposed National Land Transport Bill, currently under consideration, is promulgated);
- National Land Transport Strategic Framework 2017;
- National Transport Policy 2017;
- Western Cape Government Strategic Goals;

- Western Cape Provincial Land Transport Framework 2011;
- Cape Winelands District Integrated Transport Plan 2016;
- Stellenbosch Roads Master Plan 2019;
- Stellenbosch Integrated Development Plan 2022;
- Stellenbosch Quo Vadis 2015, and
- LED Strategy and Action Plan 2014.

6.2.1 Summary of Key Policy Documents Relating to Public Transport

6.2.1.1 National Land Transport Act, 2009

Based on the 2009 NLTA Minimum Requirements for the Preparation of Integrated Transport Plans, 2016:

- An Intermodal Planning Committee must be established to focus on integrating public transport with a specific focus on integrating passenger rail services;
- A Public Transport Plan and Transport Register is required with each CITP;
- The Public Transport Plan replaces the requirement for a Rationalisation Plan and OLS, and
- The focus of the Public Transport Plan is to integrate the public transport network, services, and modes.

The NLTA Amendment Bill (2016) also presents amendments and additions to the 2009 NLTA, incorporating focus on integrated planning, universal accessibility, and OL review and rationalisation.

6.2.1.2 National Transport Policy, 2017

The key objectives of the revised National Transport Policy (NTP) of 2017 are listed in the first column of **Error! Reference source not found..** The current status quo of Stellenbosch Municipality measured against these objectives is presented in the second column.

Table 6.2: Policy Objectives Against Stellenbosch Municipality Context

Objective as per the National Transport Policy 2017	Objective Realisation in the Context of Stellenbosch Municipality
Accessibility	<ul style="list-style-type: none"> • Safe, reliable and affordable transport are not widely available. There is a lack of universal accessibility on public transport. • Transport Universal Access audits are now part of policy in developing ITPs.
Rural transport	<ul style="list-style-type: none"> • The farming community surrounding Stellenbosch. The policy requires that rural transport programmes need to be identified and assessed.
Integrated ticketing system	<ul style="list-style-type: none"> • Policy states that NDoT should continue to drive, facilitate and assist in funding. • Feasibility in Stellenbosch Municipality unknown.
Performance monitoring	<ul style="list-style-type: none"> • Developing information systems for monitoring and enforcing policy on PT services.
Planning and regulation	<ul style="list-style-type: none"> • Policy requires ITP to integrate all modes of public transport which in Stellenbosch includes: <ul style="list-style-type: none"> ○ Rail services ○ MBT operations ○ E-hailing operators ○ Non-motorised transport

The 2017 NTP also identifies that there is a lack of institutional capacity to prepare and implement transport plans, and that inadequate law enforcement contributes to the issues faced by the operating licensing system (unlicensed operators specifically in MBT).

For a detailed summary of the above-mentioned key policy directives, please refer to the full PTP.

6.2.2 Previously Updated Stellenbosch CITP Concept, Key Strategies, and Proposals

The 2016 and 2020 Comprehensive Integrated Transport Plans (CITP) for Stellenbosch Municipality focus on the development of an integrated public transport service network within the municipality. The 2016 CITP proposes the use of articulated and midi-buses to alleviate traffic congestion and infrastructure projects such as passenger shelters, vehicle flow improvements, and NMT infrastructure along the existing service network.

The 2020 revised CITP highlights the need for a Public Transport Plan to identify concrete projects and includes proposals for rail as a regional and local connector, intra-municipal services between main suburbs, and a high vehicle capacity bypass. It also proposes issuing additional operating licenses for minibus-taxi services and increasing enforcement against illegal operators. Both CITPs note the constraints of funding and lack of municipal staff capacity as challenges for implementing and monitoring projects.

6.2.3 Existing Issues and Concerns Based on Previous Plans

6.2.3.1 Summary of general concerns and issues on transport

Following on the issues and concerns that were raised during the 2020 update of the CITP, and the concerns and issues identified through the stakeholder consultation process for this update, the issues and concerns can be summarised as follows:

- Poor integration with other modes;
- Limited access to existing public transport services;
- Services concentrated during peak periods;
- No travel time advantage;
- Limited public transport infrastructure
- Rail service unreliable when operational (currently not operational at all);
- Current services are not universally accessible, and
- Passenger personal safety while accessing and traveling on public transport.

During the stakeholder engagements, the minibus-taxi associations mentioned that the industry had lost 40% of their income due to COVID-19 and had experienced an increase in passenger demand due to rising petrol prices and an increase in the number of people receiving social grants. They are willing to work towards a more formalised service with predictable schedules and a ticketing system. They also emphasised the need to be consulted when it comes to planning for parking solutions, taxi ranking facilities, and new developments such as malls and residential areas.

During engagements with larger stakeholders such as Western Cape Province, Cape Winelands, PRASA, and Stellenbosch University, the key discussion points related to public transport revolved around the need for behaviour change to shift passengers from private vehicles to more sustainable alternatives, improvements in taxi-rank facilities, the introduction of incentives to improve safety for operators and users, reinstating rail services, and the need to collaborate as stakeholders to address the challenges faced, as well as having access to reliable and save public transport services certain times of the day, especially “after hours”.

The details of each stakeholder engagement are presented under the Chapter 13: Stakeholder Consultation section of this report.

6.2.3.2 Spatial Development Framework

Chapter 4 of this report provides a summary of the Spatial Development Framework (SDF), approved by the Stellenbosch Municipality Council in 2012. The SDF focuses on high density development at strategic nodes such as the Adam Tas Corridor, Stellenbosch town centre and Klappmuts. Strengthening the role played by rail-based public transport is also identified as being critical to serve regional mobility needs, and local accessibility. The SDF also indicates that public transport and NMT infrastructure is to

be incorporated in all developments, shifting the focus towards providing infrastructure for sustainable transport modes.

The public transport proposals contained in the Adam Tas Corridor LSDF, which will be heavily reliant on public transport and NMT, were also noted.

6.2.3.3 Integrated Development Plan

The Stellenbosch Municipality IDP makes provision for a select few public transport planning projects, with allocated budget estimations between 2022 and 2025. These projects are listed in below (note that this is not the full list of projects presented in the IDP):

- Continued feasibility studies to establish a transport operating company;
- Development of business model for a Transport service for persons with disabilities in Stellenbosch;
- Park and Ride (Transport Interchange);
- Public Transport Infrastructure (Public Transport Shelters and Embayments);
- Re-design of Bergzicht Public Transport Facility, and
- Taxi Rank – Franschhoek.

Each project listed in the 2022 IDP has an allocated amount of proposed budget per financial year. These budgets are either provisional estimates for annual work, or provisional budgets for ongoing projects and studies that have already commenced and require further funding. The IDP also presents a table of projects under the *Implementation Plan: Comprehensive Integrated Transport Plan* (on page 126 of the IDP). These projects can therefore be considered as key projects since the municipality has already assigned budget through the IDP. The projects proposed as part of this revision of the CIP are presented in Table 6.4 at the end of this section of the report.

6.3 Overall Network Design

The overall network design presents the high-level vision of the proposed rail and road-based services, contracted and non-contracted for Stellenbosch Municipality. Therefore, summarising the potential interventions put forward under sections 6.4, 6.5, 6.6 and 6.8 hereafter. The overall network, presented in the sub-sections below, design also ties in with the future transport concept presented in section 2.6 of this report.

6.3.1 Corridors, routes and modes

The preferred modes for routes and corridors were identified through the assessment of the status quo of existing services and development of new interventions within Stellenbosch Municipality. The existing services and new interventions speak to the policies for rationalisation of existing and development of new contracted services and refocusing the of non-contracted such as minibus-taxis. **Figure 6-1** presents the preferred modes based on the interventions proposed in this public transport plan.

The main arterials, indicated in red, resent the existing road network on which road-based public transport (minibus-taxis), learner transport and tourism services operate, along with private vehicles. These routes present the road-based transport alternatives with origins and destinations from outside of the municipal boarder. The R310 (from Eersteriver) and the R304 (from Durbanville/Brackenfell) compete with the existing, although not yet operational, rail services indicated in blue. The three other main arterials namely, the R44 (both from Somerset West and Klapmuts) are not spatially aligned to compete with rail services.

Figure 6-1: Overall network design

The provision of HOV lanes and public transport priority measures on arterials, specifically the R44, promotes the development of new contracted services by allowing minibus-taxi operators to formally provide contracted services between proposed park-and-ride facilities and Stellenbosch town center. The scheduled shuttle services will connect key nodes such as Kayamandi, University facilities, rail stations, proposed new ATC stops, and higher-density residential areas. A proposed central pilot loop that services the Devon Valley and Uniepark is another scheduled service that promotes contracted services.

The rollout of the shuttle services presents an opportunity to include technology such as online timetables, route information and e-hailing technology to attract new users and students who would previously only use their private vehicle. These proposed shuttle services provided by contract minibus-taxi operators are an incremental approach to establishing an IPTN service that ties into the current MyCiTi service provided in the Cape Metropole. Commuter rail services will also be reinstated to attract lost passenger demand that diminished due to the cessation of operations during the COVID-19 pandemic. Together with the ATC initiatives, there is an opportunity to fully integrate commuter rail with the proposed shuttle services and NMT route network within Stellenbosch town center.

In terms of the roll-out of the overall network design, **Table 6.4** presents initiatives that form the building blocks of developing an integrated network of transport services. Each initiative has an estimated timeline in years. These implementation timelines are however subject to further investigation and will need to be refined through the drafting of feasibility studies.

6.4 Commuter Rail Plan

In this section, rail transport will be briefly discussed.

6.4.1 Rail Infrastructure and Services Prior to COVID-19

The Western Cape has extensive rail infrastructure. 90% of the services originate or terminate at Cape Town station, while the other 10% originates or terminates at Bellville. However, the length of the railway line within Stellenbosch Municipality is only 18km, which includes seven stations namely (Innovative Transport Solutions, 2020):

- Klapmuts;
- Muldersvlei;
- Koelenhof;
- Du Toit;
- Stellenbosch;
- Vlottenburg, and
- Lynedoch.

6.4.2 Proposed Rail Improvements and Interventions from Previous CITP(s)

Table 6.3 summarises the proposed rail improvements and interventions from previous CITP(s).

Table 6.3: Proposed Rail Improvements and Interventions from Previous CITP(s)

Report	Improvement/Intervention	Proposed Timeline
CITP 2022 Review	Reinstatement of commuter rail services within Stellenbosch Municipality	Short term
CITP Review 2020	Regional and national access improved via rail	Longer term
	Inter-municipal rail services with improved access to Paarl, Somerset West, Bellville, and Cape Town	Longer term
	Intra-municipal rail movement for local access within SM i.e., between Klapmuts, Muldersvlei, Koelenhof, Du Toit, Stellenbosch, Vlottenburg and Lynedoch	Short term
	Rail services between Somerset West to Paarl or limited within Stellenbosch Stations	The feasibility of this needs to be determined.

Report	Improvement/Intervention	Proposed Timeline
CITP 2016-2020	Integration of rail, bus, and NMT	Longer term
	Stellenbosch and Du Toit Railway Stations: Facilities for Solo / Midi-bus services operating on public transport routes i.e., stops, signage shelters	Short term
	NMT facilities at terminals and railway stations	Longer term
	Relocate the Stellenbosch and Du Toit stations to new locations to facilitate the development of adjacent land. More detailed study is required to assess the implication of the relocation.	The feasibility of this needs to be determined.
	Blue Downs Line: Blue Downs is a densely populated area; this scheme incorporates it into the network while also linking Khayelitsha to Bellville. The proposal is for a new electrified double-track alignment which would integrate with the wider network	Longer term
	Chris Hani- Somerset West and Stellenbosch: There are existing proposals to extend the current line to Chris Hani but current footfalls appear suitable for Light Rail Transit (LRT) if the new journey opportunities boost usage. There is the potential for an extension beyond Christ Hani using alternative technology that would serve existing catchments	Longer term

6.4.3 The Way forward for Rail Transport in Stellenbosch Municipality Post COVID-19

Stellenbosch Municipality does not have any control over rail operations or investment. It is thus important for the municipality to have good relationships with stakeholders such as the PRASA to improve rail connectivity. It is proposed that the municipality engages with PRASA and utilise a phased approach (refer to [Figure 6-2](#)) by first re-instating the railway LOS in the municipality to pre-COVID-19 levels, and second assessing the rail interventions proposed in the previous CITPs.

Figure 6-2: Proposed Rail Phased Approach

6.5 Contracted Services Plan

6.5.1 Proposed Uniepark/Onder Papegaaiberg loop

Contracted services refer to legally enforceable agreements for the provision of transport services. For this CITP, a pilot shuttle service loop running between Uniepark and Onder Papegaaiberg is proposed as a possibility for consideration, and discussion with minibus-taxi sector stakeholders. Figure 6-3 illustrates the proposed loop.

Figure 6-3: Uniepark/Onder Papegaaiberg Loop

The shuttle service loop starts at Oude Libertas parking area, adjacent to Onder Papegaaiberg. The route continues along the R304 eastbound, entering the town of Stellenbosch. The route proceeds along Dorp Street, Die Laan, Coetzenburg Street, Van Riebeeck Street, and Jonkershoek Road where it loops into Martinson Road, adjacent to Uniepark. The route continues down Merriman Avenue, past the Bergzicht taxi rank, and into the R310 (Adam Tass Road) westbound to Devon Valley Road, where it loops back to the Oude Libertas parking area. The proposed timetables and stops are presented in the full PTP.

6.5.2 Basis For Providing the Service

The proposed pilot loop running between is planned to run bi-directionally, to accommodate the desire lines of passengers based on their destinations and to prevent lengthy travel times.

6.5.2.1 Formalising the Minibus-taxi Industry

It is recommended that Stellenbosch Municipality aims to incorporate the existing minibus-taxi operators to provide this service through a commercial contract arrangement. To integrate the minibus-taxi operators into the proposed loop, extensive engagements with the minibus-taxi operators will be required and a process developed, together with the industry, to formalise and corporatise the industry as recommended in the key interventions of Stellenbosch Municipality 2022 IDP.

6.5.2.2 Corporate Identity

A differentiation in identity of the shuttle service and its vehicles is required for passengers to easily distinguish between the formalised service from the existing informal minibus-taxi operations. Vehicle branding and/or decals can be designed specifically for the Stellenbosch Municipality formalised public transport services. An example of this is the Blue Dot sticker used on existing minibus-taxi vehicles.

The appropriate vehicle size will depend on the passenger demand for the service which can be determined through surveys.

6.5.2.3 Fares

While a pre-boarding fare collection system will likely not be possible during the initial stages of the proposed service, it is recommended that automatic fare collection technology be explored, for future introduction. The implementation of a computer or cell phone application-based payment system could also be considered.

6.5.2.4 Passenger Information

The informal manner in which the minibus-taxi service are operated often limit the ability of the more occasional user to access such services because it is difficult to obtain information on services. It is proposed that service information be made available to passengers through various means, including the route, timetables and fares. Again digital technology could be a part of the solution through for example computer or cell phone applications.

6.5.2.5 Service Quality

In order to increase the viability of the shuttle service and for it to attract passengers that are not captive to public transport, for example choice users, the level and the quality of the service needs to be of an acceptable level, consistent and guaranteed. Service quality can be promoted through the implementation of principles and measures that had been proven successful during the Western Cape Government's Blue Dot pilot programme.

6.5.2.6 Universal Access

Various pieces of legislation dictate that public transport must be accessible to all people, regardless of physical or mental abilities. It is important that, if it is decided to implement and expand the loop system, the service must be planned with universal accessibility in mind.

6.5.3 Integration with Other Contracted Services

6.5.3.1 Stellenbosch University Shuttle Service

During weekdays, Stellenbosch University offers shuttle services for students and staff to and from various campus destinations to decentralised parking facilities (Innovative Transport Solutions, 2020)

It is proposed that, if the internal feeder system proves to be successful and feasible in the long run, the Stellenbosch University shuttle service be integrated into the system to further increase accessibility and reach. SU already provides this contracted service with financial assistance. In terms of a cost perspective, there are benefits for Stellenbosch Municipality to engage with SU to determine the terms of integration as there may be cost benefits for both entities.

6.5.3.2 Learner Transport

Currently, there are 13 transport operators providing learner transport within the municipality (RHDHV, 2016). Despite this service being available, most schools in the town of Stellenbosch are not served and learners are dropped off at school with private vehicles. This contributes greatly to congestion within the town, especially in the morning peak.

Again, there is an opportunity to integrate learner transport into the internal feeder system if it proves to be viable. The pilot route can easily be adjusted by adding a loop (see [Figure 6-4](#)) to incorporate the biggest schools in the town of Stellenbosch. Learners can be dropped off at or walk to any of the main or intermediate stops and use the system to get to school. The following can be possible incentives for learners to use the system:

- Discounted fares for learners from Monday to Friday;
- High-quality safety and security measures, and
- Loyalty rewards that can be used at their respective schools.

Figure 6-4: Added School Loop

6.6 Non-contracted Services Plan

The details regarding non-contracted services routes, operating licences, and capacity requirements can be found in the OLP written in 2019. Alternatively, please see Section 6.7. For this CIP, the non-contracted services plan will focus on driver customer care.

A driver customer care strategy is a framework to improve customer service quality and ultimately improve business overall. For this report, the concept of driver customer care aims to improve the success and sustainability of a business through improving driver service and vehicle operation standards of non-contracted services.

6.6.1 Driver Customer Care Framework

This section presents a proposed Driver Customer Care Programme to be adopted by non-contracted services, based on the three (3) phases of the credentialing process. The three (3) phases are: (1) Driver Training, (2) Vehicle Inspection, and (3) Driver Licensing and Vehicle Operating License.

The driver training component of the credentialing process for a vehicle operating license in Stellenbosch includes five sub-components: customer service standards, driver code of conduct, passenger safety, services for people with disabilities, and the permittance of service animals. Drivers must pass the training program provided by Stellenbosch Municipality or an identified company to qualify for the next phase of the credentialing process, which is the Vehicle Inspection phase. The fees for the training program are paid for by the driver or operator, and all costs incurred during the credentialing process are the responsibility of the applicant and are non-refundable.

The Vehicle Inspection phase requires the driver to take the vehicle in application to an approved testing facility for a vehicle inspection. Certificates are required for every new vehicle operating license application and for annual renewal applications. The driver or operator is responsible for addressing any faults identified during the inspection before the operating license application can be completed.

The final phase of the credentialing process is the Driver Licensing and Vehicle Operating License phase, which includes the final criteria and supporting documentation required for the driver or operator to receive an operating license. The detailed driver customer care framework can be found in the full PTP.

6.6.2 Possible Integration with Blue Dot

The blue dot pilot project ended in November 2022, and currently there are no plans for project extension. It could be beneficial for Stellenbosch Municipality to investigate the feasibility of a blue-dot-like project that incorporates the proposed driver customer care programme. Engagement with the Department of Transport and Public Works is required to identify the potential way forward on either reinstating the programme and including Stellenbosch Municipality. The challenge that will need to be addressed is the source of funding and how the continuation of the programme will roll out.

6.7 Operating License Plan (OLP)

The latest Operating Licence Plan (OLP) was written in 2019. It must be noted that the report mainly covers MBT and excludes other non-contracted services such as metered taxis and e-hailing services.

To assess the supply and demand for non-contracted services within the municipality, and to essentially balance the supply and demand, an operating licence analysis was conducted (Stellenbosch Municipality, 2019). To view a more detailed summary of the analysis, please refer to the full PTP.

6.8 Dedicated HOV Lanes

In the Stellenbosch 5th Generation IDP 2022-2027, under the CITP section (6.3.4.2), it is proposed that an assessment report be submitted to the Provincial Department of Transport on the potential implementation of public transport lanes on the R44, in both directions, between Stellenbosch and Somerset West.

6.8.1 HOV Lane Scenarios

To promote public transport, and prioritise high occupancy vehicles, as part of the revised CITP, it is proposed that an HOV lanes pilot be conducted between Somerset West and Stellenbosch town centre. Pilot studies allow the testing of interventions with reduced risk.

For the pilot study, it is proposed that the implementation of dedicated HOV lanes would be between Somerset West and Stellenbosch town centre, in both directions. The HOV lane from Somerset West towards Stellenbosch would start before the R44/Annandale Road intersection and terminate before the R44/Dorp Street intersection. The HOV lane in the opposite direction (Stellenbosch to Somerset West), would start at the R44/Van Rheede Road intersection, and terminate at the R44/Annandale Road intersection (as illustrated in **Figure 6-5**).

Figure 6-5: Dedicated HOV Lanes

Four potential R44 HOV lane scenarios could be investigated:

- Demarcating an existing lane for HOV vehicles during peak periods;
- Utilising a contraflow lane for HOVs during peak periods;

- Construction of additional lanes within the road reserve dedicated to HOVs, and
- Developing infrastructure for dedicated HOVs that can be used for bus rapid transit in the future.

The dedicated HOV lane pilot study could be conducted in conjunction with the piloting of a park and ride facility along the same corridor. The park and ride would include a shuttle service between the facility and the town centre, potentially using minibus-taxi operators. The shuttle service would also integrate with existing transport systems to encourage the use of sustainable modes of transportation and reduce congestion. The dedicated HOV lane would also need to integrate with the existing NMT network and planned improvements in the area.

6.8.2 Possible HOV Integration with Other Modes

The proposed HOV lanes can be integrated with other modes of transportation such as the internal feeder system which connects areas like Jamestown, Technopark, and Paradyskloof to the looped system – refer to **Figure 6-6**. Once rail services are reinstated, the internal feeder system can be linked to the rail by adding a stop at the train station or adjacent parking area. This will increase accessibility to and from other areas outside the town and be the first step in achieving an integrated public transport system for Stellenbosch.

Figure 6-6: Possible Integration Opportunities

6.9 Summary of key public transport interventions and projects

Table 6.4 provides a summary of proposed the public transport-related interventions and projects for this CITP, which includes several projects outlined in the IDP as well.

Table 6.4: Proposed Public Transport Projects and Initiatives

Public Transport Plan: Key Intervention and Initiatives								
	Interventions/initiatives	Description	5-year target 2023-2028	Year 1 2023/24	Year 2 2024/25	Year 3 2025/26	Year 4 2026/27	Year 5 2027/28
1.	Transport Feeder System (IDP 2022)	Investigations and assessments reports for mechanism for the Internal Transport Feeder System from park and ride areas to the CBD	2	n/a	1	1	n/a	n/a
2.	Park and Ride Facilities (IDP 2022)	Submission of assessments reports for management of park and ride facilities to the Municipal Manager	2	n/a	1	1	n/a	n/a
3.	HOV lanes (R44) (IDP 2022)	Submission of an assessment report to the Provincial Department of Transport on the implementation of public transport lanes on the R44 (from both directions Stellenbosch – Somerset West)	1	1	n/a	n/a	n/a	n/a
4.	SU Shuttle Services (IDP 2022)	Engagements with the University to collaborate on the implementation and improvement of park and ride facilities and shuttle services for students	5	1	1	1	1	1
5.	Transport Operating Company (IDP 2022)	Continued feasibility studies to establish a transport operating company	4	n/a	1	1	1	1
6.	Universal Accessibility (IDP 2022)	Development of business model for a Transport service for persons with disabilities in Stellenbosch	4	n/a	1	1	1	1
7.	Bergzicht Taxi Rank (IDP 2022)	Re-design of Bergzicht Public Transport Facility	2	1	1	n/a	n/a	n/a
8.	OLS Review (Current CITP Revision)	Conducting an Operating License review	1	1	n/a	n/a	n/a	n/a
9.	Mobility Forum (Current CITP Revision)	The reinstatement of the Mobility Forum between large employers and public transport operators	1	1	n/a	n/a	n/a	n/a
10.	Driver Customer Care (Current CITP Revision)	Development of a Driver Customer Care Programme to improve minibus-taxi service provision	4	n/a	1	1	1	1

7 TRANSPORT INFRASTRUCTURE STRATEGY

7.1 Introduction

The *Transport Infrastructure Strategy* chapter summarises the strategy to improve transport infrastructure for the municipality. The transport infrastructure strategy considers the development, provision, implementation, and maintenance of the major road transport infrastructure. Other transport infrastructure such as public transport facilities, freight corridors, Non-Motorised Transport (NMT) and rail are described elsewhere.

The transport infrastructure strategy includes proposals for improvement of existing infrastructure and proposals for new infrastructure implementation.

Options for implementation within the five-year period from 2023 to 2028 were considered for this CITP. The following types of infrastructure projects are included:

- Infrastructure Maintenance: Maintenance and rehabilitation of roads, public transport facilities and traffic control equipment, and
- Road Infrastructure: The construction of all classes of roads, bridges and associated stormwater, non-motorised infrastructure such as sidewalks and cycle tracks and traffic control equipment.

Within this chapter the primary infrastructure projects investigated are related specifically to **roadways**, traffic control equipment and **parking**. The infrastructure projects related to public transport (bus services, shuttle services, rail and MBT) and non-motorised transport (walking and cycling) are investigated and presented in Chapters 6 and 9 respectively.

7.1.1 Legislation & Policy Directives

The following list contains the legislation applicable to the transport infrastructure:

- The National Land Transport Act 5 of 2009 (NLTA);
- The National Land Transport Act – Minimum Requirements of Integrated Transport Plans;
- The National Land Transport Amendment Bill, and
- The National White Paper on Transport 1996.

The relevance of the listed legislation to the Transport Infrastructure Strategy is described in the sections below.

7.1.1.1 The National Land Transport Act 5 of 2009 (NLTA)

As per Chapter 4, section 31 of the National Land Transport Act (NLTA), land transport planning must be integrated with the land development and land use planning (National Land Transport Act, 2009). To do so, the Act requires the following plans (section 32):

- A National Land Transport Strategic Framework (by the Minister for the provincial level);
- Provincial Land Transport Framework (by the MEC (Member of Executive Council) for the provincial level), and
- Integrated Transport Plans (by planning authorities for a municipal level).

For this project point c is of importance as any proposed road infrastructure will stem from the ITP documentation. Point c is supported by the additional legislation of The National Land Transport Act – Minimum Requirements of Integrated Transport Plans.

7.1.1.2 The National Land Transport Act – Minimum Requirements of Integrated Transport Plans

As per Chapter 7, Transport Infrastructure Strategy, of the minimum requirements the transport infrastructure strategy must deal with the development and maintenance of all types of transport infrastructure, including major roads, public transport facilities, BRT networks, dedicated lanes for public transport, depots, freight corridor measures, non-motorised transport infrastructure, and rail infrastructure.

The transport infrastructure strategy must include proposals for new facilities and for the improvement of existing public transport facilities and major roads. Only firm schemes on which work will commence within the five-year CITP planning period must be included in the strategy. The transport infrastructure strategy must include measures aimed at giving priority to public transport where such measures are

practical and economically justified. In the case of those municipalities participating in the DoT's IPTN strategy and receiving PTNG Grant funding for infrastructure development, the infrastructure strategy must include the plan for the progressive implementation of the rapid rail or BRT corridors over the next five-year period. This will also be reflected in the business plans submitted to the DoT annually in this regard.

The transport infrastructure strategy must describe the current rail network and system, and must:

- Indicate the desired future rail extensions and stations within the context of SDF growth projections;
- Indicate the relative importance or ranking of proposed rail extensions and stations in the municipal area;
- Indicate which railway proposals must be prioritised for conceptual planning, design and construction in the short, medium and long terms, and
- Include the action plans for rail projects for which funding has been secured;
- Indicate railway stations where intermodal facilities or activities exist;
- Specify the modes that are integrated at each station;
- Describe how the integration is taking place;
- Describe the modal split or share of both feeder and distribution services at the stations;
- Propose guidelines for modal integration at those stations;
- Identify railway stations that warrant consideration as integrated transport nodes;
- Indicate what modes will be integrated at the identified railway stations, and
- Indicate the desired modal split at the identified nodes.

7.1.1.3 The National Land Transport Amendment Bill

The purpose of the Amendment Bill is to bring about updates to the NLTA. The following amendments are applicable to Transport Infrastructure:

Insertion of new section 10A in Act 5 of 2009 6: "Accessible and non-motorised transport 10A. (1) The Minister, all MECs and planning authorities must take steps in performing their functions under this Act to promote accessible transport and non-motorised transport.

(2) For the purposes of this section, "accessible transport" means transport that is accessible to all persons in the area, including, but not limited to, targeted categories of passengers, pedestrians and cyclists to their intended destinations in a safe and convenient manner, and in relation to infrastructure means the design of facilities that are usable by all people to the greatest extent possible, with or without the need for adaptation or specialised design."

7.1.1.4 The National White Paper on Transport 1996

The National White Paper defines transport infrastructure as a significant portion of the Government's total financial investment and therefore it needs to be well managed. The White Paper provides a vision, mission, strategic objectives and policies for transport infrastructure in South Africa. The following policies, that tie in to the vision, mission and strategic objectives, should be adhered to:

- Maintain and develop the transportation infrastructure system and prioritise its development in terms of needs;
- Foster a sound financial base for transportation infrastructure;
- Current fiscal constraints are holding back the development of certain critical infrastructure;
- Promote a strong, diverse, effective and competitive industry;
- Promote environmental protection and resource conservation;
- Enhance the quality of life of all citizens of South Africa;
- Advance human resource development in the provision of transportation infrastructure, and
- Infrastructure policy for the various modes.

The following updated policies were added in the Revised White Paper:

- Road transport demand management;

- Road traffic safety regulation;
- Road traffic control;
- Adjudication of Traffic Offences;
- Improvement of road user knowledge, skills and attitudes;
- Funding of road traffic management;
- Incident management;
- The engineering discipline;
- International harmonisation of road traffic policy;
- Road infrastructure, and
- Non-motorised transport.

7.1.2 Summary Major Existing “External” Strategies, Proposals and Projects

External stakeholders such as the Western Cape Government and Cape Winelands District Municipality have a bearing on the Stellenbosch Municipal transportation system. In the below paragraphs the external impacts and strategies related to the road infrastructure are considered.

On a **National Level**, as taken from the National Transport Master Plan (NATMAP 2050), there are various objectives aimed at facilitating the vision (Department of Transport, 2016). The following of these objectives are aimed at transport infrastructure:

- A much-improved sustainable public transport system that is appropriately funded;
- Non-motorised transport network development;
- A transport system that promotes better integration between land use planning and transport planning to encourage densification and sustainable development in supporting high volumes of travel required for public transport, and
- Better infrastructure, better maintained road and rail networks, with proper management and operations practices that link and provide interchange opportunities for different modes of transport.

The objective on a **Provincial Level** as concluded from the Western Cape Provincial Land Transport Framework (WCPLTF), the OneCape 2040 strategy is that appropriate infrastructure is required to facilitate a positive transition in the province. Furthermore, it sets out the required changes and development agendas relating to infrastructure provision to achieve the OneCape 2040 transitions (Western Cape Government - Transport and Public Works, 2016).

The three key transitions proposed by the WCIF relating to transport are:

- Invest in public transport and NMT infrastructure, particularly in larger urban centres;
- Prioritise general freight rail over bulk freight, and
- Shift freight traffic from road to rail along major routes.

Stellenbosch forms part of the **Cape Winelands District**. The transport infrastructure objectives that are in accordance with the transport objectives of the Cape Winelands District Integrated Transport Plan (CWDITP) objectives are listed below (Royal Haskoning DHV, 2016):

- To maintain the health and safety of communities;
- To facilitate sustainable economic empowerment of all communities;
- To support and ensure the development and implementation of infrastructural services;
- To provide effective and efficient support services, and
- To ensure financial sustainability.

The objectives identified from previous studies for the Stellenbosch CIP and plans undertaken for the **Municipality of Stellenbosch** are listed below and should be considered with the transport infrastructure implementations in future (ITS Innovative Transport Solutions, 2020):

- Strive towards car-free living;

- Alleviate congestion;
- Safe learner transport;
- Stop of urban sprawl;
- Provide more NMT, and
- Promote Public Transport Implementation.

For Stellenbosch, a strategy is further proposed to improve transport mobility on major roads linking Klapmuts and Somerset West and passing through Stellenbosch. Several alternatives have been identified for further investigation and consultation:

- Construction of a by-pass road to the west of Stellenbosch. This is a long-term solution that has advantages and disadvantages;
- Travel Demand Management to reduce the reliance on cars and encourage the use of public transport, and
- Increase capacity.

By comparing the four levels of objectives it can be concluded that the way forward of transport infrastructure on these four levels are similar and that the primary focus public transport, non-motorised transport, improved mobility and integration, densification and healthy and safe communities. Stellenbosch Municipality is therefore not exempted from the broader vision for transport infrastructure and should strive to achieve the common good.

The overarching vision for the Transport Infrastructure Strategy over the broader external network is therefore summarised as:

Implementation of integrated movement corridors to improve mobility, sustainability, empowerment, and safety of all travellers.

7.1.2.1 Changes in the environment and transportation milieu

In addition to the impacts of external authoritative bodies, there are various external factors and the immediate environment of any town or city is directly linked to the transportation system. With the everchanging character of daily life and the advances of technology it is key to re-evaluate this immediate environment and determine how things changed to date and how things are anticipated to change in the future. By identifying and predicating these changes it can be ensured that the transportation system stays relevant.

Some recent and some predicted changes in external factors influencing the transportation system and the effect of these changes specifically on transportation infrastructure in Stellenbosch are summarised in **Table 7.1**.

Table 7.1: Environmental Challenges in transportation

Change	Impact on Transportation
COVID-19	A change in travel patterns such as a longer distributed peak period instead of a condensed peak hour can result in the existing capacity to be sufficient as the capacity requirements at a certain point in time are less. The "working-from-home" concept and virtual learning can also have an impact in the times when people commute. It should be confirmed (from Section 3.3.3) that the October 2022 traffic surveys indicated basically no change to traffic numbers on the major roads, when compared to before the COVID-19 pandemic (early 2020).
4 th Industrial Revolution	Increased economic growth and raised global income levels for the average population can indicate that earnings are spent differently – perhaps more people purchase private vehicles and therefore increased capacity will be required? On the other hand – should technology replace jobs by people it can also have the opposite effect.
Electric Cars	Charging stations will become a requirement of any parking facility.

Change	Impact on Transportation
Hike in Fuel Price	Hikes in fuel prices can discourage people to travel and reduce small/short trips. Almost no impact on commuting is evident from the steep fuel price hikes during 2022.
Navigation Tools	Making use of navigation tools and applications can influence route planning and the route choices commuters and travellers make i.e. increased Rat-Racing can become a trend reducing capacity requirements on the main routes and increasing capacity requirements on smaller roads.
University of Stellenbosch – virtual teaching	Depending on the decision of the University to continue with virtual/on-line teaching the required transportation infrastructure will be impacted. Should students not return to campus, increased parking facilities and roadways for the accommodation of students are most likely not a future priority.
Automated Vehicles	It is not foreseen that the majority of the privately owned vehicles in Stellenbosch will be replaced by automated vehicles in the near future but the integration of automated vehicles with the existing road users will be key.
Cycling Culture	The cycling culture in Stellenbosch is growing. Infrastructure for cyclist should therefore be prioritised.
E-Bikes	The popularity of e-bikes in Stellenbosch are growing. Consideration for e-bike infrastructure can be explored (charging stations).
Home Deliveries of Groceries	Grocery stores deliver throughout the town – infrastructure to advance delivery motorcycles etc. can be prioritised?
Growing Population	The anticipated population growth in Stellenbosch is 5% per year – the impact of this growth on all the transportation infrastructure will be severe, should it materialise.
Rail System Neglected	Infrastructure required to replace the dependence on rail. Incentives to revert rail passengers back to rail that transferred to different modes in the past years.

7.1.2.2 Roadway Infrastructure Objectives

The transportation objectives as determined by the study team in July 2022 are indicated in Section 2.4 above. Most if not all of these speak to roadway infrastructure, but the most important, directly influencing the road network is considered to be:

- Adequate mobility;
- Densification of public transport corridors;
- Diversification (mixed) types of land use at new nodes;
- Reduce congestion;
- Parking developments to promote public transport;
- Acceptable maintenance;
- Safe and convenient infrastructure for NMT, and
- Promote car free living.

The strategies related to the provision of transportation, divided into thirteen sub categories, are shown in Section 2.5 above. The ones specifically addressing the provision of transport infrastructure and parking are briefly:

- The road network should be developed so that some are providing for higher levels of mobility for private vehicles and others providing more for access, public transport and specifically NMT;

- Upgrades and development of roads should make adequate allowance for all modes of transport (cross-section, servitude boundary to boundary, urban design);
- Bypass road options for through traffic should be developed and evaluated through a strategic environmental assessment;
- Parking requirements related to new development should be scaled down in favour of public transport and NMT facilities;
- Park-&-ride facilities should be developed to serve the Stellenbosch Town and Franschhoek CBDs;
- On-street parking should be reduced and/or taken away on certain functionality type streets;
- Where possible, on-street parking should be made more expensive to encourage motorists to park-&-ride and/or use NMT, and
- Continued and improved road maintenance should always be provided.

7.1.3 Previously Updated Stellenbosch CITP Concepts, Key Strategies, Proposals

This chapter defines the context and current realities of the Transport Infrastructure Strategy for the towns in the Stellenbosch Municipal boundary in terms of **roadways** and **parking**. It looks into the concepts, key strategies and proposals (projects) as captured in previous and existing documentation which include the previous CITP, IDP and RMP.

7.1.3.1 Major Roadways

The overarching trend in the current realities and **experiences** of the roads network infrastructure indicated that congestion is the primary concern and that a number of sections of the current road network operates at capacity during peak times. The most important links have been identified in **Section 5.2**.

Whilst the **strategy** to address the concerns around congestion (at the present time) has to be based on the current congestion levels and the predicted traffic demand in the Stellenbosch Roads Master Plan, it also has to take into account the recent proposals for the redevelopment of the Adam Tas corridor (described in **Section 4.5**).

The Roads Masterplan completed for Stellenbosch in 2019 and approved by the Council in 2022, included the application of the existing Cape Town EMME/4 Metropolitan Transport model. A number of long-term land use scenarios (developed in cooperation with Stellenbosch municipal officials) were used to develop a 2040 Transport Demand Modelling Scenario for Stellenbosch. The 2018 base model includes the latest known residential, industrial and commercial development in the Stellenbosch municipal area. The 2040 scenario included all feasible developments extracted from information provided by Stellenbosch Municipality. The potential projects identified in the Roads Master Plan to address the predicted future demand, including the projects falling under provincial jurisdiction, are provided in **Appendix E**.

In view of all the above, it is concluded that there are at least five major road projects which are required in the medium term to service the expected developments. They are the following (brief description provided below):

- Portions of the Eastern Link Road;
- Portions of the Western Bypass;
- The R44 Upgrade – mostly provincial responsibility;
- The Jamestown Links, and
- Upgrading of the R304/Bird Street link.

Eastern Link Road - This route has a long history. It was proposed many years ago as the north/south link, with the main aim of providing a new link into Stellenbosch midtown as a supplement to the R44. It was originally planned to link to Marais Street west of the Jan Marais Park, and to eventually link with Helshoogte Road, just south of Idas Valley. The original route has been compromised and has two major constraints, namely, passing the Stellenbosch College (originally Denneoord) and crossing the Coetzenburg sports grounds. Although the route has very strong merits from a traffic and transport viewpoint, it was opposed in the past by many, which in effect led to it being excluded from further considerations. Possibly a special class one Non-Motorised Transport (NMT) facility linking suburbs along this route to the CDB would be beneficial.

Construction of portions of this link, i.e. Wilderbosch extension north to Trumali, and Wilderbosch extension south to Technoparl has been allowed for in the 10-year Infrastructure Services Budget of the municipality, refer to **Figure 7-1**.

Figure 7-1: Portions of the Proposed Eastern Link Road allowed for in the 10 year budget

Western Bypass - The major function of the R44 is to serve as a north/south (regional mobility) route connecting Strand, Somerset West, Helderberg and Overstrand regions with areas to the north such as Paarl, Wellington and Malmesbury. In the Stellenbosch area, especially in the vicinity of Jamestown, it also has to serve as a commuter route bringing workers from the southern suburbs and Somerset West to employment opportunities in Stellenbosch and to regions in the north. This dual function leads to the R44 probably being the most congested road in the Stellenbosch area.

One of the solutions for this is to construct a parallel route on the western side past Stellenbosch which can then serve the longer distance traffic. Such a route will be highly sensitive to environmental concerns - investigations into this have been commissioned. The 2019 Stellenbosch Roads Master Plan referred to the 2012 RMP's description of the three preliminary road alignments for such a route:

- Option 1 - A Class 1 expressway, linking the R44 close to the Annandale intersection in the south, to the existing R44 between Stellenbosch and Paarl (SRMP003, SRMP001 and SRMP030), just north of Welgevonden;
- Option 2 A similar but shorter route which starts at a future grade separated R44/Technopark intersection (in the south) and terminates at the same location in the north (SRMP002, SRMP001 and SRMP030) – Class 2 arterial, and
- Options 3 An reduced proposal, starting at Technopark, and ending at Adam Tas Road (R310) – basically SRMP002.

To implement the Western Bypass (Option 1), expropriation and proclamation of the road reserve by the provincial government is required, as well as extensive public participation, funding requirements and approval processes. The possibility of implementing a lower order road, and utilizing existing roads should be investigated, especially since intersection improvements are being planned along the R44 by the Provincial Government. Option 1 should therefore be re-evaluated. The reduced bypass proposal (Options 2 and 3) as shown in **Figure 7-2**, is considered more feasible for implementation.

The implementation of Option 3 is currently underway, with the upgrading of the R44/Techno Park intersection complete and the planning of the link between Technopark and Adam Tas Road (R310) in progress. The latest preliminary design for the third option is shown in [Error! Reference source not found.](#) (source, Bergstedt R, Stellenbosch Municipality). In future the extension northwards (Option 2) partially following the Devon Valley Road and eventually linking with the R304 and the R44 may also be required, considering the proposed developments along the Adam Tas Corridor.

Figure 7-2: Alignment of Possible Future Western Bypass (yellow) and Eastern Link (blue)

(Source: Messrs ICE)

Figure 7-3: Alignment of link road currently being designed between R44 and R310 – basically the third option from the 2019 Stellenbosch RMP – SRMP002

The assignment results (from macroscopic modelling in 2019) shown in the Stellenbosch Roads Master Plan confirms the importance of the proposed Western Bypass to service longer distance traffic, as it is predicted to reduce the traffic on the central part of the R44 by 970 vehicles/hour/direction (which is

around 50% of the current capacity of the R44 through Stellenbosch). This is quite different to the results of the Gateway study done by Messrs RHDHV in 2017, which states that the proposed bypass will reduce traffic loads (on the present R44) slightly (10%).

It is unlikely that the 2019 modelling included the current (extensive) land use proposals for the Adam Tas Corridor. Should this now be included, then the results should even more point to the need for a western bypass to reduce through traffic on the R44 and Adam Tas Road.

It is considered crucial that the planning process with respect to a possible Western Bypass proceeds, also in co-operation with the provincial transport department, and that the environmental process is started.

Major Intersection Upgrades

Insert drawing as per email.

R44 Upgrade – The Western Cape Government: Department of Transport and Public Works (DTPW) initiated a process to upgrade the Safety and Level of Service of the R44 between Steynsrust Road (km 20.15) in Somerset West and Van Rhee de Street (km 33.00) in Stellenbosch. As part of the environmental process, the Basic Assessment Process commenced in 2012. Messrs Kantey & Templer completed an (unpublished) Conceptual Planning Report in 2012, describing the development of upgrading proposals for the R44.

The ensuing Environmental Impact Assessment (EIA) process, driven by Messrs CCA Environmental, culminated with a Final Basic Assessment Report (BAR), dated November 2017. The Final BAR resulted in Environmental Authorisation (EA) being granted by the Provincial Department of Local Government, Environmental Affairs and Development Planning on 29 March 2018. This was followed by several appeals being lodged against the EA. Finally, the appeals were considered, and the original EA was amended on 27 August 2019 by the Minister of Local Government, Environmental Affairs and Development Planning. The amendments basically contained two points:

- The proposed elevated Annandale narrow diamond interchange must change to a below ground facility, and
- Whilst the original EA approved the closure of all the existing 22 median openings on this section of the R44, the 2019 amendments required that two of them must remain open. Which of the median openings these have to be was left to the provincial transport department, and it has not been confirmed yet.

It is concluded that the main purpose of this exercise was to protect the integrity of the R44 as a regional mobility road. As such it has consequences on (for example) the Jamestown area, which would eventually lose some existing accesses. Even though the upgrading of this portion of the R44 is a provincial responsibility, it does have a profound impact on Stellenbosch Municipality.

Jamestown links – As described above, the upgrading proposals of the mobility function of the R44 will eventually result in the closing of numerous existing access points to the road. This impacts the accessibility of Jamestown. A Roads Master Plan for Jamestown was completed in March 2020 (B/SM 39/18 Jamestown: Development Roads Master Plan). In view of the substantial residential development proposed in Jamestown, largely to the south of the existing developed area, this plan proposed a number of possible links between Jamestown and Stellenbosch – refer to [Figure 7-4](#). It is important to note that these proposals have not been workshopped with any IAP's (as far as is known) at this stage, but it is expected that the matter will receive attention in due course. The proposals shown below therefore do not have any status at present.

Allowance has been made for the construction of portions of this network in the 10-year Infrastructure Services Budget of the municipality.

Figure 7-4: Possible roads master plan for Jamestown – status unknown

Upgrading R304/Bird Street Link – The link to Stellenbosch from the N1 through the R304 (provincial responsibility) is one of the five major road links into central Stellenbosch – see **Chapter 3**. The first development which is part of the proposed Adam Tas Corridor proposals (Precinct 10 – referred to as Newinbosch) is in fact starting at this time and a new access road from the R304 to the site, as well as partial dualling of the R304, is almost completed – refer to **Figure 7-5**. This development will put further pressure on the R304 leading into Stellenbosch from the west. It is being addressed through the planned doubling of the R304 between Kayamandi and the R44. Exactly how the current bottleneck of the R44/Bird intersection will be upgraded, is not known.

Substantial provision for the Bird Street dualling has been provided in the current Infrastructure Services 10-year budget.

Figure 7-5: Current access construction and dualling of the R304 to provide access to Newinbosch (Precinct 10 of proposed Adam Tas Corridor development – just west of the R304 and northwest of Kayamandi)

7.1.3.2 Other Road Upgrading

The 2019 Roads Master Plan included the development of a macroscopic traffic demand model. The base year modelling (done for 2018) found that the traffic demand exceeded the capacity in 2018 at the following links:

- The R304 between Bottelary Road and the R44;
- The R44 (south) between Paradyskloof and the Van Reede intersection;
- Bird Street between the R44 and Du Toit Street;
- Merriman and Cluver Streets between Bird Street and Helshoogte Road;
- Dorp Street between the R44 and Piet Retief Street;
- Adam Tas Road between its junction with the R44 and Merriman Street;
- Piet Retief Street;
- Van Reede and Vrede Streets between the R44 and Piet Retief Street;
- Alexander Street between the R44 and Bergzicht Street, and
- George Blake Street.

The following links were also identified as being “under severe pressure” in 2018:

- The Welgevonden access road;
- Lang Street into Cloeteville;
- La Colline access off the R310, and
- The Technopark access road.

The modelling also included land use projections for 2040 – done in co-operation with the Municipality and including the best projections of future residential, industrial and commercial developments. The following improvements were identified and included in the 2040 model to address projected needs:

- Polkadraai Road: It was assumed that the last remaining single carriageway sections will be dualled well before 2035, in accordance with the Provincial roads infrastructure programme;
- R44 North: This road requires a dual carriageway from Stellenbosch to Welgevonden. The R44 in the vicinity of Klapmuts also requires additional road capacity due to the proposed future residential and employment concentration in this area;
- Adam Tas Road: This could become the busiest section of road in Stellenbosch, requiring 3 lanes per direction between the R44 and Merriman. In addition, the R44, Alexander, George Blake and Merriman intersections also need to be improved or reconfigured to provide additional capacity;
- R304 (Koelenhof Road): The model results indicated that this road should be dualled between the R44 and Bottelary Road;
- Merriman and Cluver Street link: Upgrade to dual carriageway or minimum 2-lanes per direction required between Bosman Street and Banghoek Road;
- Dorp Street: Capacity improvements required between the R44 and Adam Tas Road. Conceptual planning has been undertaken for the dualling of this section;
- Van Reede / Vrede Streets: These roads required dualling between the R44 and Piet Retief Street, with further improvements at the R44 / Van Reede intersection;
- Van Reede Street westbound extension to Technopark: The extension of this road to provide a second access to Technopark linking into Electron road;
- Technopark, De Zalze, Brandwacht and Welgevonden access roads: Dualling and/or intersection improvements are required;
- Jamestown Road: Road Network development required due to major residential developments planned for this area, and
- Baden Powell Drive: Dualling of remaining sections between the N2 and Polkadraai Road.

For the purposes of this CIP, there is no motivation for not accepting these recommendations.

In view of the proposed development of the Adam Tas Corridor, some improvements related to the corridor, are already in a concept stage and the design is work in progress. These include the dualling

of Dorp Street between the R44 and the R310, the upgrading of the R44/Alexander Street intersection and the upgrading of the R44/Merriman intersection. These are illustrated in the three figures **Figure 7-6** to **Figure 7-8**.

Figure 7-6: Planned Option 2 for dualling of Dorp Street between the R44 and the R310 (Adam Tas Road)

Figure 7-7: Planned upgrade of R310/Alexander Street intersection

Figure 7-8: Planned upgrade of R44/Merriman Street intersection

Allowance has been made in the Infrastructure Services 10 year budget for some of these roads – refer to **Appendix C**.

7.2 Parking

The municipality has embarked on a PPP process to address the need for parking in the CBD. This initiative proposes the development of a parking garage on the Eikestad Mall parking area site. The development of this parking area will also allow for the reduction of on-street parking areas making certain streets in the CBD more pedestrian pedestrian and parking friendly.

The creation of parking facilities outside Stellenbosch with accompanying shuttle services to central Stellenbosch has been proposed a number of times in the past, most recently in the Stellenbosch SDF. The recent parking study for Stellenbosch has been discussed above. It did not address the park and ride concept and focussed on the feasibility of two parking facilities in the Stellenbosch CBD and in Techno Park – the creation of these is included in the ten year Infrastructure Services budget.

The feasibility of park and ride facilities along the edge of Stellenbosch and the entrances to the town is questioned and it is considered that this concept should be further investigated. For example, a park and ride facility at the start of the ATC on Adam Tas Road and also near Koelenhof would be beneficial. The same is true of the proposal to pedestrianise some of the streets in the CBD. Allowance for both of these investigations is made in the ten year Infrastructure Services budget.

7.3 Maintenance

The Road Asset Management Plan (RAMP) for Stellenbosch Municipality, completed in June 2019, provides a complete inventory of all the road classes and their condition. It indicated that the condition of the road infrastructure at that time was reasonably good – only 7 kilometres or 2.5% of the municipal roads were indicated to be in a poor or very poor condition (Visual Condition Index - VCI).

Five major issues and risks were identified at that stage, with the most important that the available budgets for road maintenance were below the estimated maintenance needs. A road maintenance programme and strategy have been proposed.

Road maintenance is being done in accordance with the recommendations of this RAMP and various routine maintenance and rehabilitation/reconstruction projects are included in the ten year budget. Whether the correct sums of money (in relation to new projects) are currently allocated to road maintenance is difficult to say, but in view of the results of 2019, it has to be concluded that road maintenance is not a major issue.

7.4 Traffic Management

The municipality is continuously busy with efforts to upgrade, modernise and improve the effectiveness of the traffic signal system, also in cooperation with the Civil Engineering Faculty at the university. Various items allowing for this are included in the ten-year Infrastructure Services budget.

7.5 Design Standards (NMT & Public Transport orientated)

In view of the overall strategy to encourage higher use of public transport and NMT, it is recommended that all road planning and design should include maximum allowance for facilities to support these modes. The current road design cross sections should be interrogated and it should be ensured that optimal accommodation of NMT and public transport facilities is achieved.

7.6 Future Transport Solutions Development

In general the strategy for private travel and parking is to discourage the use of private vehicles and to improve opportunities and facilities for public transport usage. Even so, when the major planned (future) developments in Stellenbosch, such as the Adam Tas Corridor development, as well as further residential developments in Jamestown and the Kayamandi area are considered, it is clear that some continued improvement to the road system and parking facilities, will also be required. The main road and parking components have been discussed above and are summarised below – with special cognisance of the latest 10-year Infrastructure Services budget (January 2023 – refer to [Appendix C](#)).

7.6.1 Major Road Network Extension

The five major road projects have been described above and are summarised below (also refer to Table 7.2):

- **Portions of Eastern Link Road** – creation of links (such as Wilderbosch Road extension to the north and its extension south) in order to alleviate traffic at congested intersections, directing traffic to intersections on the R44 that have more capacity, such as the Technopark intersection and Trumali Road Intersection.
- **Portions of Western Bypass** – creation of links to systematically get this road in place in order to allow for development of the Adam Tas Corridor and to remove some of the through traffic component on Adam Tas Road (mostly provincial responsibility) and the R44. Link road between Techno Park (in effect R44) and Adam Tas Road is one of the first sections in this process.
- The following Intersection improvements along Adam Tas and the R44, namely Dorp Street, Alexander Street and Merriman Road
- **R44 Upgrade** – protect the integrity of the R44 as a regional mobility road (mostly provincial responsibility).
- **Jamestown links** – take the proposals for a road network to service Jamestown and improved linking to central Stellenbosch further. The Eastern Link Road plays an important role in this concept.
- **Upgrading R304/Bird Street Link** – to enable the envisioned Adam Tas Corridor development, upgrade the R304 between Kayamandi and the R44.

7.6.2 Other Road Related Projects

Other road related projects can be summarised as follows:

- Upgrading of sections of Adam Tas Road – Alexander and Merriman intersections, as well as Dorp Street (West) dualling;
- Ad hoc upgrading, rehabilitation, maintenance and safety improvement of roads – in Stellenbosch, Klapmuts, Pniel, Lanquedoc, Franschhoek;
- Upgrading of parking areas in Stellenbosch and Franschhoek, including the two major identified facilities in Eikestad Mall and Techno Park, as well as for tour buses;
- Upgrading of traffic signal system, including management system and all road furniture;
- Further investigation of pedestrianisation of streets, together with improvements of universal access, and
- Further investigation into the park and ride concept.

Table 7.2: Summary Transport Infrastructure Plan Key Intervention and Initiatives

Transport Infrastructure Plan: Key Intervention and Initiatives								
	Interventions/initiatives	Description	5-year target 2023-2028	Year 1 2023/24	Year 2 2024/25	Year 3 2025/26	Year 4 2026/27	Year 5 2027/28
1.	Portions of Eastern Link Road (Wilderbosch Extension to Trumali)	See above	5	1	1	1	1	1
2.	Portions of Western Bypass (Adam Tas – Techno Park Link Road)	See above	5	1	1	1	1	1
3.	Upgrade R44 and required intersections	See above	2		1	1		
4.	Jamestown Links	See above	5	1	1	1	1	1
5.	Upgrade R304 and required intersection	See above	3			1	1	1
6.	Upgrade Adam Tas and required intersections	See above	3		1	1	1	
7.	Ad hoc road maintenance and upgrading	See above	5	1	1	1	1	1
8.	Upgrading of parking	See above	5	1	1	1	1	1
9.	Upgrading of traffic signal system	See above	5	1	1	1	1	1

11.	Investigation park and ride	See above	2	1	1			

8 TRANSPORT DEMAND MANAGEMENT (TDM) STRATEGY

8.1 Introduction

8.1.1 Legislation & Policy Directives

The management of transport demand can be defined as making the most efficient use of the available transport infrastructure, and as such is just the sensible action to take for any transport authority. It is especially applicable to South Africa where resources for infrastructure development are severely constrained. As traffic congestion has been identified as an issue in Stellenbosch, any action which can reduce congestion, should be implemented.

There is reference in the **National Land Transport Act (NLTA, Act 5 of 2009)** to TDM. The City of Cape Town TDM Strategy of 2017 states that the NLTA requires that municipal spheres of government formulate and apply TDM measures in their functional area (Section 2, c, xxii). This could not be found in the Act, but it is accepted to be correct.

8.1.2 Summary Major Existing “External” Strategies, Proposals and Projects

Numerous strategies, proposals and projects with relevance to TDM have been formulated in the past. These are all referred to in the literature review provided in the sections below.

8.1.2.1 PLTF 2016/17 to 2020/21 (Feb 2016)

The PLTF has no specific section referring to Transportation Demand Management. It does confirm that one of the NLTSP (2015 – 2020) goals is to “where appropriate, reduce the need to travel by motor vehicles, having achieved an integrated land use and transportation system”.

The PLTF, whilst an extensive document (almost 500 pages with annexures), contains the following (unfortunate) statement on p(xxi):

“The unavoidable conclusion is that the PLTF has hitherto been produced primarily for reasons such as statutory compliance and information provision and has not been proactively used to manage and coordinate all modes of transport across the Western Cape. There has been little or no joint strategic planning with parties such as Transnet, PRASA, ACSA and Metrorail at provincial level.”

8.1.2.2 Winelands DITP

There is no specific section on TDM.

As part of the sustainability vision it is stated (p12) that “an affordable public transport system with adequate schedules and levels of service needs to be instituted in each town”.

8.1.2.3 Stellenbosch SDF, July 2019

This framework contains three catalytic projects which are briefly summarised below. It is considered that all three fit into previous and current suggestions in terms of TDM.

1. **Redevelopment of Adam Tas Corridor** – considered to “launch the restructuring of Stellenbosch town” through the redevelopment of the Adam Tas corridor along the R310 and the R44 from the Cape Sawmills site in the west to Kayamandi and Cloetessville in the north. Overall, mixed high-density development, with access favouring NMT is foreseen. Curtailing the use of short private car trips in town was seen as one of the requirements for this, as was a more reliable and frequent rail service. In fact, a potential light rail service on the (now) dysfunctional rail line, with two new stations, has also been shown on the corridor drawings.

This proposed development is considered to fully fit into the TDM actions that were proposed in the past and which is also now favoured by participants in the stakeholder consultation process. As such it should be strongly supported. From the viewpoint of this intended planned project, the removal of longer distance traffic on the R44 (Adam Tas Road), through the proposed western bypass, makes strong sense.

2. **Development of Klapmuts** – The Klapmuts area has for some time been seen as a potential regional economic development node. The 2019 SDF stated as fact that Distell would relocate their operations there (just north of N1), but the status of this is unknown, especially in view of the current negotiations for the selling of Distell to Heineken – refer to **Figure 8-1** from SDF. Substantial residential development is occurring in Klapmuts, which is a good reason to encourage the creation of work opportunities in the area. This is considered to fit into the TDM strategies identified in the past. The re-instatement of the rail linkage between Stellenbosch and Klapmuts is also considered important in view of the growing developments there.

Figure 8-1: Potential Development of Distell at Klapmuts – 2019 SDF – Gapp Architects

3. **Alternative rail service along Baden Powell/Adam Tas/R304 corridor** – The 2019 SDF expressed the opinion that it was critical that a more frequent and reliable rail service on the Eerste River/Stellenbosch/Klapmuts rail line be provided. The possibility of lighter rolling stock was mentioned. Alternatively, the viability of a bus service should be explored. Whether any progress was made with this is unknown. This also fits in the TDM strategies proposed in the past.

Conclusion – In view of the emphasis three years ago on improved rail service through and past Stellenbosch, and the actual termination of these services, it has to be concluded that serious issues exist regarding planning proposals being made and the execution thereof. The co-operation between the different authorities involved has to be addressed – otherwise exercises of this nature could be considered a waste of time.

8.1.3 Previously Updated Stellenbosch CITP Concept, Key Strategies, Proposals

The previous (2016) Stellenbosch CITP did include TDM objectives, strategies and proposals. These are described in the sections below:

8.1.3.1 Previous Stellenbosch CITP (2016)

The TDM objectives in the 2016 CITP included:

- Using existing infrastructure as efficiently as possible;
- Reduce demand for car use;
- Reduce environmental impact of private transport;
- Support investment in public transport, and
- Support investment in NMT.

Three categories of TDM strategies have been identified:

1. **Improving travel options for residents and visitors** – Address safety of people walking and cycling and ensure that future growth and urban design support these modes;
2. **Reduce need for investment in large-scale public infrastructure** – create significant shifts in travel behaviour to reduce the need for new road capacity, and
3. **Increase revenue to finance infrastructure** – Consider tolls, congestion pricing, parking pricing and development charges as financing strategies available to manage demand.

Stated that TDM contributes directly to the seven key development principles of the 2013 SDF, namely:

- Provide public transport for all;
- Create walkable neighbourhoods;
- Grow economy to create jobs;
- Make wise use of land;
- Conserve, restore and regenerate resources;
- Grow more food for ourselves, and
- Care for our heritage.

Three types of interventions have been identified:

1. **Small-scale Interventions**

Large employers and public buildings – bicycle facilities and flexible working hours

Campaigns to increase awareness of existing options, e.g. bicycle hire

Peer pressure campaigns – enforcement and education

Car-share options – e.g. car hire on hourly basis

Pedestrian only phases at signals

Improved pedestrian routing

Parking pricing

Freight transport management

2. **Large-scale Interventions**

Parking location – some outside congestion bottlenecks

Public transport – existing services not adequate – need dramatic improvements

Finer grain network suitable for NMT – more permeable urban fabric

Encourage route changes through adjustments to infrastructure – bypasses

Spatial planning enabling trip chaining – TOD

HOV priority for buses and taxis – prohibiting cars on some routes

3. **Policy and Urban Management**

Update and enforce by-laws regarding occupation of public space by businesses – café's not obstructing sidewalks

Update regulations governing building design – promote activity on ground floor

Enforce traffic regulations – motorists driving or parking illegally hinders NMT

Allocate TDM responsibility to specific municipal official to roll out TDM programme and liaise with all stakeholders and potential partners. The Large Employer Programme recommended establishment of a Stellenbosch Employer Transport Forum.

Further Work Required – Considered high priority as it forms the basis of subsequent activities and projects:

- Identify stakeholders and potential partners;
- Literature survey for street audits to assess obstacles to NMT;
- Build on previous cycling survey – ongoing monitoring exercise;
- Undertake street audit;
- Review building design regulations that impact on walkability;
- Survey parking demand, supply and pricing. Investigate institutional and regulatory requirements, and

- Investigate most appropriate routes for addressing congestion bottlenecks.

Summary

Pedestrian improvements and parking strategies were considered the most effective in the short term to encourage a shift among discretionary car users. Strategies related to cycling and public transport were also considered beneficial for this group, but a significant change in municipal commitment and funding was required to achieve this.

Refer to **Table 8.1** for the summarised recommendations under three headings namely (i) Studies, (ii) Programmes and Policies and (iii) Infrastructure as follows (directly from 2016 CITP):

Table 8.1: Summary of Recommendations

Key Focus Area	Interventions	Priority
	STUDIES:	
Urban management, personal security	Undertake a comprehensive audit of streets with a view to understanding the interaction between street design and movement patterns and map key routes for designation and attention; include literature review; develop policy and design standards to improve walkability; key routes to receive particular attention regarding design elements	High
Urban management, promoting alternative modes	Map and review parking supply and demand and pricing, and assess opportunities in short term to influence spatial distribution of demand through supply and pricing; liaise with businesses to explore options for reducing free employee parking	High
Urban management	Investigate and prioritise congestion bottlenecks based on their contribution to TDM objectives rather than conventional level of service analysis; assess how route changes can be induced for more efficient use of road infrastructure, through strategically located adjustments to road capacity and intersection controls	High
Safety	Identify areas suitable for designation as speed reduction zones to improve safety for vulnerable street users	Medium
Promoting NMT	In future spatial planning exercises, include assessment of how density, mix and location of land development can improve viability of alternative forms of transport	Low
Promoting public transport	In future transport planning exercises, always consider how road improvements can enhance conditions for public transport and other modes as alternatives to car travel	Low
	PROGRAMMES AND POLICY:	
Promoting public transport and NMT	Implement recommendations of the Large Employer Programme	High – low
Programme development and coordination	Designate a TDM official and commence engagement with stakeholders who can assist in developing and running campaigns	High
Urban management, Awareness	Enforce traffic laws that impact NMT activity, and by-laws governing use of public space	High
Promoting NMT	Identify opportunities for creating a finer grained pedestrian and cyclist network by opening up semi-private space, and develop policies to ensure that future development does not eliminate existing or future routes	High
Promoting NMT	Review building design regulations and street design standards that impact on walkability	High - Medium
Awareness	Develop campaigns to raise awareness of travel options, and to encourage a shift in behaviour; include improved enforcement as part of this	Medium

Supplementary modes	Pursue possibility of establishing a carshare service in Stellenbosch (e.g. with Locomute)	Medium
Urban management	Update rules and by-laws governing the use of public space, particularly on key NMT routes	Low
Safety, promoting NMT	Review freight management practices and their impact on pedestrians and cyclists; identify strategies and policies to mitigate impact on key NMT routes	Low
	INFRASTRUCTURE:	
Promoting public transport	Begin planning in more detail the public transport services proposed in this CIP, and develop an implementation plan	High
Promoting NMT	Pursue options for long-term development of share parking structures to reduce impact of traffic on the historic town core	Medium
Promoting NMT	Undertake localised improvements for pedestrians, such as pedestrian-only signals, bulb-outs and street lighting along key routes identified through the street audit	Medium

No specific (spatially defined) projects were identified under the TDM heading in 2016. The closest to this was the recommendation to develop an implementation plan for the public transport services which were proposed. These are briefly:

With respect to **rail**, PRASA has indicated in 2016 that there were no “plans to upgrade existing facilities in the Stellenbosch area. In reality the rail service on the line running through Stellenbosch has been terminated since then. In view of the overhead wires being broken, it is concluded that physical repairs will be required before the service can be restored again. Recent discussions with PRASA indicated that the previous service is planned to be in operation before the end of 2022.

With respect to **contracted bus services**, the 2016 CIP proposed the implementation of a new Public Transport Service Network (PTSN) operating from a central terminal in the Stellenbosch CBD or along the Adam Tas corridor. It was mentioned that the five year CIP budget is allowing for this since 2018. A further proposal was that the provision of a public transport lane/facilities on the R44 between Stellenbosch and Somerset West had to be investigated.

With respect to **minibus taxis**, no specific proposals could be found in the 2016 CIP, but a number of improvements to minibus taxi facilities has been included in the five year budget proposed for 2015/16 to 2019/2020.

8.1.3.2 CIP Update, June 2020

The TDM Strategy still needs to be prepared. Components could be:

- Parking management;
- Alternative work from home schemes, and
- Incident management systems.

Only way to get travellers in more sustainable modes is considered to be:

- Improved public transport options;
- Network improvements to cycling and walking, and
- Provide for different travel markets.

Projects proposed:

- Prepare a TDM Strategy;
- Prepare Public Transport Plan;
- Improve walking and cycling network;
- TOD Plan;
- Include TOD principles in future developments;

- Parking Strategy, and
- Plan for remote parking locations (in process).

8.1.4 Stakeholder Engagement

The Stellenbosch Ratepayers Association provided eleven comments in February 2016 on the previous CITP. These can be summarised as follows:

- Lack of clear strategy on how real transport improvements will be achieved;
- Too much emphasis on road network improvements versus sustainable TDM approaches;
- There is a lack of integration of spatial development and transport – location of future development;
- The public transport development aims are not clear;
- Stellenbosch, the town, should be preserved;
- The successes with traffic management and NMT that have been achieved, should be extended;
- NMT and the promotion of Utility Cycling should be more prominent;
- Less parking should be provided in central Stellenbosch;
- The impact of the university (students) on traffic and parking problems are not controlled adequately;
- The impact of heavy vehicles in Main Street in Franschhoek, but also in Stellenbosch is not addressed adequately, and
- Roundabouts should be favoured above traffic signals.

A summary of the feedback received during the recent stakeholder engagement (April and May 2022), is provided in Chapter 13. The key themes from the engagement are all related to TDM – the following four have been identified:

- Develop an effective communications program which will aim to shift personal behaviour away from car usage to the other modes – NMT, public transport, etc;
- Implement improvements for NMT users – sidewalks, etc;
- Develop an integrated public transport system, and
- Reduce the need for travel by creating mixed land use developments.

It is believed that the correct approach should be to develop a balanced and sustainable transportation system which opens the question of what such a system would have to consist of.

8.1.5 Issues and Concerns

The major issues and concerns are considered to be:

- Is enough emphasis being put on the enhancement of TDM by the municipality?
- Why has nothing happened to previous TDM proposals?;
- How does a balanced transportation system for Stellenbosch look like?
- What can be afforded by Stellenbosch in terms of the transportation system?

8.2 TDM Categories

In summary it is considered that the actions that can be implemented as part of TDM can be categorised into three groupings, namely (i) Behaviour, (ii) Infrastructure and (iii) Operations. Whilst action on each of these fronts is desirable, some **prioritisation** could be done in cooperation with all stakeholders.

A: Behaviour

- Reduce the demand for travel
 - Work from home, variable working hours, staggered school starting times
- Discourage car use

- Parking management and pricing
- Congestion charges
- Marketing and Communication

B: Infrastructure

- Land use changes – transform to mixed use development – residential areas closer to work opportunities
- Improve public transport
- Improve NMT facilities
- Park and Ride Facilities
- Upgrade road bottlenecks

C: Operations

- Improved traffic management
 - Traffic signal operation
 - Incident management
 - Preferential treatment of HOV's
 - Reversible or contra flow lanes
 - Carpooling

8.3 TDM Objectives

The main TDM aim should be to move to a balanced transportation system where the most effective use is made of available facilities. Specific objectives have to focus on the categories listed above, i.e.:

- Change behaviour to reduce the demand for travel;
- Influence land use to form mixed use clusters;
- Improve NMT and public transport facilities, and
- Improve all operations (private and public) to operate as effectively as possible.

8.4 Future Solutions Developments/Proposed Interventions

The proposed interventions with regards to Transport Demand Management have been identified in the past in the documentation referred to above. As many of them involve NMT improvements, public transport, parking initiatives, traffic signals, road pricing, etc allowance has been made in the ten-year budget of the Transport Division for taking a number of these forward. The most relevant at this point in time have been included in the sections above and are summarised below. Note that the only items not specifically mentioned in the current ten-year budget, are an investigation into congestion pricing and the development of a marketing program for TDM. If TDM is considered important, then the municipality should consider the appointment of an official dedicated to this subject, whose only focus should be driving this concept. Refer to Table 8.2 for a summary.

Table 8.2 Transport Demand Management Plan Key Intervention and Initiatives

Transport Demand Management Plan: Key Intervention and Initiatives								
	Interventions/initiatives	Description	5-year target 2023-2028	Year 1 2023/24	Year 2 2024/25	Year 3 2025/26	Year 4 2026/27	Year 5 2027/28
1.	Upgrading of traffic signals and control system	Chapter 7	5	1	1	1	1	1
2.	Upgrading of NMT facilities including cycle plan, universal access improvements	Chapter 7	5	1	1	1	1	1
3.	Continued investigation of transport operating company	See above	2	1	1			
4.	Investigation into pedestrianisation of certain streets	Chapter 7	2	1	1			
5.	Further investigation into feasibility of park and ride facilities	Chapter 7	2	1	1			
6.	Investigation of congestion pricing	See above	2	1	1			
7.	Develop marketing and communication strategy to further TDM	See above	2	1	1			
8.	Appointment of a TDM official	See above	1	1				

9 NON-MOTORISED TRANSPORT PLAN

9.1 Introduction

In support of being a “Valley of Opportunity and Innovation” Stellenbosch aspires towards car-free living and Non-motorised transport forms a key enabler in doing so. In order to achieve this and realise the objectives of becoming a Valley of Possibility, a Green and Sustainable Valley and a Safe Valley, and ensuring Dignified Living encouraging walking, cycling and public transport as key modes of travel over private motor vehicles is essential.

In support of the overarching vision the vision for pedestrians and cycling in Stellenbosch is:

“Stellenbosch Municipality will strive to develop walkable and cycle-able environments that are safe for all to use and contribute to the mobility needs, economic vibrancy and social health of communities.”

9.1.1.1 Legislation & Policy Directives

The legislative and policy framework for the planning and implementation of NMT is extensive and includes the following:

- National Land Transport Act (5/2009);
- Draft Revised White Paper on National Transport Policy (2021);
- National Road Traffic Act (93/1996);
- The National Land Transport Strategic Framework (2017-2022);
- Western Cape Provincial Road Traffic Administration Act (6/2012);
- Stellenbosch Municipality: Roads and Streets By-law (2021), and
- NMT Facilities Guideline(2016).

The following are of particular relevance to NMT in SM

9.1.1.1.1 Green Transport Strategy (2018-2050)

The Green Transport Strategy sets out a long term vision for the “use of resources and supporting the ecosystem” which includes:

- Instituting “no-car zones”, within most of the central business districts being closed off for car use, and emphasising eco-mobility mode of transport like walking and cycling as the preferred mode of transport, allowing significant areas of urban real estate currently used for parking to be repurposed for use in affordable inner-city housing and businesses: and
- An extensive network of cycle lanes and pedestrian walkways to re-orient South Africa’s towns and cities away from cars towards people. The investment in non-motorised transport infrastructure will yield a double dividend in terms of human health, by both reducing harmful air pollution and promoting healthy exercise.

9.1.1.1.2 Western Cape PLTF 2016/2017 – 2020/2021

The overall objective of NMT is to increase mobility and access to opportunities, and in so doing, to improve the quality of life in a sustainable manner throughout the province with the defined goal of establishing “NMT as a pivotal part of all forms of transport planning in urban and rural areas” through:

- Development of NMT standards;
- Integration of NMT into all transport plans;
- Provision of NMT infrastructure in transport projects;
- Incorporation of Universal Access principles;
- Implementation of a transversal plan to promote transport safety, and
- Coordination forum to coordinate NMT across municipalities.

9.1.1.1.3 Cape Winelands DITP (2016 – 2021)

The DITP has a very brief section on NMT which recognises the challenges of low income residents living on the periphery of towns and the implications for walking distances. It further recognises the context specific requirements for developing walking, cycling and public transport in towns. There is also a brief summary of the Stellenbosch 2016 CITP.

9.1.1.1.4 Stellenbosch MSDF (2109)

The MSDF identifies NMT as a key mode of travel especially for low income groups which constitute 95% of all NMT trips. In addition local peak period passenger trips (<5km in length) total twice the number of longer (>5km) trips.

Under the change action of improved access and mobility Public Transport and NMT are promoted through densification, redesign of existing routes and the development of new routes. In support of this it is also proposed that the design of all roads provides for appropriate NMT movement and that TDM measures favouring NMT and Public Transport be introduced in partnership with key organisations.

9.1.1.1.5 Stellenbosch Non-Motorised Transport Policy (2022)

The NMT policy was adopted by Council in October 2002. Recognising that achieving the vision of walkable and cycle-able environments requires a move away from the “business as usual” approach in transport planning and engineering a set of clear principles, policies and strategies to guide officials and politicians of Stellenbosch Municipality was established.

Principles

The policy principles guiding the development of transport systems and infrastructure to achieve SM's vision and enable pedestrian and cycling friendly environments which are universally accessible are:

- Integration between land use and transport towards developing pedestrian friendly environments to reduce the demand for travel and the need for motorised transport;
- Prioritization of vulnerable road users especially at conflict points to improve road safety for pedestrians and cyclists and encourage people to walk and cycle more;
- Prioritization of improvement of the environments for pedestrians and cyclists in outlying communities to encourage and support these modes;
- Development of a partnership between the private and public sector focussed towards furthering car-free living including Stellenbosch University to enable sustainable transport solutions and pedestrian/ cycle friendly environments as these cannot solely be undertaken by the public sector, and
- Application of the principles of Universal Design ensuring that roads and streets are for all. This requires the re-prioritisation of road space to ensure that all the needs of all users are adequately provided for. Where the needs of the various users are in conflict, the needs of the more vulnerable road user must receive priority.

Objectives

The overarching objectives of the NMT Policy are to:

- Provide the officials of Stellenbosch Municipality with a framework to enable NMT implementation;
- Guide officials in making strategic decisions with respect to transport management and roads implementation and maintenance, and
- Create a framework for prioritizing more vulnerable road users and create streets for all.

These are then expanded upon as a set of strategic objectives which are derived directly from the Consolidated NMT and Cycling Masterplan:

- Connect the outlying communities with the CBD in a safe and attractive manner and improve safety, access to opportunities and the dignity of these communities;
- Strive towards car-free living in Stellenbosch CBD;
- Achieve a modal shift in the Stellenbosch CBD towards public transport, walkability and cycle-ability, and
- Creating dignified living spaces in previously disadvantaged areas.

9.2 External themes and approaches

From the international through to the national and provincial levels there are key common themes that come through in a review of the current statuses of planning and developing NMT. The key themes and approaches are those of:

- Reducing reliance on the private motor vehicle;

- Reducing transport's contribution towards GHG emissions and environmental degradation and its reliance on fossil fuels;
- Providing accessible and affordable mobility for all;

In proposing solutions towards these the proposals of:

- Ensuring an integrated planning approach to land use and mobility, and
- Moving towards a paradigm of Sustainable Transport.

NMT is thus central to addressing the issues facing transport in both the immediate and longer term. This is as it provides an easily accessible and affordable means of mobility whilst addressing environmental issues and contributing towards a healthier society.

The focus on NMT in SM directly supports this.

9.3 Previously Updated Stellenbosch CIP Concept, Key Strategies, Proposals

This is a brief summary of the Update of the CIP for Stellenbosch Municipality (June 2020) and the Review, Update and Consolidation of the Stellenbosch NMT Masterplan & Cycle Plan.

SM supports a shift towards public transport, walking and cycling and Stellenbosch CBD particularly has a culture of walking and cycling. However, the increasing pressure of private vehicle usage is affecting the safety of pedestrians and cyclists and thus the nature and vibrancy of these areas. A further issue is that of street furniture and the lack of dropped kerbs on many of the sidewalks. Where street improvements have been done (e.g. Andringa and Victoria Streets) the usage by pedestrians is strong evidence of how shifts can be encouraged.

The previously disadvantaged settlements of Kayamandi, Cloetessville and Idas Valley are within walking distance of the CBD and significant numbers do walk. However, major roads separate these settlements from Stellenbosch requiring that pedestrians have to walk alongside and cross them with vehicle movements having priority. In the case of Kayamandi the informal crossing of the railway line provides an additional safety threat on the walking desire line. Jamestown lies beyond comfortable walking distance from Stellenbosch and the route is along the R44. In the other towns (Franschhoek, Klapmuts, Pniel) within SM residents of the outlying settlements have to walk along provincial roads.

The University of Stellenbosch is a significant trip generator and encourages students to walk and is planning to improve cycling infrastructure on campus and integrate its NMT network with SM's plans.

The CBDs of Stellenbosch and Franschhoek are relatively pedestrian friendly and attract high numbers of tourists. Within Stellenbosch the residential areas, university, offices and amenities are well positioned for walking.

Whilst cycling in Stellenbosch is popular in terms of the South African context a significant proportion of cyclists are recreational/sports cyclists and those riding on roads prefer the higher order provincial roads. Sections of the cycling network have been implemented but these are not coherent. The main barriers to cycling are safety in traffic, the lack of suitable infrastructure, crime and, in the case of lower income communities, access to bicycles.

Both the CIP Update and the Consolidated NMT Masterplan & Cycle Plan describe the proposed NMT Network and provide summaries of the extent of the proposed NMT Network and, based on budgetary constraints, a set of priority projects which are categorized as Short Term with sub categories of essential and desirable.

The proposed network was developed on the basis of understanding desire lines, reviewing the existing NMT network facilities, proposing a higher order network around Stellenbosch whilst creating local networks within neighbourhoods, and upgrading of certain existing facilities.

9.4 Stakeholder Engagement

A key concern of various stakeholder groups / representatives is that, whilst cycling and indeed NMT, have been identified as key modes for Stellenbosch the policies and plans developed have not been given the support in terms of funding and implementation required to give effect to them. Specifically mentioned were the Cycle Plan and the NMT Masterplan.

Specific suggestions / concerns raised include:

- Include cycling and walking as part of the behaviour change approach including the role of the University in enabling walking and cycling;

- Exploring alternatives to motorised transport and strengthening the opportunities for walking and cycling through making streets more walkable/universally accessible and cyclable through removing parking / reducing sidewalk usage by restaurants;
- Creating continuity of routes for cycling, and
- Improving safety of routes for both pedestrians and cyclists with a particular focus on intersections with higher order roads and adequate street lighting along routes.

From engagements regarding the ATC development proposals it is recognised that the current NMT and Cycling Masterplan has not considered in any depth the requirements and opportunities arising from the development.

9.5 Key Issues, concerns

The key issues and concerns for NMT are:

- The lack of integration between land use and transport planning;
- NMT is not considered an essential element and the foundation of any and all transport and development planning;
- Captive users are limited in the travel choices they have;
- Significant pedestrian movements are crossing major roads / a rail line;
- Many choice users covering shorter distances travel by private motor vehicle in preference to walking or cycling;
- Although there has been progress in developing NMT (and cycling) infrastructure routes are not coherent, and
- Funding allocation for NMT is extremely limited.

In addition, a key concern is that the evolving ATC development and its impact on the broader transport systems and travel patterns of SM have not been incorporated into current NMT planning processes at any level of detail.

9.6 Strategic Objectives

Arising from the foregoing an initial set of Strategic Objectives is proposed as:

- Reinforce the integration of land use and transport planning – this requires a full assessment of the ATC development and its implications for SM in both the short and long term;
- Connect outlying communities with their local towns / CBDs;
- Require all developments to fully integrate NMT and Universal Design principles in their planning and implementation;
- Achieve a modal shift from PV to walking and cycling;
- Improve the living spaces and NMT routes in previously disadvantaged communities, and
- Reconsider funding mechanisms.

9.7 Future Solutions Developments / Proposed Interventions

Within the consolidated NMT Masterplan and Cycle Plan short term projects were then identified through reviewing the priority projects previously identified in the NMT and Cycleplans (2015) and the PSTP (2018), addressing pedestrian safety hotspots, identifying locations for pedestrian and safe crossings of major roads and rail lines, upgrades / new infrastructure of existing NMT desire lines, upgrading existing informal links and addressing future NMT desire lines based on the overall principle of achieving a safe environment for pedestrians and cyclists.

Table 9.1 indicates the extent of the proposed NMT network for Stellenbosch Municipality. **Table 9.2** summarizes the short-term projects proposed for the NMT network in Stellenbosch which are graphically depicted in **Appendix D**.

Table 9.1: Extent of Proposed NMT Network

	Whole Stellenbosch Municipality Length (km)	Stellenbosch Town (incl. Kayamandi, Jamestown) Length (km)
Proposed Sidewalk	31	11
Proposed NMT Only Class 1	26	17
Proposed NMT Facilities with Partial Separation Class 2	172	103
Proposed Bicycle Lanes (Partial or Marked Separation) Class 3	14	14
Proposed Cycling in Local Street (Mixed Shoulder) Class 4)	32	28
Proposed Pedestrian Priority Street	4.2	3.8
Total (km)	279	176

Note:

- Cycling in the shoulder is excluded from this list.
- All lengths refer to centreline length, except for Sidewalks.
- Intersection upgrades are excluded from the length summary.

Table 9.2 summarizes the short term projects proposed for the NMT network in Stellenbosch which are graphically depicted in **Appendix D**.

Table 9.2: Details of Short Term NMT Projects for SM

Project No.	Projects
1	Pedestrianisation of Church St and Andringa St
2	De-cluttering of street furniture in Stellenbosch CBD and dropped kerb standardisation
3	Roll-out of bicycle network in Stellenbosch CBD (continuity of cycle routes, road markings, bi-directional cycling in one-way streets, bicycle parking)
4	Pedestrian bridge across R304 & rail line linking Kayamandi and Cloeteville
5	Kayamandi / Rand Rd: Pedestrian priority, restrict heavy vehicle access, narrow road to 6.5 m (from 9 m wide black top), raised ped crossing; Brick pave 4 m wide NMT route up to railway crossing
6	Kayamandi: Safe ped link across railway line at Du Toit Station (grade separated crossing; either pedestrian bridge or crossing as part of Kayamandi mall upgrade)
7	Kayamandi: Staircases parallel to Rand Rd north-east of stadium
8	Kayamandi: Staircases west of stadium and 3m wide footpath up to Rand Rd (market area)

Project No.	Projects
9	Pedestrian bridge across Helshoogte Rd (R310) at Simonsberg St to provide safe crossing for scholars
10	Bosman St: Extend effective sidewalk width and provide bi-directional cycle lane (Phase 1 between Banhoek and Merriman, Phase 2 Merriman and Van Riebeeck)
11	Soeteweide St: Restrict access to local traffic only and provide safe pedestrian space
12	Merriman Ave: Investigation into ped crossing to mitigate current safety concerns
13	Merriman Ave: Extension of existing cycle lane up to Adam Tas
14	Die Laan: Extend effective sidewalk width and provide bi-directional cycle lane
15	R44: Provide 3m wide footpath on western side of the R44 (from Lang Rd to Welegevonden)
16	R44: Provide footpath (Extension of Ortell Rd in Cloeteville to the east) and bridge over R44
17	Curry Rd: Extend sidewalk space on eastern side by 1) widening existing sidewalk and by 2) reducing drop-off area by installing delineated kerb
18	Bloekom St: Improved traffic calming in front of school and extend existing sidewalk
19	Extend Bicycle Lane from Cluver Rd along Rustenberg Rd and extend sidewalk where space allows
20	Cluver Rd: Provide smooth transition of bicycle lane onto sidewalk space on both sides of the road, widen sidewalk to convert into Bicycle Class 2
21	Upgrade NMT route through Eikestad Mall outside parking area; investigate re-arrangement of parking
22	Aan die Wagenweg: Upgrade of bicycle path and sidewalk space
23	Van Rheeде/ R44 Intersection: Improve pedestrian safety
24	R44: Provide footpath on eastern side of the R44 (from Doornbosch to Dorp) incl. ped bridge over Eerste River
25	R44: Upgrade footpath on eastern side of the R44 (from Paradyskloof to Doornbosch)
26	Merriman Ave: Proposed shared footpath on southern side of the road (from Cluver to Simonsberg)
27	Simonsberg Rd: Provide shared facility & Implementation of traffic calming measures
28	Martinson Rd: Narrowing of road with a separate two-way bicycle facility (4m wide Class 3) on southern side between Omega Rd and Simonsberg Rd; incl. gateways and sidewalk on northern side
29	Jonkershoek Rd: Upgrade of shared footpath (widen and resurface southside path where space allows) and provide lighting
30	Bird St/ Adam Tas (R44) Intersection: Improve pedestrian safety

Project No.	Projects
31	Strand St. R44/ Dorp St Intersection: Improve pedestrian safety
32	Adam Tas (R301)/ Dorp St Intersection: Improve pedestrian safety and bridge over railway line
33	Jamestown Webbersvallei Rd: Provide 3m wide shared facility on northern side
34	Jamestown Drakensberg Rd: Provide shared NMT Facility
35	Koelenhof: Investigation into safe ped crossing at railway line
36	Kylemore Swart Rd: Extend existing sidewalk up to Helshoogte Road
37	Kylemore Gousblom St: Widen pedestrian space at school entrance
38	Kylemore Petunia St: Widen existing sidewalk on southern side, potentially convert into oneway street
39	Lanquedoc: Provide shared NMT facility as part of Class 2 as part of the Upgrading of the Lanquedoc Access Road (SRMP078)
40	Klapmuts: Shared NMT path along Klapmuts River (off-road)
41	Klapmuts Adams St: Widen existing sidewalk on western side
42	Klapmuts Alexander St: Widen existing sidewalk and traffic calming measures
43	Klapmuts Merchant St: Widen existing sidewalk on eastern side (use full effective width) and convert into shared NMT facility
44	Groendal Upper Lea Smit Rd: Upgrade sidewalks and introduce traffic calming
45	Groendal Stiebeuel River: Provide shared NMT facility along river on western side from existing NMT path to Dalubuhle school
46	Groendal Jafthas St: Sidewalk along Jafthas St from Boonzaaier to Groendal High School (including ped crossing)
47	Groendal Davids St: Extend sidewalk by means of delineated kerb
48	Groendal: Provide staircase and NMT route from higher lying informal area down to Dalubuhle Primary School
49	La Motte Robertsvlei Rd: Provide 3m wide shared facility on western side of Robertsvlei Rd (to be included in SRMP033)
50	La Motte Main Rd: Provide pedestrian crossing
51	Franschhoek Main Road (R45): Upgrade existing pedestrian crossing points
52	Wemmershoek: Rail crossing - Formalise path to PT stop on R45

Project No.	Projects
53	Wemmershoek: Formalise footpath on the western side of the R301 up to Wemmershoek access and pedestrian crossing at school access road
54	Wemmershoek: Formalise footpath on southern end of Wemmershoek up to school

9.8 Future Solutions Developments / Proposed Interventions

In addition to the previously identified projects additional key NMT interventions are reflected in Table 9.3.

Table 9.3: Key NMT Interventions

Non-Motorised Transport: Key Intervention and Initiatives								
	Intervention / Initiative	Description	5-year target 2023-2028	Year 1 2023/24	Year 2 2024/25	Year 3 2025/26	Year 4 2026/27	Year 5 2027/28
1.	Update consolidated NMT and Cycling Masterplan	Review of the consolidated NMT and Cycling Masterplan to incorporate ACT development and impacts	1	1	n/a	n/a	n/a	n/a
2.	Upgrade NMT facilities including cycle plan, universal access improvements	Improvements to the NMT network in rural and semi-rural residential settlements located within the Stellenbosch Municipal area. This includes construction of sidewalks and NMT facilities in rural and semi-rural residential settlements located within the Stellenbosch Municipal area.	5	1	1	1	1	1
3.	NMT link over the N1 between Klappmuts North and South	Investigation of NMT linkages enabling access between	2	1	1	n/a	n/a	n/a

		Klapmuts north and south, specifically along Groenfontein Road and a possible NMT crossing over the N1 linking residential areas south of the N1 directly with Farm 736/RE. to enable residents to the south of the N1 to benefit from the opportunities north of the N1						
4.	Amending existing by laws	In light of the changes proposed in the National Road Traffic Act Amendment Bill existing bylaws will require updating.	1	n/a	1	n/a	n/a	n/a
5.	NMT working group	Establish the NMT working group as proposed in the NMT Policy with the aim to advise Council on Identification of NMT needs and shortcomings, Promotion of NMT in the Municipal area, NMT best practices worldwide and NMT trends worldwide.	5	1	1	1	1	1

10 FREIGHT TRANSPORT STRATEGY

This section (Freight Transport Strategy) of the report sets out to review the transportation of goods to, from, and through Stellenbosch Municipality. Firstly, an introduction and background are presented. Secondly, the objectives of the freight transport strategy are briefly outlined on national, provincial, and municipal levels. This is followed by a review of existing legislation that informs freight transport. The current realities and freight issues are discussed which includes the short-, medium-, and long-term initiatives for Stellenbosch Municipality. The initiatives summarised in section 10.4 are discussed in more detail under section 10.5. Lastly, in section 10.6, some environmental challenges are presented.

10.1 Introduction and Background

According to traffic count data sourced from the 2016 CITP, around 1% of inbound traffic between 06:00 to 09:00 into Stellenbosch comprises of heavy vehicles during this period. This equates to roughly 270 heavy vehicles that travel within Stellenbosch Municipality during the morning peak periods. Freight is predominantly transported via road transport, due to the absence of a freight rail network within Stellenbosch. This means that any freight trips that are generated or attracted within Stellenbosch can only be transported via road (Stellenbosch CITP 2016-2020, 2016), therefore contributing heavily to the wear and tear of the road network infrastructure.

Currently, there is only one weighbridge in the Stellenbosch Municipal area. The Western Cape, as well as Stellenbosch Municipality law enforcement, is responsible for its operation. (Stellenbosch CITP 2016-2020, 2016). **Figure 10-1** illustrates the major freight routes through Stellenbosch. These include connections between Stellenbosch and Somerset West (R44), Stellenbosch and Kuils River (R310), Stellenbosch and Klipmuts (R44 north), Stellenbosch and Brackenfell (R304), and Stellenbosch and Franschhoek (R310). Secondary routes were also identified which provide access to farming areas, supporting the transportation of agri-processing supplies (such as the delivery of bottles, and distribution of processed goods such as wine) to the Port of Cape Town for export (Stellenbosch Municipality Roads Master Plan, 2018).

Figure 10-1: Stellenbosch Major Freight Routes

Stellenbosch Municipality is forecast to experience higher economic growth than other municipalities within the Cape Wine District, due to the manufacturing of high-value goods such as wine. Future industrial development is planned for underutilised industrial areas of Koelenhof and Klipmuts along the R101 (Stellenbosch CITP 2016-2020, 2016). The existing and future industrial areas can be seen in **Figure 10-2**.

Figure 10-2: Existing and Future Industrial Areas

(Source: Stellenbosch CIP 2016-2020, 2016)

The production of wine grapes dominates the agricultural industry in Stellenbosch. This results in the generation of freight, which is a vital input for cultivation, wine production, and the transporting of the final produce (Stellenbosch CIP 2016-2020, 2016). **Figure 10-3** illustrates a large concentration of agri-processing within Stellenbosch Municipality.

Figure 10-3: Agri-Processing within Stellenbosch Municipality

(Source: Stellenbosch CITP 2016-2020, 2016)

Most of the road-based freight within the Cape Winelands is transported on the N1. As a result, a large number of freight vehicles move from, or through Stellenbosch (Stellenbosch CITP 2016-2020, 2016).

10.2 Objectives

The development of a freight transport strategy requires the consideration of national, provincial, and municipal objectives. The following subsections present the objectives presented at different levels of government.

10.2.1 National Objectives: The National Freight Logistics Strategy (NFLS): (Department of Transport, 2015)

The objectives of the National Freight Logistics Strategy (NFLS) include the following:

- Meet demands of industry and the economy;
- Optimise total cost-effectiveness;
- Obviate cost distortions and optimise competition;
- Reduce negative externalities, safety, pollution, congestion, and infrastructure damage;
- Promote national global industrial competitiveness;
- Attract international investment;
- Actively build skills and capacity at all levels;
- Optimise use of resources – land, facilities, and infrastructure, and
- Develop sustainable systems and operations.

10.2.2 Provincial Objectives: Western Cape Government Provincial Freight Strategy (Western Cape Government, 2019)

The Western Cape Government identified five principles for the development of a freight strategy namely; 1) Freight Transport Network Efficiency, 2) Inclusive Economic Development, 3) Freight Transport Network Safety, 4) Environmental Sustainability, and 5) Cost Optimisation.

The Western Cape Government further identified seven key focus areas, where continued progress is anticipated to improvement in freight transport delivery. These areas include 1) planning, coordination, and institutional arrangements, 2) demand management, 3) modal rebalancing 4) infrastructure capacity

and condition, 5) traffic management, 6) technology and innovation, and 7) data and information management.

Considering the above, the main strategic objectives of the freight strategy are to:

- Strengthen coordination of freight planning and delivery within the Department of Transport and Public Works (DTPW);
- Strengthen coordination of freight planning and delivery between the DTPW, other Western Cape Government Departments, Local Municipalities, and other external stakeholders, and
- Improve the capacity of provincial and local governments to plan, implement and coordinate freight.

10.2.3 Municipal Objectives: Cape Winelands District Integrated Transport Plan (Cape Winelands District, 2016).

Stellenbosch forms part of the Cape Winelands District. The freight needs are aligned with the transport objectives of the district. These objectives are listed below.

- To maintain the health and safety of communities;
- To facilitate sustainable economic empowerment of all communities;
- To support and ensure the development and implementation of infrastructural services;
- To provide effective and efficient support services, and
- To ensure financial sustainability.

10.3 Review of Legislation

This section discusses the various legislation and legal instruments that inform freight transport.

10.3.1 The National Land Transport Act (NLTA)

As per section 36(2) of the National Land Transport Act (NLTA), planning authorities are obligated to develop a freight transport strategy, paying heed to national and provincial policies concerning the transportation of goods to, from, and through an area. The freight transport strategy must include and regulate the following:

- The identification of routes for moving goods to promote their seamless movement and to avoid conflict with road traffic;
- A plan for the movement of dangerous/hazardous cargo as per section 2(1) of the Hazardous Substances Act, 1973 (Act No. 15 of 1973), by designating specific routes per the general strategy or plan which is provided for in the relevant Provincial Land Transport Framework;
- Dangerous substances are not to be transported on any other route or area except on a route so designated and indicated in an integrated transport plan;
- The failure to comply with the above-mentioned makes the relevant person(s) guilty of an offence, and
- Under the deregulation of the road freight industry effected by the Transport Deregulation Act, 1988 (Act No. 80 of 1988), planning authorities must join forces with the MEC and registering authorities mentioned in the National Road Traffic Act, to ensure the effective regulation of freight operations by implementing the operator card system stated in Chapter VI of the National Road Traffic Act, to prevent damage to the road system and to achieve the other objects of this Act.

10.3.2 The National White Paper on Transport 1996

The aim of the white paper is to provide safe, reliable, effective, efficient, and fully integrated transport operations and infrastructure. It further aims to improve the level of service in such a way that will best meet the needs of freight and passenger customers as well as support government strategies for economic and social development whilst being environmentally and economically sustainable (Stellenbosch CIP 2016-2020, 2016).

10.3.3 Draft National Land Transport Strategic Framework (13 August 2015)

Freight transport has a significant impact on the national transport network. High transport costs translate to increased logistical costs. The main objective of the framework is to reduce the cost of freight

logistics, influence industry behaviour while maintaining profitability. In addition, the framework aims to reduce road transport congestion, improve road safety, and reduce logistics costs by distributing freight amongst other modes (Stellenbosch CITP 2016-2020, 2016).

10.3.4 National Freight Logistics Strategy, 2005

The strategy was developed to increase the efficiency and reliability of logistical services by reducing system, and inland freight costs, thus offering the client viable modal choices (Stellenbosch CITP 2016-2020, 2016).

10.3.5 The Provincial Strategic Goals

The Provincial Strategic Goals established that the government must encourage interventions that will assist in shifting freight haulage from road to rail modes (Stellenbosch CITP 2016-2020, 2016).

10.3.5.1 The Provincial Government of the Western Cape Strategic Goal 1

The goal includes various catalytic infrastructure projects such as small harbours strategy, road network strategy, and rail network facilitation that will create more jobs and economic growth and therefore an increase in the movement of freight (Stellenbosch CITP 2016-2020, 2016).

10.4 Current Freight Challenges

Globally, there are various challenges regarding freight transport management. The main issues are listed below (Open Learning Campus: Future trends and Challenges, 2021).

- Inadequate maintenance of roads and rail infrastructure leads to expensive rehabilitation.
- Speed restrictions on poorly maintained infrastructure also leads to reduced competitiveness, especially for rail transport.
- Regulations often hinder new entrants to the transport market and limit competition. Regulations to operate and manage a fleet should be harmonised.
- Developing countries are reluctant or unable to modernise the transport sector.

There are general freight and logistics issues that are prevalent within Stellenbosch Municipality such as lack of rail freight movement, high volumes of freight vehicles that impact road maintenance budgets, and road safety issues. There are also challenges that Stellenbosch Municipality can positively address during the next 5 years to improve and optimise freight movements. **Table 10.1** indicates the municipality's short-, medium-, and long-term initiatives, as sourced from previous CITP(s).

Table 10.1: Short-, Medium-, and Long-Term Initiatives

	Short term	Medium Term	Long Term
Plans and Studies	Freight Strategy	1. Strategic Freight Network 2. Hazardous Goods Network	
Infrastructure			<ul style="list-style-type: none"> • Infrastructure Improvement Programme • Klapmuts truck-stop development
Service Provision		Technology Innovation	A shift from road to rail transport
Law Enforcement	Mechanisms for better law enforcement and overloading control	Mechanisms for supporting self-regulation	

The key initiatives, sourced from Table 1, are discussed in further detail in the following section. The key initiatives identified from this table are:

- Mechanisms for better law enforcement and overloading control;
- A shift from road to rail transport;

- Hazardous Goods Network, and
- Technology Innovation.

10.5 Strategic Freight Network

10.5.1 Mechanisms for Better Law Enforcement and Overloading Control

Developments in technology allow authorities to manage traffic, including freight vehicles, with a lot more ease and less disruption to drivers (thereby lessening the impact on time and the economy). An example of a system that improves law enforcement by means of innovative technology is a virtual weigh station concept.

A virtual weigh station concept can be regarded as “Open Road Weighing” (similar to the Open Road Tolling, e-Toll being the local example) and is therefore almost a natural alternative to the conventional overload control options. A Virtual Weigh Station (VWS) is a Weigh-In-Motion (WIM) system that provides vehicle records for enforcement, traffic surveillance, and/or data collection in real-time and provides a way to unobtrusively monitor heavy vehicle traffic. The system automatically weighs vehicles as they travel at normal speeds along a roadway, classifies them based on weight and axle spacing, determines when vehicles violate regulations, produces records of heavy vehicles, and provides a display of these records on a computer with a network connection to the system. The system is made up of Weigh-in-Motion (WIM) sensors, image cameras, and automatic number plate recognition (ANPR) equipment as reflected in **Figure 10-4**.

Figure 10-4: Typical VWS site

Commercially available VWS systems can provide the following data:

- Vehicle class;
- Vehicle image;
- Time and date of record;
- Vehicle speed;
- Axle mass and spacing;
- GVM and legal GVM for that vehicle class;
- Equivalent single axle load (E80s) per axle;
- The overall length of the vehicle, and
- A schematic diagram of the vehicle showing loaded and overloaded axles.

When utilising VWS, two apprehension methods can be applied namely visual apprehension and silent apprehension.

When a vehicle is suspected of being overloaded, the vehicle will be requested to pull over at the next safe location and be weighed on a mobile scale. If found that the vehicle is possibly overloaded, the vehicle will be directed to the next static weighbridge. In Stellenbosch Municipality it may not be practical to pull over vehicles, as there is only one static weighbridge within the Municipality.

Silent apprehension entails vehicles being monitored over a pre-set period of time. If found that certain vehicles are consistently overloaded, the operating company of these vehicles will be given two weeks to inform Stellenbosch Municipality of measures on how to stop the overloading trend. If the trends continue, the operator will be subject to vigorous and stringent law enforcement exercises. Every vehicle

of the operator will be inspected and fines for every violation that is found can then be issued. If overloading still occurs, the licences of such vehicles can be suspended.

The actual enforcement may be an issue, as the Western Cape Government is responsible for the control of overloaded freight vehicles (Western Cape Government, 2019).

Stellenbosch Municipality will need to have further engagements with the Western Cape Provincial Government on how Stellenbosch can enforce the apprehension methods. One possibility is to develop a municipal bylaw that gives the municipality authority to apprehend those operators responsible for overloading.

10.5.2 A Shift from Road to Rail Transport

Modal shift could play a significant role in reducing CO₂ emissions. However, it should be noted that different transportation modes serve different markets. **Figure 10-5** shows the carbon intensity of freight transport modes (Open Learning Campus: Decarbonization and the Green Agenda, 2021).

Figure 10-5: Carbon Intensity of Transport Modes

(Source: Open Learning Campus: Decarbonization and the Green Agenda, 2021)

Currently, there is no heavy haul rail line within the Stellenbosch Municipality, however, as stated earlier, one of the main focuses of the Draft National Land Transport Strategic Framework is to distribute freight between modes, where the Provincial Strategic Goals aim to shift freight haulage from road to rail modes.

Although rail transport is significantly less carbon intense than road transport, a shift from road to rail transport is not always possible due to different market characteristics such as distance, the value of cargo, flexibility, and inefficiencies.

Railway performance can be improved by firstly, exploring the revival of railway through concessions. Secondly by modernising management concepts by making rail a customer-orientated business. Focus should be placed on core offerings with specialisation and standardisation that lead to seamless logistics. The development of strategies that would encourage one-stop-shop logistics by offering full-service packages or collaborations could prove vital in achieving the goal of distributing freight between modes. Lastly, special planning and land use measures should be used to congregate logistics activities close to rail lines (Open Learning Campus: Economic, Transport, and Trade Corridors, 2021).

Rail transport is already very efficient. However, some potential energy savings are to improve efficiency through technological enhancements in locomotive engines, improved driving techniques, optimised position of containers/cargo on the train, and the introduction of anti-idling devices logistics (Open Learning Campus: Decarbonization and the Green Agenda, 2021).

Figure 10-6 shows the existing rail infrastructure in Stellenbosch Municipality.

Figure 10-6: Stellenbosch Rail Infrastructure

Freight trips between 0 and 150 km are almost always cheaper when using road transport compared to rail transport (Pienaar & Vogt, 2014). This is mainly due to the high capital investment or fixed costs of rail infrastructure (roughly 75% of rail transport cost is fixed).

Stellenbosch already has existing, underutilised rail infrastructure. When comparing the major freight routes in Stellenbosch Municipality with that of the rail infrastructure (refer to [Figure 10-7](#)), it shows that the routes and the rail infrastructure intercept at 6 different locations. This creates an opportunity for intermodal transport.

By adding the existing and future industrial areas within Stellenbosch Municipality to the map (refer to **Figure 10-7**) this adds a layer to further illustrate where the opportunities for road and rail transport integration are located spatially.

Rail transport offers economies of fleet size and economies of infrastructure extension (Penaar & Vogt, 2014). Rail capacity can be increased by operating longer trains, or capacity can be quadrupled when moving from a single to a double track due to the elimination of directional conflict. However, it must be noted that it would not make sense to build more infrastructure if the capacity is not warranted.

The integration of road and rail transport can possibly lead to the following benefits:

- Reduced emissions caused by the transport industry;
- Fewer heavy vehicles moving through the town of Stellenbosch;
- Reduced congestion;
- Reduced wear of road infrastructure, and
- Reduced port congestion (for exports moving from Stellenbosch to the port of Cape Town).

It must be noted that further investigation and data collection is needed to fully understand where the major freight generators are and determine the feasibility of intermodal transport within the Municipality.

Figure 10-7: Stellenbosch Major Freight Routes/Rail Interceptions/Industrial Areas

10.5.3 Hazardous Goods Network

The transportation of dangerous goods is a specialised form of freight transport. Regulation requires that the type and classification of the hazardous cargo be displayed on the vehicle. The driver of such a vehicle is required to undergo specialised driver training. The proposed route of the vehicle must be communicated to authorities to ensure sufficient levels of safety (Stellenbosch CITP 2016-2020, 2016).

The safety of transporting dangerous/ hazardous goods can be improved by ensuring clear and comprehensive road transport legislation. The legislation should include aspects such as competitive quality licensing, which includes the financial, legal, and ethical status of the companies, the quality of the trucks, and the skills and training of the drivers. A fleet renewal financing scheme could also be implemented to ensure overall quality (Open Learning Campus: Economic, Transport, and Trade Corridors, 2021).

The movement of dangerous/hazardous goods should be contained to routes with minimal contact with residential areas or areas where environmental awareness must be upheld such as rivers, wetlands, or nature reserves. The only exception should be vehicles such as fuel tankers, which in some cases need to move through residential areas to offload fuel.

Taking all the above into consideration, an example of a possible hazardous/abnormal goods network is presented in Figure 10-8.

Figure 10-8: Possible Hazardous/Abnormal Goods Network

The red routes allow hazardous/abnormal loads to be moved without moving through the town of Stellenbosch. It also avoids much of the sensitive environment(s) such as farmlands, rivers, and nature reserves. The yellow routes are possible routes that can be added to the network to increase the flexibility and accessibility of the network with minimal contact with sensitive areas. The following could be possible bylaws to consider:

- No vehicles moving hazardous/abnormal goods may use the main freight routes and drive through the town of Stellenbosch (refer to **Figure 10-8**) between 06:00-19:00. Only vehicles (like fuel tankers) that need to offload these goods in the town will be allowed to do so, with prior consent from Stellenbosch Municipality.
- Vehicles moving hazardous/abnormal goods may use the main freight routes between the hours of 19:00-06:00.

It must be noted that further investigation will be required to assess the feasibility of a hazardous/abnormal goods network.

10.5.4 Technology Innovation

Technology can be used as a tool to improve the efficiency of freight operations. Technology enhancements now offer capabilities that can assist in operational capacity assessments, strategic planning, and environmental monitoring. By having sensors along main freight routes that continuously stream data performance can more easily be measured. Having accurate and reliable data available to all relevant parties will reduce the need for human inspection and paperwork (Open Learning Campus: Economic, Transport, and Trade Corridors, 2021).

Due to changing market circumstances, transport systems must be flexible and adaptable. Technological innovations, together with their positive results are at times hindered by regulations, especially if the new technology competes with a nationalised transport system with strong political influence. Often, when deregulation takes place, technological innovation increases. It is critical to only regulate when needed (Open Learning Campus: Future trends and Challenges, 2021).

New technologies are complex, and governments cannot always implement them. Future transport systems will most likely be private initiatives or public-private partnership schemes (Open Learning Campus: Future trends and Challenges, 2021).

It may be warranted for Stellenbosch Municipality to further investigate how technology could possibly assist in the efficient and effective integration of freight modes. For example, the use of technology could assist in determining the correct and most efficient balance between the different freight modes.

One such technological innovation, which may be utilised in the future is drone technology. Stellenbosch Municipality should consider a policy for such drone deliveries.

The South African Civil Aviation Authority (SACAA) has already introduced rules, regulations, and safety precautions around Remotely Piloted Aircraft System (RPAS) (Western Cape Government, 2019). The laws cover where the drones can and cannot be operated as well as licencing requirements.

10.6 Environmental Challenges

Transport emissions account for between 12-25% of CO₂ emissions. It is expected that the transport sector will grow more than any other sector leading to increased CO₂ emissions. **Figure 10-9** shows the environmental impact of transport and logistics (Open Learning Campus: Decarbonization and the Green Agenda, 2021).

Figure 10-9: Environmental Impact of Transport and Logistics

(Open Learning Campus: Decarbonization and the Green Agenda, 2021)

Freight transport and logistics have numerous externalities, which include atmospheric pollution, noise pollution, vibration, congestion, accidents, land use and biodiversity, waste, and visual intrusion. To make logistics more sustainable in the long run, decarbonisation of the transport sector is needed. There are various ways to reduce logistical movements by avoiding the extra mile or extra-weight being transported (Open Learning Campus: Decarbonization and the Green Agenda, 2021).

- Waste minimisation – reduce waste in logistics activities (logistic waste include aspects such as incomplete loads, badly routed deliveries, and the misuse of resources).
- Recycling – Move from a linear to a circular economy, which will reduce logistical activity.
- Digitisation and digital transformation – Reduce the amount of waste by shifting to e-books and digital documents within the sector
- Miniaturisation – Increased functionality leads to a reduction in the weight and volume of products.
- Material substitution – The development of lighter materials can lighten the loads carried and thus reduce the weight of vehicles, fuel consumption, and emission.
- Postponement – Reduce product mass by delaying the final packaging and customisations of products until they are near their final point of consumption can reduce product mass.

It is key to note that the above-mentioned processes are universal and should be adopted if possible.

Vehicle routing and scheduling can have a significant impact on emissions and cost. Vehicle routing and scheduling can assist in managing unexpected changes in customer demands, the time window for deliveries, and pick-up and congestion. The use of technology can assist in optimising time, cost, or distance. Some models can adapt to fuel use and emissions logistics (Open Learning Campus: Decarbonization and the Green Agenda, 2021).

Increasing vehicle utilisation increases economic and environmental benefits. Globally, around 25% of trucks run empty while around 40% are only half loaded. Some studies found that bigger operators with bigger fleets run closer to optimal capacity. Large Asset Based Carriers had 9% empty running while

Independent Carriers/Owner Operators ran up to 50% empty logistics (Open Learning Campus: Decarbonization and the Green Agenda, 2021).

Table 10.2: Key Freight Intervention and Initiatives

Key Freight Intervention and Initiatives								
	Interventions/initiatives	Description	5-year target 2023-2028	Year 1 2023/24	Year 2 2024/25	Year 1 2025/26	Year 1 2026/27	Year 1 2027/28
1.	Mechanisms for Better Law Enforcement and Overloading Control.	The Virtual Weigh Station (VWS) is an innovative technology for traffic management, specifically for freight vehicles. It operates as an "Open Road Weighing" system and acts as an alternative traditional overload control methods. The VWS weighs vehicles in motion, classifies them based on weight and axle spacing, detects violations, records heavy vehicles, and displays the information on a computer through a network connection. The system consists of WIM sensors, image cameras, and ANPR equipment. This technology provides real-time data for enforcement, surveillance, and data collection, making it easier for authorities to manage traffic with less disruption to drivers and less impact on time and the economy.	2	n/a	1	1	n/a	n/a
2.	A shift from Road to Rail Transport.	The modal shift from road to rail transport can play a crucial role in reducing CO2 emissions. However, different transport modes cater to different markets and there is no heavy haul rail line in the Stellenbosch Municipality at present. The Draft National Land Transport Strategic Framework focuses on distributing freight between modes, with the goal of shifting freight haulage from road to rail. Stellenbosch already has underutilised rail infrastructure that intersects with major freight routes at 6 different locations, creating opportunities for intermodal transport. The addition of existing and future industrial areas within the municipality to the map further highlights the potential for road and rail transport integration (see Figure 10-7 in the section).	5	1	1	1	1	1
3.	Hazardous Goods Network.	Transporting dangerous/hazardous goods is a specialised form of freight transport that requires clear and comprehensive	2	n/a	1	1	n/a	n/a

Key Freight Intervention and Initiatives								
	Interventions/initiatives	Description	5-year target 2023-2028	Year 1 2023/24	Year 2 2024/25	Year 1 2025/26	Year 1 2026/27	Year 1 2027/28
		road transport legislation for improved safety. The legislation should include competitive quality licensing, fleet renewal financing, and driver training. The movement of these goods should be contained to routes with minimal contact with residential areas or sensitive environments such as rivers, wetlands, and nature reserves. An example of a hazardous/abnormal goods network is presented in Figure 8 of the section, where red routes allow for transportation without moving through the town of Stellenbosch, while yellow routes increase the network's flexibility and accessibility with minimal contact with sensitive areas.						
4.	Technology Innovation.	To enhance the effectiveness of freight operations, technology can be leveraged as a tool. Advancements in technology now provide the ability to evaluate operational capacity, plan strategically, and monitor the environment. Therefore, the Stellenbosch Municipality should consider investigating how technology can assist in the efficient integration of freight modes. For instance, technology can help determine the optimal balance between different freight modes. Drone technology is one such innovation that may be utilised in the future, and the municipality should consider a policy for drone deliveries.	1	1	n/a	n/a	n/a	n/a

11 OTHER TRANSPORT RELATED STRATEGIES

11.1 Introduction

This Chapter deals with other transport strategies which relates to Law Enforcement, Safety & Security which includes Traffic Safety, Tourism, Fire services and Disaster Management, and finally an additional section which specifically highlights the need for a Communication Strategy which deals with Transportation to enable the move to NMT and also to improve transportation safety and security.

Whereas Transport leads this CITP, it is critical to understand that most municipal stakeholders have a vested interest in safe and secure mobility and public spaces; and that most will benefit from increased use of public transport and reduced congestion in Stellenbosch.

For this to be successful, continued stakeholder engagement is key. It is therefore important to explore within the Municipality the contribution that each department can make to these shared objectives, and to include Community Development; Spatial Planning and Land Use Management, Fire Services, Traffic Services; Traffic Administration; Law Enforcement and Security Services; By-Law Enforcement; Sport and Parks and Recreation; and Environmental Management in the further revision of this CITP in future.

Roads and Storm water, solid waste management and Electricity Services are also important. Waste management plays an important role in keeping public spaces, sidewalks and road reserves clean and free of litter. Neighbourhood revitalisation should have safety and security at the core of its plans. Local Economic Development and Tourism is co-dependent with Transport in this endeavour, as neither can achieve its objectives without providing safe and secure facilities and public spaces.

11.2 Law Enforcement

According to the WCG Socio-economic profile for Stellenbosch the number of road fatalities decreased from 34 in 2019/20 to 31 in 2020/21. The number of fatal crashes decreased from, 35 to 39 for the same reference period - refer to **Figure 11-1**. Restrictions on the sale of alcohol and limited personal movement due to COVID lockdowns resulted on a decline in cases from 236 in 2019/20 to 164 in 2020/21.

Source: Western Cape, Social – Economic Profile 2021

Figure 11-1: Fatal Crashes and Road User Fatalities

Stellenbosch Municipality has built a reputation for relatively strict traffic law enforcement. The fixed speed cameras and diligent enforcement of speeding are inter alia important contributors to this situation. As the law enforcement department is key to the enforcement of traffic by-laws, it is important that proper engagement with them be undertaken to define their issues and to develop strategies to address them.

The Safety Strategy of the Stellenbosch Municipality has been reviewed to adapt to the changing environment of crime in its area of jurisdiction. The action plan which follows the Safety Strategy, has 3 phases which were all implemented. This included the installation of License Plate Recognition cameras (LPR) at all main entrances and exits to Stellenbosch and Franschhoek towns. These are also supplemented in residential areas. The Municipality also continuously invest in CCTV and the CCTV Masterplan is continuously updated to accommodate new needs and investments.

These strategies and projects relate to general crime prevention, and it is proposed that these strategies be supplemented with specific focus to public transport interchanges, Public Transport routes, NMT routes and cycling routes, also with respect to lighting, CCTV and crime reporting.

11.3 Safety and Security

11.3.1 Introduction

Unsafety and fear of crime are important barriers to the use of public transport and public spaces. Perceptions of safety are an essential lever for individuals and groups to embrace public transport and non-motorised transport, by choice rather than of necessity. It is not possible to address unsafety without responding to perceptions of unsafety; users of public space often think they are unsafe when they are relatively safe, and vice versa.

Safety and security should be seen as a transversal issue that aims to enable accessible, safe and affordable transport for all. Safety and security objectives are identified to strengthen interventions in the CITP aimed at both:

- Security, being protection against known and perceived risks and threats to people and property, and
- Safety, being the achievement of a state in which there is less need for security, with reduced perceptions of vulnerability and fear.

Thus, they must both be safe and feel safe to let go of their sense of unsafety. It is therefore important to provide security cover where necessary, in the form of visible policing and rapid response to incidents, but equally so to manage transport hubs and public spaces to be most conducive to safe navigation.

The inclusion of safety and security in the CITP aligns with the sustainable transport approach and the promotion of public transport. Safe and secure transport will also facilitate equitable and safe access to opportunities for study, work and leisure. It should be seen as contributing to the general wellbeing of a flourishing town.

11.3.2 Objectives

Objectives of a collaborative and sustainable Safety and Security approach:

- Reflect and respond to the status of safety and security in the municipality;
- Align actions to mandates of diverse municipal and external stakeholders;
- Apply a gendered lens to the use of public space and public transport;
- Spotlight special needs, for instance people with disabilities and elderly people, families;
- Respond transparently to barriers to effective intervention to achieve safety and security;
- Ensure that municipal officials understand what makes public space and public transport safe;
- Support integrative safety and security operations;
- Create feedback loops that sol;
- icit information from users and are responsive to that information, providing updates on safety interventions, in the process creating and sustaining a trusting relationship between the municipality and users, and
- Explore technology-based interventions (other than CCTV), for instance reporting tools that capture lived experience, safety audits.

11.3.3 Traffic Safety and Security

In the formulation of a safety and security strategy within the CITP, many cities take their lead from law enforcement and regard CCTV systems as the go-to intervention. This is arguably the most expensive way of addressing problems of insecurity and it does not necessarily deliver value against cost. In many instances, the cost of the system cripples the ability of the municipality to address issues such as lighting and visibility, safe and clean sanitation (particularly for women), access control, walkability of sidewalks and pathways, signage, reporting systems and in-person responses. These should be considered as the essentials of a safety and security plan. Analysis of the findings or existing surveillance systems can provide insights into where best planning, design, infrastructure, management and maintenance budgets should be applied, for the greatest safety returns.

Law enforcement and traffic safety and security, as well as by-law enforcement are obviously at the centre of delivery of day-to-day safety and security services.

As in most urban areas, traffic safety and security are a huge concern. With many students and commuters moving on foot and bicycle, the conflict between them and road vehicles is high. Pedestrians

are also often involved in road accidents on the rural road sections linking the different nodes of Stellenbosch. Reducing this conflict and making all roads safer for NMT is a challenge that requires better co-ordination with the provincial road authority who manages large sections of these roads. The maintenance of lighting on some provincial routes has been mentioned as an issue warranting attention and the creation of an MOU between the municipality and the province should be pursued.

The second major concern is the safety and security of (especially) women and children who are using public transport. Whilst upgrades are being undertaken at taxi ranks to improve lighting, CCTV, visibility of law enforcement, higher quality and gender segregated bathrooms, much can still be done. Upgrades to the accommodation of informal trading are also generally considered necessary.

There is a perception that taxis are not safe; they are used by those who have no alternative, rather than those who can choose. To improve public transport, there should be a system in place to encourage taxi drivers and owners to improve their services. A system such as the blue dot and red dot system enforces compliance. A reward system will incentivise taxi drivers who are compliant and also give incentive to those who use taxis to encourage more people to use public transport. From a stakeholder engagement perspective minibus-taxis do not have a good reputation, both within the municipality and with external stakeholders, users and potential users. There is suspected taxi extortion taking place at ranks, where rival associations hold taxis with passenger's hostage until a release fine is paid. This is a criminal violation rather than breach of by-law and must be addressed by SAPS, who must also be engaged in this plan.

This safety and security approach requires sustained multi-disciplinary engagement, both within municipality and beyond, including civil society organisations and networks who either impact safety and security or are negatively impacted by unsafety. It is premised on the notion that everyone is and should be useful in achieving safety, with each stakeholder bringing different skills, experiences and knowledge to bear. The approach enables stakeholders to cast a safety lens on their area of work.

While a diverse group of stakeholders have been engaged through this process, it is not exhaustive. Consultation process should continue, recruiting participation in all stages of planning and implementation. Safety must be woven into the system that aims to transform the Municipality over time while protecting existing and new assets through activation of public space in a prosocial way, preventing vandalism, littering, illegal dumping, stimulating greater compliance with by-laws and reducing criminal activity overall.

Safety and Security: Key Intervention and Initiatives								
	Interventions/ initiatives	Description	5-year target 2023- 2028	Year 1 2023/24	Year 2 2024/25	Year 3 2025/26	Year 4 2026/27	Year 5 2027/28

11.4 Tourism

Both CBD areas of Stellenbosch town and Franschhoek are tourist hubs for local and international visitors. In Stellenbosch, tourists are attracted to the central area of the town (primarily around Dorp Street) due to the Cape Dutch buildings, heritage museums, and restaurants overspilling into the streets. The same can be said for Franschhoek Main Road. The road infrastructure of Stellenbosch town centre is narrow and in some places lei water channels limits the mobility of large vehicles. Coach (tour) buses can often be found transporting groups of tourists to and from Stellenbosch town.

Operations often include bringing large groups into town from outlying areas such as Cape Town to tour Stellenbosch for the day. This leaves the tour buses idle for most of the day and with limited to no parking facilities for these large vehicles, which contributes negatively to the movement of general traffic within the town.

In 2018, SMEC South Africa conducted the Stellenbosch and Franschhoek CBD Tour Bus Study for the Stellenbosch Municipality. The study found that since the CBD of Stellenbosch town is already well developed, tour bus parking facilities will have to be accommodated at existing properties. The following two potential areas were identified:

- The existing parking facility at Stellenbosch rail station, and
- Parking adjacent to Bloemhof High School.

For Franschhoek, one vacant areas (zoned as commons) was identified as a potential parking facility for tour buses, namely:

- An open area opposite the Huguenot Monument

The Tour Bus Study also recommends that funding should be set aside for the planning, detail design and implementation of the four proposed facilities (the study does provide a costing of each intervention). Upgrading of existing facilities is also required as well as the retention of the existing on-street parking bay which is used as a drop-off and loading facility for tour buses at the Village Museum in Stellenbosch.

The Stellenbosch municipal area is one of the most scenic areas in South Africa and tourism is (and should) be a very important industry. It can have huge economic benefits for everyone, the challenge, however, is to optimise facilities, such as pedestrian accommodation, wherever required for tourism. It is therefore important to have adequate co-operation between the Tourism organisations and the Municipality in this respect. The concept of feedback loops between stakeholders has been mentioned, also in reference to the tourist needs of Franschhoek.

For this revision of the Stellenbosch Municipality CIP, the project team proposes that the four listed interventions for both Stellenbosch and Franschhoek be investigated further to determine the feasibility thereof.

Tourism: Key Intervention and Initiatives								
	Interventions/ initiatives	Description	5-year target 2023- 2028	Year 1 2023/24	Year 2 2024/25	Year 3 2025/26	Year 4 2026/27	Year 5 2027/28
1.	Stellenbosch - Tour Bus Parking Facility 1	Upgrading the existing parking facility at Stellenbosch rail station						
2.	Stellenbosch - Tour Bus Parking Facility 2	Formalising the parking facility adjacent to Bloemhof High School						
3.	Franschhoek - Tour Bus Parking Facility	Formalising the open area opposite the Huguenot Monument						

11.5 Universal Access

There can be little doubt that everything possible should be done to provide universal access in Stellenbosch. It was considered that the Stellenbosch Disability Network should be included in the process as they can help to understand the types of disability, challenges that people living with disability have in terms of transport and how they would like to participate in the process.

Special needs passengers are generally not well catered for in South Africa's the public transport systems. Public transport infrastructure provision, including non-motorised transport, has until recently not been designed and constructed in such a way that the needs of people with disabilities have been catered for.

Lack of physical access, both to and within the built environment, is a major factor contributing to the ongoing exclusion of people with disabilities from mainstream society and using public transport. The accessibility of the built environment concerns how easily, safely and equally people with special needs or impairments can use buildings, facilities and public spaces. Physical and other barriers discriminate against some people by not allowing them to move freely and independently within their built surroundings (SAHRC, 2002).

11.6 Fire Services and Disaster Management

The provision of fire services and adequate response to disaster situations should not be neglected. The fire services indicated that there are informal settlements in Kayamandi where it is difficult for them to access and to respond timeously and effectively. Azania informal settlement is one of these settlements where the road system must be reviewed as it cannot be accessed by fire trucks.

It is considered that there is a lack of planning in these informal settlements, and even after there has been a severe fire, the dwellings have been reconstructed at the same density, without demarcated routes for vehicles, nor fire breaks. It was stated that in 2013, around 1000 shacks burnt down resulting in the municipality giving each owner a fire kit worth R9000. There are allegations that some residents

start fires intentionally to receive the fire kit (this pattern is mostly observed during the festive season, which does coincide with the fire season).

11.7 Transport Communication Strategy

11.7.1 Motivation

Communication underpins the ability of the municipality to be a good partner to achieve the objectives it shares with those who live in, travel through, visit and use it. Being a good partner is essential to mutual trust. Throughout South Africa and indeed in many municipalities across the globe, there is a deficit of trust, and this makes it harder for the municipality to make decisions, deliver services, and offer new services. Communication mechanisms should promote integration across diverse municipal departments. This will allow the municipality to unite in communications that bring back hope in communities by leading a shift in attitudes and behaviour in the community to encourage active citizenry in support of CIP objectives. Many community members are frustrated and feel hopeless because of poverty, inequality, crime, violence and latterly of the impact of COVID-19. Communities live with high levels of trauma and uncertainty, often looking for interventions that have an individual rather than a generalized impact. This is a challenge for resource-strapped municipalities, where demand often exceeds capacity to deliver.

The CIP should be supported by a communication strategy that aims to shift attitudes and behaviour of (municipal officials and) community members who:

- Believe themselves to be dependent on their private vehicles to move around Stellenbosch, and those who regard private vehicles as the aspirational mode of transport in Stellenbosch;
- Believe that public transport cannot be safe and that they have no agency in making it safer;
- Have never used public transport (in Stellenbosch) including public officials;
- Don't understand the links between infrastructure, maintenance, reliability, predictability, and safety (particularly of women);
- Vandalize infrastructure without understanding the impact of their actions on their safety and the safety of their communities;
- Do not come forward with information about those who vandalize infrastructure (because they don't believe it will make any difference/are frightened of reprisals);
- Who do not know their way around Stellenbosch and are easily lost in the city, and
- Who can help by understanding the importance of making spaces safer for women.

11.7.2 Communication Actions/interventions

The following transport communications actions / interventions are proposed:

- Establish feedback loops with community members, particularly targeting women, who are both more vulnerable because they are women and because they are more likely to be traveling with children, the elderly, people with disabilities. They are also more likely to have routines and use routes that place them at greater risk than men. Women are also more likely to be aware of risk factors, and to have information that will be useful to the municipality. Hypothesis: If the city is safe for women, it will be safe for everyone.
- Promote the convenience of public transport routes, cycle lanes, pedestrian precincts.
- Engage taxi associations, drivers and marshals to understand how their own behaviour can assist in increasing the user base of taxis. Develop a campaign with the associations for expansion of their user base; negotiate rules of engagement. Implement a rapid reporting and response for issues at taxi ranks and taxis. Introduce gender sensitive principles and behaviour (#notinmytaxi) and an understanding of vulnerabilities of women in the city.
- Disseminate materials (for instance in taxis, at transport hubs, in municipal offices and service points) about the benefits of public transport and NMT
- Engage senior municipal officials to use and communicate about public transport and NMT (lead by example)
- Publish principles, findings, recommendations, and responses generated by communications processes in municipal media
- Insinuate issues of women's dignity, safety and freedom of movement into municipal messaging

- Use social media to promote interpersonal safety on public transport in Stellenbosch
- Convene discussions focused on ways in which increased demand for public transport will improve public transport.

The municipality will only achieve sustainable behaviour change by collaborating (rather than just consulting) with service providers and communities and enabling them to take on the responsibility of making their spaces safer as key partners. When communities do not understand the complexity of safety, they will continue to allow their spaces to be used for unsafe activities. Only when communities are equipped and empowered, they will understand their role in ensuring their environments are safe for all.

Transport Communication Strategy: Key Intervention and Initiatives

12 FUNDING

12.1 Current Funding Sources

12.1.1 National Allocations

Public-, Private-, Freight- and NMT in all its facets (planning, construction, implementation, monitoring, upgrading, operations and maintenance) is the responsibility of the Stellenbosch Municipality and is enshrined in the Constitution. In a country where public funds are limited, transport has to compete with other basic amenities that government should be able to provide to its citizens. This includes, amongst others, housing, water, sanitation, education and health facilities.

The Division of Revenue Act (DoRA) allows funds to flow from National Government to Provincial Government, Metropolitan and District Municipalities and even Local Municipalities.

The flow of funds is broadly categorised as follows:

- Equitable share;
- Expanded Public Works Programme Integrated Grant for Municipalities;
- Integrated National Electrification Programme (Municipal) Grant;
- Local Government Financial Management Grant, and
- Integrated Urban Development Grant.

The allocation from National Government for the Stellenbosch Municipality for the MTEF period is indicated in **Error! Reference source not found.**

Table 12.1: National allocations to Stellenbosch Municipality

National Allocations				
National Allocations ('000)	2022/2023	2023/2024	2024/2025	Total
Equitable share	R179 634	R196 720	R215 547	R591 901
Expanded Public Works Programme Integrated Grant for Municipalities	R4 928	-	-	R4 928
Integrated National Electrification Programme (Municipal) Grant	R28 350	R6 000	R6 269	R40 619
Local Government Financial Management Grant	R1 550	R1 550	R1 550	R4 650
Integrated Urban Development Grant	R65 747	R42 114	R43 821	R151 682
Total	R280 209	R246 384	R267 187	R793 780

Over the MTEF period, the majority of the allocations is received from the equitable share (75%) and the Integrated Urban Development Grant (19%). In total SM will be receiving almost R 800 million from National Government over the MTEF period. The Integrated Urban Development Grant is most likely a combination of the Urban Settlement Development Grant and the Integrated City Development Grant. The total for the Integrated Urban Development Grant for the MTEF is R 151 million, or 19% - within these allocated funds, public transport still needs to compete with roads, water, energy, housing and land acquisition and development.

The Public Transport Network Grant, which is specifically earmarked for the planning, implementation and operations of the approved Integrated Public Transport Network in a Planning Authority, is currently not allocated to SM as it is not one of the Cities that is eligible for this grant. Cities of similar size as Stellenbosch that is currently receiving a share of the PTNG includes George and Mutsunduzi.

The Public Transport Network Grant (PTNG) grant has been in place for a number of years, and within this time, it has changed its name a few times. Originally it was called the Public Transport Infrastructure and Systems Grant (PTISG) and intended only for supporting capital expenditure to establish new transport systems in line with national Department of Transport (NDoT)'s Public Transport Strategy and Action Plan.

It was initially thought that the new Bus Rapid Transit (BRT) systems would not have big operating deficits. However, as projects have been implemented, it has become apparent that there are significant

operating deficits to be expected. The conditions of the PTISG were then relaxed to allow the grant to be used to cover some of the operating deficits.

To reflect this change, the grant was split into two, namely:

- Public Transport Infrastructure Grant (PTIG) – for capital items, and
- Public Transport Network Operating Grant (PTNOG) – for certain operating items.

However, this made it difficult to switch money between the two and so the two grants were amalgamated again into one grant – called the Public Transport Network Grant (PTNG) – but with two ‘components’ – a ‘Network Operations Component’ and a ‘Network Infrastructure Component’. This is the current shape of the grant in the latest version of the Division of Revenue Act.

The Department of Transport can consider a city for the PTNG, but the City must apply in accordance with the guidelines as contained in the DoRA, Grant Schedule 5, Part B.

12.1.2 Provincial Allocations

The Western Cape Government provides allocations to local authorities in the Province per line function which is indicated in Table 12.2.

Table 12.2: Provincial allocations to Stellenbosch Municipality

Provincial Allocations					
WCG Departments and funding ('000)	2022/23	2023/24	2024/25	Total	Percentage
Cultural Affairs and Sport	R14 112	R11 629	R12 151	R37 892	22,3%
Community Library Services Grant	R14 112	R11 629	R12 151	R37 892	
Development of sport and recreational facilities					
Environmental Affairs and Development Planning	-	-	-	-	
RSEP/VPUU municipal projects					
Department of Local Government	R38	R38	R38	R114	0,1%
Community Development Workers Operational Support Grant	R38	R38	R38	R114	
Human Settlements	R35 890	R58 003	R33 900	R127 793	75,3%
Human Settlements Development grant (Beneficiaries)	R15 040	R30 823	R27 900	R73 763	
Informal Settlements Upgrading Partnership Grant: Provinces (Beneficiaries)	R20 850	R27 180	R6 000	R54 030	
Provincial Treasury	R256	R245	R249	R750	0,4%
Capital Building Grant	R256	R245	R249	R750	
Western Cape Financial Management					
Transport and Public Works	R495	R495	R1 122	R2 112	1,2%
Financial assistance to municipalities for maintenance and construction of transport infrastructure	R495	R495	R495	R1 485	
Integrated transport planning			R627	R627	
District Municipality	R1 020	R0	R0	R1 020	0,6%
Safety Initiative Implementation-whole of society (WOSA)	R1 020			R1 020	

Provincial Allocations					
WCG Departments and funding ('000)	2022/23	2023/24	2024/25	Total	Percentage
Total	R51 811	R70 410	R47 460	R169 681	100,0%

The majority of the funds is allocated by the Human Settlements Department (75%), followed by the Cultural Affairs and Sport (22.3%). The provincial department of Transport and Public Works contributes about R1.5 million for maintenance and construction of transport infrastructure and R0.6 million for integrated transport planning.

In addition to the allocations indicated in Table ???, there are Provincial Departments that are directly involved in projects in the SM. The budgets, per department, are indicated in Table 12.3.

Table 12.3: Provincial Infrastructure Projects and Programmes – MTEF Period 2022/23 - 2024/25

Provincial Infrastructure Projects and Programmes												
Provincial Department	Number of Projects	Value (all amounts rounded to R'000)					MTEF Totals	Progress Rating				
		Infrastructure Transfers - Capital	New or Replaced Infrastructure	Non - Infrastructure	Rehabilitation, Renovations and Refurbishment	Upgrading and Additions		2022/23	2023/24	2024/25	2025/26	2026/27
Education	2	R0	R90 000	R0	R0	R0	R90 000	n/a	n/a	n/a	n/a	n/a
Health	10	R0	R0	R9 826	R27 647	R2 662	R40 135	n/a	n/a	n/a	n/a	n/a
Human Settlements	14	R189 883	R0	R0	R0	R0	R189 883	n/a	n/a	n/a	n/a	n/a
Transport and Public Works	12	R0	R0	R0	R1 127 553	R0	R1 127 553	n/a	n/a	n/a	n/a	n/a
Total	38	R189 883	R90 000	R9 826	R1 155 200	R2 662	R1 447 571	n/a	n/a	n/a	n/a	n/a

Of the 38 projects that the Western Cape Government is involved with in SM, 12 are the responsibility of the Transport and Public Works Department. The infrastructure and capital projects listed in Table 12.4 (above) are in various stages of implementation, with certain projects in the planning phase, some in implementation (construction in progress) phase and some in close-out phase of the project.

The Provincial Department of Transport and Public Works will provide in the order of R 1.1 billion over the MTEF period for rehabilitation, renovations and refurbishment projects.

The detail of the Provincial Department of Transport and Public Works expenditure can be found in Table 12.4.

Table 12.4: Provincial Department of Transport and Public Works Investment Projects and Programmes

Provincial Department of Transport and Public Works - Infrastructure Investment				
Department	Nature of Investment	Project ID	Project Name	MTEF TOTALS ('000)
Transport and Public Works	Rehabilitation, Renovations & Refurbishment	206038	C1092 Somerset West - Stellenbosch	R1 000
		198138	C1151 Kuilsriver-Stellenbosch	R1 000
		3914	CW DM Reseal	R14 200
		206160	C1217 Reseal Stellenbosch - Pniël (Helshoogte Pass)	R22 000
		187000	Modernisation Elsenburg - Main Building Phase 2 (Labs)	R45 422
		196759	C1151 PRMG Kuilsriver-Stellenbosch	R64 000
		3926	CW DM regravell	R84 400
		3929	CW DM regravell	R97 960
		180626	CYCC - Lindelani	R125 571
		196758	C1150 PRMG Helshoogte Rd - Franschoek	R142 000
		24950	C914 Spier Road Phase 3	R245 000
		196018	C7492 Reconstruct Road - Franschoek	R285 000
TOTAL		12		R1 127 553

With the exception of the modernisation of the Elsenburg main building (R 45 million) and the Lindelani Child Youth Care Centre (R 125 million), the majority (85%) of the projects and programmes of the Provincial Department of Transport and Public Works is allocated to transport related projects over the MTEF period. These funds are allocated to road infrastructure improvement projects.

12.2 Funding objectives

The Municipal Finance Management Act (2003) (MFMA), together with the Municipal Systems Act (2000) (MSA) ensure that municipalities' priorities, plans, budgets, implementation actions and reports are properly aligned. The Acts identify the main components of the financial management and accountability cycle and how they ought to be aligned. In this regard, the following are applicable:

- The Integrated Development Plan (IDP) sets out the municipality's goals and development plans, which need to be aligned with the municipality's available resources. Council adopts the IDP and undertakes an annual review and assessment of performance based on the annual report.
- The three-year budget sets out the revenue raising and expenditure plan of the municipality for approval by council. The allocation of funds needs to be aligned with the priorities in the IDP.

It is therefore a legal requirement that financial implications for the IDP (and thus its sector plan the CIP) are reported over a three-year period, summarising the capital projects along with their respective budgets. These are planned to be executed over the three-year MTEF period. Projects over the

remaining term of the CIP are considered on their merits annually and reported on in subsequent reviews.

Operating budgets for the Stellenbosch Municipality should be reported on an annual basis per directorate.

As the quality of the public transport system increases the recurrent funding needs will grow. Stellenbosch Municipality will require additional funding to address backlogs in the maintenance, upgrade and preservation of the road network and provide for effective freight movement.

Funding is becoming increasingly problematic in the current environment where the economy has contracted substantially mainly due to sluggish growth due to Government Policies, state capture and more recently the impact of the COVID-19 pandemic. During the height of the pandemic (2020, hard lockdown) government had to re-prioritise and re-allocate funds to cover for the costs of fighting the pandemic. This has led to major cuts in all budgets, and the transport sector, and specifically the public transport sector was not spared. All indications are that the South African economy will take years to recover to pre-pandemic levels.

Authorities are required to improve their public transport offering, despite the funding challenges that is brought about by the economy. This is a tough ask, and additional funding sources will have to be sourced, in addition to the diminishing available resources (mainly obtained from national grants).

The objective is for the Stellenbosch Municipality to actively explore and participate in efforts to access additional sources of funding. The following funding sources should be explored:

1. Revenue from Local Sources

Various studies have been done in City of Cape Town and the City of Johannesburg on alternative sources of local revenue. Sources such as bulk development contributions, increased vehicle licencing fees, increased parking fees, as well as smaller sources such as traffic fines and advertising revenue have been explored.

Much has been written about the allocation of a part of the fuel levy to the authority where the fuel is sold as an additional source of funds to specifically invest in roads and transport. It is unlikely to happen for reasons mentioned in Section 12.2.3.1.

It is understood that a new Local Business Tax and an expanded share of the fuel levy continuous to be pursued through the South African Local Government Association (SALGA).

Congestion charging is another potential source, and also serves as a TDM measure. The most recent example of congestion charging is in London. This can be an effective tool to change traveling patterns and modal choices. However, crucially a viable alternative has to be in place. It works in London because of the availability of one of the best public transport systems in the world.

A city-wide tax on non-residential parking bays should also be explored, including an additional tax on full time students that owns a car. The Stellenbosch Municipality should engage with Local Chamber of Business as well as the US to explore this income source further. It would constitute a tax on owning a vehicle.

2. Grant Funding

Significant grant funding through the Public Transport Network Grant is made available to Cities that are planning and/or implementing an Integrated Public Transport Network (IPTN).

Originally the fund had a different name and was used to improve the transport system for the FIFA soccer World Cup in 2010. The majority of the funds were allocated to the major metropolitan areas, that was also host cities. Since then, the IPTN Grant has been expanded to include Msunduzi and George. This provides an opportunity for Stellenbosch participate in the available funding from this grant.

3. Improving Transport Operational Efficiencies

A Transit-Oriented Development strategy will over the long term contribute a great deal.

4. Land Value Capture

Another potential source is 'land value capture', a term used to describe the recouping of some of the additional value that accrues to property owners as a result of the creation of a new public facility, generally in order to contribute towards payment of that facility.

If the provision of public transport leads to urban regeneration on a corridor, there will be an increase in property taxes which accrues to Stellenbosch Municipality. This is a form of land value capture.

5. Third Party Cost Recovery

Developers are required to pay developer contributions for new developments. The reason is that new developments generate additional traffic, which is to their benefit and which, if upgrading is not done, can lead to the deterioration of the road network and increased congestion for all users.

The Policy on Development Contributions for Bulk Engineering Infrastructure is dated 2014/15. The Stellenbosch Development Report and the Klapmuts Development Report refer to in this policy should be revisited for relevance and effectiveness of cost recovery.

6. Higher priority in City Budgeting

Finding alternative sources of funding is complicated. However, since the benefits of investment in public transport are significant, it can be expected that future expenditure in respect of quality of the road network and public transport services will increase.

Better transport systems improve the economic competitiveness of the city, attract investment and development, are part of the social wage for the poor, and make the city liveable, resilient and sustainable.

Table 12.5 indicates the capital (and planning) budget for infrastructure services, as contained in the most recent IDP for the 2022 – 2027 period.

Table 12.5: Capital (and planning) Budget: Infrastructure Services

Department	Nr of Projects	Proposed budget 2022/23 ('000)	Proposed budget 2023/24 ('000)	Proposed budget 2024/25 ('000)	Total
Roads and Stormwater	22	R27 411	R30 450	R29 677	R87 538
Traffic Engineering	20	R17 100	R19 500	R12 880	R49 480
Transport Planning	21	R18 950	R25 350	R12 300	R56 600
Project Management Unit (PMU)	1	R3 500	-	-	R3 500
TOTAL	64	R66 961	R75 300	R54 857	R197 182

Table 12.1 indicates that the majority of the budget for the MTEF is allocated to the Roads and Stormwater Department, with a total expected budget of R 87.5 million. The allocation is evenly distributed over the 3-year period. This department will oversee 22 projects over this period.

In total 64 projects to the value of R 197 million is budgeted for. The majority of these projects (R 106 million) will be funded through CRR (own funds) with the remaining being funded from the IUDG and DC-roads contributions.

A list, indicating the detail of the projects can be found in [Appendix C](#).

A high-level summary of the sources of funding for transport and the allocated budget per source is indicated in Table 12.6.

Table 12.6: Sources of funding and budget per source for the MTEF

Funding Source	2022/23	2023/24	2024/25	Total
National Government	-	-	-	-
Provincial Government				
<i>Allocations</i>	R495	R495	R1 122	R2 112
<i>Projects and Programmes</i>				R1 127 553
Stellenbosch Municipality	R66 961	R75 300	R54 857	R197 118
Total	R67 456	R75 795	R55 979	R1 326 783

The available funding for the MTEF is R 1.3 billion, with 85% being made available from the Provincial Government.

Table 12.7 is a summary of the projects and programmes envisaged in the MTEF period.

Table 12.7: Summary of projects and programmes and for the MTEF period

<i>Project Management Unit (PMU)</i>	R3 500			R3 500
Total	R443 307	R451 646	R431 830	R1 326 783

12.3 Context setting and current Realities

The key objective of projects, proposals and budgets of the CIP is to enable and contribute to economic growth, improved accessibility, equitable transport for all and a safe environment while ensuring environmental sustainability and good governance.

The projects and proposals contained in this CIP comprise the following project types:

- Roads and Stormwater: Maintenance, road construction and upgrading, street lighting and construction projects
- Traffic Engineering: Traffic calming, signage, traffic signals, intersection improvements, road marking, road safety improvements,
- Transport Planning:
 - Non-motorised Transport: Sidewalks, lock-up facilities for bicycles, pedestrianisation projects;
 - Public Transport: Public transport facilities (ranks, shelters), services
- Planning: Preparation of integrated transport plans and strategies, feasibility studies, masterplans.

12.3.1 Budget 2022/23 – 2027/27

Investment in transport, including road infrastructure, NMT, public transport (facilities, routes, shelters etc), road safety, intersection upgrades etc. is crucial for any city to develop.

The five-year budget (2016/17 – 2020/2021) as provided for in the CIP 2016 -2020 is reviewed in Table 12.8.

Table 12.8: Five-Year Budget (from CIP 2016-2020)

BUDGETED PROJECTS ('000)								
Department	Proposed budget 2022/23	Proposed budget 2023/24 (1)	Proposed budget 2024/25 (2)	Proposed budget 2025/26 (3)	Proposed budget 2026/27 (4)	Proposed budget 2027/28 (5)	Proposed budget 2028 to 2033	Budget 10 years from 2023 to 2033
Roads and Stormwater	R30 675	R28 250	R31 900	R35 400	R27 100	R27 900	R126 100	R276 650
Traffic Engineering	R13 965	R20 450	R17 380	R21 650	R27 350	R31 250	R89 650	R207 730
Transport Planning	R15 117	R28 850	R19 800	R40 900	R37 400	R35 500	R199 300	R361 750

BUDGETED PROJECTS ('000)								
Department	Proposed budget 2022/23	Proposed budget 2023/24 (1)	Proposed budget 2024/25 (2)	Proposed budget 2025/26 (3)	Proposed budget 2026/27 (4)	Proposed budget 2027/28 (5)	Proposed budget 2028 to 2033	Budget 10 years from 2023 to 2033
Total	R59 757	R77 550	R69 080	R97 950	R91 850	R94 650	R415 050	R846 130

The total budget for the CIP period (2023/24 – 2027/28) for the 3 Departments is R 431 million, and is allocated per department as follows:

- Roads and Stormwater : R 151 million (34,9%)
- Traffic Engineering : R 118 million (27,4%)
- Transport Planning : R 162 million (37,7%)

The projects per department and their allocated budget is indicated in **Appendix C**.

12.3.2 Review Applicable Legislation and Policy Changes

12.3.2.1 Division of Revenue Act

The DoRA is annually enacted to comply with section 214 of the Constitution that provides for national legislation to ensure an equitable division of nationally raised revenue between the three spheres of government. The annual DORA provides allocations to be made to local government over the medium term. The funds are transferred to municipalities in the form of unconditional and conditional grants.

It is important to note that the life-span, size and conditions to the grant can be amended according to physical policy developments. Amendments to grants for municipalities will be clearly communicated in the annual budget documentation, including the Division of Revenue Bill.

Unconditional grants are allocated to municipalities in compliance with the constitutional provisions for an equitable share on nationally raised revenue annually and to provide additional general revenue sources for local government. The largest is the Local Government Equitable Share (LGES). The second unconditional grant is the RSC Levy Replacement Grant that district municipalities receive as a replacement for RSC levies.

Metros receive an allocation for the sharing of the General Fuel Levy that is exclusively allocated to them as a replacement for the RSC levies. Allocations does not form part of DoRA, and are made in terms on the annual Taxation Laws Amendment Act.

12.3.2.2 National Land Transport Act

The National Land Transport Act (Chapter 3) provides for funding options to implement the CIP as follows:

- The establishment of a Municipal Land Transport Fund;
- Public Transport User Charges;
- The provision of funds for transport by the national Minister of Transport, and
- The provision of funds for land transport by the MEC.

To date the national Minister of Transport has made substantial funding available to some Municipalities for the implementation of Integrated Public Transport Networks. The Western Cape Government has funded the preparation of Integrated Transport Plans - in addition to the funding of the provincial road network in the Stellenbosch Municipal area. Other government grants are available to Municipalities e.g. the Municipal Infrastructure Grant (MIG). Although some funding has been allocated to the Stellenbosch Municipality from the MIG, additional funding should be sourced for eligible projects e.g. sidewalks and cycle tracks and public transport facilities (basic services).

The primary responsibility for the implementation of the CIP rests with the Stellenbosch Municipality. However, projects that are the responsibility of other agencies or bodies and who are the implementation agency for projects that fall within the Stellenbosch Municipality, are also included in the CIP.

12.3.2.3 Frameworks for Additional Grants to Municipalities

Detailed frameworks on Schedule 4, Part B, Schedule 5, Part B, Schedule 6, Part B and Schedule 7, Part B of the 2020 Divisions of Revenue Bill was Gazetted on 2 July 2020 (Gazette No.43495).

The frameworks pertaining to transport in general and public transport specifically is summarised in **Table 12.9**.

Table 12.9: General and Public Transport Frameworks

Name	Output	Project Life
Integrated urban Development Grant	<ul style="list-style-type: none"> Percentage of unsurfaced roads graded within the financial year Percentage of surfaced municipal road lanes which has been resurfaced and resealed Length of non-motorised transport paths built over the financial year 	1. Introduced in 2019/20 2. Continue up to 2022/23, subject to review
Municipal Infrastructure Grant	<ul style="list-style-type: none"> Number of poor households impacted through the construction of new infrastructure and the upgrading and renewal of existing infrastructure for: <ul style="list-style-type: none"> street and community lighting public facilities Number of kilometres of municipal roads developed, upgraded and maintained servicing the poor 	3. Continue until 2022/23, subject to review
Urban Settlements Development Grant	<p>The following outputs should be funded by the grant to support the improvement of the overall built environment:</p> <ul style="list-style-type: none"> increase in land provision for informal settlement upgrading, subsidised housing, or mixed-use developments in support of approved human settlements and other urban developments increase in access to public and socio-economic amenities 	4. The USDG will continue until 2022/23, subject to review 5. The UISP component is intended to become a separate conditional grant in 2021/22, subject to review
Integrated City Development Grant	<ul style="list-style-type: none"> Number of infrastructure projects including public transport, roads, water, energy, housing, land acquisition and development in implementation within identified integration zones 	6. Continue over the 2020 MTEF, subject to review
Neighbourhood Development Partnership Grant	<ul style="list-style-type: none"> Targeted locations with catalytic projects, defined as urban hub precincts with secondary linkages and rural regional service centres; <ul style="list-style-type: none"> catalytic programmes within integration zones; or built environment upgrade projects in urban townships and rural towns 	7. Continue over the medium term
Public Transport Network Grant	<p><u>Network Operations Component</u></p> <ul style="list-style-type: none"> Number of average weekday passenger trips carried on Public Transport Network Grant (PTNG) funded networks Number and percentage of municipal households within a 500m walk to an integrated public transport network (IPTN) station or stop that has a minimum peak period frequency of 15 minutes or better 	8. Continue until 2022/23, subject to review

Name	Output	Project Life
	<ul style="list-style-type: none"> Percentage uptime for network operating systems as a proportion of the network's public operating hours Passengers per network vehicle per average weekday <u>Network Infrastructure Component</u> <ul style="list-style-type: none"> Public transport network infrastructure including dedicated lanes, routes and stops/shelters, stations, depots, signage and information displays, control centres and related information technology, fare systems and vehicles (if the national Department of Transport (DoT) in consultation with National Treasury approves use of grant funds to purchase vehicles), non-motorised transport (NMT) infrastructure that supports network integration (e.g. sidewalks, cycleways, cycle storage at stations, etc.) Plans and detailed design related to IPTN infrastructure and operation 	

There is a number of grants available that specifically addresses public transport, improvement of roads, Non-Motorised Transport provision and mixed land use and integrating communities.

Public transport and Non-Motorised Transport is a major catalyst in all the efforts to improve the life of the poor in municipalities.

The Public Transport Network Grant was specifically established to improve the public transport offering in municipalities through the development of Integrated Public Transport Networks, with its associated business plans and operational plans.

12.4 Future Solution Developments/Proposed Interventions

The South African economy has been stagnating for over a decade, and with the sharp contraction experienced in 2020, the immediate future growth prospects (next 10 years) is looking increasingly unlikely.

The poor economic outlook, coupled with the international ratings agencies downgrade of the Country to junk status (April 2020) means that there is less tax money available for Government to spend on infrastructure and social services, and also that the money borrowed on the international market carries a higher interest rate (more tax money must be used to pay interest on the loans).

Coupled with this reality, investment in public transport systems is expensive and takes a long time to realise a positive return.

The future solution is a funding approach, that is focussed on the following pillars:

- Improve allocation from own funds to a sustained increase over a period of time;
- Pursue all grant funding through the DoRA, established for improving public transport, NMT etc;
- Pursue international donor agencies and Non-Government Organisations (NGO's) that focus on sustainability, community integration, clean energy, etc;
- Pursue possibility of Public Private Partnerships, and
- Improve access to state owned land by providing opportunities for developers to develop TOD on this land in areas where it is feasible.

The 2016-2020 CITP, recommended the following:

- That the IPTN be funded from the Public Transport Network Grant and that applications in the standard format be submitted to the Department of Transport;

- To ensure that additional funding is provided to implement high priority projects;
- A Committee be established from the relevant Municipal Departments, the Western Cape Government and other relevant agencies to formulate firm proposals for the funding of the projects listed in the 5 year budget, and
- Stellenbosch Municipality establish a Municipal Land Transport Fund into which the funds must be paid for use in implementing the CITP.

13 STAKEHOLDER CONSULTATION

13.1 Introduction

This chapter provides an overview of the stakeholder engagement process undertaken thus far. Internal and external stakeholders were consulted to ensure that the process is inclusive and all voices are heard. The process commenced with a workshop with internal Stellenbosch municipal official and the session is referred to as a What's Negotiable/ What's Not workshop. This was followed by external workshops with key stakeholders and a broader public participation process in a form of an open day both in Stellenbosch and Franschhoek.

13.2 Legislative Framework

13.2.1 1998 White Paper on Local Government

Local government should take a developmental approach, which requires commitment from local government to working with citizens and groups within the community to find sustainable ways to meet their social, economic and material needs and improve the quality of their lives. This should be driven by a shared vision and leadership must be provided for all role players in achieving local prosperity. Spatial integration is central to addressing wrongs from the past and to building an integrated society.

13.2.2 Batho Pele Principles

The Batho Pele principles highlight the importance of prioritising citizens through:

- Consultation with all citizens using different platforms to better understand their needs;
- Ensuring that citizens are aware of the level of service they are going to receive in order to manage expectations;
- At all times citizens must be treated with courtesy and consideration;
- Enabling and ensuring that all citizens have equal access to the services to which they are entitled;
- Citizens should have access to accurate information about services they are entitled to receive;
- Promoting openness and transparency in all processes;
- Establishing mechanisms for recording and to redress any dissatisfaction brought forward, and
- Making sure that public services are provided economically and efficiently in order to give citizens the best possible value for money.

13.2.3 Integrated Urban development Framework

The Integrated Urban Development Framework (IUDF) is government's policy position to guide the future growth and management of urban areas. Policy lever 7 looks at Empowered active communities and this is achieved through:

- Municipalities and cities acknowledging that their success depends on the buy-in of their citizens;
- Communities must be empowered to contribute to the development of spaces and will transform the quality of urban life;
- Municipalities must be inclusive, stable, safe, respect, embrace diversity, offer equal access to opportunities and promote participation of all people, and
- The power of a city is demonstrated through its ability to bring together a critical mass of social and cultural diversity.

13.3 Identified Gaps and Recommendations

Community engagement is difficult. It has become more and more difficult in South Africa, as communities have become increasingly frustrated over service delivery. Municipalities in South Africa attract large numbers of inhabitants seeking opportunity, improved livelihoods, higher average incomes and the municipalities have limited capacities and resources to meet these needs.

To ensure that the stakeholder engagement process is inclusive the process planners should consider aspects as the location, day and time of the engagement. The consultation process should ensure that

all those who participate are safe and that all voices are heard, this should not be seen as a tick box exercise.

13.4 Vision

A draft vision of What It Looks Like When It's Fixed was prepared as part of the consultation process. The vision is articulated as a model of 48 outcomes, making space for complex, systemic and sustainable transformation, and for all the mandates and objectives of all process participants. Stakeholder had the opportunity to share their inputs, and these have been used to update the vision. The vision provides a long-term destination for the process, a motivator for the collective work and a tool to be used to enable the work. The vision is made up of 48 outcomes because the plans we plan we work with are complex.

13.5 Process

13.5.1 Workshop One: What's Negotiable/ What's Not

This was an internal workshop attended by Stellenbosch municipality officials and the project team. In this workshop the scope of work, parameters and scope of work to be conducted were discussed and agreed. The officials had an opportunity to input on the draft vision. The turnout at the workshop was not good, it was then agreed that stakeholders who could not make it to the session will be invited to workshop three. As a result of excellent discussion the following were drawn out:

- Key stakeholders: stakeholders were identified to ensure that the process is inclusive. The need for an open day to enable broader public participation and ensure that the process is accessible to all. Stakeholders to be consulted to ensure that there is buy-in from the different interest groups and politicians.
- Reduce relevance of vehicles: offering alternatives that are reliable, safe, comfortable and convenient. In order for people to use public transport the system needs to be efficient and effective.
- Behaviour change communications: the need to shift attitudes towards car dependency by helping people understand the impact of 'one person: one car'. Share messaging to encourage people especially young people to use public transport to relieve traffic congestion. Messaging that will start conversations about climate change, alternatives that people can use and solutions that are sustainable.

Key recommendations

- The project team must be put together a timeline to help identified processes taking place and how the CIP can benefit and fit into each of these consultations in terms of data gathering. Consultation processes include the IDP process, Environmental process, and SDF.
- Consult the Stellenbosch Disability Network to understand types of disability and challenges that people living with disability have in terms of transport.
- Broaden the consultation process by not only relying on an online survey to reach the public.
- Consult with women who travel alone and mothers who travel with their children to understand their transport concern and needs.
- Have an open day to enable inclusive participation.
- Engage the Development Forum, the forum consists of property development stakeholders and business community with a focus on development. The forum is scheduled to meet on the 4th of May.
- Engage politicians and interest groups to get buy-in, stakeholders indicated that they can influence the process.
- Address safety issues to get people to buy-into the car-free living approach.
- Encourage walking by improving sidewalks, currently sidewalks do not have continuity.
- Arrange a meeting with the media to present the CIP prior to engaging the Council.
- Create pilot project to get the feel of how the community would react, one example was to close some streets on Sundays to encourage people to walk.
- Explore the option of centralized accommodation to reduce vehicle dependency. Mixed land used is essential to ensure that people can access services and opportunities closer to where they reside.

- Develop communication messaging to shift attitudes, “Living your better life is a better life for all”.
- Privatize some of the projects in the CITP to ensure that they can be implemented by entities that can sustain them.
- There are capacity needs within the municipality, currently 80% vacancies. Transport will need capacity support to achieve and deliver against the CITP.
- Reduce speed limit and increase petrol price to encourage more people to use public transport.

13.5.2 Workshop Two: Taxi Industry

On the 3rd of May a workshop with the taxi associations representatives was held. The session was with the Stellenbosch Taxi Association and Kayamandi Taxi Association, the Franschhoek Taxi Association representatives could not make it to the workshop. The associations indicated that they have not fully recovered from the impact of COVID-19. They have lost 40% of their income since COVID-19 as some people have lost their jobs, others are working from home and people opt for lift clubs or e-hailing services to minimise the risk of contracting COVID-19. Many operators have had vehicles repossessed as could not keep up with repayments. The representatives indicated that they are experiencing an increase in the number of people who are using their services as a result of an increase in petrol prices. They have also shared that there are more people using public transport around social grant collection dates. Farmers transporting employee using bakkies /vans have been identified as a problem as this mode of transport is not safe and comfortable for passengers. Students and workers are currently their biggest client base. The taxi associations raised that they would like to retain and attract more users and below are some of the proposed solutions:

- **Predictability:** people are using e-hailing services and lift clubs because they collect at drop them at their destination. These services are reliable and convenient, users perceive them as safe. The taxi associations indicated that they have a schedule that taxis follow and it would be beneficial to the public if this information can be made accessible. Stellenbosch Taxi Association taxis leave every half an hour from ranks between 9am and 5pm, even if they are not full while Kayamandi Association indicated that from 6am their taxis depart every 15 minutes from ranks even if not full.
- **Dedicated lanes:** like buses, taxis would like to have a dedicated lane so that they can efficient. Currently taxi drivers use the yellow lane during peak hours to ensure that they get customers to their destinations timeously. An example is the Jamestown route, it takes 30 minutes during peak but only 10 minutes during off-peak. This makes trips longer in a taxi compared to private vehicles as drivers have in a taxi to pick up and drop off passengers along the way. The longest route that drivers take is the one Cape Town. Stellenbosch Municipality indicated that road reserve in many places is wide enough to accommodate dedicated lanes on the R44, this is a challenge because a portion of the R44 is managed at a provincial level.
- **Parking:** approximately 90% of students have cars, students are permitted to own cars from matric and this has contributed to the traffic. Students park their cars on public parking as the University does not have sufficient parking to accommodate all students. Taxi association representatives also indicated that taxis do not have sufficient parking in town.
- **Taxi ranks:** the geographical location of a taxi rank is essential, taxi ranks must be located in the centre to ensure that they are easily accessible. One example is the move of the Braak taxi rank due to complaints to Bergzicht, which is approximately 1km from the original location. The location is not ideal for passengers resulting in more passengers disembarking at Braak. This is a conflicting challenge because taxi drivers do not have a permit to enter the town centre whereas this is the destination of some of their passengers. The infrastructure at the taxi rank needs to be improved to ensure inclusivity.
- **Ticketing system:** develop a ticketing system to encourage the use of public transport and to attract more customers. Users will have an option to buy a monthly or weekly ticket. This will help formalise the industry and help owners monitor their revenue as drivers often do not handover all revenue generated. The municipality in collaboration with the industry can broaden the partnership with other public transport service providers to develop an integrated ticketing system. The system can be managed at provincial level as province is responsible for issuing operating licences. Have a smart mobile application to track taxis location and to connect taxis to commuters.
- **Developments:** when a new mall or residential area is built, it is important that in the design transport is included. Taxi ranks must be put in the centre of a residential area. Plans for malls must include space for a taxi rank and drop off bays to enable taxis to operate effectively.
- **Relationship with the University:** the taxi industry would like to improve their relationship with the university to get more students to use public transport. Currently there are three taxis from the Stellenbosch taxi association that have been contracted to provide services for the night shuttle.

This service provides transport for students between 6pm to 2am. Students have to book the service in advance and produce their student card at boarding. Currently the night shuttle is utilized by 50 -250 students. The shuttle departs once per hour from campus taking students to their residences. The industry is looking into improving their relationship with the University so that such services can be expanded. It was also proposed that first year students can be given maps as part of their registration package. These maps will indicate taxi routes to encourage more students to use taxis.

The representatives indicated that they did not increase their taxi fares to encourage more people to use taxis. The Kayamandi association shared that they have identified two new routes; Kayamandi to Fir Grove and Kayamandi to Malmesbury. Taxis also provide group transportation for workers who knock off late and for students who go out at night.

13.5.3 Workshop Three: Provincial Stakeholders, Cape Winelands, PRASA and the University

The workshop had a good turn-out consisting of stakeholders from provincial government, Stellenbosch municipality, officials from Cape Winelands, Stellenbosch University and PRASA. Stakeholders indicated that there should be change in legislation to enable them to be innovative. Currently, legislation requires plans to have parking. It is essential that we design towns or cities where there is less need to travel. It is the responsibility of the University to ensure that any transport services provided to students by the institution is safe. The University transport system operates every 15 minutes to create a system that is convenient and reliable for students. The University transport system does not operate on taxi routes. The shuttle service from Stellenbosch to Tygerberg was discontinued due to taxi threats. Taxi drivers protested the University shuttle services crossing public roads to access remote campus, as claimed this encroached on their routes. The extent of disruption caused by protests resulted in affected properties being sold.

PRASA indicated they have only been able to recover 10 out of the 15 sections across their 3 corridors due to the impact of COVID-19, vandalism and cable theft. PRASA also indicated that the National Rail Plan will be released by the transport minister mid-May, and it is expected that freight links which are currently under-utilised could be released for private operations. This will respond to the University's interest to operate a train service between Klapmuts and Stellenbosch to link campuses. PRASA is in discussion with Durbanville about the proposed airport to establish how it can be linked to Stellenbosch and Cape Town central through rail.

Key discussions points:

- Behaviour change communications: have less students using private vehicles. Messaging and campaigns that change the status and shift perceptions on safety to get more students to use public transport. The Maties cycling campaign is a good initiative that the University can expand one to shift attitudes and reduce vehicle dependency.
- Elevate voices of the future;
- Encourage student to use the University shuttle as it is free;
- Identify sites for drop off in the spatial plan;
- Help students understand the impact of using vehicles on social and ecological environmental;
- Repurpose parking in the University for sporting activities, outdoor gym or outdoor study areas – students do not want to go to the library.
- The importance of by-laws, many students use skateboards and push scooters to travel between residences and campus buildings. Law enforcement indicated that the use of skateboards and push-scooters on public roads is prohibited.
- NMT infrastructure: the University has NMT plan, however, has found that implementation of this plan has been resisted by residents in the area due to "heritage" concerns. COVID-19, there has been an increase in cafes using sidewalks for tables which has resulted in no space for pedestrians to walk.
- Roads Management/Jurisdiction: the rate of pedestrian accidents is high on rural roads. Many roads have portions which are managed by the municipality, and portions managed by the province. This means if there is poor lighting on provincial portions of the roads, the municipality has not authority to implement upgrades, or even replace faulty bulbs (also municipality has upgraded their lighting to LED, while provincial roads still use sodium lights, meaning municipality does not have bulbs for provincial lamps even if they were permitted to replace) It is suggested that an MoU be signed between province and municipality so that maintenance authority and budget can be transferred to the municipality.

- Taxi ranks: there are upgrades underway at taxi ranks to improve elements such lighting, security through CCTV, access, improved visibility of law enforcement, upgraded and gender segregated bathrooms. It was agreed that informal trading at taxi ranks contributes to visibility and it is natural oversight. Upgrades must include plans to accommodate informal trading.
- Waste management: there is a problem of littering on the side of the road and taxi ranks. It is essential that Parks is engaged to discuss a waste management programme. This will help the municipality explore the potential of transport becoming a net for biodiversity.
- Road safety: there is a perception that public transport is not safe. To improve public transport, there should be a system in place to encourage taxi drivers and owners to improve their services. A system such as the blue dot and red dot system enforces compliance. Have a reward system in place to incentives taxi drivers who are compliant and also incentive those who use taxis to encourage more people to use public transport.
- Property prices and accommodation: rental and property prices in Stellenbosch are too high for most people who work in Stellenbosch, and therefore there is little choice but to commute. Majority of students must commute from Somerset West due to rental prices in Stellenbosch. The University intends to construct mixed-use developments in Stellenbosch (although this will target affluent students).
- Rail system: the need for an effective rail system was emphasised. PRASA indicated that they are in the recovery phase and hope to meet the 2015 service level. This will result in a reduction in cancellations and an increase in the number of users. Aims to improve quality of service and look for opportunities to expand.

Stakeholders indicated that having an in-person workshop was essential and has resulted in excellent discussion and rich insights. They have also highlighted that all stakeholders are faced with challenges and to intervene collaboration is essential. The relationship between the municipality and the University was commended. It was agreed that the CITP needs to be aligned to municipal and provincial plans and vision.

13.5.4 Public Participation: Open Day

13.5.4.1 Open Day: Stellenbosch

- Public transport: stakeholders indicated that they would use public transport if it were reliable, safe, comfortable and affordable. They would park their vehicles at home and use public transport as this would help to reduce the traffic congestion in Stellenbosch and Somerset West. This would also supplement the University shuttle service for students.
- Cycling: cycling must be explored as a mode of transport as it can reduce traffic congestion. There is a comprehensive master cycle plan written by experts. The cycling approach must be supported by a review of speed limits, reduce the speed limit to 40 km/h as a start for built up areas, 60 km/h for through routes and 20 km/h for some streets in the central core. Cycling routes need to be properly connected at intersections to ensure the safety of cyclists. Merriman and Cluver, Cluver cycling road ends are too narrow – students cannot cross the road to use the road in the right direction or get to the supermarket. Traffic lights must be synchronized as cycling cycle and pedestrian cycle is too short to cross safely. Part of the cycle plan covers the northern side of town, and it indicates that people cannot cross into town or interconnect specifically those who walk and cycle. The cross at Hellshoogte is very difficult for cyclists and pedestrians.
- Sidewalks: to enable more people to walk in town, restaurants tables and chairs on sidewalks need to be removed. The pavements are not safe for old people as there are so many holes and broken bricks. In front of the mother church, it's impossible to walk with a walking frame or chair. In Church Street, restaurants make the pavements unpassable with their chairs and tables and this makes it dangerous for people who walk and for people who have disabilities.
- Traffic calming mechanisms: traffic calming in the whole centre is essential, there are currently no speed humps, and this is a problem. A traffic light is needed at the four ways stop at Neetling & van Riebeeck street; by Azaliahof, motorists do not adhere to the intersection rules. A traffic light would reduce the traffic congestion however, it would still be impossible to get past the tree on the four ways stop. The municipality must put traffic circles on the R44 and reduce the number of traffic circles between Annadale road to Welgevonden. There are about 15 traffic circles on this road, and this results in traffic getting held up.
- Alternative routes: to enable access from Jamestown into Paradyskloof, unused pockets of land that are not used must be identified as they could make it easier to access Paradyskloof instead of going through R44. The Blauwklippen nodes are also strung along the R44. The road going behind the mountain at the eastern link road is recommended. It is suggested that the municipal road run adjacent to the R44, to connect and incorporate public transport system from Jamestown into town without the congestion of the town. Parcels of land next to Coligny road

towards Die Boord, have restrictions on the traffic lights allow pedestrians to cross and this interrupts the traffic flow. There is a need for a more integrated system.

- Accommodating the elderly: there must be special parking for the elderly at parking facilities.
- Development: the Adam Tas development is seen as a wonderful development project that will improve lives of many. Stakeholders envisage that the development will create jobs, however this type of development has the potential to increase traffic and the demand for parking.

13.5.4.2 Open Day: Franschhoek

The turnout to the open day was poor however this did not stop the ten stakeholders who came to the open day from making excellent contribution. Below are key discussion points from the inputs made by stakeholders.

- Taxis: there is a general perception that taxis are not safe, convenient and reliable. Stakeholders indicated that taxi drivers do not comply with transport rules and regulations.
- Signage: there is a need for more signage in Franschhoek to enforce compliance and ensure safety for all. Have signs to make motorists aware of schools, sharp curves on the road, cyclists and pedestrian crossings.
- Reduction of speed limit: Five stakeholders indicated that it would be helpful if the speed limit on the R45 into Franschhoek could be reduced to 80km/h and down to 40km/h in the town because it is a residential area. Speed humps in the town were also mentioned as a mechanism to reduce speed.
- Traffic: traffic is a problem during peak hours which is from 6 am – 8 am in the morning and 4 pm – 6 pm in the evening. Stakeholders indicated that a traffic circle at one of the entrances of Le Roux would reduce traffic. They further stated that having a traffic light would have a negative impact.
- Pedestrianised town: stakeholders suggested that the municipality must remove parking on the side of the road to allow for wider pavements which will enable more people to walk. Pavements should be properly fixed after fibre installations to ensure the safety of those living with disabilities. Stakeholders stated that wider pavements will encourage tourists to walk and get an amazing opportunity to experience the town. Using side parking to expand pavements will make the road narrower making the road not ideal for trucks. An alternative road through Robertsvlei road have been suggested. This will be an expensive exercise as it will require the municipality to upgrade the road and to widen the bridge to improve safety. Trucks currently cause infrastructure damage on the R45 through the town resulting in frequent repair of the road.
- Integrated public transport: there are numerous shuttle services in the Franschhoek including scholar transport. It is important that the public transport system is not only viewed as taxis, buses or e-hailing services but private shuttle services are integrated into the CITP.
- Parking: stakeholders indicated that the municipality must increase parking tariff to encourage more people to use public transport and reduce congestion.
- Youth development: enable young people to access skills development and economic opportunities. This should be a sustainable process where young people receive skills that are linked to economic opportunities. The municipality must develop support programmes for entrepreneurs.
- By-laws: there should be a programme to educate communities about by-laws to increase adherence. There is a problem of illegal dumping in areas such as Le Roux. There is illegal dumping that has closed half of the road resulting in motorists using one lane. This is a result of a system that is not reliable, the municipality must create a system that is reliable by producing a schedule for rubbish collection.
- Inclusive public participation process: stakeholder who came to the open day indicated that the poor turnout can be a result of advertising approach followed. For future engagements, the municipality must use social media (Facebook), the local newspaper and platforms such as the Rates Payers Association to put out notices for consultations. Stakeholders further stated that the venue might have been a problem, some stakeholders do not have transport to access the venue.

Stakeholders emphasised that Franschhoek is a tourist town, therefore it should be pedestrianised to offer locals and tourists an opportunity to walk and enjoy the town. The Master Plan for Franschhoek must be reviewed to provide an understanding of the needs in Franschhoek. The process should have feedback loops, stakeholders are tired of participating in processes where they do not receive feedback.

13.5.5 Interviews

Municipal officials who could not attend the internal and the provincial workshops were interviewed.

13.5.5.1 Property Management - Stellenbosch Municipality

Stellenbosch municipality would like to remove street parking in parts of the old town centre to allow restaurants to take up more space on sidewalks and ensure adequate provision for NMT. To compensate for the loss in parking bays, the municipality is investigating the construction of multi-storey parking lots, integrated into mixed-use building, in several peripheral locations, and one in a central location. While developers would like to redevelop low density non-heritage buildings into mixed-use higher density buildings without parking, the municipality is not willing to relax parking requirements.

Stellenbosch municipality is planning two main bypasses on existing freeways: one to direct traffic to the west of Stellenbosch, and the other to direct traffic to the east of Stellenbosch. It is understood that much of the congestion in Stellenbosch is caused by traffic passing through Stellenbosch, and therefore the bypasses would alleviate congestion levels.

13.5.5.2 Housing Development - Stellenbosch Municipality

The Stellenbosch municipality currently has a backlog of 80000 houses. It has been identified that people living far from opportunities, and they must commute to access these opportunities. It is important that housing plans are integrative, they include transport and other key services. Services such as transport must not be an afterthought – they must be placed at the centre of a housing development.

A housing pipeline which is aligned with the SDF is currently being reviewed by council. There numerous housing projects that have been proposed:

- The Botmaskop project, this is a mixed-use high-density development planned to address housing gap and flisp housing. It was indicated that there are heritage and environmental concerns delaying the project;
- Kayamandi project, which would comprise 250 affordable units;
- The Northern extension which will accommodate between 5000 to 6000 units (mixed use: residential, light industrial, schools), and
- Jamestown project, phase one has been completed, two and three are in planning phase. This project will have a total of 2000 dwelling units.

There are 10 identified sites for infield developments and only four or five of these are likely to proceed to planning. There is a lot of resistance from residents, including the mayor, as these sites are near affluent residential areas and there is a concern that having affordable housing close by will result in reduce property values. The target price range for units in these developments is half a million to R1.2 million.

Klapmuts is likely going to be a major node in future as many developers have bought up land in the area. This has resulted in a dramatically increase in land prices as there is speculation that the University intends to have a satellite campus in the area. The rising land prices are making it challenging for the municipality to develop affordable housing in the area.

13.5.5.3 Fire Services & Disaster Management - Stellenbosch Municipality

The fire services indicated that there are informal settlements in Kayamandi where it is difficult for taxis to access and for them to respond timeously and effectively. Azania informal settlement is one of these settlements that needs to be re-blocked with a road network as it cannot be accessed by fire trucks. There is a lack of planning in these informal settlements, and even after there has been a severe fire, the dwellings are reconstructed at the same density, without demarcated routes for vehicles, nor fire breaks. In 2013, around 1000 shacks burnt down and the municipality had to give each owner a fire kit worth R9000. There are allegations that some residents start fires intentionally to receive the fire kit (this pattern is mostly observed during the festive season, which does coincide with the fire season). The budget for the current financial year allocated to fire and rescue in informal settlements is R2.7 million and this was consumed within just a few months.

13.5.5.4 Safety and Security - Stellenbosch Municipality

It is important that we address both realities and perceptions of safety and security on public transport in Stellenbosch. There is suspected taxi extortion taking place at ranks, where rival associations hold taxis with passenger's hostage until a release fine is paid. This is seen as a criminal violation rather than breach of by-law. Therefore, law enforcement officials cannot take any direct action and instead can only report such activities to SAPS as they are responsible for addressing criminal violations.

13.6 Conclusion

There are several themes that have been identified through the stakeholder engagement process. Through discussions, the data indicates that the municipality needs to help the people of Stellenbosch understand the impact of accommodating the increase of vehicles in developmental plans. This will require a shift in behaviour to get people to move from having several vehicles to one vehicle and ultimately a non-motorised town. Behaviour change programmes must be addressed at both internal and external stakeholders. The approach must start with enabling a municipal official to understand that building more parking will result in an increase in the number of vehicles. Find a balance to accommodate different views while addressing environmental challenges. The parking issue is one recommendation with conflicting views, there are stakeholders that have suggested that legislation needs to be amended to remove the requirement of parking in development plans. Some stakeholders have argued that it would be unrealistic not to include parking in development plans as this will only have a negative impact on those using the space. The public have gone as far as recommending that side parking on the roads must be removed to expand sidewalks and create a pedestrianised town.

Several stakeholders have indicated that a NMT approach only looks good on paper, and it would be a challenge for the municipality to achieve such an approach. Some have gone as far as asking what will happen to all the cars? Creating a pedestrianised town will only mean that the traffic is displaced from the inner town to elsewhere. Interventions such as the park and ride will require the municipality to build parking bays outside of the town. This will not achieve a NMT town, there will still be a vehicle dependency, but people will not be allowed to bring their cars to the town centre.

All these proposed interventions are inter-dependent. Prohibiting vehicles in centre parts of the municipality would mean that the municipality must develop precincts where people can access services and opportunities closer to their place of residence. This might not be feasible in areas where the development must be housing developments to address gaps. Participants have indicated that there are interest groups that can influence where and when developments take place and without the buy-in of those groups it would be impossible to achieve such interventions.

How do you convince a young person that they do not need a vehicle or a person who has never used public transport that it is safe to use taxi? The University indicated that 90% of students have vehicles. This is a challenge because the university does not have sufficient parking to accommodate all these vehicles, and this has resulted in students using public parking. It is important that perceptions towards public transport especially taxis are changed. Some of the concerns are not just perceptions but reality. We need to offer people alternatives that are reliable, reliable, comfortable, predictable, and safe if we want them to leave their vehicles at home and use public transport. Public transport service providers must understand the needs and concerns of people to effectively address them.

13.6.1 Key themes drawn from the data

- **Behaviour Change Communications theme:** this theme looks at the importance of shifting behaviour to reduce traffic congestion. This will entail having an effective communications plan to educate both internal and external stakeholders about the future impact of planning around the increase of motor vehicle usage as the main sources of transport. It should also include communications to encourage significantly increased use of public and non-motorised transport and to reduce the use of cars to a minimum. Communication with specific stakeholders; such as the University – to assist in motivating students to adopt cycling and walking in Stellenbosch, and Taxi Associations – to innovate and improve services so as to encourage more people, including potentially, tourists, to use their services, must also be undertaken. Communication should also be used to create greater awareness about safety of cyclists and pedestrians, emphasising their roles in reducing congestion.
- **NMT theme:** stakeholders are keen to explore alternatives to motorised transport. The municipality must take the steps to support this through recommendations such as taking away side parking to widen sidewalks. The plan must address concerns raised about the safety of cyclists, pedestrians, the elderly, and people living with disabilities. It is important that people living with disabilities can easily move in public spaces. Stakeholders have indicated that the installation of fibre lines have had some negatives impacts on people who use wheelchairs as the pavement was not properly fixed. The plan must also look at addressing cycling lanes and ensuring that these are safe for cyclists. A significant challenge is that the lanes are not connected into a full route, meaning that cyclists are at risk at intersections and traffic circles. The Fietsry Stellenbosch cycling map is available to input into the plan. Enabling more people to walk by ensuring that they are safe and there is enough space for them to walk. There is a big tree near the zebra lines cross on Azaliahof street which makes it difficult to cross the road.
- **Integrated public transport system theme:** develop an integrated public system by partnering with the taxi industry and other modes of public transport. Suggestions such as a universal ticketing system must be explored further, including integrating such plans with Provincial stakeholders. Therefore, it is important that the different stakeholders continue to engage to establish and improve relationships and explore what is possible in this regard.

- **Integrated land use:** the municipality and developers must follow the mixed land use approach to address the traffic congestion issues, reduce the need for people to use cars to access services. One way to do this is to bring services closer to people to reduce their need to travel by vehicle. It is important that building plans are not centred on measures that accommodate increased private vehicle usage but on designing spaces that are responsive to identified challenges and incentivise less use of cars.
- **Safety:** stakeholders have raised concerns with regards to safety in public transport and public spaces. They have stated that the shift from private vehicles to public transport will be achieved if safety can be prioritised and achieved. It is essential that engagements with the public transport sector continue to explore ways to improve services and safety of commuters. This will not only have an impact on the safety of commuters but will also enable more opportunities for public transport providers such as taxis. The University indicated that safety is one of their biggest concerns for their students and it should be prioritised in transport plans. It is also important that the safety of pedestrians and cyclists is prioritised. Well-lit pedestrian routes, both in the town and in surrounding townships and settlements, would assist with this. Public toilets, designed and maintained to be safe and clean, would also assist in making pedestrians safer.
- **Climate change:** it is important that the plan considers climate change to ensure sustainability of interventions proposed. Although there were no practical suggestions about this from stakeholders, it is agreed that this is a core principle, both in the immediate and longer term. The plan must provide guidance in terms of what is possible to ensure that proposed interventions are sustainable and responsive to the rapidly changing environment.
- **Congestion:** congestion is a feature of almost all inputs; stakeholders all struggle with it, while many contribute to it, describing their journeys in and out of Stellenbosch as arduous and time-consuming, as well as having an impact on productivity. All measures to reduce dependency on private vehicles, must be included. Adopting measures to move to NMT and integrated public transport will have a positive impact on congestion, but planning must support this, in particular as relates to parking. Parking is inexpensive and this is seen as being responsive to the needs of private vehicles, whereas the opposite is needed. Congestion is also exacerbated by tourist buses that clog narrow streets. The idea of park and walk or park and connect with public transport should be pursued (this in conjunction with taxi associations). Stakeholders also said that if they could easily move to and from Stellenbosch by train they would prefer to do that than to sit in traffic.

13.6.2 Concluding Comment

Stakeholder 'interest groups' such as the cycling community came into the Open Day in Stellenbosch with a lot of anger and aggression. Some were very rude, also to visiting municipal officials. This made them hard to hear, but also seemed on reflection to be misplaced as they didn't express the need for anything beyond what was already contemplated. Their assumptions were that the CIP would favour developers and be biased against (in particular) cyclists. One claimed that another didn't need to participate in public consultation because he had the 'ear of the mayor direct'. These encounters prompt us to recommend that there should be better communications between the municipality and its public, focused on building a relationship grounded in shared intentions and vision, rather than on differences. Such a campaign will be necessary before there is real cooperation across the board.

APPENDIX A: PUBLIC TRANSPORT PLAN

1 Public Transport Plan

1.1 Introduction

Stellenbosch Municipality's vision for the region is for it to be a "Valley of Opportunity and Innovation". Well-functioning, accessible, convenient, and comprehensive public transport is integral to the realisation of this vision. This Public Transport Plan therefore intends to support the realisation of the following goals:

- to support the development of an effective and well-functioning public transport system;
- to facilitate the investment in a supportive infrastructure network that prioritises walking, cycling, and public transport.

To set broad goals and defined objectives of the public transport plan, Stellenbosch Municipality must determine what future appearance and character the public transport system needs to have. Once the goals and objectives are determined, strategies must be developed to achieve the goals and objectives.

The strategic focus areas, as well as their transport elements, gaps, and actions required, are presented in Table 6.1.

Table 1.1: Strategic Focus Areas

Focus Area	Transport Elements needed to respond to Strategic Focus Areas	Gap	Actions Required
Valley of Possibility	Would require well functioning network of transport services and infrastructure.	Current road network hinders growth possibilities. Congestion will discourage economy and cause business to locate elsewhere.	Road network improvements. Identification of effective freight network and supporting infrastructure. Effective public transport and NMT systems for access to opportunities.
Green and Sustainable Valley	Would require sustainable transport modes and practices.	Not effective public transport or walking and cycling modes.	Public Transport, walking and cycling network and other improvements. Manage travel demand to improve air quality.
Safe Valley	Would require safe and secure transport system.	Currently safety and security a challenge within public transport and use of walking/cycling modes.	Road safety projects to improve safety practices. Establish safe and secure public transport and NMT systems.
Dignified Living	Would require transport system which serves all including minority, poor and marginalised.	Public transport which services marginalised is limited.	Implement public transport systems that are accessible and affordable for all.
Good Governance and Compliance	Would require effective management structures and enforcement within transport.	Current governance and compliance not effective impacts delivery of transport.	Streamlined governmental processes with accountability for effective implementation of transport solutions.

1.2 Policies and Strategies

The following legislation and policy directives (as discussed in Section 2) are applicable to the CITP:

- National Land Transport Act, 2009 (and the updated Act, once the current proposed National Land Transport Bill, currently under consideration, is promulgated)
- National Land Transport Strategic Framework 2017
- National Transport Policy 2017
- Western Cape Government Strategic Goals
- Western Cape Provincial Land Transport Framework 2011
- Cape Winelands District Integrated Transport Plan 2016
- Stellenbosch Roads Master Plan 2019
- Stellenbosch Integrated Development Plan 2022
- Stellenbosch Quo Vadis 2015
- LED Strategy and Action Plan 2014

1.2.1 Summary of Key Policy Documents Relating to Public Transport

1.2.1.1 National Land Transport Act, 2009

Based on the 2009 NLTA Minimum Requirements for the Preparation of Integrated Transport Plans, 2016:

- An Intermodal Planning Committee must be established to focus on integrating public transport with a specific focus on integrating passenger rail services
- A Public Transport Plan and Transport Register is required with each CITP
- The Public Transport Plan replaces the requirement for a Rationalisation Plan and OLS
- The focus of the Public Transport Plan is to integrate the public transport network, services, and modes

The NLTA Amendment Bill (2016) also presents amendments and additions to the 2009 NLTA, incorporating focus on integrated planning, universal accessibility, and OL review and rationalisation.

1.2.1.2 National Transport Policy, 2017

The key objectives of the revised National Transport Policy (NTP) of 2017 are listed in the first column of **Table 1.2**. The current status quo of Stellenbosch Municipality measured against these objectives is presented in the second column.

Table 1.2: Policy Objectives Against Stellenbosch Municipality Context

Objective as per the National Transport Policy 2017	Objective Realisation in the Context of Stellenbosch Municipality
1. Accessibility	<ul style="list-style-type: none"> • Safe, reliable, and affordable transport are not widely available. There is a lack of universal accessibility on public transport. • Transport Universal Access audits are now part of policy in developing ITPs.
2. Rural transport	<ul style="list-style-type: none"> • The farming community surrounding Stellenbosch. The policy requires that rural transport programmes need to be identified and assessed.
3. Integrated ticketing system	<ul style="list-style-type: none"> • Policy states that NDoT should continue to drive, facilitate, and assist in funding. • Feasibility in Stellenbosch Municipality unknown
4. Performance monitoring	<ul style="list-style-type: none"> • Developing information systems for monitoring and enforcing policy on PT services.

Objective as per the National Transport Policy 2017	Objective Realisation in the Context of Stellenbosch Municipality
5. Planning and regulation	<ul style="list-style-type: none"> • Policy requires ITPs to integrate all modes of public transport which in Stellenbosch includes: <ul style="list-style-type: none"> ○ Rail services ○ MBT operations ○ e-hailing operators ○ Non-motorised transport

The NTP 2017 also identifies that there is a lack of institutional capacity to prepare and implement transport plans, and that inadequate law enforcement contributes to the issues faced by the operating licensing system (unlicensed operators specifically in MBT).

1.2.2 Summary Major Existing “External” Strategies, Proposals and Projects

1.2.2.1 Cape Winelands DITP concepts, key strategies & projects

In terms of public transport (PT), the Cape Winelands (CW) District Integrated Transport Plan (DITP) 2016-2021 presents the following proposals for implementation throughout the district:

- Rationalisation of operating licenses (OLs) to reduce oversupply
- No data on the Stellenbosch context was provided
- Law enforcement is key to the successful implementation of an OLS
- Establish an electronic database for monitoring and regulation
- Establish a Communication Forum where local government and operators can communicate on matters regarding PT

The DITP does not present PT improvements for the Stellenbosch Local Municipality but highlights the findings of the 2016 CIP review of applicable legislation and policy changes.

1.2.2.2 Western Cape PLTF concepts, proposals & major strategies

The Western Cape Provincial Government has the following strategic objectives that relate to public transport in general:

- PSG 1: Create Opportunities for Growth and Jobs - Improve the efficiency of the region's transport system.
- PSG 2: Improve Education Outcomes and Opportunities for Youth Development – access to education through transport.
- PSG 3: Increase Wellness and Safety, and Tackle Social ills - Inclusive, safe, and healthy communities – reduction in road fatalities.
- PSG 4: Enable a Resilient, Sustainable, Quality, and Inclusive Living Environment – energy consumption and emissions.
- PSG 5: Embed Good Governance and Integrated Service Delivery through Partnerships and Spatial Alignment – improved coordination between spheres of government.

The Western Cape (WC) Provincial Land Transport Framework (PLTF) in terms of public transport focuses on integrated transport systems, the improvement of passenger rail, NMT, and universal accessibility needs to be considered in each initiative. The WC PLTF presents the following strategic interventions relating to PT that tie into the Department of Transport and Public Works (DTPW) Programmes:

- The establishment of a draft Provincial Public Transport Institutional Framework (PPTIF) for the delivery of integrated public transport
- Develop a funding strategy for public transport in terms of both addressing capital requirements and operational subsidisation
- Coordination, implementation, and management of Integrated Public Transport Networks in high priority non-metro areas of the Western Cape

- Ensure the establishment of an appropriately regulated transport environment to address regulatory and compliance challenges

1.2.3 Previously Updated Stellenbosch CITP Concept, Key Strategies, and Proposals

The 2016 CITP focuses on the development of an integrated public transport service network within Stellenbosch Municipality and presents a framework for a public transport service network that integrates with the City of Cape Town's Bus Rapid Transit system. This integrated service network introduces the viability of utilising articulated- and midi-buses to alleviate traffic congestion along main arterials that run through Stellenbosch town. In terms of infrastructure projects related to public transport, the 2016 CITP proposes passenger shelters located at key roadside stops, vehicle flow improvements in terminal facilities, and providing roadside stops with embayments, as well as NMT infrastructure along the existing service network (Royal Haskoning DHV, 2016).

The 2020 revised CITP focuses on the need for the development of a Public Transport Plan and presents the findings of the revised Operating License Plan (OLP) of 2019. The proposed interventions listed under public transport improvements are not clearly defined and highlight that further investigation through a Public Transport Plan is required to identify concrete projects. Some of the elements listed in the recommended improvements table include rail as a regional and local connector, intra-municipal services between main suburbs of the municipality, and regional road connections, such as a high vehicle capacity bypass.

The 2020 revised CITP also proposed that additional operating licenses be issued, due to the high demand for minibus-taxi services, and the high prevalence of illegal operators within Stellenbosch Municipality (Innovative Transport Solutions, 2020). The OLP identified that there is a need to increase the number of operating licenses issued along specific routes and to service areas of planned development, ensure greater enforcement of operations focusing on illegal operators, correct route descriptions that reflect current operations, and through the Provincial Regulating Entity (PRE), remove operating licenses of deceased owners.

Both CITP documents highlight the constraints with regards to public transport project interventions, of which the main constraints are funding at a municipal level (large projects will require Provincial Government budget), and the lack of municipal staff capacity to support the implementation and monitoring of projects.

The most pressing public transport concerns, and the recommended public transport improvements reflected in the 2020 Stellenbosch CITP, are shown in [Table 1.3](#) and [Table 1.4](#).

Table 1.3: Key Public Transport Concerns in Stellenbosch (ITS Global, 2020, p. 78)

Issue	Description
Poor integration with other modes	Various public transport modes are not well integrated i.e., services, payment methods, infrastructure, transfers, timetables, etc.
Limited access of existing PT services	Particularly limited for national (long distance) and regional (intermunicipal) connections. <ul style="list-style-type: none"> • Access at local levels is provided by MBTs and serve mainly specific lower income neighbourhoods. • MBT routes typically end at Bergzicht rank or Stations, no or limited circulation into towns • No airport services
Services concentrated during peak periods	<ul style="list-style-type: none"> • Higher service levels during peak periods • Longer waiting times during off-peak periods • No night services – start operating after 06:00 and end before 19:00 • Limited PT transport services to access medical assistance in an emergency after-hours. Usually comes at a higher cost if needed.
No travel time advantage	<ul style="list-style-type: none"> • There is no dedicated PT infrastructure, thus MBTs (which are the main PT service providers) are subject to general traffic congestion • PT offers no travel time advantage, and thus there is little incentive to shift from private vehicles. They serve mainly low-income population who are captive riders
Limited PT infrastructure	<ul style="list-style-type: none"> • Ranks are not used during peak periods, which are the busiest times • Passengers collected in neighbourhoods where no public transport facilities or shelters • No lighting and poorly designed urban spaces are unsafe and uncomfortable • No formal long-distance facility.
Rail is currently not operating	<ul style="list-style-type: none"> • Rail services have been stopped • The timeline for service returning is uncertain • PRASA has no strategy to regain passengers lost • Stellenbosch and Du Toit Stations are not ideally located - there have been proposals to relocate them, although it is unclear whether this would be feasible (funding/space).
Not universally accessible	Vehicles and infrastructure do not accommodate people with special needs

As indicated in **Table 1.3**, the municipality lacks formal public transport services. At present, only informal minibus-taxis operate intra- and inter-municipal services. There are no larger capacity bus operators (previously, Golden Arrow Bus Service operated a service between Somerset West and Stellenbosch Town, however this no longer operates) or rail services providing viable alternatives for passengers travelling from outside of Stellenbosch Town (again, Metrorail previously operated passenger rail services across the municipality, however these have not been in service for several years).

Since there are no dedicated lanes for public transport services, minibus-taxis run in mixed traffic. Consequently, their users are at travel time disadvantage, relative to private transport users. As a result, most minibus taxi users are captive, rather than choice users. Ranking facilities are underutilised during peak periods, due to the nature of minibus-taxi operations, where trip generators and attractors are not from or to the ranking facilities, but rather from surrounding suburbs, where passengers are typically dropped/picked up enroute.

Table 1.4, extracted from the 2020 Stellenbosch CITP, provides a summary of recommended public transport improvements.

Table 1.4: Summary of Recommended Public Transport Improvements (ITS Global, 2020, p. 83)

Elements	Improvements/Upgrades	Possible Project/Actions
Regional Road Connections	<ul style="list-style-type: none"> • Strong regional road connections to existing or planned higher order urban settlements (Stellenbosch, Franschhoek, Klapmuts) 	<ul style="list-style-type: none"> • New roads or road upgrades to include a

Elements	Improvements/Upgrades	Possible Project/Actions
		bypass with access to national routes <ul style="list-style-type: none"> High capacity arterial which accommodates dedicated road-based public transport north and south of CBD
Rail as a regional and local connector	<ul style="list-style-type: none"> Regional and national access improved via rail Inter-municipal rail services with improved access Paarl, Somerset West, Bellville, and Cape Town Intra-municipal rail movement for local access in Stellenbosch Municipality i.e., between Klapmuts, Muldersvlei, Koelenhof, Du Toit, Stellenbosch, Vlothenburg and Lynedoch Rail services between Somerset West to Paarl or limited within Stellenbosch Stations 	<ul style="list-style-type: none"> Lobby PRASA to improve rail services Prepare feasibility of private rail services
Short-term	<ul style="list-style-type: none"> Quality of vehicles Quality of drivers Public transport stops (seating, lighting, shelter) for high demand locations 	<ul style="list-style-type: none"> Driver training programmes Prepare a Public Transport Plan Shelters and stop upgrades TOD developments around stations and stops
Operational	<ul style="list-style-type: none"> Use of technology to improve customer experience, ticket purchasing, system monitoring Scheduling during peak periods and on-demand Booking system for off-peak periods, night, or emergency needs Integration between modes and services New services to expand to unserved neighbourhoods and new developments Expanding hours of operation outside peaks Public transport stops (seating, lighting, shelter) for high demand locations 	<ul style="list-style-type: none"> Prepare a Public Transport Plan Prepare Operations Plan
Regional Road Based Services	<ul style="list-style-type: none"> High demand inter-municipal O-Ds (Somerset West, Bellville, Cape Town, Airport, Paarl) Scheduled with on-demand outside core hours Access to stations and town MBT ranks Booking and payment system using an app; also flagging delays Park and rides available with affordable secure parking (must be worthwhile to use service) Infrastructure for comfortable and safe waiting areas 	<ul style="list-style-type: none"> Next OLP: Investigate need for new services and OLs required Prepare Public Transport Plan and investigate elements for improving regional road-based services
Intra-Municipal or Neighbourhood Services (Idas Valley, Cloeteville, Kayamandi, Franschhoek, Klappmuts, Vlothenburg, etc.)	<ul style="list-style-type: none"> Existing restructured routes Neighbourhood circulation for collection New routes based on new housing proposals Core operation time within peak periods Alternative booking and system for services outside peak periods perhaps more flexible or on-demand system 	<ul style="list-style-type: none"> Public Transport Plan and investigate new or supplemental routes and alternative booking systems during off-peak
Local CBD Circulation Service (Stellenbosch,	<ul style="list-style-type: none"> Funded by business, university, and development Contributions operated by existing MBT operators and vehicles, but with branding, driver training, 	<ul style="list-style-type: none"> Local CBD Circulation Plan

Elements	Improvements/Upgrades	Possible Project/Actions
Franschhoek, Klapmuts)	vehicle cleanliness, safety, and quality specifications <ul style="list-style-type: none"> • Stellenbosch access from stations and parking garages to CBD and University • Klapmuts – planned with proposed industrial growth 	

Table 1.4 provides a brief list of potential interventions intended to improve public transport within the municipality. It should however be noted that the first intervention under “Regional Road Connections” is not a public transport intervention (despite being categorised as such). The construction of new roads and increasing road capacity for all road users does not promote sustainable mobility, rather, it encourages increased private vehicle use. The construction of a high-capacity arterial route, which would accommodate dedicated road-based public transport north and south of Stellenbosch town centre, would however be highly beneficial to public transport users. Dedicated infrastructure for public transport could potentially attract choice users, especially if service quality and standards of minibus-taxi operations and vehicles were to be improved.

1.2.4 Existing Issues and Concerns Based on Previous Plans

In this section the main transport problems and issues are presented, as identified by households during the NHTS (2020) (see 3.3.9.1) and identified during the first set of stakeholder engagements (April and early May 2022, presented in section 3.3.9.2).

1.2.4.1 Transport problems identified by Households

Households were asked to indicate the two main issues they have with transportation. In **Table 1.5**, the available response options are listed, and ranked in order from most to least frequent. The top concerns were found to be related to accessibility and levels of service, as well as safety concerns.

Table 1.5: Transport problems identified by Households (NHTS, 2020)

Issue	Description	Value
1	No buses available	1,609
2	No taxis at specific times e.g., late at night	1,758
3	Congestion	1,773
4	Reckless driving by taxi drivers	1,795
5	Crime	1,827
6	Trains are not reliable	1,830
7	No trains available	1,863
8	Overload	1,879
9	Parking	1,920
10	Trains too far	1,947
11	Rude drivers	1,960
12	Taxis too expensive	1,970

1.2.4.2 Summary of general concerns and issues on transport

Following on the issues and concerns that were raised during the 2020 update of the CITP, and the concerns and issues identified through the stakeholder consultation process for this update the issues and concerns can be summarised as follows:

- Poor integration with other modes
- Limited access to existing public transport services
- Services concentrated during peak periods
- No travel time advantage

- Limited public transport infrastructure
- Rail service unreliable when operational (currently not operational at all)
- Current services are not universally accessible

Based on the stakeholder engagements conducted as part of this revision of the CITP

As part of this revision of the CITP, the project team conducted a series of stakeholder engagements. The following paragraphs provide an overview of the outcomes of the public transport aspects discussed during these engagements.

During an engagement with the minibus-taxi associations it was mentioned that the industry had lost 40% of their income due to COVID-19 and as a result thereof, some operators had their vehicles repossessed due to not being able to meet repayments. The associations also shared that they have experienced an increase in passenger demand due to passengers choosing public transport over private vehicles due to an increase in petrol prices, and more people are receiving social grants due to job loss during the COVID-19 pandemic, also resulting in an increased patronage to reach grant collection points.

The minibus-taxi associations communicated that they are willing to work towards a more formalised service as they acknowledge that passengers are more inclined to utilise their services if the service is predictable and offers a ticketing system which removes the existing cash-based fare system. The associations also propose that the industry be consulted when it comes to the planning in providing parking solutions, taxi ranking facilities and new developments such as malls and residential areas.

During an engagement with larger stakeholders such as Western Cape Province, Cape Winelands, PRASA and Stellenbosch University, each stakeholder expressed their major challenges relating to transport service provision within Stellenbosch Municipality. The key discussion points related to public transport revolved around communicating behaviour change focusing on shifting passengers from private vehicles to more sustainable alternatives such as the University Shuttle service; taxi-rank facility improvements planned and the importance of including the provision of infrastructure for informal trading at these facilities; introduce incentive programmes in minibus-taxi service provision to improve safety for operators and users; and the importance of reinstating rail services and improving service provision to attract new passenger demand. The engagement was concluded by highlighting the need to collaborate as stakeholders to address challenges faced by stakeholders.

The details of each stakeholder engagement are presented under the Section 13: Stakeholder Consultation section of this report.

1.2.4.3 Spatial Development Framework

Chapter 4 of this report provides a summary of the Spatial Development Framework (SDF), approved by the Stellenbosch Municipality Council in 2012. The SDF focuses on high density development at strategic nodes such as the Adam Tas Corridor, Stellenbosch town centre and Klappmuts. These nodes are connected by rail (although currently not operational) and road. When identifying public transport interventions, it is critical that solutions be proposed that will enable improved accessibility to and along the corridors that connect these nodes.

The SDF presents eight strategies and specific spatial policies to support the SDF concept and settlement plans. Public transport, along with NMT, and shared vehicle travel are identified as levers to support the realisation of three of the eight strategies, namely:

- (4) Clarify and respect the different roles and potentials of settlements in SM and maintain the identity of each;
- (5) Ensure a balance approach to transport in SM, that appropriately serves regional mobility needs and local level accessibility improvements; and
- (6) Develop all settlements as balanced, inclusive, appropriately serviced, communities, negotiable through NMT and exhibiting a positive relationship with surrounding nature and agricultural land.

Strengthening the role played by rail-based public transport is also identified as being critical to serve regional mobility needs, and local accessibility. The SDF also indicates that public transport and NMT infrastructure is to be incorporated in all developments, shifting the focus towards providing infrastructure for sustainable transport modes.

1.2.4.4 Integrated Development Plan

The Stellenbosch Municipality IDP makes provision for a select few public transport planning projects, with allocated budget estimations between 2022 and 2025. These projects are listed in below (note that this is not the full list of projects presented in the IDP):

- Continued feasibility studies to establish a transport operating company
- Development of business model for a Transport service for persons with disabilities in Stellenbosch
- Park and Ride (Transport Interchange)
- Public Transport Infrastructure (Public Transport Shelters and Embayments)
- Re-design of Bergzicht Public Transport Facility
- Taxi Rank - Franschhoek

The 2022 IDP also identifies the need for an alternative rail service along the Baden Powell Drive-Adam Tas (R304) corridor. The IDP highlights the requirement of a feasibility study to introduce a more frequent passenger service along the corridor potentially including lighter rail stock in the form of a “tram” system. Another alternative proposed in the 2022 IDP is to explore the viability of a regular bus service along this corridor.

Each project listed in the 2022 IDP has an allocated amount of proposed budget per financial year. These budgets are either provisional estimates for annual work, or provisional budgets for ongoing projects and studies that have already commenced and require further funding. The IDP also presents a table of projects under the *Implementation Plan: Comprehensive Integrated Transport Plan* (on page 126 of the IDP).

The following list of projects are presented as public transport projects included in the 2020 CITP (5 of which are also present in the IDP).

- Investigations and assessments reports for mechanism for the Internal Transport Feeder System from park and ride areas to the CBD.
- Facilitating the implementation and optimisation engagements of the Public Transport System
- Submission of assessments reports for management of park and ride facilities to the Municipal Manager.
- Submission of an assessment report to the Provincial Department of Transport on the implementation of public transport lanes on the R44 (from both directions Stellenbosch – Somerset West).
- Engagements with the University to collaborate on the implementation and improvement of park and ride facilities and shuttle services for students.

These projects can therefore be considered as key projects since the municipality has already assigned budget through the IDP. The projects proposed as part of this revision of the CITP are presented in [Table 1.12](#) at the end of this section of the report.

1.3 Overall Network Design

The overall network design presents the high-level vision of the proposed rail and road-based services, contracted and non-contracted for Stellenbosch Municipality. Therefore, summarising the potential interventions put forward under sections 1.4, 1.5, 1.6 and 1.8 hereafter. The overall network, presented in the sub-sections below, design also ties in with the future transport concept presented in section 2.6 of this report.

1.3.1 Preferred modes for routes and corridors

The preferred modes for routes and corridors were identified through the assessment of the status quo of existing services and development of new interventions within Stellenbosch Municipality. The existing services and new interventions speak to the policies for rationalisation of existing and development of new contracted services and refocusing the of non-contracted such as minibus-taxis.

Figure 1.1 presents the preferred modes based on the interventions proposed in this public transport plan.

Figure 1.1: Overall network design

The main arterials, indicated in red, represent the existing road network on which road-based public transport (minibus-taxis), learner transport and tourism services operate, along with private vehicles. These routes present the road-based transport alternatives with origins and destinations from outside of the municipal boarder. The R310 (from Eersteriver) and the R304 (from Durbanville/Brackenfell) compete with the existing, although not yet operational, rail services indicated in blue. The three other main arterials namely, the R44 (both from Somerset West and Klappmuts) are not spatially aligned to compete with rail services.

The provision of HOV lane infrastructure and public transport priority measures on arterials (highlighted in yellow), more specifically piloting these concepts along the R44, promotes the development of new contracted services by allowing minibus-taxi operators to formally provide contracted services between the proposed park-and-ride facilities and Stellenbosch town centre.

The scheduled shuttle services is not limited to servicing the park-and-ride facilities but will also link key nodes such as Kayamandi, University facilities, rail stations, proposed new ATC stops, and higher-density residential areas. A proposed central pilot loop (in light blue) that services the Devon Valley and Uniepark (through the ATC and Bergzicht Taxi Rank) is another scheduled service that promotes contracted services.

Due to the current lack of route and timetable transparency for new users to utilise the minibus-taxi services, the rolling out of the various shuttle services presents the ideal opportunity to include technology as a source of information. Technology not only can provide for online timetables and route O-Ds but also can allow for ticketing, fare collection systems, and even e-hailing technology. By incorporating technology as an integral mechanism for these proposed shuttle services, the

opportunity arises for new passenger demand to utilise these services. Potentially attracting students who would previously only use their private vehicle as preferred mode of choice.

These proposed shuttle services provided by contract minibus-taxi operators is one of the incremental approaches (a hybrid approach) to establishing an IPTN service that ties into the current MyCiTi service provided in the Cape Metropole. Minibus-taxis are demand-responsive and can potentially be even more popular if technology is implemented to attract new demand. The IPTN Business Plan (2017) unpacks the concept of a more flexible approach when incorporating the minibus-taxi industry in to formal services (City of Cape Town, 2021).

Commuter rail services are to be reinstated to attract the lost passenger demand which diminished due to the ceased operations during the Covid 19 pandemic. Together with the ATC initiatives, there is an opportunity to fully integrate commuter rail with the proposed shuttle services and NMT route network within Stellenbosch town centre.

In terms of the roll-out of the overall network design, **Table 1.12** presents initiatives that form the building blocks of developing an integrated network of transport services. Each initiative has an estimated timeline in years. These implementation timelines are however subject to further investigation and will need to be refined through the drafting of feasibility studies.

1.4 Commuter Rail Plan

In this section, rail transport will be briefly discussed. Firstly, the national rail policy is briefly noted. Secondly, rail infrastructure and services prior to covid 19 are presented. It must be noted that due to the covid 19 pandemic, rail services across the country ceased to operate. This is still the case in Stellenbosch Municipality at the time of writing this section. Thirdly, the proposed rail improvements and interventions from previous CITP(s) are discussed. This is followed by the fourth sub-section, which discusses the way forward for rail and Stellenbosch Municipality.

1.4.1 National Rail Legislation

The national rail policy highlights the following key components of commuter rail (Western Cape Government, 2016):

- Maximising the competitive and environmental advantages of rail transport for moving high volumes of people,
- Encourage appropriate use of rail transport through promoting effective intermodal planning, efficiency, regulation, facilities, and collaboration,
- Enable private sector participation on mutually agreed terms where latent capacity exists,
- Subsidies (where provided) must be transparent, targeted, and monitored,
- Safety and security for railway passengers are of prime importance,
- Adequately protect and secure railway assets and those of passengers.

1.4.2 Rail Infrastructure and Services Prior to Covid 19

The Western Cape has extensive rail infrastructure (see **Figure 1.2**). 90% of the services originate or terminate at Cape Town station, while the other 10% originates or terminates at Bellville. However, the length of the railway line within Stellenbosch Municipality is only 18km, which includes seven stations namely (Innovative Transport Solutions, 2020):

- Klapmuts
- Muldersvlei
- Koelenhof
- Du Toit
- Stellenbosch
- Vlottenburg

- Lynedoch

Figure 1.2: Western Cape Rail Infrastructure (Innovative Transport Solutions, 2020).

The blue and brown lines are considered the southern corridor, the blue lines represent the central corridor, the dark green the northern corridor, and the light green regional services, which offered one service a day to assist the rural areas.

The Stellenbosch-line service comprised a frequency of two trains per peak hour running through the municipality (Innovative Transport Solutions, 2020). A total of 25 trains operated in each direction between Monday and Friday, 15 trains on Saturday, and 13 trains on Sunday.

The tariff structure (see [Table 1.6](#)) was based on km zone pricing (distances between 136 km and 200 km).

Table 1.6: Tariff Structure (Prior to Covid-19) (Innovative Transport Solutions, 2020).

Station	KM Zone	Single		Week		Month	
		Metro Plus	Metro	Metro Plus	Metro	Metro Plus	Metro
Vlottenburg	30/40	R15.50	R9.50	R127	R61	R394	R184
Lynedoch	41-135	R18.50	R12	R152	R78	R394	R239
Stellenbosch	41-135	R18.50	R12	R152	R78	R394	R239
Du Toit	41-135	R18.50	R12	R152	R78	R394	R239
Koelenhof	41-135	R18.50	R12	R152	R78	R394	R239
Muldersvlei	41-135	R18.50	R12	R152	R78	R394	R239
Klapmuts	41-135	R18.50	R12	R152	R78	R394	R239

As per the stakeholder engagement with PRASA on 08/04/2022, the tariffs will remain the same when the service resumes. Passenger volume data is outdated. The most recent passenger volume figures can be seen in [Table 1.7](#).

Table 1.7: Rail Passenger Volume between 2007 and 2012 (Innovative Transport Solutions, 2020).

Station	Boarding		Alighting	
	2007	2012	2007	2012
Klapmuts	1692	1468	1646	1426
Muldersvlei	3919	3713	3213	3722
Koelenhof	651	686	576	614
Du Toit	2808	2863	2589	2695
Stellenbosch	2209	2471	2553	2286
Vlottenburg	448	482	505	544
Lynedoch	653	624	793	811

There was a substantial decline in ridership between 2007 and 2012 at Klapmuts station, but increases in ridership at Vlottenburg, Koelenhoff, Muldersvlei, and Du Toit stations. At this stage, it is not possible to estimate passenger demand. Data collection campaigns will be required to determine accurate passenger volume once the service(s) are reinstated in the Municipality (see section 0 for rail deadlines).

1.4.3 Proposed Rail Improvements and Interventions from Previous CITP(s)

Table 1.8 summarises the proposed rail improvements and interventions from previous CITP(s) and includes in the final column whether these interventions are aligned with the proposed interventions of this revision (2022 CITP).

Table 1.8: Proposed Rail Improvements and Interventions (Innovative Transport Solutions, 2020), (RHDHV, 2016).

Report	Improvement/Intervention	Proposed Timeline
CITP 2022 Review	Reinstatement of commuter rail services within Stellenbosch Municipality	Short term
CITP Review 2020	Regional and national access improved via rail	Longer term
	Inter-municipal rail services with improved access to Paarl, Somerset West, Bellville, and Cape Town	Longer term
	Intra-municipal rail movement for local access within SM i.e. between Klapmuts, Muldersvlei, Koelenhof, Du Toit, Stellenbosch, Vlottenburg and Lynedoch	Short term
	Rail services between Somerset West to Paarl or limited within Stellenbosch Stations	The feasibility of this needs to be determined.
CITP 2016-2020	Integration of rail, bus, and NMT	Longer term
	Stellenbosch and Du Toit Railway Stations: Facilities for Solo / Midi-bus services operating on public transport routes i.e. stops, signage shelters	Short term
	NMT facilities at terminals and railway stations	Longer term
	Relocate the Stellenbosch and Du Toit stations to new locations to facilitate the development of adjacent land. More detailed study is required to assess the implication of the relocation.	The feasibility of this needs to be determined.
	Blue Downs Line: Blue Downs is a densely populated area; this scheme incorporates it into the network while also linking Khayelitsha to Bellville. The proposal is for a new electrified double-track alignment which would integrate with the wider network	Longer term
	Chris Hani- Somerset West and Stellenbosch: There are existing proposals to extend the current line to Chris Hani but current footfalls appear suitable for Light Rail Transit	Longer term

Report	Improvement/Intervention	Proposed Timeline
	(LRT) if the new journey opportunities boost usage. There is the potential for an extension beyond Christ Hani using alternative technology that would serve existing catchments	

1.4.4 The Way forward for Rail Transport in Stellenbosch Municipality Post Covid 19

The following section provides information obtained from an engagement with PRASA on 08/04/2022.

As mentioned at the beginning of section 1.4, due to the Covid-19 pandemic, rail services across the Western Cape (including Stellenbosch) ceased. **Table 1.9** below gives a brief summary of the lines that have been reinstated and the future deadlines for the Stellenbosch line.

Table 1.9: Rail services and Deadlines

Service/line	Planned Deadline	Current Status
Southern Corridor (red/brown line)	Reinstated	Reinstated
Northern Corridor (CPT to Bellville via Tygerberg)	Reinstated	Reinstated
Northern Corridor (CPT to Bellville via Monte Vista)	Reinstated	Reinstated
Bellville to Eerste Rivier	June 2022	Not yet reinstated
Bellville to Strand	End of September 2022	Not yet reinstated
Bellville to Muldersvlei (via Stellenbosch)	January 2023	Not yet reinstated

Further to **Table 1.9** PRASA advised that they are working with the city of CPT to improve services in the Northern Corridor (which includes the Stellenbosch line). CPT is the owner of a draft document called the Northern Corridor Modernisation: Rail Corridor Operational plan and Passenger Rail Modernisation Plan. The plans include all information on future improvements. At the time of writing this report, it was not available.

PRASA advised that the timetables and the fare structure will remain the same as it was prior to Covid 19. However, services will be introduced at three trains per hour. Demand will be monitored and frequencies adjusted accordingly.

Stellenbosch Municipality does not have any control over rail operations or investment. It is thus important for the municipality to have good relationships with stakeholders such as the SARCC to improve rail connectivity. It is proposed that the municipality engages with PRASA and utilise a phased approach (see **Figure 1.3**) by first re-instating the railway LOS in the municipality to pre-covid levels, and second assessing the rail interventions proposed in the previous CITPs.

Figure 1.3: Proposed Rail Phased Approach

1.5 Contracted Services Plan

1.5.1 Proposed in the 2016 CITP

Contracted services refer to legally enforceable agreements for the provision of transport services. The 2016 CITP presented a formalised Public Transport Service that was first proposed in the 2011 Stellenbosch CITP. This service was to be a road-based scheduled public transport service, operating on six routes within Stellenbosch town. For the revision of this CITP, it is proposed that one route be selected as a pilot study to help determine the viability of a scheduled public transport service. This service is envisaged to be a contracted service plan with some operational support from Stellenbosch Municipality.

If the pilot study is successful the roll-out of the remaining five routes could also be implemented in a phased approach. **Figure 1.4** presents all the proposed public transport routes dating initially from the 2011 CITP and supported in the 2016 revision and included in this current revision (2022).

Figure 1.4: Proposed Public Transport Routes, CITP 2016

The Bergzicht taxi ranking facilities could function as the central interchange, where vehicles are required to stop in both directions when completing a single loop of the proposed pilot route. The key to the successful implementation of the pilot study would require engagements with the existing minibus-taxi sector stakeholders. Their buy-in and insights into operations would be of great value in

terms of supporting the determining of an appropriate pilot route, testing this proposed route, and supporting the potential expansion of the service network.

1.5.2 Proposed Uniepark/Onder Papegaaiberg loop

For this CITP, a pilot loop running between Uniepark and Onder Papegaaiberg is proposed as a possibility for consideration, and discussion with minibus-taxi sector stakeholders. **Figure 1.5** illustrates the potential loop.

Figure 1.5: Uniepark/Onder Papegaaiberg Loop

The loop originates at Oude Libertas parking area, adjacent to Onder Papegaaiberg. The route continues along the R304 eastbound, entering the town of Stellenbosch. The route proceeds along Dorp Street, Die Laan, Coetzenburg Street, Van Riebeeck Street, and Jonkershoek Road where it loops into Martinson Road, adjacent to Uniepark. The route continues down Merriman Avenue, past the Bergzicht taxi rank, and into the R310 (Adam Tass Road) westbound to Devon Valley Road, where it loops back to the Oude Libertas parking area.

1.5.3 Proposed Timetable and Stops

The proposed timetable and stops for loop 1 are presented in **Table 1.10** for various service frequencies). Excluding stops and under low traffic conditions, this route would take approximately 30 minutes to complete. With stops, it is expected that the route would take 60 minutes. There are a total of 4 proposed park and ride stops for the loop.

Stop 1: Oude Libertas Parking Area.

The loop originates at the Oude Libertas parking area. As illustrated in **Figure 1.6** **Error! Reference source not found.**, there is ample space to accommodate a pick-up point.

Figure 1.6: Proposed Stop at the Oude Libertas Parking Area

Stop 2: Die Laan

The second stop on the route is at Die Laan, which has ample space to accommodate a stopping point.

Figure 1.7: Proposed Stop at Coetzenburg

Stop 3: Morkel Road

Morkel Road has ample space to accommodate a stopping point, as seen in **Figure 1.8**

Figure 1.8: Proposed Stop on Morkel Road

Stop 4: Bergzicht Taxi Rank

The last stopping point on the route is the Bergzicht taxi rank.

Figure 1.9: Proposed Stop at Bergzicht Taxi Rank

Intermediate Stops

It is good practice to have intermediate stops every +/- 500m. Passengers will not be getting off at every stop each time, and there may not be passengers waiting at every stop, so the minibus will likely pass many stops without stopping. The 4 identified stops will be the main stops where the minibus always stops and wait regardless of whether there is anyone wanting to get on or off, so that the service users can rely on the minibus being at the stop according to the schedule. The proposed intermediate stops for the Pilot Loop are listed below. The main routes are highlighted in Bold text.

- Oude Libertas Parking Area
- R301 Opposite Nedbank
- 3 Dorp Street
- 1 Herold Street
- Stelkor Parking Area

- Die Laan Stop
- 42 Noordwal-East Street
- 6 Jonkershoek Road
- 51 Jonkershoek Road
- Morkel Road Stop
- 136 Merriman Avenue
- 110 Merriman Avenue
- Provincial hospital
- Neelsie Centre
- Bergzicht Taxi Rank Stop
- 3 Du Toit street
- Stellenbosch Train Station Stop
- Adam Tas Road(Adjacent to Distell)
- 1 Devon Valley Road
- 28 Devon Valley Road
- 4 Patrys Road
- 32 Patrys Road
- Flamingo Street

It must be noted that not all intermediate stops are 500m apart. For example, part of the route runs up and down the R304 (Adam Tas Road) which has limited stopping space. It is proposed that these intermediate stops are promoted and displayed clearly along the route. There should also be a clear distinction between the intermediate stops and the four main stops. For example, intermediate stops can be displayed with a red pole (see [Figure 1.10](#)), while the main stops are displayed with a red pole and temporary shelter (see [Figure 1.11](#)).

Figure 1.10 : MyCiTi Intermediate/Temporary Stop (MyCiTi, 2022)

Figure 1.11: MyCiTi Shelter (Shelflife, 2014)

Each vehicle will take roughly 60 min to complete a single loop. It is proposed that the pilot loop runs at a service frequency of 3 vehicles per hour during off-peak periods, and 4 vehicles per hour during peak periods (see Table 1.10). The duration between stops is between 2 and 3 minutes. Drivers will be required to adhere to a fixed schedule, regardless of the number of passengers or traffic conditions (to ensure the reliability of service).

Once the pilot study has started, it will give a clearer indication of whether the proposed timetable can be accurately adhered to in all traffic conditions (peak and non-peak periods). It will also give a clearer indication of other operational aspects. For example, after the pilot study, the municipality could consider running the loop in both directions (clockwise and anti-clockwise).

2	19:40	19:43	19:45	19:47	19:50	19:52	19:54	19:56	19:58	20:00	20:03	20:06	20:09	20:12	20:15	20:18	20:21	20:24	20:26	20:28	20:30	20:32	20:34
1	20:00	20:03	20:05	20:07	20:10	20:12	20:14	20:16	20:18	20:20	20:23	20:26	20:29	20:32	20:35	20:38	20:41	20:44	20:46	20:48	20:50	20:52	20:54

1.5.4 Basis For Providing the Service

The proposed pilot loop running between Uniepark and Onder Papegaaiberg is planned to run bi-directionally in order to accommodate the desire lines of passengers based on their destinations and to prevent lengthy travel times.

1.5.4.1 Formalising the Minibus-taxi Industry

It is recommended that Stellenbosch Municipality aims to incorporate the existing minibus taxi operators to provide this service. This would reduce potential for resistance from the sector towards the new service, as they would see it as an opportunity, rather than a threat. To integrate the minibus taxi operators into the proposed loop, extensive engagements with the minibus-taxi operators will be required and a process developed, together with the industry, to formalise the industry as recommended in the key interventions of Stellenbosch Municipality 2022 IDP.

To ensure strong lines of communication between the minibus taxi sector and the municipality, it is recommended that regular meetings (coordinated by the municipality) be held among all affected stakeholders. The piloting of a central town loop could also be the platform from which possible Transport Operating Company (TOC) could be established, and additional operating licences (OL) being released.

1.5.4.2 Corporate Identity

A differentiation in identifying the loop service vehicles is required in order for passengers to distinguish between the formalised service and existing informal minibus-taxi operations. Vehicle decals can be designed specifically for the Stellenbosch Municipality formalised public transport services. An example of this is the Blue Dot sticker used on existing minibus-taxi vehicles.

The appropriate vehicle size will depend on the passenger demand for the service which can be determined through surveys. Should 14-seater vehicles be required, utilising current minibus-taxi vehicles should be determined. However, existing minibus-taxi vehicles will also be required to undergo a fitness assessment to determine whether the vehicles are roadworthy and fit for providing the formal service. More information on this is provided under the Driver Customer Care proposed initiative.

1.5.4.3 Fares

While a pre-boarding fare collection system will likely not be possible during the initial stages of the proposed service, it is recommended that automatic fare collection technology be explored, for future introduction. A thorough investigation is also needed to determine what an appropriate fare structure would be. For the sake of simplicity, it is however recommended that the existing cash-based fare system, which the minibus-taxi operators currently implement, be applied during the pilot study.

1.5.4.4 Universal Access

Various pieces of legislation dictate that public transport must be accessible to all people, regardless of physical or mental abilities. The objective of The White Paper on National Transport Policy, 1996 is to: “ensure that passenger transport services address user needs, including those of commuters, pensioners, the aged, scholars, the disabled, tourists, and long-distance passengers” (Department of Transport: Republic of South Africa, 2009, p. i). The NLTA states that the municipal sphere has a responsibility to ensure “there is provision for the needs of special categories of passengers in planning and providing public transport infrastructure, facilities, and services to meet their needs, in so far as possible by the system provided for mainstream public transport” (Department of Transport: Republic of South Africa, 2009).

It is important that, if it is decided to implement and expand the loop system, it be planned with universal accessibility in mind.

1.5.4.5 Pilot Phase

To establish the feasibility of the loop system, as well as if there is sufficient passenger demand, it is recommended that loop 1, with a frequency of 3-4 vehicles per hour be operated for 12-18 months (with an option to renew for a further extended period). This will provide sufficient time for the pilot

project to gain exposure to stakeholders and potential users, and also provide the coordinating team of the pilot to address any challenges originating during the pilot period.

It is critical that during the pilot phase, information regarding the loop service is disseminated to the community and potential passengers. This includes the University students and employees of large employers residing outside of the municipal boundary, travelling into Stellenbosch Town for work.

1.5.5 Integration with Other Contracted Services

1.5.5.1 Stellenbosch University Shuttle Service

During weekdays, Stellenbosch University offers shuttle services for students and staff to and from various campus destinations to decentralised parking facilities (Innovative Transport Solutions, 2020). Tygerberg students can book the services between the campus collection point and a nearby shopping centre, currently Tyger Valley between Monday and Wednesday, and to Parow Centre on Thursdays.

There is a daily central campus service between 07:00 -17:30 and a booked evening service (18:00 – 02:00) (Innovative Transport Solutions, 2020). The service focuses on transport from parking areas to campus, transport from departments to and from the central campus, and the transport of congress attendees to and from the general parking areas.

It is proposed that, if the internal feeder system proves to be successful and feasible in the long run, the SU shuttle service be integrated into the system to further increase accessibility and reach. SU already provides this contracted service with financial assistance. In terms of a cost perspective, there are benefits for Stellenbosch Municipality to engage with SU to determine the terms of integration as there may be cost benefits for both entities.

1.5.5.2 Learner Transport

Currently, there are 13 transport operators providing learner transport within the municipality (RHDHV, 2016). Despite this service being available, most schools in the town of Stellenbosch are not served and learners are dropped off at school with private vehicles. This contributes greatly to congestion within the town, especially in the morning peak.

Again, there is an opportunity to integrate learner transport into the internal feeder system if it proves to be viable. The pilot route can easily be adjusted by adding a loop (see **Figure 1.12**) to incorporate the biggest schools in the town of Stellenbosch. Learners can be dropped off at or walk to any of the main or intermediate stops, and use the system to get to school. The following can be possible incentives for learners to use the system.

- Discounted fares for learners from Monday to Friday.
- High-quality safety and security measures.
- Loyalty rewards that can be used at their respective schools.

Figure 1.12: Added School Loop

1.5.6 Proposed Process for the Pilot Study(s) for the Proposed Public Transport Interventions

The purpose of the pilot studies is to not only provide viable public transport options for choice users but to improve the existing service provision for captive users. The pilot will also start the conversations to provide infrastructure for the future implementation of Integrated Public Transport Networks. In the following sections, the proposed pilot study process is discussed. The process is illustrated in Figure 1.13 which acts as a guideline to developing the pilot studies and can be altered according to each scenario.

1.5.6.1 Stakeholder Engagements Round 1

The first step of the process is to conduct engagements with the various stakeholders that will be affected by the pilot studies. These include representatives from the minibus taxi associations, law enforcement, municipality, bus operators and the public. The engagements should present the proposed pilot studies and collect feedback on the perceived feasibility, and the needs and desires of the stakeholders.

1.5.6.2 Planning

The planning phase aims to determine the timeline of the pilot studies, what activities are needed to conduct the pilot studies as well as who will be the responsible parties. It is also important to determine the criteria for a successful pilot study. The order in which the pilot studies will commence must also be determined.

1.5.6.3 Promoting to the General Public

Before the pilot studies are conducted, the proposed pilot(s) should be promoted through public facing campaigns. Campaign materials could include pamphlets (available hardcopy and digital), social media advertising, and announcements through other media formats. A promotional video could also be of value. The following information should be included in the campaign material.

- Brief background on the benefits of using the system
- Route(s)
- Timetable(s)
- Fare(s)
- Stops

1.5.6.4 Conduct the Pilot Study

During the pilot study(s), it is important to have an instrument to measure levels of demand and satisfaction with the service. It is proposed that passengers be given a short questionnaire that assesses the pilot study. Transport mapping could also be conducted, to establish the number of passengers boarding and alighting from each stop, as well as trip characteristics such as the duration of the trips under various circumstances.

1.5.6.5 Stakeholder Engagements Round 2

The round 2 stakeholder engagements will commence after the pilot study is completed. During these engagements, the role-players will be allowed to give their feedback. The data that was collected through the questionnaires and the transport mapping will also be presented.

1.5.6.6 Write-up of the Findings and Way Forward

The last step of the process is to prepare a full write-up of the findings. The write-up should include the collected and analysed data, and recommendations on the way forward.

Figure 1.13: Pilot Study Process

1.6 Non-contracted Services Plan

The details regarding non-contracted services routes, operating licences, and capacity requirements can be found in the OLP written in 2019. Alternatively, please see Section 1.7.

For this CITP, the non-contracted services plan will focus on driver customer care. Customer care is described as how well customers are taken care of while the customer is interacting with the service. The interaction includes how a customer experiences the company and its employees before, during, and after a service is completed. Customer care promotes the building of an emotional relationship with customers and, by doing so, creates a long-term relationship with customers (Fontanella, 2021).

The success and sustainability of any business rely on customer care as it is directly linked to customer satisfaction. In a study conducted by Mokonyama *et al.*, public transport customer satisfaction is unpacked by evaluating the gap between perceived- and expected performance based on 10 different criteria (factors) that influence a passenger's satisfaction towards a transport service (Mokonyama, *et al.*, 2010). The different factors considered are:

- Reliability – consistency of performance.
- Responsiveness – the ability of service provider employees to provide timely feedback.
- Competence – possession of required skills by service provider employees.
- Access – ease of contact with the service.
- Courtesy – aspects such as friendliness, politeness, and respect experienced by the customer.
- Communication – informing and listening to the customer.
- Credibility – includes aspects such as trustworthiness, honesty, and believability.
- Security – the need to minimise risks and dangers for the customer.
- Understanding and knowing the customer – making the effort to understand the customer.
- Tangibles – entails the physical appearance of the service presented to the customer such as vehicle cleanliness, driver appearance, etc.

Specifically, transport vehicle drivers directly impact the reliability, competence, courtesy, security, and tangibles factors listed above. Based on these factors relating to customer satisfaction, one can conclude that a driver operating a transport vehicle is key to the perceived passenger service quality and ultimately the success of a transport service.

A driver customer care strategy is a framework to improve customer service quality and ultimately improve business overall. For this report, the concept of driver customer care aims to improve the success and sustainability of a business through improving driver service and vehicle operation standards of non-contracted services. Driver service standards can be improved by, for example, imposing a training programme and setting standards to which non-contracted transport drivers are required to adhere if they wish to obtain an operating license. Driver training enables a driver to fully understand what driver customer care entails, to know where the permitted operating areas are based on operating licenses, and to become aware of the safety of customers and drivers themselves with regard to working long consecutive hours.

The standards of operating vehicles are improved through imposing vehicle inspections as part of the operating license application and more critically through the vigilant enforcement of regulations by local authorities such as valid driver-, vehicle- and operating licenses.

A driver customer care strategy looks at different factors in which the driver plays a direct role in customer satisfaction with the transport service provided. In the non-contracted services industry, specifically, some factors could potentially be improved should a single framework, and therefore a guideline, for the industry exist.

1.6.1 Driver Customer Care Framework

This section presents a proposed Driver Customer Care Programme to be adopted by non-contracted services. **Table 1.11** provides a breakdown of the criteria and requirements for both the driver and the permitted vehicle based on the three (3) phases of the credentialing process. The three (3) phases are: (1) Driver Training, (2) Vehicle Inspection, and (3) Driver Licensing and Vehicle Operating License.

Driver Training is divided into five (5) sub-components which are (1) customer service standards, (2) driver code of conduct, (3) passenger safety, (4) services for people with disabilities, and (5) the permittance of service animals. All drivers are required to pass the training programme to qualify for the next phase of the credentialing process, which is the Vehicle Inspection phase. The training programme will be provided by Stellenbosch Municipality or an identified company that is able to provide the training programme. The fees of the training programme are paid for by the driver or operator applying for the vehicle operating license. All costs incurred to complete the credentialing process are the responsibility of the applicant and are non-refundable.

The **Vehicle Inspection** phase of the credentialing process requires a driver to take the vehicle in application to their nearest approved testing facility for a vehicle inspection. Vehicle inspection certificates are required for every new vehicle operating license application. For every vehicle operating license renewal application, the vehicle needs to undergo a vehicle inspection each year the operating license is issued. In other words, for every renewal application, the vehicle needs to be inspected and a certificate needs to be provided as supporting documentation for the application. The driver or operator is responsible for addressing any faults identified by the vehicle inspection facility at their own cost before the operating license application may be completed.

The final phase of the credentialing process is the **Driver Licensing and Vehicle Operating License** phase. This phase of the credentialing includes the final criteria to be met and supporting documentation required in the application for a driver or operator to receive an operating license.

Table 1.11: Driver Customer Care Programme

Phase	Driver	Vehicle
1. Driver Training	The Training Programme should cover the following: <ul style="list-style-type: none"> • Rules and regulations for providing non-contracted transport operations including operating license areas. • Customer service standards. • Driver code of conduct. • Passenger safety: safe driving skills and traffic rules. • Services for people with disabilities. • And the permittance of service animals. 	N/A
1.1 Customer service standards	Driver customer service includes the following: <ul style="list-style-type: none"> • Drivers shall always communicate with passengers professionally and appropriately. • Drivers shall offer assistance to passengers in boarding and alighting the vehicle. • Drivers shall never make use of cell phones and/or headphones while driving. 	Standards relating to the vehicle regarding customer service are as follows: <ul style="list-style-type: none"> • Driver identification shall be displayed in the form of a card which will be placed at an easy-to-read location for the passenger(s). • The interior of the vehicle is to be kept neat and clean with a temperature that is comfortable for the passenger.
1.2 Driver Code of Conduct	The code of conduct a driver must adhere to is as follows: <ul style="list-style-type: none"> • Drugs and alcohol are forbidden for both the driver and the passenger(s). • Smoking in the vehicle is forbidden for both the driver and the passenger(s). • Food and beverages in the vehicle are forbidden for both the driver and the passenger(s). 	N/A
1.3 Passenger safety	Drivers to confirm that passenger(s) are safely in the vehicle and have fastened their seatbelts before departing the pick-up location.	All vehicles should have a safety belt for each seated passenger in the vehicle.
1.4 Services for people with disabilities	The definition of “person with a disability”: is individuals with physical/ mental impairments that substantially limit one or more major life activities. <ul style="list-style-type: none"> • Drivers shall never deny service to a passenger(s) with a disability. • Drivers shall never impose special charges based on disability, gender, religion, national origin, race, or age. • Drivers may not refuse service solely because the passenger’s disability results in behaviour that may offend, annoy, or be inconvenient to him/her. • It is not discrimination to refuse service if the passenger engages in violent, seriously disruptive, or illegal conduct. 	Vehicles can be modified to accommodate passengers that utilise wheelchairs. The modification certificate is required to be submitted upon renewal or new application of the vehicle operating license.
1.5 Service animals	All drivers are to permit passengers (only if the passenger provides proof of the requirement) to bring their service animals within the vehicle for example for passengers who have sight impairment and require a guide dog.	Drivers can opt to have pet seat covers fitted to the rear passenger seat for the permittance of service animals or opt to use a pet hair removal stick. The interior of the vehicle must be kept clean of pet hair after such service is rendered.
2 Vehicle Inspection	A driver’s responsibility regarding vehicle inspection entails: <ul style="list-style-type: none"> • Drivers are to take the permitted vehicle in for inspection prior to a vehicle operating license application and prior to every application. • Drivers are responsible to address any inspection faults identified through the inspection facility before a vehicle operating license shall be issued. 	Vehicle inspection requirements: <ul style="list-style-type: none"> • Inspection of the vehicle is to take place every year as part of the operating license renewal process. • The inspection facilities available in Stellenbosch Municipality are to be listed and provided by the municipality. The inspection facility is to perform tests on the vehicle components such as brakes, seatbelts, lights, suspension components, and emissions systems.
3 Driver Licensing and Vehicle Operating License	Driver licensing requirements: <ul style="list-style-type: none"> • To qualify for a license, the driver needs to meet the following criteria: <ul style="list-style-type: none"> ○ Minimum age: 21 ○ Have a valid SA driver’s license. ○ Have a valid PrDP license. ○ No fines or fees owed to the PRE and law enforcement (traffic department). • The following supporting documentation is to be supplied upon renewal and new application of drivers: <ul style="list-style-type: none"> ○ Medical health assessment conducted by a local clinic (blood pressure, BMI, glucose, and cholesterol). ○ Certificate of completed first aid course. ○ Certificate of a completed training programme. • Drivers renewing their license must undergo the medical health assessment each year the license is being renewed for the license to be approved by the PRE and Stellenbsoch Municipality. 	Vehicle operating license requirements: <ul style="list-style-type: none"> • Vehicles must either be owned or leased by the driver applying for the license. • The following supporting documentation of the vehicle in application must be provided in the licensing application: <ul style="list-style-type: none"> ○ Vehicle registration certificate. ○ Roadworthy certificate. ○ Insurance certificate. ○ Existing operating license (if applicable). ○ Vehicle modification letter (if the vehicle is, for example, wheelchair accessible). • A placard is to be displayed on the interior of the front view window of the passenger side of the vehicle. Passengers (inside the vehicle) will be able to view the content of the placard which includes: <ul style="list-style-type: none"> ○ Driver and operator details (name of the driver and operator, PrDP number, photo of the driver, contact details of the operator). ○ Emergency contact details. ○ Report incident/poor driver behaviour contact details. ○ Log universal access requests. ○ Sexual harassment reporting contact details.

1.6.2 Possible Integration with Blue Dot

The blue dot taxi pilot project had 4 main objectives (Western Cape Government, 2022):

- Improve service quality & safety
- Leverage technology to drive change
- Address taxi violence and illegal operations
- Support industry formalisation & empowerment

Operators could earn a blue dot by achieving a green status (Western Cape Government, 2022). Once operators received a green status, they earned daily payments based on how they performed. Performance was based on star ratings, ranging from 1 to 5. The higher the star rating, the higher the incentive. Operator performance was measured by 4 indicators:

- Speeding
- Harsh driving
- Route adherence
- User feedback

The blue dot pilot project ended in November 2022, and currently there are no plans for project extension. It could be beneficial for Stellenbosch Municipality to investigate the feasibility of a blue-dot-like project that incorporates the proposed driver customer care programme. Engagement with the Department of Transport and Public Works is required to identify the potential way forward on either reinstating the programme and including Stellenbosch Municipality. The challenge that will need to be addressed is the source of funding and how the continuation of the programme will roll out.

1.7 Operating License Plan (OLP)

The latest Operating Licence Plan (OLP) was written in 2019. This section gives a summary on what the plan presents. It must be noted that the report mainly covers MBT and excludes other non-contracted services such as metered taxis and e-hailing services.

1.7.1 Background

According to the OLP, there are 144 MBT operating licences, 717 route authorities and 3 taxi associations in Stellenbosch (Stellenbosch Municipality, 2019). However, the actual number of taxis are difficult to calculate due to the lack of OL database accuracy.

Surveys conducted in 2019 throughout the municipality indicated a large number of illegal vehicles (Stellenbosch Municipality, 2019). The local routes with the highest number of illegal vehicles were Koelenhof (route 662), Kayamandi (route 676) and Klapmuts/Muldersvlei (route G60), while the inter municipal routes with the highest number of illegal vehicles were Stellenbosch/Bellville (route N12), Stellenbosch/Somerset (route 669) and Franschhoek Paarl (route 755). For actual numbers and counts, please refer to the full operating licence plan.

1.7.2 Operating Licence Analysis

To assess the supply of and demand for non-contracted services within the municipality, and to essentially balance the supply and demand, an operating licence analysis were conducted (Stellenbosch Municipality, 2019). The analysis included the following information:

- Rank Information
 - Rank number
 - Rank name
 - Destination (names of areas where routes operate from that specific rank)

- Route numbers serving the particular rank
- No of routes where multiple route numbers serve the same O-D
- Supply
 - Distinct OLs or vehicles with PRE
 - Service capacity which assumes on average a 15 seater vehicle i.e. vehicle capacity x
 - number of OLs
 - The number of surveyed vehicles
 - Legal vehicles which have an OL and have the right route authority for the rank
- Demand
 - Peak day
 - Peak hour
 - No. of Pax (peak hr)
 - Average waiting time (mins)
- Operating Licence Evaluation
 - 1-way route distance [km]
 - Turn-around Time [hh:mm:ss]
 - OLs required based on pax demand
 - Comparison of capacity from existing OLs registered vs the number of OLs required based on passenger demand
 - Status of illegal vehicles i.e. no OLs with route authorities for that rank
- Recommendation
 - If demand is higher than existing supply, recommend additional OLs
 - If demand is significantly lower than existing supply, recommend no additional OLs

1.7.3 Conclusions from the Operating Licence Analysis

From the analysis done, the following were concluded.

1.7.3.1 Additional OLs Required

The analysis indicated that some additional OLs are required for the following routes. High levels of illegal vehicles were observed servicing these routes (Stellenbosch Municipality, 2019).

- Route 665 (Stellenbosch to Cloeteville)
- Route 676 (Stellenbosch to Kayamandi)
- Route 755 (Franschhoek to Paarl)
- Route G15 (Klapmuts to Paarl)

1.7.3.2 Reduce the Number of Route Authorities

Some routes showed low passenger demand (Stellenbosch Municipality, 2019). As a result, the routes had more OLs than what was required to meet the passenger demand. However, it is estimated that future development and population growth will balance out supply and demand on these routes.

1.7.3.3 Greater Enforcement of Legal Vehicles

A greater level of enforcement is required as most routes showed high levels of illegal vehicles (Stellenbosch Municipality, 2019). Vehicles that are classified as illegal are those that do not have route authority or have OLs for Stellenbosch but operate on the incorrect route(s).

1.7.3.4 Additional OLs in Growth Areas

Additional OLs will be required in areas with high expected growth during the next 5 years. These areas include (Stellenbosch Municipality, 2019):

- Stellenbosch CBD
- Klapmuts
- Pniel
- Idasvalley
- Cloetesville
- Raithby
- Jamestown

1.7.3.5 Modify and Correct Route Descriptions

In some cases, route descriptions were incorrect due to them being incorrectly recorded or no longer viable due to road improvements/changes (Stellenbosch Municipality, 2019). As part of the OLP process, the modified routes were submitted to the PRE in order for them to communicate the modifications to the taxi associations.

1.7.3.6 Deceased OLs

It was found that the owners of numerous OLs were deceased (Stellenbosch Municipality, 2019). Currently, it is unclear to the operators how these OLs should be cancelled or transferred. Taxi associations need to communicate with the PRE regarding deceased members.

1.8 Dedicated HOV Lanes

In the Stellenbosch 5th Generation IDP 2022-2027, under the CITP section (6.3.4.2), it is proposed that an assessment report be submitted to the Provincial Department of Transport on the potential implementation of public transport lanes on the R44, in both directions, between Stellenbosch and Somerset West. Dedicated high occupancy vehicle (HOV) lanes encourage motorists to either participate in ridesharing or to shift to public transport modes. Dedicated HOV lanes help prioritise public transport traffic, thereby enabling those travelling via public transport to potentially have shorter travel times than single occupancy private vehicles. HOVs can be defined to include public transport vehicles, such as minibus-taxis, as well as private vehicles, with three or more passengers per vehicle.

The Revised National Transport Policy 2021 states that “the establishment of priority lanes on the road network for buses and taxis will be investigated to reduce travel times and encourage the use of public transport” (Department of Transport, 2021, p. 50). The establishment of priority lanes falls under the policy of implementing integrated rapid public transport networks, across all appropriate districts and municipalities. The policy also indicates that the implementation of such networks can be slow, and therefore integrating public transport by employing a systematic approach and promoting the establishment of priority lanes where feasible could potentially be one phase of developing the integrated public transport system.

1.8.1 HOV Lane Scenarios

To promote public transport, and prioritise high occupancy vehicles, as part of the revised CITP, it is proposed that an HOV lanes pilot be conducted between Somerset West and Stellenbosch town centre. Pilot studies allow the testing of interventions with reduced risk.

For the pilot study, it is proposed that the implementation of dedicated HOV lanes would be between Somerset West and Stellenbosch town centre, in both directions. The HOV lane from Somerset West towards Stellenbosch would start before the R44/Annandale Road intersection and terminate before the R44/Dorp Street intersection. The HOV lane in the opposite direction (Stellenbosch to Somerset West), would start at the R44/Van Rheeke Road intersection, and terminate at the R44/Annandale Road intersection (as illustrated in **Figure 1.14**).

Figure 1.14: Dedicated HOV Lanes

Four potential R44 HOV lane scenarios could be investigated:

- Demarcating an existing lane for HOV vehicles during peak periods (where different road markings are used to differentiate the HOV lane from the open lane, as seen on the N2 inbound public transport lane). This option would require active law enforcement, to ensure compliance.
- Utilising a contraflow lane for HOVs during peak periods. Under a contra flow HOV lane scheme, during peak periods, the inner lane on the contraflow side of the road (i.e.: the side of the road running in the opposite direction to peak traffic flow), is utilised by HOV vehicles traveling in the peak traffic flow direction. The main issue with a contra flow-based scheme is that it can pose a major safety risk to all road users, especially at intersections, where there are many potential points of conflict.
- Construction of additional lanes within the road reserve dedicated to HOVs. This option would require substantial investment in infrastructure and is therefore not suitable for a pilot (but could be considered for implementation should a scenario 1 pilot be successful). In addition, this option would also require active law enforcement to ensure compliance.
- Developing infrastructure for dedicated HOVs that can be used for bus rapid transit in the future. This option will, however, require significant planning and funding from the Provincial Government.

The photos in **Figure 1.15** show the current configuration of portions of the R44, from Somerset West, towards Stellenbosch.

Figure 1.15: Road capacity for dedicated HOV lane pilot study

The dedicated HOV lane pilot study could be conducted in conjunction with the piloting of a park and ride facility along the same corridor. There are ongoing studies investigating the potential of the park and ride solutions, to alleviate congestion, and provide sustainable transport solutions to and from Stellenbosch town centre. The park and ride pilot would require a shuttle service between the proposed facility and the Stellenbosch town centre. The contracting of minibus-taxi operators to run this service is one potential option that could help to make more efficient use of existing public transport vehicles. This would also encourage private vehicle owners to use public transport services more broadly, thereby potentially shifting mindsets in favour of sustainable transport modes.

The public transport shuttle service operating on the dedicated HOV lanes could integrate with an internal transport feeder system, the anticipated TOD-style Development along the Adam Tas Corridor, the parking garage facility proposed at Technopark, and the development of a formalised taxi operating company with the support of the Municipality. It is critical that the dedicated HOV lanes integrate with the existing NMT network, and planned improvements along this proposed corridor. The process for the pilot study is presented in Section 1.5.6.

1.8.2 Possible HOV Integration with Other Modes

The minimum requirements for the preparation of integrated transport plans document states that the focus of the public transport plan must be to integrate the public transport network, services, and modes. There is an opportunity to integrate other modes with the proposed HOV lanes (see [Figure 1.16](#)). Firstly, the HOV lanes can be integrated with the internal feeder system (see section 1.5). This will connect areas such as Jamestown, Technopark, and Paradyskloof with the looped system. Secondly, once the rail services are re-instated (see section 1.4 for more information), the internal feeder system can be linked to rail by adding an additional stop at the train station or adjacent parking area (see [Figure 1.17](#)). This will further increase accessibility to and from other areas outside the town and be the first step in achieving an integrated public transport system for Stellenbosch.

Figure 1.16: Possible Integration Opportunities

**APPENDIX E: STB RMP PROPOSED ROAD PROJECTS
(including Provincial road projects)**

STB RMP .PROPOSED ROAD PROJECTS (INCLUDING PROVINCIAL ROAD PROJECTS)

PROJECT REFERENCE NUMBER	ROAD NAME	ROAD AUTHORITY	ROAD NUMBER	PROVINCIAL ROAD NUMBER	ROAD SECTION / INTERSECTION NAMES	IMPROVEMENT TYPE	IMPROVEMENT DESCRIPTION	LENGTH (+/- km)	PROPOSED CLASSIFICATION	CROSS SECTION	PRIORITY *	COMMENTS/STATUS
SRMP001	Western bypass Adam Tas- Kayamandi Link	Stellenbosch/PGWC	tbc	-	New road between R310 and R304 (Western bypass - Portion north of Adam Tas Road)	New road	Option 2 New road between R310 heading north to link with the R304 to tie into the existing intersection with Welgevonden Boulevard. The route runs east of the Stellenbosch land-fill and joins Devon Valley Road for a portion before deviating to pass over the hill	6.0	Class 2, Urban Major Arterial	Dual Carriageway	-	TBC
SRMP002	Western bypass Adam Tas- Technopark Link	Stellenbosch/PGWC	tbc	-	New road between R44 (Techno Park) and R310 Adam Tas Western Bypass, portion south of Adam Tas Road - Alignment Option 1	New road	Option 3 - New road parallel to existing Techno Avenue from the R44 to R310. The road will have limited intersections with a possible 2nd access to Techno Park linking into Neutron Road. The route crosses the Eerste river (new bridge), and passes to the west of Van Ryn's Distillery before crossing the railway line (new bridge) and intersecting with Adam Tas.	4.0	Class 2, Urban Major Arterial	Single Carriageway	High	Planning and Design
SRMP003	Western bypass	PGWC	tbc	-	New road between R44 (Annandale Road) and R310 Adam Tas. Western Bypass, portion south of Adam Tas Road - Alignment Option 2	New road	Option 1 New north-south link road between Annandale Road and Adam Tas running to the east of the airport and De Zalze Estate. The route will cross the Eerste River (new bridge) and passes to the west of Van Ryn's Distillery before crossing the railway line (new bridge) and intersecting with Adam Tas. Detailed planning and investigation of route alternatives will be required, and an EIA process due to potentially environmentally sensitive areas.	6.4	Class 2, Urban Major Arterial	Single Carriageway		Further investigation required to determine whether feasible possibly as lower order road and utilizing existing routes as far as possible.
SRMP004	Kromme Rhee Road	PGWC	M23	DR1085	Kromme Rhee Road	Road upgrade	Upgrade to dual carriageway with shoulders, replacement of level crossing at Koelenhof Station with road over rail bridge.	3.5	Class 2, Urban Major Arterial	Dual Carriageway		
SRMP006	R44	Stellenbosch/PGWC	R44	MR27	R44 / Merriman Street/Adam Tas	Intersection upgrade	Grade separated intersection with bridge over railway line.	N/a	Class 2, Urban Major Arterials	-	High	Planning and Design
SRMP008	R44/R310	Stellenbosch/PGWC	R44/R310	MR27/MR172	R44 / Helshoogte Road	Intersection upgrade	Phase 1: Provide a left turn slip lane on the R44 southbound, and upgrade Helshoogte westbound to left turn, through and double right turn lanes. Phase 2: Realignment of La Colline Road.	N/a	Class 2, Urban Major Arterials	-	High	Phase 1 Complete Phase 2 Planning and Design
SRMP009	Adam Tas	STB/PGWC	R44/R310	MR27/MR177	R44 / Alexander Street / Adam Tas	Intersection upgrade	Realign Alexander Road to form the 4th leg opposite Adam Tas Road southbound.	N/a	Class 2, Urban Major Arterials	-	High	Planning and Design
SRMP010	R44	PGWC	R 44	MR27	R44 / Winery Road	Intersection upgrade	Grade Separation of intersection with free flow on the R44	N/a	Class 2, Urban Major Arterials	Dual Carriageway		
SRMP011	R44	PGWC	R 44	MR27	R44 / Annandale Road	Intersection upgrade	Grade Separation of intersection with free flow on the R44	N/a	Class 2, Urban Major Arterials	Dual Carriageway		
SRMP012	Huguenot Road	Stellenbosch	R45	MR191	R45 (Huguenot Rd) / Le Roux Street	Intersection upgrade	Intersection upgrade and potentially a new layout / control type	N/a	Class 2, Urban Major Arterials	-	High	Planning and Design
SRMP013	Huguenot Road	Stellenbosch	R45	MR191	R45 (Huguenot Rd) / La Provence Road	Intersection upgrade	Intersection upgrade and potentially a new layout / control type	N/a	Class 2, Urban Major Arterials	-	Medium	
SRMP014	Huguenot Road	Stellenbosch	R45	MR191	R45 (Huguenot Rd) / Uitkyk Street	Intersection upgrade	Intersection upgrade and potentially a new layout / control type	N/a	Class 2, Urban Major Arterials	-	Medium	
SRMP015	Huguenot Road	Stellenbosch	R45	MR191	R45 (Huguenot Rd) / Louis Botha Road	Intersection upgrade	Provide medians on approaches to Huguenot Road / Louis Botha intersection to improve safety.	N/a	Class 2, Urban Major Arterials	-		
SRMP016	Huguenot Road	Stellenbosch	R45	MR191	R45 (Huguenot Rd) / Lambrechts Road	Intersection upgrade	Intersection upgrade and potentially a new layout / control type	N/a	Class 2, Urban Major Arterials	-		
SRMP017	Lambrechts Road	Stellenbosch	R45	MR191	R45 (Lambrechts Road) / Nerina Street	Intersection upgrade	Intersection upgrade and potentially a new layout / control type	N/a	Class 2, Urban Major Arterials	-		

PROJECT REFERENCE NUMBER	ROAD NAME	ROAD AUTHORITY	ROAD NUMBER	PROVINCIAL ROAD NUMBER	ROAD SECTION / INTERSECTION NAMES	IMPROVEMENT TYPE	IMPROVEMENT DESCRIPTION	LENGTH (+/- km)	PROPOSED CLASSIFICATION	CROSS SECTION	PRIORITY *	COMMENTS/STATUS
SRMP018	R44	PGWC	R 44	MR27	Techno Road to Van Reede Road intersections	Additional lanes	Provision of additional lanes to increase road link capacity and intersection stop line capacity	3.3	Class 2, Urban Major Arterials	Dual Carriageway		
SRMP020	R44	PGWC	R 44	MR27	R 44	IRT infrastructure	Provision of intersection upgrades and/or dedicated lanes in congested sections	N/a	Class 2, Urban Major Arterials	Dual Carriageway & median IRT Lanes		
SRMP021	R310	PGWC	M12 & R310	MR177	Stellenbosch Arterial / Polkadraai Road	IRT infrastructure	Provision of intersection upgrades and/or dedicated lanes in congested sections	N/a	Class 2, Urban Major Arterials	Dual Carriageway & median IRT Lanes		Long-term planning
SRMP023	Western bypass	PGWC	-	-	Western Bypass / R304 intersection	Interchange	Upgrade to grade-separated interchange	N/a	Class 2, Urban Major Arterials	-		
SRMP024	Western bypass	PGWC	-	-	Western Bypass / R310 intersection	Interchange	Upgrade to grade-separated interchange	N/a	Class 2, Urban Major Arterials	-		
SRMP025	Western bypass	PGWC	R 44	MR27	Western Bypass / R44 intersection	Intersection upgrade	Upgrade to grade-separated interchange. Possible roundabout to accommodate Techno Park access, proposed new east-west route, and possibly De Zalze access. Refer to SRMP003.	N/a	Class 2, Urban Major Arterials	-		
SRMP027	R45	PGWC		MR191	Portion of R45 between N1 and Helshoogte Road	Road upgrade	Road improvement and intersection improvements	9.8	Class 2, Urban Major Arterial	Single Carriageway		
SRMP028 (Full)	R304	PGWC	R304	MR174	Portion of R304 from N1 to R310/R44	Road upgrade	Upgrade to dual carriageway.	13.5	Class 2, Urban Major Arterial	Dual Carriageway		
SRMP028 (Partial)	R304	PGWC	R304	MR174	Portion of R304 from R44 to Welgevonden	Road upgrade	Upgrade to dual carriageway.	0.75	Class 2, Urban Major Arterial	Dual Carriageway	High	Planning and Design
SRMP030	Welgevonden Boulevard	Stellenbosch	-	-	New road between Lang Road and R44	New road extension	Extension of Welgevonden Boulevard to bypass north of Welgevonden residential area, follow a new alignment and link to the R44 with a signalised intersection. A new entrance to Welgevonden will be required.	1.4	Class 3, Urban Minor Arterial	Single Carriageway		
	Remove Row											Project removed
SRMP033	Robertsvlei Road	PGWC	-	DR1351	DR1343 / DR1351 / MR191	Road upgrade	Upgrade of Robertsvlei Road to accommodate Heavy Vehicles which will allow bypassing of Franschoek town centre.	10.3	Class 3, Rural Minor Arterials	Single Carriageway		
SRMP034	Groenfontein Road	Stellenbosch	-	DR1104	Groenfontein Road from R44 to Protea Road	New road extension	Upgrade of Groenfontein Road to serve proposed new developments in Klapmuts (north and south of the N1).	5.3	Class 3, Urban Minor Arterials	Single Carriageway		
SRMP036	Remove Row											Project completed
SRMP037	tbc	PGWC	-	MR166	Road and intersection upgrades	Road upgrade	Road rehabilitation and provision of new intersections with Eikendal Road, Bredell Road and the R44.	-	tbc	Single Carriageway		
SRMP038	Old Paarl Road	PGWC	R101	MR189	Portion of Old Paarl Road from the R304 to Bloekombos	Road rehabilitation	Road rehabilitation of the R101.	-	Class 3, Urban Minor Arterial	Single Carriageway		
SRMP039	Stellenbosch Arterial	PGWC	M12	MR177	Portion of M12 from existing dualling to R102	Road rehabilitation	Road rehabilitation of the M12.	-	Class 3, Urban Minor Arterial	Single Carriageway		
SRMP040	Annandale Road	PGWC	-	DR1050	Annandale Road and a portion of Baden Powell Drive	Road rehabilitation	Road rehabilitation of Annandale Road.	-	Class 3, Urban Minor Arterial	Single Carriageway	High	Completed
SRMP041	Groenfontein Road	PGWC	-	DR1104	Groenfontein Road from Klapmuts to north of the N1	Road regravel	Regravel Groenfontein Road	-	Class 3, Urban Minor Arterial	Single Carriageway	Medium	Refer to SRMP034
SRMP043	Baden Powell Drive	PGWC	R310	MR168	Baden Powell Drive between the M12 Polkadraai and N2.	Road rehabilitation	Rehabilitation and upgrade of Baden Powell between the N2 and Vlaeberg Road. Section between Polkadraai and Annandale Road is planned.	-	Class 3, Rural Minor Arterials	Single Carriageway		In-Progress
SRMP044	Robertsvlei Road	PGWC	-	DR1351	Portion of Robertsvlei Road	Road regravel	Regravelling of existing road	-	Class 3, Rural Minor Arterials	Single Carriageway		Refer to SRMP033

PROJECT REFERENCE NUMBER	ROAD NAME	ROAD AUTHORITY	ROAD NUMBER	PROVINCIAL ROAD NUMBER	ROAD SECTION / INTERSECTION NAMES	IMPROVEMENT TYPE	IMPROVEMENT DESCRIPTION	LENGTH (+/- km)	PROPOSED CLASSIFICATION	CROSS SECTION	PRIORITY *	COMMENTS/STATUS
SRMP045	Winery Road / Main Street	PGWC	M9	MR165/MR166	Macassar Road to Winery Road, extension of Main Road	New road & intersection	Realignment of Macassar Road to connect with Winery Road to create improved mobility from south of the N1. Existing portion of Winery Road to be maintained for local farm access only. Main Road to be extended to meet with new road as a priority intersection.	1.3	Class 3, Urban Minor Arterials	Single Carriageway		Upgrade located outside SM
SRMP046	Remove Row											Removed
SRMP047	R44 / Stellenbosch Airport Service Road	Stellenbosch	-	-	New road link to the R44	New road	New road between the existing service road and tying into proposed intersection on the R44 - required as part of the Stellenrust Road realignment. Allows closure of several private driveways along the R44 with a consolidated access road. May require upgrading of the existing gravel service road. Closure of existing unsafe Aerodrome access off the R44	0.2	Class 4, Urban Collector Streets	Single Carriageway		Refer to SRMP048
SRMP048	Stellenrust Road	Stellenbosch	-	DR1053	Stellenrust Road	Road realignment	Realignment of Stellenrust Road over the R44 to link onto proposed new road and the closure of the existing unsafe access on the R44.	0.7	Class 4, Urban Collector Streets	Single Carriageway		Refer to SRMP047
SRMP049	New Jamestown Access Road	Stellenbosch	-	-	New Jamestown Access Road	New road extension	New Jamestown Road linking existing and proposed residential developments south to Stellenrust Road and north to Blaauwklippen Road / proposed Eastern Link	3	Class 4, Urban Collector Streets	Dual Carriageway		Long-term planning
SRMP050	School Road	Stellenbosch	-	-	Upgrade and realign School Street	New road	School Road upgrade from R44 to future Eastern Link Road	1.5	Class 4, Urban Collector Streets	Single Carriageway	High	Planning & Design
SRMP051	Pajaro Avenue	Stellenbosch	-	-	Pajaro Avenue between Webersvallei Road and Stellenrust Road	New road extension	Extend Pajaro Avenue northwards to intersect with Blaauwklippen Road and south to Stellenrust Road. Provides additional access to future Jamestown developments proposed as well as linking Jamestown to Paradyskloof.	2.3	Class 4, Urban Collector Streets	Single Carriageway		
SRMP052	Wildebosch Rd Ext – South (Eastern Link)	Stellenbosch	-	MR169	Wildebosch Road between R44 and Blaauwklippen Road	New road	The extension of Wildebosch Road to link onto Techno Avenue at the R44 (Portion of Eastern link)	0.95	Class 4, Urban Collector Streets	Single Carriageway	TBC	TBC
SRMP053	Wildebosch Rd Ext – North (Eastern Link)	Stellenbosch	-	MR169	Wildebosch Road between Paradyskloof Road and the extension of Van Reede Road	New road	The extension of Wildebosch Road north over Trumali Road and Brandwacht linking onto the extension of Van Reede Road and further north to the CBD	2.5	Class 4, Urban Collector Streets	Single Carriageway	TBC	Planning and Design
SRMP054	Van Reede Road	Stellenbosch	-	MR171	Van Reede Road	Upgrade & new road extension	Investigate the extension of Van Reede Road to link with Neutron Road.	2.3	Class 4, Urban Collector Streets	Single Carriageway		
SRMP055	Van Reede Road	Stellenbosch	-	MR171	Van Reede Road	New road extension	Extension of Van Reede Road to link with proposed new eastern extension of Wildebosch Road. Route runs through potentially sensitive farmlands and although a proclaimed provincial servitude is present, further investigations will be required.	0.6	Class 4, Urban Collector Streets	Single Carriageway		
SRMP056	Suidwal Road	Stellenbosch	-	-	Suidwal Road	New road	Extension of Suidwal Road between Doornbosch Road to Koch Road. The route is near sensitive areas and requires changes to Bloemhof Girls High School parking area.	0.4	Class 4, Urban Local Streets	Single Carriageway		
SRMP057	Stellentia Road	Stellenbosch	-	-	Rokewood Road / Stellentia Road	New road	Extension of Stellentia Road over the Eerste River (new bridge) to link onto Rokewood Road at the eastern Culemborg Crescent intersection. Provides an alternative access from Die Boord to the R310, without using the R44.	0.2	Class 4, Urban Collector Streets	Single Carriageway

Qualification:
Note that where the Road Authority is the Provincial Roads Department, projects are commissioned and funded by the Department and are implemented in accordance with the provincial budgets and timeframes. Where the Road Authority is both the Municipality and Provincial Roads Department, the Municipality would apply for funding from the Provincial department. Should the application be successful, the department will fund part of the project; in such instances the Provincial Department is the approval authority.

11.8.1	PRECINCT PLAN: FUTURE DEVELOPMENT AND UTILIZATION OF THE RHENISH COMPLEX AND SURROUNDS
--------	---

Collaborator No:

IDP KPA Ref No:

Good Governance and Compliance

Meeting Date:

22 March 2023 & 29 March 2023

1. SUBJECT: PRECINCT PLAN: FUTURE DEVELOPMENT AND UTILIZATION OF THE RHENISH COMPLEX AND SURROUNDS

2. PURPOSE OF REPORT

To obtain approval from Council to commence with a public participation process for the possible future development of the Rhenish Complex and surrounding area. It has generally been recognized that the Rhenish Complex is of significant cultural and heritage importance and is an invaluable asset for the town which demands proper maintenance and appropriate utilization. Several municipally initiated and supported studies and development frameworks have focused on the complex and its surrounds over preceding years. The report is the result of the evaluation and analysis of all existing planning and planning related documentation, current lease agreements and any documentation as it relates to the future utilization of the Rhenish Complex, its buildings and open space, the Braak and public spaces around the Braak including the potential linkage of Church Street with the Braak and Rhenish Complex.

3. DELEGATED AUTHORITY

Council

4. EXECUTIVE SUMMARY

Several municipally initiated and supported studies and development frameworks have focused on the complex and its surrounds over preceding years. These include:

- 1) Stellenbosch Conservation Strategy; Kruger Roos; 1997. (Approved by Council in 1997).
- 2) Die Braak, Voorlopige Ontwikkelingsraamwerk & Rekonstruksie; Kruger Roos, 1997.
- 3) Stellenbosch Historical Centre, Mill Square and Surrounds; Kruger Roos, 1998.
- 4) Heritage Study, Binnetuin Park, Stellenbosch; Pistorius and Harris, 2005.
- 5) Het Erfgoedbeleid van Stellenbosch. Het opstellen van ondersteunende komen – Die Braak en het Rijnse Complex als katalysator; Carton & Ryckeboer, 2012.
- 6) Kerkstraat sluiting, Piet Louw & Dave Dewar, 2020
- 7) Proposals call for the utilization of the Braak, Mayor 2019

While there are many relevant and good ideas included in the above-mentioned studies, the project allowed for an opportunity to consider the study area as a totality, as well as the site's integrated relationship with the general surroundings. A key question therefore is:

'What should structure the whole or the totality, in urban design terms, and how can the site, most of which is embedded, be unlocked to become part of the daily-use fabric of the town, from a public perspective?'

The project entailed the following processes.

- 1) The evaluation and analysis of all existing planning and planning related documentation, current lease agreements and any documentation as it relates to the future utilization of the Rhenish Complex, its buildings and open space, the Braak and public spaces around the Braak including the potential linkage of Church Street with the Braak and Rhenish Complex.
- 2) The identification of and exploratory discussions with Interested and Affected Parties as it relates to their understanding and ideas for the future use of the Rhenish Complex and gardens including the keeping of notes and minutes of such discussions.
- 3) The preparation and drafting of professional urban design proposals based on the existing studies and proposals linked to the preferred future use of the buildings, gardens and/or portions of buildings/gardens as well as other public space which might have an impact on the Rhenish Complex.
- 4) Drafting a framework for the Rhenish complex and surrounding properties linking the site to the historical centre and public spaces such as Die Braak, Dorp Street, Church Street etc.
- 5) The preparation of an urban design report and power point presentation with illustrations summarizing and motivating the future use of the Rhenish Complex.

The report provides an urban design framework which serves as a precinct plan that guides the future utilization, preservation and development of the study area with a view to unlock the potential of this area to play an important role to activate the Rhenish complex as a key site of cultural and heritage significance.

5. RECOMMENDATION

- (a) that Council take note of the precinct plan for the Rhenish Complex attached as **APPENDIX 1** to the agenda;
- (b) that Council gives approval for the commencement of a public participation process and advertisement of the precinct plan for the Rhenish Complex for a period of 60 days; and
- (c) that after the process of public participation is concluded, the precinct plan for the Rhenish Complex must be resubmitted to Council together with all comments received for consideration within 2 months.

6. DISCUSSION /CONTENTS

6.1 Background

Stellenbosch and its rural surrounds constitute an unique Cape Environment which is part of the cultural heritage of South Africa. The historical town and surrounding areas which provides its setting have special qualities which merit conservation. The Directorate of Planning and Development recognised the need to formulate a conservation strategy to ensure the enhancement and protection of the area and commissioned the drafting of such a conservation strategy which culminated in the approval by Council in 1997 of the "Stellenbosch Conservation Strategy; Development Guidelines. (Kruger Roos, 1997)". Already in this conservation strategy the Rhenish Complex was identified as a precinct of significant value and part of a key precinct incorporating the Braak, Dorp Street and linkages to the Eerste River. An Urban Design Framework for the Braak itself, incorporating a historical study, was undertaken in 1997 (Kruger Roos, 1997) and some urban design improvements were undertaken around the southern end of the Braak/ Mill Square.

Following the approval of the Stellenbosch Conservation Strategy the Directorate of Planning and Development embarked on a program to prepare detailed heritage studies of all significant heritage areas in Stellenbosch town as identified in the Stellenbosch Conservation Strategy and specifically the areas where large green

(public) areas were located. These heritage studies formed part of the Stellenbosch Spatial Linkages project (Kruger Roos, 2003/4), which were an exploration of the ways that the town can develop and enhance key public spaces and precincts and link them together in a network of pedestrian routes, thus improving access to the historical core – and enjoyment of its facilities and amenities – by residents and visitors.

Studies included the Stadshuis urban block (between Plein, Ryneveld, Victoria and Andringa Streets), the Bloemhof site (between Plein Street, Ryneveld Street, the University, and the Botanical Garden), and the Ou Kerkhof urban block (between Plein, Ryneveld, Church and Andringa Streets). Another of these studies was for the street block in which the Rhenish complex is situated and resulted in a report called “Binnetuin Park: Stellenbosch: Spatial Network of Gardens South and West of the Braak,” (Pistorius & Harris, 2005).

This heritage study identified the various cultural and environmental values on and around the site and is the essential foundational component to inform and guide development in this sensitive area, and to ensure that it benefits and enriches the Historical Core as a whole.

Location

The site is embedded in the historical village and is part of the centre of Stellenbosch town. The gardens occupy the inner part of a large block which wraps around the south and south-west sides of the Braak, the "village green" of Stellenbosch, with its two churches. Eastward is the oldest part of the village, with small blocks, narrow streets and a tight-grained fabric focussed on the Moederkerk. To the south is Dorp Street, the old wagon road to the Cape and the historical "spine" of the village, with its characteristic oaks and white-walled buildings. Further south is the Eerste River, a ribbon of green space which forms a natural edge to the village. Westward, the village fabric continues but has a looser grain and lower density than the oldest part. Immediately to the north is Market Street and the Kruithuis (Arsenal) on Markplein. This is part of the most direct pedestrian route between the station and the town and houses the Tourist Information centre.

The location of the site is shown on **Figure 1** below.

Figure 1. Location of study area

6.2 Block Characteristics

The block on which the site is situated is exceptionally large in relation to the village blocks to the east of the area and is distinctly larger than the surrounding ones, and constitutes a blockage, in urban permeability terms. For this reason, the pedestrian links through it are important. Without pedestrian permeability, the block would be a barrier to free movement – and in the case of Dorp Street, to the south, this is indeed the case: there are no northward links on Dorp Street between Herte Street and Bird Street, which is a fair distance on foot.

Vehicles are limited to the perimeter of the block, only penetrating at Schreuder Street cul-de-sac, off Herte Street, and the Old Mill Garden parking area (apart from access to private properties); there are no through-routes. The inner part of the block is consequently secluded and tranquil, shielded from the traffic in the busy streets around it. Unfortunately, this characteristic makes the site difficult to access thus limiting the utilization thereof.

The northern part of the block is occupied by the various components of the historical Rhenish Complex, associated with the Rhenish Church on the Braak. The freed slave cottages facing the Parsonage across Herte Street reinforce the important slave history theme of the Rhenish Complex. The Rhenish Parsonage is used as a toy museum and the building and grounds are open to the public, but other parts of the complex such as the School and Institute are not freely accessible.

The Tourist Information Centre in Market Street was an important visitor destination, from which many tourists start exploring the town. Most head for the Kruithuis and the Braak. Those who find themselves at the Rhenish Parsonage may discover the link to Voorgelegen garden by accident (by following the mill stream or a local who is walking purposefully), but the link is not clear at present and there is no directional signage. The mill stream can be followed upstream, southwards from Market Street into the heart of the block before turning to continue eastward to Meulplein. It is an important linear element which connects the green spaces at the centre of the block.

The southwestern quadrant of the block is residential in character: a mix of villas and infill flats behind the elegant buildings of Dorp Street.

The portion of Dorp Street edging the block on the south is particularly fine: noble and elegant buildings shaded by large oaks form a streetscape of strong character. This serene grouping comes to an ignominious end near Mill Street, where the activity associated with Checkers delivery yard is disruptive and intrusive. At the Mill Street/Piet Retief Street intersection the dignity and strong linearity of Dorp Street is broken down by modern traffic engineering – a fried-egg traffic circle and traffic island with historically uncharacteristic landscaping.

The southeast corner of the block is occupied by the Checkers shopping complex, a large building with a massing uncharacteristic of the historical core (but similar to the massing of buildings in the "commercial citadel" between Bird Street and Andringa Street). For the purposes of pedestrian spatial linkages, it is redeemed by the T-shaped mall that connects through it from the Mill Garden parking area to Meulplein in the east and Dorp Street in the south.

6.3 Landscape Character Assessment and Landscape Activation Opportunities

The Rhenish Precinct is a future-focussed initiative that looks to demonstrate a resilient vision for our urban centres. It is a place of health and abundance where communities can come together to share in their collective heritage and enjoy the range of amenities provided within this fascinating cultural landscape.

Income generated by the precinct is invested into the further development of the site and in the training of interns in horticulture, sales and marketing, event coordination, hospitality, urban landscaping, and maintenance. The design has transformed a semi-derelict site into a verdant working landscape, creating spaces that are both beautiful and functional and connects visitors to the production of their food, while creating a memorable immersive experience for communities in nature.

The Rhenish precinct provides an opportunity to bring agricultural and urban life together as the confluence of farming and cultural landscapes. Central Stellenbosch is bounded by two rivers and forms the urban heart of the Cape Winelands. A strong landscape masterplan consolidated visual identity of street furniture and landscape elements and integrated site management will all be essential to enable the success of the precinct.

6.4 Identifying Main Constraints and Informants

In the analysis and interpretation, the main constraints and informants impacting on the study area have been identified. These are graphically illustrated in Figure 8 in the report (page 27) and were addressed and considered in the outcome of the final proposal.

6.5 Main Ideas

Several ideas drive the spatial outcome of the proposals. These are captured in figures 31 and 32 of the report. These ideas are broadly captured as follows:

Improving Urban Permeability

To achieve improved integration and pedestrian convenience, the following ideas are proposed:

- 1) Create mid-block connections between activity generators along desire lines to accommodate pedestrian, bicycle, and emergency vehicles.
- 2) The linkages should be direct with a high degree of visual transparency and pedestrian scaled lighting. A straight paved avenue (binne-tuin laan) is proposed.
- 3) The entrances to these linkages to be managed for closure during specific times for security and surveillance reasons.
- 4) Resolve the spatially confused condition of the Meulplein precinct with pedestrian priority and sympathetic townscape qualities.

An Integrating Urban Design and Spatial Concept

The design concept includes the following elements.

- 1) The creation of a mid-block connection in the form of a straight paved avenue between Dorp Street and Market Street with lockable control gates at the ends.
- 2) The creation of an urban resource hub space at the northern end of the avenue integrating the surrounding buildings into a central heart for the precinct. The access points to the buildings should all face onto the space.
- 3) The southern and eastern edges of the space should be edged with a roofed and rear-walled pergola structure suitably laid out for flexible market-related activities.
- 4) The 'Binnetuin' should be the subject of landscape treatment, including water management. The eastern edge of the garden should not be accessed from the Shoprite parking area.

-
- 5) The junction of the Binnetuin to Dorp Street should take the form of a commercial venture (restaurant, beer house) in the existing building with spilling out space onto a beer garden and tea garden, all accessed from the existing building. The building to the immediate east along Dorp Street should perform a supporting public-orientated function, although quieter.
 - 6) The parsonage garden should be transformed into an agriculturally based vegetable and herb space with the produce sold from the market structure in the hub space on periodic days.
 - 7) The uses within the existing buildings around the hub space should be community focused, with an emphasis on learning, access to resource management, arts, crafts, and cultural activities.
 - 8) To the north-eastern edge of the hub space, the entrance to the hall of the school should be transformed into a dignified forecourt space.
 - 9) On this north-eastern corner, a new tourist information facility should be created on the edge of the market square precinct. The market square space should be re-instated to an orthogonal space and the through-traffic should be simplified to generate a more people friendly space around the 'Kruithuis'.
 - 10) The western and southern edge of 'Die Braak' space should be edged with a werf-type wall with openings which respond to the pedestrian desire-lines and paths. New tree-planting and associated stormwater swales compliment the making of this edge (see cross-sections).
 - 11) The Meulplein is reconfigured with the closure of the Church Street connection. A new westerly one-way connection for traffic circulation is created at the junction of Blom Street and Meul Street to give access to the parking on the western and southern edges of 'Die Braak'.
 - 12) Meulplein is paved in one material and the water wheel is re-located in its original position.
 - 13) The Shoprite-corner should be the subject of an action project to explore its improved potential.

6.6 Returning to the Essence of the Idea and the Bigger Context

Figure 48 captures the essence of the proposed municipal-led intervention in terms of unlocking the site and integrating the precinct with the surroundings and mutually reinforcing activities through a before and after comparison. The outcome is much more spatial and consistent with the qualities of the original historic core.

In terms of achieving continuity of space and linkages, Figure 49 locates the precinct in relation to the Church Street precinct. This bigger idea is ideal for very large events, festivals, and special days. Also shown are the municipal parking areas on the periphery of the east-west activity core/spine. With appropriate management, it should be possible to control the extent and spatial distribution of events of different sizes and characters in the larger precinct.

6.7 Transport Engineering Input

As part of the urban design framework, a transport engineer was involved in evaluating and testing the feasibility of the main proposals contained in the precinct plan. The report is included in the precinct plan as pages 64 -70. The main findings of the transport engineer were the following:

- 1) The potential exit from Checkers Parking area onto Dorp Street is currently a driveway access located opposite another driveway access and adjacent to the Checkers service area. The potential exit is possible from an access management perspective.

- 2) The entry and exit portion of the Mark/ Blom intersection is currently split to accommodate a historical feature on a central island. The current Blom/ Mark (1-way) is priority-controlled with Blom having priority. It is proposed to close the southern link (the entry portion) to enable the creation of a dedicated pedestrian link between Plein Street and Mark Street and the current Mark Street (1-way portion westbound) will become an urban square with a pedestrian route. This will require that the existing approach to the intersection on Mark Street (currently a 1-way eastbound) in the Blom direction, will become a 2-way section.

This is possible as it is expected that the Blom/ Market Street intersection (currently priority-controlled with Blom having priority) will have sufficient capacity to accommodate 2-way traffic on Mark Street. Access to the existing parking areas must just be considered and adapted in the reconfiguration of this section of Mark Street. A Transport Impact Assessment will also be required to determine the impact of the additional entering traffic volumes at the Blom/ Mark intersection.

- 3) It is also proposed to close the portion of Church Street between Mill and Bird Street. Mill Street and the portion of Bird Street between Dorp and Alexander (currently dualled) forms part of a 2-way couplet system. The closure this portion of Church Street will have the following impacts:

- i. Vehicles looking for parking along Bird Street southbound will have to turn around at the mini circles in Dorp.
- ii. The parking (8 bays) along this section will have to be removed.

This proposal is possible, but subject to a parking investigation and a Transport Impact Assessment.

- 4) New full intersection at Blom/ Mill and Bird is proposed at Blom/ Mill to enable the vehicles to cross the median of the Bird - Mill Street couplet and create another turn opportunity that will be lost due to the closure of Church between Mill and Bird.

The proposal will have traffic engineering implications and it is advised that a Transport Impact Assessment be undertaken to understand the impact on intersection operations, intersection spacing and parking.

6.8 Identification of Action Areas and Action Projects

The intention of the precinct plan is to inform the municipality of a series of preliminary action areas and projects that were identified for possible further investigations and strategies and that these actions and plans be implemented over time. These are spatially shown on the figure 46 of the report.

6.9 Effectuation and Way Forward

As a way forward, the following activities are recommended:

- 1) Endorsement of the intent and ideas of the proposals by the Municipality and the critical role-players.
- 2) Identify stakeholders and prepare questionnaire, engage with stakeholders.
- 3) Explore discussions with Interested and Affected Parties as it relates to their understanding and ideas for the future use of the Rhenish Complex and gardens.
- 4) Establish the basis for public/private partnerships and their related negotiations.
- 5) Undertake accurate survey of the study area.
- 6) Undertake coarse-grained technical feasibility studies for Action Areas and Action Projects
- 7) Prepare implementation strategy and prioritize action projects.

7. INPUT FROM OTHER DEPARTMENTS

During last year, the precinct plan was presented to the Director: Corporate Services, Director: Planning and Development and Director: Infrastructure Services. The proposal was well received in general, and reference was made the need to establish a management structure that can manage the implementation and future utilization of the Rhenish Complex as a unit as the municipality does not have the in-house capacity to do so. This report supports the idea of establishing a form of public partnership in one way or another to undertake the further work required and in implementing the proposed uses.

8. FINANCIAL IMPLICATIONS

No financial implication.

9. LEGAL IMPLICATIONS

A land claim was previously registered against a section of the property. Although this department is not familiar with the details the Director: Corporate Services is dealing with the matter. However, this precinct plan represents a spatial vision of the Rhenish Complex and does not award or take away any land use rights. Any owner of the property or sections of the property will have to take the precinct plan into consideration when considering any improvements to their property.

10. STAFF IMPLICATIONS

None.

11. RISK IMPLICATIONS

None.

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.8.1

- (a) that Council take note of the precinct plan for the Rhenish Complex attached as **APPENDIX 1** to the agenda;
- (b) that Council gives approval for the commencement of a public participation process and advertisement of the precinct plan for the Rhenish Complex for a period of 60 days; and
- (c) that after the process of public participation is concluded, the precinct plan for the Rhenish Complex must be resubmitted to Council together with all comments received for consideration within 2 months.

1. INTRODUCTION

It has generally been recognized that the Rhenish Complex as a whole is of significant cultural and heritage importance and is an invaluable asset for the town which demands proper maintenance and appropriate utilization. The Rhenish complex already contains the pre-conditions for a significant cultural precinct and associated regeneration. These include highly valued historic buildings and spaces in an accessible location to all citizens and visitors, and a range of space options, open and enclosed, large, and small, and varying in its degree of public exposure.

The site, however, is embedded and not easily accessible. The spatial layout is also confusing and requires clarification. In short, it needs to be unlocked.

1.1. Location of the Study Area

The location of the site is shown in figure 1 and the broad study area under consideration is indicated in figure 2, the landscape context, in the heart of the historic core of Stellenbosch. Figure 3 shows the heritage resources identified within the study area in a previous study, dated 1995. Of note is the uncoloured white zone running north-south through the middle of the block, not identified as a heritage resource.

1.2. The Brief

The brief is extracted from the tender and calls for the following:

- a. The evaluation and analysis of all existing planning and planning related documentation, current lease agreements and any documentation as it relates to the future utilization of the Rhenish Complex, its buildings and open space, the Braak and public spaces around the Braak including the potential linkage of Church Street with the Braak and Rhenish Complex;
- b. The identification of and exploratory discussions with Interested and Affected Parties as it relates to their understanding and ideas for the future use of the Rhenish Complex and gardens including the keeping of notes and minutes of such discussions.
- c. The preparation and drafting of professional urban design proposals based on the existing studies and proposals linked to the preferred future use of the buildings, gardens and/or portions of buildings/gardens as well as other public space which might have an impact on the Rhenish Complex.
- d. Drafting a framework for the Rhenish complex and surrounding properties linking the site to the historical centre and public space such as Die Braak, Dorp Street, Church Street etc.
- e. The preparation of an urban design report and power point presentation with illustrations summarizing and motivating the future use of the Rhenish Complex.

1.3. Previous Studies

Several municipally initiated and supported studies and development frameworks have focused on the complex and its surrounds over preceding years. These include:

- Stellenbosch Conservation Strategy; Kruger Roos; 1997.
- Die Braak, Voorlopige Ontwikkelingsraamwerk & Rekonstruksie; Kruger Roos, 1997.
- Stellenbosch Historical Centre, Mill Square and Surrounds; Kruger Roos, 1998.
- Heritage Study, Binnetuin Park, Stellenbosch; Pistorius and Harris, 2005.
- Het Erfgoedbeleid van Stellenbosch. Het opstellen van ondersteunende komen – Die Braak en het Rijnse Complex als katalysator; Carton & Ryckeboer, 2012.
- Kerkstraat Sluiting, Piet Louw & Dave Dewar, 2020 Proposals call for the utilization of the Braak, Mayor 2019

While there are many relevant and good ideas included in the above-mentioned studies, there is now an opportunity to consider the study area as a totality, as well as the site's integrated relationship with the general surroundings. A key question therefore is:

'What should structure the whole or the totality, in urban design terms, and how can the site, most of which is embedded, be unlocked to become part of the daily-use fabric of the town, from a public perspective?'

Figure 1: Location of the Precinct

Figure 2: Study Area in relation to the Landscape Context

Figure 3: Study Area in relation to previously identified Heritage Resources

2. APPROACH

Firstly, the approach and working method adopted is multi-scaled as each scale of consideration impacts on the next scale up and down.

Secondly, the approach proposed is process orientated, and which will bring about change and improvement as a series of steps. This approach is consistent with generally accepted international trends where change is brought about through tactical thinking using interim measures and generating meanwhile uses while building towards a desired end condition.

The over-riding thrust is to set in place shared space which can accommodate many users. A high degree of flexibility and ensuring that public and common space is multi-functional, dominates the thinking and approach in the exploration of the possibilities.

At the same time, all safety, functional and emergency service requirements have to be satisfied. These include access for emergency (fire brigade, ambulance), service (refuse truck) and delivery vehicles.

Therefore, In order to unlock the site, the strategy needs to take cognizance of devices which embrace thinking about the following trends:

- Tactical Urbanism
- Recognizing Food and Water Security Issues
- Interim Measures and Meanwhile Uses
- Place-making through Design
- The Concept of Cultural and Creative Hub

2.1. The Concept of Cultural and Creative Hub

At an international level, considerable thinking has occurred around the subject of creative and cultural hubs as a means of regenerating under-utilized and strategically located parts of towns, cities and urban areas. These trends have recognized that:

- Art and Culture are one of the most promising avenues to revitalize cities and neighbourhoods.
- A city without a vibrant, diverse cultural life holds little appeal.
- A cultural and creative field is often anchored by specific places.
- These places are mixed-use meeting places for creative minds.
- Places where cross-fertilization between different user lead to new programming and the exchange of visitor and customer groups.
- These places are known as culture houses, art buildings or multifunctional centres, and they often brand new structures such as library, theatre, welfare facilities and resource learning facilities.
- If the culture houses are at one end of the spectrum, at the other end are temporary creative and cultural initiatives.
- Abandoned or underutilized properties can be leased for a modest rent, on a short or longer term basis, as live-work spaces for artists and creatives.
- Their creative endeavors generate a buzz and attract new people, thus enhancing the areas' quality of life, and thus its monetary value.

- This type of place-making has proved to be an extraordinarily successful strategy for many real-estate owners, developers and city and town councils.
- Several companies have now built their business model around starting and running this particular kind of temporary sites.

2.2. Some Principles and Ingredients for Running Successful Cultural Hubs:

Some internationally accepted practices have suggested that the following ingredients are required to enable a successful outcome.

- Find a smart mix of functions and users
- Create a sharp brand and positioning
- Share ownership and a common goal
- Earn local support
- Build a sustainable business model with a triple bottom line, which is the idea of 'multiple value creation'
- In 'multiple value creation' economic, ecological and social values are in balance
- Cultivate an active community
- Serve a real need
- Work with what is already there
- Carry out an area assessment – identify current initiatives and spaces, and how they can be strengthened
- Invest in making a space permanent

3. THE STARTING POINT

The starting point of the study, therefore, is not a re-hash of heritage-related issues or a narrow building-based definition of heritage resources. Rather, it begins with the identification of indicators which are of relevance from a context, townscape and streetscape perspective. The basic position is that the central issue is not simply the protection of historical heritage resources but ensuring that each new development is respectful of the resources and through change contributes to a steady improving future.

The study identified a number of scales of consideration in order to determine which informants impact on the site. The scales are the local area scale, the site and environs scale, the site and immediate environs scale and the site scale.

4. ANALYSIS AND INTERPRETATION

The analysis focuses on spatial and settlement structure, and covers two broad categories. These are from a historic perspective followed by urban design and structural considerations.

4.1. Historic Context - Some Observations

Figures 4, 5, 6 and 7 show the historical development and the spatial evolution of the town. A number of observations require mentioning:

- The study area is located in the heart of the historic core of the town.
- The edges of the settlement superblocks are gradually firmed up over time.
- The superblocks are predominantly of orthogonal geometric shapes.
- The resultant grid offers urban permeability and choices of route.
- The main spaces are cadastrally of orthogonal shape and edged by buildings (Mark Plein, Die Braak and Meul Plein, except for their western sides, which are 'looser' in definition.
- Noteworthy is the diagonal line through the middle of Die Braak in the evolution of the settlement, in the form of a linear space as a desire line.
- The 'Braak' space is strongly edged with a double row of trees, at least in intent to 'box the space' in a well-defined rectangular shape, 1817.
- The growth of the town through infilling did not divert from the patterns described above.
- There is a clear spatial structure to the settlement.

Figure 4: Historical Development and Spatial Evolution (1710-1817)

Figure 5: Historical Development and Spatial Evolution (1859)

Figure 6: Historical Development and Spatial Evolution (1905)

Figure 7: Historical Development and Spatial Evolution (1937)

4.2. Urban Design and Structural Considerations

At the precinct and environs scale, a number of analytic observations and interpretations point to constraints and informants which impact on the study area. The precinct and its environs are interrogated from an urban structural and design perspective and contain the following layers of consideration:

- The superblock system and their sizes, and the notion of urban permeability;
- The dominant activity energy zones in the precinct;
- The definition and nature of the edges of 'Die Braak' space;
- Edge conditions of the superblocks in the precinct;
- Building placements and the resulting public/private gradients.

Each layer is described and illustrated separately.

4.2.1 The Superblock System and their Sizes, and Urban Permeability (Figure 8) -

- The system and pattern of superblocks indicate their respective sizes, varying in shape and area. The superblock of the study area is distinctly larger than the surrounding ones, and constitutes a blockage, in urban permeability terms.
- The 'fish-bone' effect of Dorp Street, which offers fine-grain accessibility, is severely compromised by the length of the block, some three hundred meters.
- A finer pattern of access through the block should increase permeability, at least in pedestrian and bicycle terms.

Figure 8: The Precinct and Environs Scale: Urban Design and Structural Considerations - The Superblock System, their Sizes and Urban Permeability

4.2.2 Dominant Activity Energy Zones (Figure 9) -

- Two dominant energy zones impact on the site,
 - the activity along Dorp Street towards the 'midde-dorp' south of the superblock.
 - the pedestrian flows to and from the railway station precinct to the 'midde-dorp' north of the superblock.
- There is limited pedestrian flows and urban activity energy along Herte Street on the west.

Figure 9: The Precinct and Environs Scale: Urban Design and Structural Considerations - Dominant Activity Energy Zones

4.2.3 The Definition and Nature of the Edges of 'Die Braak' space (Figure 10) -

- The edges of 'Die Braak' space is strongly and firmly defined on the north, east and part-south.
- In cross-section terms, the edge is layered with many interacting urban and townscape elements contributing to the edge definition. It is not just a single vertical line.
- The western and southern edges are 'looser' and semi-fragmented in definition with buildings appearing as free-standing objects with cadastral boundary treatments holding these edges together, in some fragile form.

Figure 10: The Precinct and Environs Scale: Urban Design and Structural Considerations - Definition and Nature of the Edges of 'Die Braak' Space

4.2.4 Edge Conditions of the Superblocks (Figure 11) -

- Different edge conditions contribute to the street and public space interfaces:
 - Dead edge
 - Planted dead edge
 - Transparent edge
 - Planted transparent edge
 - Vehicle access
 - Pedestrian access
 - Overlooking feature
- The different edges of the superblock site basically create a dead edge around its periphery.

Figure 11: The Precinct and Environs Scale: Urban Design and Structural Considerations - Edge Conditions of the Superblocks

4.2.5 Building Placements and Public/Private Gradients (Figure 12) -

- There is confusion about the clarity of the privacy gradient as it is difficult to comprehend and orientate which parts of the buildings are fronts and which are rears. The ad-hoc installations of security fencing between the buildings is proof of this.

Figure 12: The Precinct and Environs Scale: Urban Design and Structural Considerations - Site-related Building Footprints and Public/Private Gradients

4.3. Landscape Character Assessment and Landscape Activation Opportunities (Figure 13)

The Rhenish Precinct is a future-focussed initiative that looks to demonstrate a resilient vision for our urban centres. It is a place of health and abundance where communities can come together to share in their collective heritage and enjoy the range of amenities provided within this fascinating cultural landscape.

Income generated by the precinct is invested into the further development of the site and in the training of interns in horticulture, sales and marketing, event coordination, hospitality, urban landscaping, and maintenance. The design has transformed a semi-derelict site into a verdant working landscape, creating spaces that are both beautiful and functional and connects visitors to the production of their food, while creating a memorable immersive experience for communities in nature.

The Rhenish precinct provides an opportunity to bring agricultural and urban life together as the confluence of farming and cultural landscapes. Central Stellenbosch is bounded by two rivers and forms the urban heart of the Cape Winelands. A strong landscape masterplan, consolidated visual identity of street furniture and landscape elements and integrated site management will all be essential to enable the success of the precinct.

Figure 13: The Precinct and Environs Scale: Broad Landscape Considerations - Character Zones, Assets and Problems

4.3.1 Stellenbosch Urban Farm

The Stellenbosch Urban Farm laid out “in front” of the historic Voorgelegen homestead is the productive heart of the town. It provides an abundance of fresh produce that is supplemented by local farms for the daily Groentemark in the open air Voorgelegen courtyard.

The farm supplies a mix of everyday fruit and vegetable crops along with heirloom varieties, specialist herbs, cut flowers, fynbos honey from the apiary and medicinal, aromatic, and ornamental plants from the Binnetuin. The food crops are irrigated with water furrows supplied by the historic Mill Stream which connects people along a meandering path back to the Braak.

The building adjacent to Voorgelegen houses a new restaurant and bar that showcases the garden’s daily harvest of diverse fresh produce. In the mornings, it serves the sunny courtyard terrace at the back of Voorgelegen, offering breakfasts, coffees and baked goods for people working in the area and marketgoers. In the afternoon and evenings, the restaurant opens out onto the back terrace, overlooking the working farm for lunch, sundowners, and dinners.

The layout of the farm ensures maximum production but is also designed as a beautiful food garden that attracts visitors. Marquee spaces allow the restaurant to cater for larger events such as weddings, birthdays, harvest festivals or graduation parties while the farm and Binnetuin offer sought-after settings for event photography.

Sydney, New South Wales

Oranjezicht City Farm
Oranjezicht, Cape Town

4.3.2 Die Binnetuin

The historic Binnetuin has been substantially transformed since it was designed as a Victorian Garden by Otto Hager in 1859. While some of the trees and plantings are part of the original design, the garden has fallen into disrepair and has lost much of its charm. With a renewed vision for the rejuvenation of the Rhenish Precinct, an opportunity exists to develop this garden into a valuable amenity space for future generations. Part of this strategy has to involve a sustainable approach to garden planning and maintenance.

The mature trees, ornamental plantings and the historic Mill Stream contribute a sense of tranquillity to this walled garden. They provide clues for the future direction of the landscape. The Binnetuin is envisaged as a contemplative peace garden where locals and visitors can escape their busy urban environment and enter a tranquil retreat in nature. A new reflection pond serves as a biofiltration basin that filters stormwater from the surrounding precinct and feeds that into the Mill Stream for irrigation of the Urban Farm and gardens. Tables and chairs and lawns are provided for people wanting to relax, meet up for lunch or picnic after shopping at the market.

Various ornamental, aromatic and medicinal plants are selected and grown to be harvested for sales or as stock plants to be grown at the Urban Farm nursery. Together with the farm, the Binnetuin is an ideal training ground for interns wanting to develop horticultural and landscape skills that are so desperately in demand in our cities. The garden is the perfect spot for birthdays and as a venue for garden ceremonies and wedding photos. While the garden is not predominantly a play park, nature play structures encourage kids to have fun while exploring the garden.

Notable plants:

- *Cinnamomum camphora*
- *Angophora costata* = Australian Apple Myrtle
- *Syzigium jambos* = Rose scented fruit in confectionery / crystallized fruit.
- *Camellia japonica*
- *Cupressus sempervirens*
- *Magnolia grandiflora*
- *Quercus robur* and *hydrangeas*
- Sections for vegetables, roses, bulbs, shrubs, fruit trees.
- Rambling roses formed hedges that lined the paths.

Arderne Gardens
Claremont, Cape Town

Trafalgar Park (historically)
Woodstock, Cape Town

The Company's Garden
Cape Town

4.3.3 Die Braak

Die Braak is an open program 'village green' that can host a large variety of events from festivals to the start and finish of sporting events, larger markets, informal sports, and community exercise grounds. Every effort should be made to retain the multifunctional nature of the grounds.

The edges, however, can accommodate a range of complementary amenity functions. A well designed and appropriated scaled and contextually relevant, all ages and abilities playground could be included to the south. A destination playground when coupled with retail and park amenities can generate substantial activity in the area.

Over time the roads surrounding Die Braak should be pedestrian prioritised and form part of the park. Edges should be consolidated and shaded. The incorporation of an interactive swale edge on the western edge provides a range of seating opportunities in the shade while the swale directs water to the tree's roots. Outdoor exercise equipment can also be included along the shaded edges of the park along with picnic table and potentially some food kiosks. Large events such as outdoor cinema and concerts should also be considered and include multifunctional infrastructure such as a stage, lighting, and sound connections.

4.4. Identifying Main Constraints and Informants (Figure 14)

4.4.1 Urban design-related Informants:

In the analysis and interpretation, the following main constraints and informants impacting on the study area have been identified. These are graphically illustrated in Figure 14 and need to be addressed and considered in the outcome of a layout.

- a. The clearly defined northern and eastern edges of 'Die Braak' versus the fragmented edge condition along the western and southern edges thereof.
- b. The relationship of the site to firstly, the activity energy zone along Dorp Street and secondly, to the pedestrian flows along the northern edge of the site.
- c. The boxed-in nature of the site.
- d. The blockage effect of the overall superblock due to its size and length of boundaries along the streets.
- e. The open space through the superblock generally not recognized as a graded heritage resource.
- f. The poor water quality of the lei-water sloot system.
- g. The dead-edge nature of most of the Shoprite/Checkers-complex.
- h. The significance of the Meul Plein sub-precinct to provide continuity between the Rhenish/Braak precinct and the Church Street precinct.

4.4.2 Technical Informants

Some additional factors with technical requirements which influence the design of the layout must be incorporated. These are:

- Emergency vehicle requirements
- Service vehicle requirements
- Local access requirements
- Delivery vehicle requirements
- Universal access requirements
- Generally acceptable and comfortable pedestrian space requirements

4.4.3 Townscape and Landscape Informants

Further townscape and landscape elements which need to be incorporated into the composition of the layout:

- Surface treatment
- Storm water layout and management
- Trees and soft landscaping
- Artwork
- Street furniture
- Signage (directional, information, event specific)
- Lighting and power supply

4.4.4 Spatial Informants

Spatially, the following design principles should guide and enrich the spatial outcome and therefore take the layout beyond a purely functional resolution only:

- The idea of Pedestrian Priority and Amenity Space.
- The idea of Minimizing Vertical Surface Separation to enable convenient universal access.

1. The clearly defined northern and eastern edges of 'Die Braak' versus the fragmented edge condition along the western and southern edges thereof.
2. The relationship of the site to firstly, the activity energy zone along Dorp Street and secondly, to the pedestrian flows along the northern edge of the site.
3. The boxed-in nature of the site.
4. The blockage effect of the overall superblock due to its size and length of boundaries along the streets.
5. The open space through the superblock generally not recognized as a graded heritage resource.
6. The poor water quality of the lei-water sloot system.
7. The dead-edge nature of most of the Shoprite/Checkers-complex.
8. The significance of the Meul Plein sub-precinct to provide continuity between the Rhenish/Braak precinct and the Church Street precinct.

THE RHENISH COMPLEX & SURROUNDINGS
STELLENBOSCH: Unlocking the Potential

Figure 14: The Precinct and Environs Scale: Urban Design and Structural Considerations - Main Constraints and Informants

4.5. Photographic Survey

Selected views of different portions of the precinct are illustrated in the photographic survey. An orientation sheet provides reference and orientation to the naming of the parts of the descriptions. The sheet and its intention is borrowed from 'Heritage Study, Binnetuin Park, Stellenbosch; Pistorius and Harris, 2005', and has been edited to read as follows:

Generally well-known names are associated with the pedestrian network through and around the inner gardens of the area south west of the Braak: Voorgelegen, the Rhenish Parsonage and so on.

The map shows the significant parts in the study area, which have been called "Binnetuin Park". A few other places have been named, such as the carpark behind Checkers "The Old Mill garden" and the lateral building at the north end of the Rhenish Parsonage is called "Long House".

These names appear on the orientation sheet and on Figure 28, Refined Layout and Estimated Street-related Parking Capacity in the Precinct.

5. MAIN IDEAS

A number of ideas drive the spatial outcome of the proposals. These are captured in figures 31 and 32 followed by three perspectives and a photograph to convey the desired characters of the design ideas. The layers making up the overall concept are unpacked and illustrated separately with descriptions (figure 33 to 43).

5.1. Improving Urban Permeability (Figure 31)

To achieve improved integration and pedestrian convenience, the following ideas are proposed:

- Create mid-block connections between activity generators along desire lines to accommodate pedestrian, bicycle and emergency vehicles.
- The linkages should be direct with a high degree of visual transparency and pedestrian scaled lighting. A straight paved avenue (binne-tuin laan) is proposed.
- The entrances to these linkages to be managed for closure during specific times for security and surveillance reasons.
- Resolve the spatially confused condition of the Meul Plein precinct with pedestrian priority and sympathetic townscape qualities.

5.2. An Integrating Urban Design and Spatial Concept (Figure 32)

The design concept includes the following elements.

1. The creation of a mid-block connection in the form of a straight paved avenue between Dorp Street and Market Street with lockable control gates at the ends.
2. The creation of an urban resource hub space at the northern end of the avenue integrating the surrounding buildings into a central heart for the precinct. The access points to the buildings should all face onto the space.
3. The southern and eastern edges of the space should be edged with a roofed and rear-walled pergola structure suitably laid out for flexible market-related activities.
4. The ‘binne-tuin’ should be the subject of landscape treatment, including water management. The eastern edge of the garden should not be accessed from the Shoprite parking area.
5. The junction of the binne-tuin to Dorp Street should take the form of a commercial venture (restaurant, beerhouse) in the existing building with spilling out space onto a beer garden and tea garden, all accessed from the existing building. The building to the immediate east along Dorp Street should perform a supporting public-orientated function, although quieter.
6. The parsonage garden should be transformed into an agriculturally based vegetable and herb space with the produce sold from the market structure in the hub space on periodic days.
7. The uses within the existing buildings around the hub space should be community focused, with an emphasis on learning, access to resource management, arts, crafts and cultural activities.
8. To the north-eastern edge of the hub space, the entrance to the hall of the school should be transformed into a dignified forecourt space.

9. On this north-eastern corner, a new tourist information facility should be created on the edge of the market square precinct. The market square space should be re-instated to an orthogonal space and the through-traffic should be simplified to generate a more people friendly space around the ‘Kruithuis’.
10. The western and southern edge of ‘Die Braak’ space should be edged with a werf-type wall with openings which respond to the pedestrian desire-lines and paths. New tree-planting and associated stormwater swales compliment the making of this edge (see cross-sections).
11. The Meul Plein is reconfigured with the closure of the Church Street connection. A new westerly one-way connection for traffic circulation is created at the junction of Blom Street and Meul Street to give access to the parking on the western and southern edges of ‘Die Braak’.
12. Meul Plein is paved in one material and the water wheel is re-located in its original position.
13. The Shoprite-corner should be the subject of an action project in order to explore its improved potential.

The layout yields the following approximate areas in square meters:

- | | |
|--|------------|
| • Agricultural precinct excluding building structures | 9,600 sq m |
| • Main courtyard space (including market structure) | 3,000 sq m |
| • Parsonage courtyard space (including market structure) | 900 sq m |
| • Information centre and public toilets | 248 sq m |
| • The Covered market structures | 558 sq m |

Figure 31: The Precinct and Environs Scale: Main Ideas - Improving Urban Permeability

Perspective 3: Urban resource hub space looking towards pergola structure

Photograph: Alphen Centre Walkway

5.3. Unpacking the Layers of the Concept

A number of urban-design-related layers contribute to the overall spatial concept. These layers are unpacked in Figures 33 to 43 and include:

- Locations of after hour control points
- Locations of early evening control points
- Dominant pedestrian flows
- Use and character zones, and their entry points
- Proposed Position of Toilet Block integrated with Proposed Information Centre
- Potential market activity zones subject to management
- Potential parking zones subject to management
- Dominant pedestrian and vehicular movement network
- Landscape treatment to western and southern edges of 'Die Braak' space
- Proposed storm water-related landscape design concepts

5.3.1 Locations of After Hour Control Points (Figure 33) -

- The control points/gates to the hub-precinct for after hour closure makes the precinct secure.

Figure 33: The Precinct and Environs Scale: Main Ideas - Unpacking the Layers of the Concept, Locations of After-hour Control Points

5.3.2 Locations of Early Evening Control Points (Figure 34) -

- Secondary and internal control points/gates to the hub-precinct for early evening closure allow for the security and management of parts of the precinct.

Figure 34: The Precinct and Environs Scale: Main Ideas - Unpacking the Layers of the Concept, Locations of Early-evening Control Points

5.3.3 Dominant Pedestrian Flows (Figure 35) -

- The dominant pedestrian flows are integrated with those of the larger precinct. In the hub space the entrances to the buildings respond to the pedestrian paths.

Figure 35: The Precinct and Environs Scale: Main Ideas - Unpacking the Layers of the Concept, Dominant Pedestrian Flows and Linkages

5.3.4 Use and Character Zones, and their Entry Points (Figure 36) -

- Complimentary uses are organized around the central hub space, with front doors aligned to activity energy zones.
- Publicly accessible commercial character.
- Religious character.
- Agricultural resource and learning centre.
- Publicly accessible landscaped park character (binne-tuin) with access control points.
- Multi-functional publicly accessible 'Braak' open space.
- Publicly accessible hard landscaped and treed multi-functional space with pedestrian priority.
- Publicly accessible hard landscaped and treed multi-functional hub space and court, framed with roofed colonnade south and east with pedestrian priority and access control points.
- Urban hub resource and learning centre.
- Craft learning centre.
- Arts and cultural learning and resource centre
- Publicly accessible information and display centre (new building structure).
- L-shaped treed and low-walled multi-functional parking space, landscaped with pedestrian priority.

Figure 36: The Precinct and Environs Scale: Main Ideas - Unpacking the Layers of the Concept, Use and Character Zones, and their Entry Points

5.3.5 Proposed Position of Toilet Block integrated with Proposed Information Centre
(Figure 20b) -

- The preferred position for this facility is at the northern end of the precinct, integrated with the proposed information centre. It can also serve activities on 'Die Braak'. In the layout of the building, flexibility for access control should be accommodated.
- For the southern end of the precinct different options should be tested whereby the incorporation of toilet facilities should be explored as part of the complex lining Dorp Street. This should be in close proximity to the proposed avenue walk through the park.

Figure 37: Precinct and Environs Scale: Proposed Position of Toilet Block integrated with Proposed Information Centre

5.3.6 Potential Market Activity Zones Subject to Management (Figure 38) -

- In terms of flexibility, many different market activities in their various forms and times can occur throughout the precinct, subject to management.

Figure 38: The Precinct and Environs Scale: Main Ideas - Unpacking the Layers of the Concept, Potential Market Activity Zones Subject to Management

5.3.7 Potential Parking Zones Subject to Management (Figure 39) -

- In terms of flexibility, many different parking options in their various forms and times can occur throughout the precinct, subject to management, permanent as well as temporary.

Figure 39: The Precinct and Environs Scale: Main Ideas - Unpacking the Layers of the Concept, Potential Parking Zones Subject to Management

5.3.8 Dominant Pedestrian and Vehicular Movement Network (Figure 40) -

- Careful and sensitive network planning ensures safe pedestrian paths, places and spaces.
- Zones and areas subject to traffic investigations are highlighted in red circles.

Figure 40: The Precinct and Environs Scale: Main Ideas - Unpacking the Layers of the Concept, Dominant Pedestrian and Vehicular Movement Network

5.3.9 Landscape Treatment to Western and Southern Edges of 'Die Braak' Space (Figures 41, 42 and 43) -

- Proposed alignment of the werf wall with associated landscape elements along the western and southern edges (see cross-sections). The elements include:
 - Low werf wall
 - Tree alignments
 - Storm water swale
 - Pedestrian-scaled lighting
 - Signage

The cross sections illustrate the different zones as well as an option to accommodate periodic market activities in terms of flexibility of use.

Figure 41: The Precinct and Environs Scale: Main Ideas - Unpacking the Layers of the Concept, Landscape Treatment to Western and Southern Edges of 'Die Braak' - Low werf wall, Tree alignments, Storm water swale, Pedestrian-scaled lighting, Signage.

Figure 42: Proposed Cross-section through the Western Edge of 'Die Braak'

Figure 43: Proposed Cross-section through the Western Edge of 'Die Braak', Periodic Market Activity Zone

5.3.10 Proposed Storm water-related Landscape Design Concepts (Figure 44)

Stormwater systems are integrated into the proposed landscape to create ecological and spatial opportunities that complement the 'multiple value creation' objectives.

Figure 44: Proposed Storm water-related Landscape Design Concepts

5.3.11 Refined Layout and Estimated Street-related Parking Capacity in the Precinct

- The coarse-grained parking capacity in relation to the streets in the precinct is illustrated in figure 28. It excludes the on-site ‘managed parking zones’ for special occasions and events, as shown on Figure 22.
- The layout also indicates the two elements in the main courtyard space to be demolished.
- Also shown is the borehole element at the northern end of ‘Die Braak’, which will require a design concept once the technical requirements have been clarified.
- Apart from enclosing the elements serving the technical requirements, the borehole element can be of a townscape-nature and potentially include considerations of a small stage, flagpole feature for periodic lights and walled seating. The circular shape represents the idea of a ‘farm-like reservoir’.
- The layout yields the following number of parking spaces in the streets:

Mark Street converted	31
Blom Street (Western edge of ‘Die Braak’)	117
Rhenish Church forecourt	42
Alexander Street (Northern edge of ‘Die Braak’)	20
210 parking spaces	

Figure 45: Refined Layout and Estimated Street Related Parking Capacity in the Precinct

5.4. Identification of Action Areas and Action Projects (Figure 46) -

A series of preliminary action areas and projects are identified for possible further investigations and strategies. These are spatially shown on the figure and include:

- SLD1
- Soft landscape design study
- A1
- Agricultural-based feasibility study
- DSC
- Dorp Street commercial interface study
- TS 1
- Traffic-related feasibility study
- TS 2
- Traffic-related feasibility study
- TS 3
- Traffic-related feasibility study
- TS 4
- Traffic-related feasibility study
- UD 1
- Integrated urban design/landscape/engineering study
- UD 2
- Integrated urban design/landscape/engineering study
- UD 3
- Integrated urban design/landscape/engineering study
- UDAL
- Integrated urban design/architecture/landscape study
- NS 1
- Negotiation study
- NS 2
- Negotiation study
- FS 1
- Feasibility study
- FS 2
- Feasibility study
- WQ 1
- Water quality study
- SH/CH
- Special redevelopment strategy study

Figure 46: Identification of Action Areas and Action Projects

5.4.1 Demolition Plan

In terms of implementation and in order to achieve the spatial intentions of the Action Area marked 'UDAL' at the northern end of the precinct, a demolition plan for the garages and a boundary wall identifies the extent and scope of these elements. The boundary wall can be reduced to a height of 450 – 750mm and transformed into a low seat wall.

Figure 47: Demolition Plan

6. Returning to the Essence of the Idea and the Bigger Context

Figure 48 captures the essence of the proposed municipal-led intervention in terms of unlocking the site and integrating the precinct with the surroundings and mutually-reinforcing activities through a before and after comparison. The outcome is much more spatial and consistent with the qualities of the original historic core.

In terms of achieving continuity of space and linkages, Figure 49 locates the precinct in relation to the Church Street precinct. This bigger idea is ideal for very large events, festivals and special days. Also shown are the municipal parking areas on the periphery of the east-west activity core/spine. With appropriate management, it should be possible to control the extent and spatial distribution of events of different sizes and characters in the larger precinct.

BEFORE: Boxed-in nature of the site

AFTER: The site unlocked and spatially integrated with the structure of the Town

Figure 48: Returning to the Overall Idea: Before and After

Figure 49: Returning to the Bigger Context: Integration with the Church Street Precinct

7. Effectuation and Way Forward

As a way forward, the following activities are recommended:

- a. Endorsement of the intent and ideas of the proposals by the Municipality and the critical role-players.
- b. Identify stakeholders and prepare questionnaire, engage with stakeholders.
Explore discussions with Interested and Affected Parties as it relates to their understanding and ideas for the future use of the Rhenish Complex and gardens.
- c. Establish the basis for public/private partnerships and their related negotiations.
- d. Undertake accurate survey of the study area.
- e. Undertake coarse-grained technical feasibility studies for Action Areas and Action Projects
- f. Prepare implementation strategy and prioritize action projects.

9. **Appendix A**

ITS RHENISH COMPLEX: TRANSPORT ENGINEERING INPUT

Piet Louw Architects, Urban Designers and Planners

Email: piet.plarchud@telkomsa.net

30 July 2021

Our Reference: 4387

Your Reference: Rhenish Complex

Attention: Piet Louw

Dear Sir

RHENISH COMPLEX: TRANSPORT ENGINEERING INPUT

The following refers:

- Our briefing meeting on 23 July 2021 at which the overall Framework Plan was discussed.
- The attached Integrating Urban Design and Spatial Concept (your Fig 16) and the Dominant Pedestrian and Vehicular Movement Network (your Figure 23)

At the briefing meeting the following key inputs are required from ITS:

- Potential exit from Checkers Parking area onto Dorp Street
- Reconfiguration of the Mark/ Blom intersection
- Closure of the section of Church Street between Bird and Mill Street
- New full intersection at Blom/ Mill and Bird

Our comments are as follows:

1. Potential exit from Checkers Parking area onto Dorp Street

The potential exit is currently a drive-way access located opposite another driveway access and adjacent to the Checkers service area (approximately 23m c/c). The potential exit is possible from an access management perspective.

2. Reconfiguration of the Mark/ Blom intersection

The entry and exit portion of the Mark/ Blom intersection is currently split to accommodate a historical feature on a central island. The current Blom/ Mark (1-way) is priority-controlled with Blom having priority.

THINKING GLOBAL, ACTING LOCAL

It is proposed to close the southern link (the entry portion) to enable the creation of a dedicated pedestrian link between Plein Street and Mark Street and the current Mark Street (1-way portion westbound) will become an urban square with a pedestrian route. This will require that the existing approach to the intersection on Mark Street (currently a 1-way eastbound) in the Blom direction, will become a 2-way section. Refer to Figure 2 in the attached Annexure.

This is possible as it is expected that the Blom/ Mark street intersection (currently priority-controlled with Blom having priority) will have sufficient capacity to accommodate 2-way traffic on Mark Street. Access to the existing parking areas must just be considered and adapted in the reconfiguration of this section of Mark Street. A Transport Impact Assessment will also be required to determine the impact of the additional entering traffic volumes at the Blom/ Mark intersection.

3. Closure of the section of Church Street between Bird and Mill Street

It is also proposed to close the portion of Church Street between Mill and Bird Street. Mill Street and the portion of Bird Street between Dorp and Alexander (currently dualled) forms part of a 2-way couplet system. Three turn-around opportunities are available:

- At the Alexander/ Bird roundabout
- At the Bird/ Plein roundabout
- The Church link between Bird and Mill (proposed to be closed)
- At Dorp at the mini-circles at Dorp/ Bird and Dorp/ Mill.

Previously Church Street was also a one-way westbound which then extended across Bird and terminated at Mill. However, in recent years Church, between Bird and Drosdy, was changed to a one-way eastbound, but the portion of Church between Mill and Bird remained a one-way westbound. So currently, the only function this portion of Church Street serves is that it allows southbound vehicles along Bird Street to turn around into Mill Street, especially for those vehicles traveling southbound along Bird looking for parking.

The closure this portion of Church Street will have the following impacts:

- Vehicles looking for parking along Bird Street southbound will have to turn around at the mini-circles in Dorp.
- The parking (8 bays) along this section will have to be removed.

This proposal is possible, but subject to a parking investigation and a Transport Impact Assessment. Also refer to Figure 3 in the attached Annexure.

4. New full intersection at Blom/ Mill and Bird

Refer to Figure 3 in the attached Annexure.

A new full intersection is proposed at Blom/ Mill to enable the vehicles to cross the median of the Bird - Mill Street couplet discussed in Section 3, and create another turn opportunity that will be lost due to the closure of Church between Mill and Bird.

The spacing between Plein and Blom is 39m (c/c) and 27m measured from the external kerb of the roundabout and Blom. Bird Street is a Class 3 street in a CBD environment with full accesses limited to 90m and high volume driveways limited to 60m per the previous Road Access Guidelines (RAG). The new Access Management Guidelines (AMG) recommends 80-120m spacings. Current access spacing ranges between 80m and 140m.

The proposed Blom/ Bird full intersection is too close to the current Plein/ Bird roundabout and will result in sub-standard access spacing along this section and potentially increasing congestion. It could also attract more traffic along Blom due to the direct link between Bird and Blom. However, it will not serve anymore as the turn –around opportunity for vehicles searching for parking as it located before the parking for southbound vehicles.

Further to the above, the following options are available:

- Close the portion of Church between Mill and Bird with no other turn-around opportunity provided; ie no median break at Blom. Turn-around movements must then be re-directed to Bird/ Dorp and Mill/ Dorp.
- Provide the median break at Blom, but close Blom/ Mill; not the current left-in/ left-out intersection but only a median break. This option does not serve the drivers searching for parkers.
- Re-align the eastern end of Blom to intersect with Mill/ Plein at the roundabout. This option does not serve the drivers searching for parkers.
- Maintain the link between Mill and Bird, but change the surface texture to improve the pedestrian-friendly quality of the street.

From the above, the proposal will have traffic engineering implications and it is advised that a Transport Impact Assessment be undertaken to understand the impact on intersection operations, intersection spacing and parking.

I trust that the above provides you with adequate feedback. In conclusion, the proposals must be tested in a more detailed Transport Impact Assessment.

Please do not hesitate to contact us should you have any queries in this regard.

Yours sincerely,

LYNNE PRETORIUS, PR.ENG

DIRECTOR: INNOVATIVE TRANSPORT SOLUTIONS

11.8.2	APPROVAL OF THE FIRST DRAFT AMENDED MUNICIPAL SPATIAL DEVELOPMENT FRAMEWORK (MSDF) AND TO OBTAIN COUNCIL APPROVAL FOR THE COMMENCEMENT OF THE PUBLIC PARTICIPATION PROCESS
--------	---

Collaborator No:

IDP KPA Ref No:

Meeting Date:

Good Governance and Compliance

22 March 2023 & 29 March 2023

1. SUBJECT: APPROVAL OF THE FIRST DRAFT AMENDED MUNICIPAL SPATIAL DEVELOPMENT FRAMEWORK (MSDF) AND TO OBTAIN COUNCIL APPROVAL FOR THE COMMENCEMENT OF THE PUBLIC PARTICIPATION PROCESS

2. PURPOSE

For Council to:

- a) Support and adopt the status quo report of the MSDF, 2019 as recommended by the project steering committee.
- b) Support and approve the first draft of the amendments to the MSDF as proposed by the project steering committee for public comment and to request comment from the Provincial Minister of Environmental Affairs and Development Planning and the Cape Winelands District Municipality.

3. DELEGATED AUTHORITY

Council.

4. EXECUTIVE SUMMARY

Council approved the commencement of the proposed amendment of the Municipal Spatial Development Framework, 2019 to achieve strategic, spatial, and financial alignment and to enable the coordination of policies within the municipality.

5. RECOMMENDATIONS

- (a) that Council supports and approve the status quo report of the first draft of the proposed amendments to the MSDF;
- (b) that the first draft of the proposed amendments to the MSDF, February 2023, be approved in principle; and
- (c) that the first draft amended MSDF, February 2023, be advertised for public comment for 60 days where after same be resubmitted to Council for final consideration and subsequent approval in terms of the relevant legislation.

6. DISCUSSION / CONTENTS

6.1 Background

Council approved the commencement of the proposed amendment of the Municipal Spatial Development Framework, 2019 due to following pertinent factors:

- The initial review of the MSDF highlighted the need for minor amendments of the MSDF to incorporate previous Council resolutions to ensure the continued strategic support and guidance from an integrated spatial and financial planning perspective.
- The proposed amendment process of the MSDF was initiated through Council decisions and actions as part of the implementation framework of the MSDF and other strategic / master planning documents, that include, the Housing Pipeline, the Integrated Waste Management Plan, and the Capital Expenditure Framework.

In essence, the amendment process of the MSDF was initiated to achieve strategic, spatial, and financial alignment and to enable the coordination of policies within the municipality. Following the integrative spatial and financial planning approach helps to

avoid the duplication of efforts and to ensure maximum positive impact from the investment of resources.

6.2 Discussion

Due to the nature of the amendments proposed, the project steering committee approach was approved and followed. The MSDF Project Steering Committee (PSC) consists of the Municipal Manager, Chief Financial Officer, and Directors and Senior Managers of municipal departments – Corporate Services (specifically IDP); Planning and Economic Development; Infrastructure Services; and Community and Protection Services. The PSC was tasked to compile a draft status quo report setting out an assessment of the existing levels of development and development challenges in the municipal area, and to consider the development proposals submitted for consideration to the first draft amendment of the MSDF.

Based on the assessments and spatial demand quantification studies compiled through the Capital Expenditure Process during 2021 and the current amendment of the CEF process (2023), and considering the current MSDF status quo of 2019, and the IDP (2022-2027) – it was found by the PSC that the status quo can remain unchanged as it still reflects the spatial trends, existing levels of development and the development challenges in the municipal area.

In the drafting of the proposed first draft amended MSDF, some of the sections of the MSDF, 2019 were found not necessary to be updated due to no changes being noted since the adoption of the MSDF (2020), and its subsequent reviews (2022/2023). The sections listed below were updated to reflect the current status quo;

- Part 1: Introduction, which reflects the approach and actions of the amendment of the MSDF process.
- Part 2: Legislative and Policy Context (partially updated) to reflect the updated 5th Generation IDP 2022-2027.
- Part 5: Plans and Settlement Proposals (partially updated) to reflect the corrected Tables 20 and 28 as adopted by Council in 25 May 2022.
- Part 7: Capital Expenditure Framework as updated and adopted by Council on 31 March 2021. Currently the CEF is being updated as a result of the approval and implementation of the catalytic project – Adam Tas Corridor – and the new updated and adopted CEF (which is a core component to the SDF) will be attached in Appendix G.
- **APPENDIX F:** Reviewed Housing Pipeline was updated and adopted by Council on 25 May 2022. The yearly review and update will be attached to the first draft amended MSDF in **APPENDIX F** for public participation.

In addition to the abovementioned process, the public was also invited to submit any development proposals for consideration. Submissions consisted of strategic catalytic and infrastructure projects committed to by Council in previous decisions and sector planning policies, as well as a few private sector development representations for urban edge amendments. These proposals were considered by the PSC with recommendations for consideration during the amendment process for consideration in the first draft amended MSDF. (**APPENDIX B** of the MSDF).

6.3 Financial Implications

There are no financial implications should the recommendations as set out in the report be accepted.

6.4 Legal Implications

The recommendations in this report comply with Council's policies and all applicable legislation.

6.5 Staff Implications

This report has no staff implications to the Municipality.

6.6 Previous / Relevant Council Resolutions:

The following Council approvals are applicable:

- **COUNCIL MEETING: 2019-09-29: ITEM 9.7.1
RESOLVED**
- **URGENT COUNCIL MEETING: 2019-11-11: ITEM 4.1
RESOLVED**
- **COUNCIL MEETING: 2021-03-31: ITEM 8.3
RESOLVED**
- **COUNCIL MEETING: 2021-11-23: ITEM 6.16
RESOLVED**
- **COUNCIL MEETING: 2022-05-25: ITEM 13.1 & 11.5.1
RESOLVED**

6.7 Risk Implications

This report has no risk implications for the Municipality.

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.8.2

- (a) that Council supports and approve the status quo report of the first draft of the proposed amendments to the MSDF;
- (b) that the first draft of the proposed amendments to the MSDF, February 2023, be approved in principle; and
- (c) that the first draft amended MSDF, February 2023, be advertised for public comment for 60 days where after same be resubmitted to Council for final consideration and subsequent approval in terms of the relevant legislation.

PART 1: INTRODUCTION

1. BACKGROUND & PURPOSE

Spatial planning is a high-level planning process that is inherently integrative and strategic, it takes into account a wide range of factors and concerns and addresses the uniquely spatial aspects of those concerns.

The action(s) of spatial planning aims to:

- Enable a vision and consistent direction for the future of the municipal area based on evidence, local distinctiveness, and community-derived objectives.
- Translate this vision and direction into a set of policies, priorities, programmes, and land allocations together with the public sector resources to deliver them.
- Create a framework for private investment and regeneration that promotes economic, environmental, and social well-being.
- Coordinate and deliver the public-sector components of this vision with other agencies and processes to ensure implementation.

In essence, it entails more than land use management; it provides a key role in providing a long-term framework for development and coordinating policies across sectors. By so doing, effective spatial planning helps to avoid the duplication of efforts by the government and can assist in the coordination of sectoral policies to ensure maximum positive impact from the investment of resources to achieve the spatial vision as agreed to by all stakeholders.

Integrative Spatial Planning Approach

Spatial planning is critical for delivering economic, social and environmental benefits (refer to Box 1) by creating more stable and predictable conditions for investment and development, securing community benefits from development, and promoting prudent use of land and natural resources for development. Spatial planning is therefore an important lever for promoting sustainable development and improving the quality of life.

Integrative Spatial Planning is informed by universal planning approaches and concepts; normative - and developmental planning principles, norms and standards. These informants provide clarity on the scope and focus for achieving spatial planning outcomes/benefits (refer to Box 1 & Figure 1) for creating positively performing areas which are generally regarded as successful and liveable settlements.

The characteristics of a desirable and successful settlement tend to be:

- Integrated and connected,
- Inclusive,
- Convenient,
- Resilient and adaptable,
- Efficient,
- Safe and healthy,
- Economically supportive, and –

- Characterful and aesthetically pleasing.

Figure 1

BOX 1: BENEFITS OF SPATIAL PLANNING**Economic benefits**

- Providing more stability and confidence for investment;
- Identifying land in appropriate locations to meet the need for economic development;
- Ensuring that land for development is well placed in relation to the transport network and the labour force;
- Promoting environmental quality in both urban and rural areas, which can then create more favourable conditions for investment and development;
- Identifying development that meets the needs of local communities;
- Promoting regeneration and renewal;
- Making decisions in a more efficient and consistent way.

Social benefits

- Considering the needs of the local communities in policy development;
- Improving accessibility when considering the location of new development;
- Supporting the provision of local facilities where they are lacking;
- Promoting the re-use of vacant and derelict land, particularly where it has a negative impact on quality of life and economic development potential;
- Aiding the creation and maintenance of pleasant, healthy, and safe environments.

Environmental benefits

- Promoting regeneration and the appropriate use of land, buildings and infrastructure;
- Promoting the use of previously developed (brownfield) land and minimizing development on greenfield land;
- Conserving important environmental, historic and cultural assets;
- Addressing potential environmental risks (e.g. flooding, air quality);
- Protecting and enhancing areas for recreation and natural heritage;
- Promoting access to development by all modes of transport (e.g. walking, cycling, and public transport), not just by private vehicle;
- Encouraging energy efficiency in the layout and design of the development.

Box 1

To achieve these positively performing, successful, liveable settlements the following requirements are required of the planning system, namely:

- To achieve a greater mix of land uses and densities in the urban structure that provide a full range of urban functions – housing, employment and services – in a pattern which minimized the need to travel great distances to work, shop or conduct business. The efficient use of land needs to be compatible with social well-being and healthy environmental objectives.
- To initiate urban regeneration in inner city areas and main streets with high-density concentrations of mixed employment, residential and other uses. These areas with adequate investment in modernisation and renovation of the existing stock and infrastructure can provide housing closer to services and a wider range of lifestyle opportunities.
- To enhance and support the regeneration of housing estates through innovative financing, technological and regulatory initiatives, and demonstration projects. Focusing on the elimination of barriers towards investment will facilitate small-scale urban renewal through cooperative efforts and self-help.
- To enhance broad participation, improve community involvement and build support for sustainable planning policies and programmes; to promote community identity through the creation of meeting places, public spaces, pedestrian networks, and preservation of historic buildings and attractive streetscapes.
- To provide a range of cultural and recreation opportunities that correspond to diverse needs

through efficient use of natural areas for passive recreation and cultural purposes; to maintain a system of integrated and interconnected open spaces, parks, and river valleys; to protect the natural habitat and resources in the areas.

- To provide water and sewerage infrastructure that accommodates the needs of the local community, while meeting the healthy environment objectives; to undertake the considerable improvement of existing infrastructure in order to reduce the amount of untreated urban runoff wastewater discharge; to increase the capacity of the existing infrastructure to accommodate urban growth and intensification.
- To improve and expand the transport system to meet the challenges of readjustment in the urban economy and to sustain the competitiveness of public transport. To maximise efficiency, supplement conventional public transit with specialised services directed at specific market segments; to promote energy efficiency and alternative modes of transport.

2. MSDF PROGRAMME

The system of Integrative Spatial Planning

One of the legislated spatial planning system tools available to Urban and Regional Planners is Spatial Development Frameworks (SDFs) — a strategic and integrated spatial planning policy —, that must outline specific arrangements for prioritisation,

Local spatial strategy informants to the MSDF (2019), review and proposed amendments (2022/2023)

The approved MSDF, 2019 was informed by various specialist and spatial strategies, namely:

- The development of scenarios of land demand to inform the development of a preferred 20-year growth strategy, development path, and nodal development concepts for SM. This work culminated in status quo and Urban Development Strategy (UDS) documents during 2017.
- The Rural Area Plan (RAP) which provides an analysis and synthesis of the rural areas of Stellenbosch Municipality.
- Heritage surveys and inventories of large-scale landscape areas in the rural domain of the municipality informing proposed heritage areas (complementing previous inventory work completed for urban areas).
- Approved Heritage Inventory, 2018
- Area-based planning investigations for parts of the municipality, notably Stellenbosch town, Klipmuts, and the area north of Kaymandi.
- Capital Expenditure Framework, 2019.

Since the approval of the MSDF (2019), related work has focused on:

- Area-based planning investigations for the Adam Tas Corridor, located in Stellenbosch town culminated in the approval and adoption of the Adam Tas Corridor Local Area Spatial Development Framework (ATC LASDF), 2022 and Development Guidelines. The catalytic

mobilising, sequencing and implementing public and private infrastructural and land development investment in the priority spatial structuring areas as identified in these spatial development frameworks to give effect to the vision, goals and objectives of the municipal Integrated Development Plan (IDP) or related business plans of the government.

The (MSDF) covers the jurisdictional area of the municipality. In the case of SM, the MSDF must answer the following questions: “How is Stellenbosch going to develop over the next ten to thirty years? What kind of development will take place, where will it take place, and who will be responsible for what aspect of the development? What are the non-negotiables and fixes necessary to achieve the proposed development path, and which areas require more detailed studies/precinct plans?” — all while maintaining the best and sustainable use of resources.

With the reform in planning law a shift in focus to integrative spatial planning approach was facilitated. This shift results in:

- More effective coordination of sectoral actions that have a cross-sectional spatial dimension.
- Greater responsibility for operating the system for authorities at regional and local levels, while ensuring conformity and adequate support.
- More effective participation by local communities and other stakeholders.
- The ability of planning authorities to recoup a proportion of the financial gain from the allocation of development rights to private developers to provide or pay for externality effects and provide local community benefits.

- The responsible consideration of environmental impacts of development, so that any adverse impacts are mitigated and/or compensated for.

Users of the MSDF

The MSDF for SM targets two broad user categories. The first is the government sector, across spheres from national to local government, including State Owned Enterprises (SOEs). While the MSDF is informed by the spatial direction stated in national, provincial, and district level policy, it also sets out the municipality’s spatial agenda for government departments across spheres of government to consider and follow. Most importantly, the MSDF outlines the municipality’s spatial agenda to its own service departments, ensuring that their sector plans, programmes, and projects are grounded in a sound and common spatial logic.

The second user category is the private and community sector, comprising business enterprises, non-government organisations (NGOs), institutions, property developers, and private citizens. While the private sector operates with relative freedom spatially — making spatial decisions within the framework of land ownership, zoning, and associated regulations and processes — the MSDF gives an indication of where and how the municipality intends to channel public investment, influence, and other resources at its disposal. This includes where infrastructure and public facility investment will be prioritised, where private sector partnerships will be sought in development, and how the municipality will view applications for land use change.

initiative was done in partnership with the WCG: DEA&DP.

- In parallel the Adam Tas Corridor Overlay Zone (2022/23) was developed and advertised for public comment. The intention is to finalise the overlay zone in 2023.
- A Memorandum of Understanding (MOU) was signed in 2022 by SM and the collective land owners in the ATC, confirming the spatial vision and implementation of the ATC LASDF. Council approved the MOU in August 2022.
- The Capital Expenditure Framework (CEF) was revised as part of the Integrated Urban development Grant (IUDG) in 2020 and 2021, in alignment with the municipal spatial vision as well as the functional areas (FAs) and priority development areas (PDAs) for the municipality in order to prepare a socio-economic and developmental profile for the municipality and each of the FAs and PDAs. This input enabled an extensive spatial demand quantification and setting of programmatic long-term infrastructure investment targets required to realise the spatial vision of the municipality.
- The Long-term Financial Plan/Strategy (2021) which forms a key component of the CEF was also completed in 2022 as a key budget impact simulator to determine the affordability envelope and the optimal funding mix for capital investment for the municipality based on profiles contained in the CEF.
- A Capital Planning Forum (CPF) was established in (...) to coordinate sector plans, prioritisation, mobilising, sequencing and implementing

public infrastructural and land development investment in the priority spatial structuring areas.

- An updated CEF was commissioned in 2023 due to the approval of the ATC LASDF, 2022 and Development Guidelines. The intention is to finalise and adopt the updated CEF as part of the amendment of SDF/IDP process for 2023/2024.
- The Inclusionary Zoning Policy identified in the MSDF implementation framework was completed and has been published for public comment. The intention is to finalise the policy during 2023. This was done in partnership with the WCG: DEA&DP and Development Action Group (DAG), City of Cape Town and other metropolitan municipalities considering the development of the policy.
- Investigation of the Rhenish complex for economic development opportunities has been concluded in 2021/2022. This is linked to the proposed urban revitalisation of Mill Square and surrounds as initiated by Council in 2022.
- The Klappmuts Concept Plan was approved as part of the MSDF, 2019 and confirmed by Council in 2021. Support was provided for the establishment of the intergovernmental initiative around the development of Klappmuts (Stellenbosch – Drakenstien – WCG via DEA&DP – and other affected government departments) through the Greater Cape Metropolitan Regional Spatial Implementation Framework (GCMRSIF) Intergovernmental

Steering Committee in order to ensure joint planning and development of the node.

- Significant progress has been made in planning and land use decisions for an “Innovation Precinct” or “Smart City district”, directly west of, and adjacent to Klappmuts South. A land agreement with the University of Stellenbosch (US) to possibly establish university related activities in this area is currently being negotiated. Phase 1 – 3 has been approved and some amendments to land use approvals are currently under consideration.
- To support the cross-border catalytic project identified in the MSDF to unlock development in Klappmuts North, as well as to enable the re-location of land extensive manufacturing, logistics, and warehousing enterprises from Stellenbosch town (linked to ATC LASDF) to Klappmuts, the SM accordingly submitted a municipal boundary redetermination application to the Demarcation Board in 2022. The Council approved the submission in 2022 and the re-determination process is currently in progress with feedback expected in 2023/2024.
- Correction of Tables 20 and 28 within the approved MSDF was adopted by Council in 2022.
- SM invasive alien plant management plan and Air Quality Management Plan was reviewed and adopted in November 2022.
- The amendment and adoption of the review of the Stellenbosch By-Law on Municipal Land Use Planning has been advertised for public

comment. The intention is to finalise the review of the by-law during 2023.

- The Housing Pipeline Review was approved in 2022, and the Integrated Human Settlements Plan (IHSP) is being updated and the intention is the finalise and adopt the policy during 2023.
- Comprehensive Integrated Transport Plan (CITP) has been updated and the intention is the finalisation and adoption of the policy during 2023.
- The Idas Valley/Botmaskop Nature Area Environmental Management Plan was approved by Council in February 2023.
- The Integrated Waste Management Plan for SM was approved in 2020.

In parallel to MSDF work, considerable progress has been made, in collaboration with the Western Cape Government (WCG) through participation in the Greater Cape Metropolitan Regional Spatial Implementation Framework (GCMRSIF) Intergovernmental Steering Committee — on a continuous basis – with adjoining municipalities to discuss regional spatial development trends, cross-border challenges, opportunities, risks and infrastructural constraints.

Continued partnership with all local municipalities within the Western Cape and the WCG:DEA&DP to share best practices and improving coordination on matters related to Spatial Planning and Land Use Management sector through the Western Cape Planning Heads Forum.

Process and Timeframes

The continued work on sector plans, prioritisation, mobilising, sequencing and implementing public

infrastructural and land development investment over the medium term (10-years) through the CEF process has highlighted the need to strategically align some sector plans with the MSDF. Accordingly, the review and amendment process of the MSDF was initiated and approved by Council in November 2021 to enable improved municipal policy coherency and vertical alignment. The amendment was included in the Integrated Development Plan (IDP) and Budget Process Plan for 2022-2027 and revised SDF/IDP/Budget time Schedule for 2022/2023.

Council also supported and approved the process as stipulated in terms of Section 11(b) of LUPA; Section 3(1)(b) of the MPBL for amending the MSDF. Therefore, Council approved the establishment of a municipal project committee and the publication of the proposed amendment of the MSDF for a sixty (60) day period for public commenting to all organs of state and the public.

The standard operating procedure for the amendment of the MSDF without an Intergovernmental Steering Committee (ISC) as contained in the WCG: DEA&DP Practice Note was used as a guideline and the steps were recorded in the IDP and Budget Process Plan (as referenced above) in terms of Section 28 of the MSA.

Approach

In preparing the review and amendment of the MSDF; previous studies, new and updated policy documents, and plans have been considered and continues to form the basis of the MSDF, 2019 and its subsequent proposed amendment. The methodology comprised primary and secondary data collection, and intensive consultation with local, national, and provincial government actors as well as the communities.

The collected data were triangulated with a desktop review of multiple literature sources, including academic sources. A set of spatial analyses were conducted from regional, municipal, to neighbourhood scales to define the major challenges and opportunities to inform the implementation plans (including the CEF). These socio-economic, spatial profiles, and spatial demand quantification were initiated during the CEF process in 2021. These profiles and spatial outcomes were reviewed and validated with the strategic assessment, and primary actors in the project.

The profiles informs and confirms the status quo of the MSDF, 2019 and the spatial transformation vision and targets reflected in the spatial strategy. Accordingly the status quo as part of the MSDF has been updated through the CEF process and are reflected in combination with the Status Quo of the MSDF, 2019 and CEF, 2021 in section (...) below. It should be noted that due to various catalytic projects being approved (i.e. ATC LASDF), the profile is currently being updated through the CEF process, 2022/2023 and will be adopted and attached as part of the amended MSDF, 2022/2023 in Part 7 of the document and Appendix G.

The approach for the amendment of the MSDF follows the SDF Guidelines (2017) and consists of four interlinked components in the MSDF process:

- Spatial analytics and urban profiling around substantive spatial themes,
- Developing a strategic vision and scenario building,
- Defining prioritized infrastructure investment and establishing linkage to financing, and –
- Contributing to knowledge exchange (change to M&E).

Some of the MSDF sections were found not necessary to be updated due to no changes being noted since the adoption of the MSDF (2020 - 2022) through the review process. The sections are listed below with an indication provided on which sections have been identified for updates.

- Part 1: Introduction (updated)
- Part 2: Legislative and Policy Context (partially)
- Part 3: Status Quo, Challenges and Opportunities
- Part 4: Vision and Concept
- Part 5: Plans and Settlement Proposals (partially)
- Part 6: Implementation Framework
- Part 7: Capital Expenditure Framework (updated)
- Part 8: Monitoring and Review
- Part 9: Proposed development proposals and comments received for consideration in amended MSDF and maps

To ensure consistency and ease of reference the unchanged sections and maps are transposed into this report. The aim is to also assist in user-friendliness for the target audience.

3. STRUCTURE OF THE AMENDED MSDF

The amended MSDF, 2023 are set out in the following parts:

- Part 2: Legislative and Policy Context (upartially – IDP section)
- Part 3: Status Quo, Challenges and Opportunities (unchanged)
- Part 4: Vision and Concept (unchanged)
- Part 5: Plans and Settlement Proposals (tables 20 and 28)

- Part 6: Implementation Framework (unchanged)
- Part 7: Capital Expenditure Framework (updated)
- Part 8: Monitoring and Review (unchanged).

Appendices related to the status quo, guidelines, public input received and proposed amendments to the urban edge.

- Appendix A: Policy Framework (unchanged)
- Appendix B: Public comment received following the request for submission of development proposal (private & public) (updated)
- Appendix C: Spatial Planning Categories, associated SEMF policy and WCG guidelines (unchanged)
- Appendix D: Thematic guidelines drawn from “WCLUP: Rural Guidelines” which may be applicable to different SPCs (unchanged)
- Appendix E: Norms / Guidelines for the size of agricultural holdings (unchanged)
- Appendix F: Housing pipeline (updated)
- Appendix G: Capital Expenditure Framework (updated)

PART 2:

LEGISLATIVE AND POLICY CONTEXT

4. LEGISLATIVE AND POLICY CONTEXT

The sections below outline key legislative and policy informants of the MSDF (including the amendment).

Legislative Requirements for MSDFs

4.1 Municipal Systems Act

The Municipal Systems Act, 32 of 2000 (MSA) first introduced the concept of a MSDF as a component of the mandatory IDP that every municipality must adopt to govern its allocation of resources. Chapter 5 of the Act deals with integrated development planning and provides the legislative framework for the compilation and adoption of IDPs by municipalities. Within the chapter, section 26(e) specifically requires an SDF as a mandatory component of the municipal IDP. In 2001 the Minister for Provincial and Local Government issued the Local Government: Municipal Planning and Performance Management Regulations. Within these regulations, Regulation 2(4) prescribes the minimum requirements for a MSDF.

4.2 Spatial Planning and Land Use Management Act

With the enactment of the Spatial Planning and Land Use Management Act 16 of 2013 (SPLUMA), a new planning regime was introduced in South Africa. It replaced disparate apartheid era laws with a coherent legislative system as the foundation for all spatial planning and land use management activities in South Africa. It seeks to promote consistency and uniformity in procedures and decision-making. Other objectives include addressing historical spatial imbalances and the integration of the principles of sustainable development into land use and planning regulatory tools and legislative instruments. In broad terms, SPLUMA differentiates between two components of

the planning system:

- SDFs; and -
- The Land Use Management System (LUMS).

As indicated above, SDFs are guiding and informing documents that indicate the desired spatial form of an area and define strategies and policies to achieve this. They inform and guide the LUMS, which includes town planning and zoning schemes, allocating development rights, and the procedures and processes for maintaining the maintenance of or changes in development rights.

SDFs can be prepared for different spatial domains, for example, the country, a province or region, municipal area (MSDF), or part of a municipal area. Plans for parts of a municipal area are referred to as Local Spatial Development Framework (LSDFs) or Precinct Plans. In terms of SPLUMA, a MSDF covers a longer time horizon (i.e. five years or longer) than spatial plans, and sets out strategies for achieving specific objectives over the medium to longer term (10 – 20 years). SDFs are not rigid or prescriptive plans that predetermine or try to deal with all eventualities, or sets out complete land use and development parameters for every land portion or cadastral entity. They should, however, contain sufficient clarity and direction to provide guidance to land use management decisions while still allowing some flexibility and discretion. MSDFs need to distinguish between critical non-negotiables and fixes, and what can be left to more detailed studies. They should be based on normative principles including performance principles that form the basis of monitoring and evaluation of impacts.

Chapter 2 of SPLUMA sets out the development principles that must guide the preparation, adoption and implementation of any SDF, policy or by-law

concerning spatial planning and the development or use of land. These principles, outlined in more detail in Table 1, include the redress of spatial injustices and the integration of socio-economic and environmental considerations in land use management to balance current development needs with those of the future generations in a transformative manner. SPLUMA reinforces and unifies the National Development Plan (NDP) in respect of using spatial planning mechanisms to eliminate poverty and inequality while creating conditions for inclusive growth by seeking to foster a high-employment economy that delivers on social and spatial cohesion.

The SPLUMA principles are aligned with key international treaties and conventions, supported by South Africa, and including the UN Agenda for Sustainable Development, and its associated sustainable development goals (SDGs) and implementation programmes.

Chapter 4 of SPLUMA provides requirements for the preparation of SDFs, which includes stipulations regarding the process of preparing a SDF and the contents of an SDF. All spheres of government must prepare SDFs that establish a clear vision for spatial development, based on a thorough inventory and analysis and underpinned by national spatial planning principles and local long-term development goals and plans. Sub-section 12(2) of SPLUMA requires that all three spheres must participate in each other's processes of spatial planning and land use management and each sphere must be guided by its own SDF when taking decisions relating to land use and development.

Section 12 (1) of sets out general provisions which are applicable to the preparation of all scales of SDFs. These provisions require that all SDFs must:

- Interpret and represent the spatial development vision of the responsible sphere of government and competent authority.
- Be informed by a long-term spatial development vision.
- Represent the integration and trade-off of all relevant sector policies and plans.
- Guide planning and development decisions across all sectors of government.
- Guide a provincial department or municipality in taking any decision or exercising any discretion in terms of the Act or any other
- law relating to spatial planning and land use management systems.
- Contribute to a coherent, planned approach to spatial development in the national, provincial and municipal spheres.
- Provide clear and accessible information to the public and private sector and provide direction for investment purposes.

- Include previously disadvantaged areas, areas under traditional leadership, rural areas, informal settlements, slums and land holdings of state-owned enterprises and government agencies and address their inclusion and integration into the spatial, economic, social and environmental objectives of the relevant sphere.
- Address historical spatial imbalances in development.
- Identify the long-term risks of particular spatial patterns of growth and development and the policies and strategies necessary to mitigate those risks.
- Provide direction for strategic developments, infrastructure investment, promote efficient, sustainable and planned investments by all sectors.

SDFs should include:

- A report on and an analysis of existing land use patterns.

- A framework for desired land use patterns.
- Existing and future land use plans, programmes and projects relative to key sectors of the economy.
- Mechanisms for identifying strategically located vacant or under-utilised land and for providing access to and the use of such land.

The time frames for the preparation of a MSDF overlaps with that of the municipal IDP. At the municipal level, IDPs, which include budget projections, financial and sector plans, are set every five years correlating with political terms of office in local government. MSDFs should be subject to a major review every five years, with less comprehensive reviews annually.²

In support of SPLUMA, the Department of Rural Development ([DRD&LR](#)) and Land Reform prepared detailed process and content “Guidelines for the Development of Provincial, Regional and Municipal Spatial Development Frameworks and Precinct Plans”. The SM follows these guidelines in its work on the MSDF.

PRINCIPLE	MEANING
SPATIAL JUSTICE	<ul style="list-style-type: none"> • Past spatial and other development imbalances must be redressed through improved access to and use of land. • SDFs (and associated policies) must address the inclusion of persons and areas that were previously excluded, with an emphasis on informal settlements, and areas characterised by widespread poverty and deprivation. • Spatial planning mechanisms, including land use schemes, must incorporate provisions that enable redress in access to land by disadvantaged communities and persons. • Land use management systems must include all areas of a municipality and specifically include provisions that are flexible and appropriate for the management of disadvantaged areas and informal settlements. • Land development procedures must include provisions that accommodate access to secure tenure and the incremental upgrading of informal areas. • In considering an application, a Municipal Planning Tribunal may not be impeded or restricted in the exercise of its discretion solely because the value of land or property is affected by the outcome of the application.
SPATIAL EFFICIENCY	<ul style="list-style-type: none"> • Land development must optimise the use of existing resources and infrastructure. • Decision-making procedures must be designed to minimise negative financial, social, economic or environmental impacts. • Development application procedures must be efficient, streamlined, and timeframes adhered to by all parties.
SPATIAL SUSTAINABILITY	<ul style="list-style-type: none"> • Only land development that is within the fiscal, institutional and administrative means of government may be promoted. • Special consideration must be given to the protection of prime and unique agricultural land. • Land use issues must be dealt consistently in accordance with environmental management instruments. • Land use management and planning must promote and stimulate the effective and equitable functioning of land markets. • Current and future costs to all parties must be considered when providing infrastructure and social services for land developments. • Land development should only be promoted in locations that are sustainable, limit urban sprawl, and result in communities that are viable.
SPATIAL RESILIENCE	<ul style="list-style-type: none"> • Spatial plans, policies and land use management systems must be flexible to ensure sustainable livelihoods in communities most likely to suffer the impacts of economic and environmental shocks.
GOOD ADMINISTRATION	<ul style="list-style-type: none"> • All spheres of government must ensure an integrated approach to land use and land development. • All government departments must provide their sector inputs and comply with any other prescribed requirements during the preparation or amendment of SDFs. • The requirements of any law relating to land development and land use must be met timeously. • The preparation and amendment of spatial plans, policies, land use schemes as well as procedures for development applications, must include transparent processes of public participation that afford all parties the opportunity to provide inputs on matters affecting them. • Policies, legislation and procedures must be clearly set out in a manner which informs and empowers the public.

4.3 National Environmental Management Act

Similar to SPLUMA, the National Environmental Management Act, Act 107 of 1998 (NEMA), is identified as “framework legislation”, intended to define overarching and generally applicable principles to guide related legislation as well as all activities integral to environmental management. Its broad purpose is to provide for co-operative environmental governance by establishing principles for decision-making on matters effecting the environment, institutions that will promote co-operative governance and procedures for coordinating environmental functions exercised by organs of the state, provide for certain aspects of the administration and enforcement of other environmental management laws, and related matters.

NEMA is critical in so far as the issues of environmental sustainability, resilience to climate change, and wise use of the natural resource base, are key to the current and future socio-economic wellbeing of residents in the municipal area. This is especially so because of the fact that sectors such as agriculture and tourism, which all rely to a great extent on the natural assets of the area, remain of great importance to the local economy and are likely to do so in future. In this regard, the National Environmental Management Principles are important and are to be applied in tandem with the development principles set out in SPLUMA. It is also notable that both SPLUMA and NEMA provide for an integrated and coordinated approach towards managing land use and land development processes. This approach is based on co-operative governance and envisages the utilization of spatial planning and environmental management “instruments” such as SDFs and environmental management frameworks to align the imperatives of

enabling development whilst ensuring that biodiversity and other critical elements of the natural environment are adequately protected to ensure sustainability.

4.4 The Western Cape Government Land Use Planning Act

The Western Cape Government (WCG), through the Land Use Planning Act 3 of 2014 (LUPA), has adopted its own legislation to consolidate the legal requirements that relates to spatial planning and public investment in the Western Cape. There is some overlap between SPLUMA and LUPA with regard to aspects such as the content and process of preparing and adopting a MSDF. In terms of LUPA, a MSDF must:

- Comply with other applicable legislation.
- Promote predictability in the utilisation of land.
- Address development priorities.
- Where relevant, provide for specific spatial focus areas, including towns, other nodes, sensitive areas, or areas experiencing specific development pressure.
- Consist of a report and maps covering the whole municipal area, reflecting municipal planning and the following structuring elements:
 - o Transportation routes.
 - o Open space systems and ecological corridors.
 - o Proposed major projects of organs of state with substantial spatial implications.
 - o Outer limits to lateral expansion.
 - o Densification of urban areas.

LUPA also sets out the minimum institutional arrangements for preparing SDFs, enabling participation across spheres of government and sectors. These institutional arrangements are further described in the SM Municipal Land Use Planning By-law 2015 (MPBL). The by-law will give effect to the municipal planning function allocated to municipalities in terms of Part B of Schedule 4 of the Constitution and certain requirements set out in SPLUMA and LUPA.

Policy Context for SDFs

Numerous policy frameworks focus the work of government holistically, the spatial arrangement of activities or specific sectors. These are explored fully in the IDP. In the sections below, only key spatial policy informants are summarised, namely the National Development Plan (NDP), the national Integrated Urban Development Framework (IUDF), the WCG’s Provincial Spatial Development Framework (PSDF), the Greater Cape Metro (GCM) Regional Spatial Implementation Framework (RSIF), and the IDP. A fuller set of applicable policy is attached in table form as Appendix A.

4.5 The National Development Plan 2030

The National Development Plan 2030 (NDP), developed by the National Planning Commission and adopted in 2012, serves as the strategic framework guiding and structuring the country’s development imperatives and is supported by the New Growth Path (NGP) and other national strategies. In principle, the NDP is underpinned by, and seeks to advance, a paradigm of development that sees the role of government as enabling by creating the conditions, opportunities and capabilities conducive to sustainable and inclusive economic growth. The NDP sets out the pillars through which to cultivate and expand a robust, entrepreneurial and innovative

economy that will address South Africa's primary challenge of significantly rolling back poverty and inequality by 2030.

The legacy of apartheid spatial settlement patterns that hinder inclusivity and access to economic opportunities, as well as the poor location and under-maintenance of major infrastructure, are two of the nine identified core challenges facing the country's development. Aimed at facilitating a virtuous cycle of expanding opportunity for all, the NDP proposes a program of action that includes the spatial transformation of South Africa's towns, cities and rural settlements given the "enormous social, environmental and financial costs imposed by spatial divides". Of particular relevance for the SM MSDP are the recommendations set out in Chapter 8: Transforming Human Settlements and the National Space Economy, including the upgrading of all informal settlements on suitable, well-located land; increasing urban densities to support public transport and reduce sprawl; promoting mixed housing strategies and compact urban development in close proximity to services and livelihood opportunities; and investing in public transport infrastructure and systems (with a special focus on commuter rail) to ensure more affordable, safe, reliable and coordinated public transport.

4.6 Integrated Urban Development Framework

The Integrated Urban Development Framework (IUDF), approved by National Cabinet in 2016, aims to steer urban growth nationally towards a sustainable model of compact, connected and coordinated towns and cities. The IUDF provides a roadmap to implement the NDP's vision for spatial

transformation, creating liveable, inclusive and resilient towns and cities while reversing apartheid spatial legacy. To achieve this transformative vision, four overall strategic goals are introduced:

- Spatial integration; to forge new spatial forms in settlement, transport, social and economic areas.
- Inclusion and access; to ensure people have access to social and economic services, opportunities and choices.
- Growth: to harness urban dynamism for inclusive, sustainable economic growth and development.
- Governance; to enhance the capacity of the state and its citizens to work together to achieve spatial and social integration.

These strategic goals inform the priority objectives of nine policy levers, premised on the understanding that integrated urban planning forms the basis for achieving integrated urban development, which follows a special sequence of urban policy actions. Integrated transport needs to inform targeted investments into integrated human settlements, underpinned by integrated infrastructure network systems and efficient land governance. The IUDF states that, taken all together, these levers can trigger economic diversification, inclusion and empowered communities, if supported by effective governance and financial reform.

4.7 The WCG Provincial Spatial Development Framework

The WCG's Provincial Spatial Development Framework (PSDF) sets out to:

- Address the lingering spatial inequalities that persist because of apartheid's legacy — inequalities that contribute both to current challenges (lack of jobs and skills, education and poverty, and unsustainable settlement patterns and resource use) and to future challenges (climate change, municipal fiscal stress, food insecurity, and water deficits).
- Provide a shared spatial development vision for both the public and private sectors and to guide to all sectoral considerations about space and place.
- Direct the location and form of public investment and to influence other investment decisions by establishing a coherent and logical spatial investment framework.

The spatial agenda advocated by the PSDF is summarised in Table 2.

The PSDF sets out the key strategic spatial transitions required to achieve a more sustainable use of provincial assets, the opening-up of opportunities in the space-economy and the development of integrated and sustainable settlements. These are summarised in Table 3.

The PSDF includes a composite map which graphically portrays the Western Cape's spatial agenda. In line with the Provincial spatial policies, the map shows what land use activities are suitable in different landscapes and highlights where efforts should be focused to grow the Provincial economy. For the agglomeration of urban activity, the Cape Metro functional region, which includes the SM, as well as the emerging regional centres of the Greater Saldanha functional region and the George/Mossel Bay functional region, is prioritised.

FOCUS	WHAT IT INVOLVES
GROWING THE WESTERN CAPE ECONOMY IN PARTNERSHIP WITH THE PRIVATE SECTOR, NON-GOVERNMENTAL AND COMMUNITY BASED ORGANISATIONS	<ul style="list-style-type: none"> Targeting public investment into the main driver of the Provincial economy (i.e. the Cape Metro functional region, the emerging Saldanha Bay/ Vredenburg and George/ Mossel Bay regional industrial centres, and the Overstrand and Southern Cape leisure and tourism regions). Managing urban growth pressures to ensure more efficient, equitable and sustainable spatial performance. Aligning, and coordinating public investments and leveraging private sector and community investment to restructure dysfunctional human settlements. Supporting municipalities in managing urban informality, making urban land markets work for the poor, broadening access to accommodation options, and improving living conditions. Promoting an urban rather than suburban approach to settlement development (i.e. diversification, integration and intensification of land uses). Boosting land reform and rural development, securing the agricultural economy and the vulnerability of farm residents, and diversifying rural livelihood and income earning opportunities.
USING INFRASTRUCTURE INVESTMENT AS PRIMARY LEVER TO BRING ABOUT THE REQUIRED URBAN AND RURAL SPATIAL TRANSITIONS	<ul style="list-style-type: none"> Aligning infrastructure, transport and spatial planning, the prioritisation of investment and on the ground delivery. Using public transport and ICT networks to connect markets and communities. Transitioning to sustainable technologies, as set out in the WCIF. Maintaining existing infrastructure.
IMPROVING OVERSIGHT OF THE SUSTAINABLE USE OF THE WESTERN CAPE'S SPATIAL ASSETS	<ul style="list-style-type: none"> Safeguarding the biodiversity network and functionality of ecosystem services, a prerequisite for a sustainable future. Prudent use of the Western Cape's precious land, water and agricultural resources, all of which underpin the regional economy. Safeguarding and celebrating the Western Cape's unique cultural, scenic and coastal resources, on which the tourism economy depends. Understanding the spatial implications of known risks (e.g. climate change and its economic impact, sea level rise associated with extreme climatic events) and introducing risk mitigation and/or adaptation measures.

PSDF THEME	FROM	TO
RESOURCES AND ASSETS (BIO-PHYSICAL ENVIRONMENT)	Mainly curative interventions	More preventative interventions
	Resource consumptive living	Sustainable living technologies
	Reactive protection of natural, scenic and agricultural resources	Proactive management of resources as social, economic and environmental assets
OPPORTUNITIES IN THE SPACE ECONOMY (SOCIO-ECONOMIC ENVIRONMENT)	Fragmented planning and management of economic infrastructure	Spatially aligned infrastructure planning, prioritisation and investment
	Limited economic opportunities	Variety of livelihood and income opportunities
	Unbalanced rural and urban space economies	Balanced urban and rural space economies built around green and information technologies
INTEGRATED AND SUSTAINABLE SETTLEMENTS (BUILT ENVIRONMENT)	Suburban approaches to settlement	Urban approaches to settlement
	Emphasis on 'greenfields' development and low density sprawl	Emphasis on 'brownfields' development
	Low density sprawl	Increased densities in appropriate locations aligned with resources and space-economy
	Segregated land use activities	Integration of complementary land uses
	Car dependent neighbourhoods and private mobility focus	Public transport orientation and walkable neighbourhoods
	Poor quality public spaces	High quality public spaces
	Fragmented, isolated and inefficient community facilities	Integrated, clustered and well located community facilities
	Focus on private property rights and developer led growth	Balancing private and public property rights and increased public direction on growth
	Exclusionary land markets and top-down delivery	Inclusionary land markets and partnerships with beneficiaries in delivery
	Limited tenure options and standardised housing types	Diverse tenure options and wider range of housing typologies
	Delivering finished houses through large contracts and public finance	Progressive housing improvements and incremental development through public, private and community finance with differentiated levels of service

4.8 The Greater Cape Metro Regional Spatial Implementation Framework

The Greater Cape Metro (GCM) Regional Spatial Implementation Framework (RSIF), completed under the guidance of the WCG in 2017, aims to build consensus between the spheres of government and state-owned companies on what spatial outcomes the GCM should strive for, where in space these should take place, and how they should be configured. The GCM covers the municipal jurisdictions of Cape Town, Saldanha Bay, Swartland, Drakenstein, Stellenbosch, Breede Valley, Theewaterskloof, and Overstrand.

The regional settlement concept proposed by the GCM RSIF is built on the following key tenets:

- Containing settlement footprints by curtailing the further development of peripheral dormitory housing projects.
- Targeting built environment investments within regional centres, specifically in nodes of high accessibility and economic opportunity.
- Targeting these locations for public and private residential investment, especially rental housing, to allow for maximum mobility between centres within the affordable housing sector.
- Using infrastructure assets (specifically key movement routes) as “drivers” of economic development and job creation.
- Promoting regeneration and urban upgrading within strategic economic centres as well as high-population townships across the functional region.
- Shifting to more urban forms of development

within town centres including higher densities and urban format social facilities.

- Connecting these nodes within an efficient and flexible regional public transport and freight network.
- Maintaining valuable agricultural and nature assets.

In terms of role and function, Paarl and Wellington is designated as the Northern Winelands service, administrative, tertiary education, agri-processing and distribution, and tourist centre, with very high or high growth potential. Stellenbosch is designated as the Southern Winelands service, administrative, tertiary education and research, and agri-processing centre, as well as home to multi-national enterprise headquarters, a key tourism destination, and focus for technology industry, with very high growth potential.

In relation to Klapmuts, the RSIF recognises that:

- Existing infrastructure in the area (i.e. the N1, R101, R44 and the Paarl-Bellville railway line and station), which dictate the location of certain transport, modal change or break-of-bulk land uses.
- Klapmuts is a significant new regional economic node within metropolitan area and spatial target for developing a “consolidated platform for export of processed agri-food products (e.g. inland packaging and “containerisation port”) and “an inter-municipal growth management priority”.

- Rural Development Area

4.9 SM Integrated Development Plan

The SM Integrated Development Plan 2022-2027 (IDP) is aimed at coordinating the efforts of various municipal departments in achieving the vision for the municipality as a “integrated valley of opportunity and innovation”. Efforts to achieve this vision are channeled into five specific focus areas:

- Valley of possibility – aimed at attracting investment, growing the economy and employment.
- Green and sustainable valley – aimed at ensuring

that the asset base of the municipality is protected and enhanced.

- Safe Valley – aimed at ensuring that its residents are and feel safe.
- Dignified living – aimed at improving conditions for residents through access to education and economic opportunities.
- Good governance and Compliance – aimed at ensuring that municipality is managed efficiently and effectively to the benefit of all stakeholders.

Budget expenditure is closely linked to these focus areas and achieving these outcomes.

Table 4 illustrates how the MSDF will contribute, in terms of its focus and contribution, to achieving the aims articulated for each strategic focus area. The intent of the Strategic goals for the 5th Generation IDP 2022-2027 will remain the same as the strategic goals of the 4th Generation IDP. The strategic focus areas directly relates to achieving the five municipal strategic focus areas contained in the IDP. The table below illustrates the spatial alignment between the IDP and SDF.

IDP STRATEGIC FOCUS AREA	RELATED CONCERNS OF THE SDF	SDF STRATEGIC DIRECTION
SFA1: VALLEY OF POSSIBILITY	The way settlements, nature and agriculture are spatially developed and managed to enhance individual and collective livelihood opportunities and enterprise development, and overcome inequity and exclusion.	<ul style="list-style-type: none"> • Containment of settlements to protect nature / agricultural areas and enable public and non-motorised transport and movement. • A focus on public and non-motorised transport and movement.
SFA2: GREEN AND SUSTAINABLE VALLEY	The way settlements, nature and agricultural areas are spatially developed and managed to maintain and enhance natural resources and ensure a future balance between human settlement and its use of natural resources and opportunity.	Protection of natural areas, agricultural areas, and river corridors.
SFA3: SAFE VALLEY	The way settlements, nature and agricultural areas are spatially developed and managed to ensure individual and collective safety in living, in movement, at work, institutions, and play.	Denser settlements with diverse activity to ensure surveillance.
SFA4: DIGNIFIED LIVING	The way settlements, nature and agricultural areas are spatially developed and managed to ensure equal access to shelter, facilities and services, notwithstanding material wealth, age, gender, or physical ability.	A specific focus on the needs of “ordinary” citizens, experiencing limited access to opportunity because of restricted available material resources.
SFA5: GOOD GOVERNANCE AND COMPLIANCE	The way settlements, nature and agricultural areas are spatially developed and managed to ensure individual and collective participation – based on accessible information and open processes – in matters related to spatial planning and land use management.	Presenting information, including opportunities and choices in a manner that assists its internalisation by all.

Policy implications

The table below sets out key policy imperatives for

the MSDF in summary form, drawn from higher level policy directives and organised in relation to broad themes of enquiry identified in the SPLUMA

guidelines.

THEME	SUB-THEME	IMPLICATIONS FOR THE SM SDF	
BIOPHYSICAL ENVIRONMENT	Biodiversity and ecosystem services Water Soils and mineral resources Resource consumption and disposal Landscape and scenic assets	<ul style="list-style-type: none"> Protection and extension of Critical Biodiversity Areas, protected, and vulnerable areas. Precautionary approach to climate change and sea level rise. Responsible water use. Protection of water resources. Protection of valuable soils for agriculture. 	<ul style="list-style-type: none"> Protection of mineral resources for possible extraction. Energy efficiency and change to alternative fuels. Waste minimization and recycling. Retaining the essential character and intactness of wilderness areas.
SOCIO-ECONOMIC ENVIRONMENT	Regional and municipal economic infrastructure Rural space-economy Settlement space-economy	<ul style="list-style-type: none"> Developing and maintaining infrastructure as a basis for economic development and growth The protection of agricultural land, enablement of its use and expansion of agricultural output. Focus on undeveloped and underdeveloped land in proximity to existing concentrations of activity and people and as far as possible within the existing footprint of settlements. The protection and expansion of tourism assets. The expansion of entrepreneurial opportunity (also for emergent entrepreneurs). 	<ul style="list-style-type: none"> Focus resources in those areas that have both high or very high growth potential, as well as high to very high social need. Better linkages between informal settlements/ poorer areas and centres of commercial/ public activity. A richer mix of activities in or proximate to informal settlements (including employment opportunity). The protection and expansion of tourism assets. The expansion of entrepreneurial opportunity (also for emergent entrepreneurs).
BUILT ENVIRONMENT	Sense of place and settlement patterns Accessibility Land use and density Facilities and social services Informality, housing delivery, inclusion and urban land markets	<ul style="list-style-type: none"> The protection of places and buildings of heritage/ cultural value (while ensuring reasonable public access, also as a means of economic development). A focus on public transport to ensure user convenience and less dependence on private vehicles (there is a recognition that many citizens will never afford a private vehicle and that the use of private vehicles has significant societal costs). Compact, denser development. Pedestrian friendly development. 	<ul style="list-style-type: none"> A focus on improving and expanding existing facilities (schools, libraries, and so on) to be more accessible and offer improved services. The significance of well-located and managed public facilities as a platform for growth, youth development, increased wellness, safety, and overcoming social ills. The clustering of public facilities to enable user convenience and efficient management. The upgrading of informal settlements. Housing typologies which meet the different needs of households and income groups.
GOVERNANCE	Way of work	<ul style="list-style-type: none"> A more coordinated and integrated approach in government planning, budgeting and delivery. Partnering with civil society and the private sector to achieve agreed outcomes (as reflected in the IDP and associated frameworks/ plans). 	<ul style="list-style-type: none"> Active engagement with communities in the planning, resourcing, prioritization, and execution of programmes and projects.

PART 3:
STATUS QUO, ISSUES, CHALLENGES &
OPPORTUNITIES

5. SPATIAL CONTEXTUALISATION

Demarcation history

South Africa undergoes a reassessment of its municipal boundaries before each municipal election. Changes in municipal boundaries affect all levels of planning and also long-term development strategies. The next table shows the municipality(s) which previously formed part of the current municipality.

	2011	2006	2001
District municipality(s) / Metropolitan area(s) affected:	Cape Winelands	Cape Winelands DC	Boland DM, City of Cape Town MM
Local municipality(s) affected:	Stellenbosch	Stellenbosch	City of Cape Town
Number of wards	22	19	19

The data shows that Stellenbosch had little demarcation disruptions over its history. This contributes to stability in the municipal administrative area. Major shifts in demarcations can have a disruptive impact.

Regional context

Stellenbosch Municipality (SM) is located in the heart of the Cape Winelands, a highly valued cultural landscape with globally important natural habitats. The municipality is bounded to the east and south by the Drakenstein, Wemmershoek and Limietberg mountain ranges. The Hottentots Holland range (i.e. Stellenbosch, Jonkershoek and Simonsberg Mountains) and the Bottelary Hills form the backdrop to the town of Stellenbosch itself. These mountains, and the

fertile agricultural valleys which they shelter, are key elements contributing to the sense of place of the municipal area. Significant portions of the municipality fall within globally recognised biosphere areas with large tracts of land designated as public and private conservation areas.

The greater part of the municipal area comprises fertile soils, constituting some of the country's highest yielding agricultural land (in terms of income and employment generation). The region's extensive agricultural areas, particularly those under vineyards and orchards, also attribute scenic value and character to the region, valued by both local inhabitants and visitors. Nature, scenic value, and agriculture add significantly to the value of the area as one of South Africa's premier tourist destinations.

Institutionally, SM forms part of the Cape Winelands District Municipality (CWDMM) of the Western Cape Province of South Africa. The municipality adjoins the City of Cape Town (CoCT) to the west and south and the Breede Valley, Drakenstein and Theewaterskloof Municipalities to the east and north (refer to Figure 2).

Functionally, SM forms part of the Cape Town Region and covers a geographical area of approximately 830km².

Local context

The main settlements are the historic towns of Stellenbosch (including Jamestown) and Franschhoek, and Klapmuts. There are also several smaller rural nodes, including Pniel, Johannesdal, Lanquedoc, Lynedoch, and Raithby. New nodes are emerging around agricultural

service centres, for example, Koelenhof and Vlotenburg.

The location of Stellenbosch in the regional context is significant. On the one hand, it has a strong link with the Cape Town area through its location. On the other hand, however, its location on the fringe of one of South Africa's most prominent city regions provides challenges in its spatial and economic competitiveness. Issues related to its urban-rural transitional character

provide challenges of growth and development (refer to Figure 3).

Part 5.

PLANS AND SETTLEMENT PROPOSALS

Table 20. Plan Elements and Proposals for Stellenbosch Town

TYPE OF SDF ELEMENT ACTION		SPATIAL PROPOSALS RELATED NON SPATIAL PROPOSALS	
Protective Actions	CBAs, ESA's, Protected areas	<ul style="list-style-type: none"> Maintain and improve the nature areas surrounding Stellenbosch town. Work to increasingly connect and integrate nature areas, also with the urban green areas, to form an integrated green web or framework across the town and its hinterland area. 	<ul style="list-style-type: none"> Implement management actions contained in the SEMF.
	Water courses	<ul style="list-style-type: none"> Improve public continuity, access, and space along the Kromrivier, Plankenbrug, Eerste River, and Blaauklippen River corridors. 	<ul style="list-style-type: none"> Improve water quality in the Plankenbrug River (through infrastructure improvements in
	Agricultural land	<ul style="list-style-type: none"> Retain and improve the relationship between Stellenbosch town and surrounding agricultural land. 	
	Urban edge	<ul style="list-style-type: none"> As a general principle, contain the footprint of Stellenbosch town as far as possible within the existing urban edge (while enabling logical, small extensions). 	
	Scenic landscapes, scenic routes, special places	<ul style="list-style-type: none"> Retain the strong sense of transition between agriculture and human settlement at the entrances to the town. 	
	Historically and culturally significant precincts and places	<ul style="list-style-type: none"> Maintain the integrity of historically and culturally significant precincts and places (as indicated in completed surveys). Improve public space and movement routes within historically and culturally significant precincts, with a focus on pedestrianism. Work to grow the extent of historically and culturally significant precincts and places in daily use and accessible to the public (through appropriate re-design and use of specifically disused industrial buildings along the Adam Tas Corridor). Define and hold the northern and eastern edges of Kayamandi. Support land use change along George Blake Road to enable the integration of Kayamandi with the Adam Tas Corridor and Stellenbosch central area. 	
Change Actions	Informal settlements to be upgraded	<ul style="list-style-type: none"> Support land use change along George Blake Road to enable the integration of Kayamandi with the Adam Tas Corridor and Stellenbosch central area. 	<ul style="list-style-type: none"> Utilise government land assets to enable integration between informal settlements and established areas.
	Areas for residential densification and infill	<ul style="list-style-type: none"> Pro-actively support higher density infill residential opportunity in the town centre, areas immediately surrounding it, and along major routes (with consideration of historic areas and structures). 	<ul style="list-style-type: none"> Utilise government land assets to enable residential densification and infill development.
	Areas for mixed land use and improved economic opportunity	<ul style="list-style-type: none"> Retain and actively support mixed use redevelopment and building within the town centre and surrounding areas, comprising living space above active streetfronts. Actively support pedestrianism and improved public space within the old town centre 	<ul style="list-style-type: none"> Support private sector led institutional arrangements assist with urban management in the town centre.
	Improved access and mobility	<ul style="list-style-type: none"> Pro-actively improve conditions for walking and NMT within Stellenbosch town. Improve access to the Techo Park, specifically from the north-west. 	<ul style="list-style-type: none"> Pro-actively, and in partnership with key corporations/ institutions, introduce transport mode demand measurements favouring public and NMT. Ensure that the design of all roads within and surrounding the town provides for appropriate NMT movement.
	Community/ Institutional use	<ul style="list-style-type: none"> Cluster community facilities together with commercial, transport, informal sector and other activities so as to maximise convenience, safety and socio-economic potential. Retain, as far as is possible, University and other educational uses within Stellenbosch town. 	<ul style="list-style-type: none"> Actively support the shared use of community facilities.
	Improved landscaping and public amenity	<ul style="list-style-type: none"> As far as possible, focus investment in parks, open space, and social facilities accessible by public and NMT, in this way also increasing the surveillance of these facilities. 	<ul style="list-style-type: none"> Actively involve local communities in the development and management of public amenities.

New Development Actions	Significant new mixed use development	<ul style="list-style-type: none"> Develop the Adam Tas Corridor as a mixed-use, high density urban district, with strong internal and external public and NMT connections. 	<ul style="list-style-type: none"> Support private sector led institutional arrangements to enable joint planning and redevelopment. Support redevelopment by making available government land assets.
	Significant new residential development	<ul style="list-style-type: none"> Support inclusive infill development on vacant public land within Cloetesville, Idas Valley, Central Stellenbosch, and Jamestown. Support infill development on private land within Stellenbosch town in a manner which serves to compact the town, expand residential opportunity, and rationalize the edges between built and unbuilt areas. 	
	Significant change to access and mobility provision	<ul style="list-style-type: none"> Explore the feasibility of changing/ complementing the rail service along the Baden Powell Drive-Adam Tas-R304 corridor to a system providing a more frequent, flexible service better integrated into the urban realm. Alternatively, a regular bus service should be explored serving the same route. 	<ul style="list-style-type: none"> Support private sector led institutional arrangements to enable joint planning and unlocking of the opportunity.

Part 6.

IMPLEMENTATION FRAMEWORK

Table 28. Proposed Settlement Hierarchy

ROLE		DEVELOPMENT AND LAND USE MANAGEMENT FOCUS
PRIMARY SETTLEMENTS		
STELLENBOSCH TOWN	<ul style="list-style-type: none"> A significant centre comprising extensive education, commercial and government services with a reach both locally and beyond the borders of the municipality, tourism attractions, places of residence, and associated community facilities. 	<ul style="list-style-type: none"> Broadening of residential opportunity for lower income groups, students, and the lower to middle housing market segments. Upgrade of informal settlements. Retention of University functions in town. Enablement of the Adam Tas Corridor. Sensitive residential infill and compaction. Drive to established “balanced” precincts (e.g. Cloeteville). Public transport development, travel demand management, parking controls, and NMT improvements.
KLAPMUTS	<ul style="list-style-type: none"> Focus for economic development (utilizing a favorable location for manufacturing, logistics, and warehousing enterprises) and associated residential opportunity. 	<ul style="list-style-type: none"> Support for development of RE/Farm 736 as a lever to economic development utilising a favorable location for manufacturing, logistics, and warehousing enterprises. Balanced housing provision in Klappmuts South, focused on those who can benefit from employment provision through unlocking Klappmuts North. Establishing the Klappmuts town centre. NMT improvements.
FRANSCHHOEK	<ul style="list-style-type: none"> Secondary service centre, significant tourist destination, and place of residence. 	<ul style="list-style-type: none"> Upgrade of informal settlements NMT improvements. Sensitive infill within urban edge providing inclusive housing and extended commercial opportunity (also for small and emerging entrepreneurs). Retention of historic character.
• SECONDARY SETTLEMENTS		
LA MOTTE	<ul style="list-style-type: none"> Contained rural settlement. 	<ul style="list-style-type: none"> Diversification of existing activities to curtail the need for movement. Sensitive location of diversified uses closer to the R45. Limited further housing development.
WEMMERSHOEK	<ul style="list-style-type: none"> Contained rural settlement. 	<ul style="list-style-type: none"> Possible extension of residential opportunity linked to re-use of saw-mill site and local employment opportunity.
GROOT DRAKENSTEIN	<ul style="list-style-type: none"> Contained historic rural settlements. 	<ul style="list-style-type: none"> Accommodation of sensitive private and public sector initiatives offering expanded livelihood (including tourism) and residential opportunity.
DWARS RIVER VALLEY	<ul style="list-style-type: none"> Contained historic rural settlements. 	<ul style="list-style-type: none"> Accommodation of sensitive private and public sector initiatives offering expanded livelihood (including tourism) and residential opportunity.
JONKERSHOEK	<ul style="list-style-type: none"> Contained, but dispersed collection of institutional, recreational and residential uses. 	<ul style="list-style-type: none"> Rationalisation and containment of existing occupation rights.
MULDERSVLEI KOELENHOF	<ul style="list-style-type: none"> Contained rural settlement. Contained rural settlement. 	<ul style="list-style-type: none"> Potential future consolidated, inclusive settlement linked to rail/bus. Potential future consolidated, inclusive settlement linked to rail/bus.
VLOTTENBURG	<ul style="list-style-type: none"> Contained rural settlement. 	<ul style="list-style-type: none"> Potential future consolidated, inclusive settlement linked to rail/bus.
LYNEDOCH	<ul style="list-style-type: none"> Contained village and institutional cluster. 	<ul style="list-style-type: none"> Gradual expansion of unique development model based focused on sustainable living and education.
SPIER	<ul style="list-style-type: none"> Contained tourism and cultural centre. 	<ul style="list-style-type: none"> Containment and limited expansion of existing offering.
RAITHBY	<ul style="list-style-type: none"> Contained historic rural settlement. 	<ul style="list-style-type: none"> Protection of unique historic settlement structure and form.

CATALYTIC INITIATIVES

Adam Tas Corridor

The most strategically located land in Stellenbosch town comprises large industrial spaces, including land previously occupied by Cape Sawmills and Distell facilities. A significant proportion of these have been vacated or will be vacated in the foreseeable future in response to changes in the operating context of manufacturing enterprises.

Thoughtful redevelopment of these spaces – at scale – can contribute meaningfully to meeting existing challenges and MSDF objectives.

In simple terms, the concept is to launch the restructuring of Stellenbosch town through redevelopment of the Adam Tas Corridor, the area stretching along the R310 and R44 along the foot of Papegaaiberg from the disused Cape Sawmills site in the west to Kayamandi and Cloeteville in the north.

It forms the western edge to the town but is not well integrated with the rest of Stellenbosch, largely because of the barrier/ severance effect of the R44 and the railway line. Much of the area has a manufacturing use history. It includes the disused sawmill site, the government owned Droë Dyke area, Distell's Adam Tas facility, Oude Libertas, various Remgro property assets, Bosman's Crossing, the rail station, Bergkelder complex, Van der Stel sports complex, the George Blake Road area, and parts of Kayamandi and Cloeteville. Underutilised and disused land in the area measures more than 300ha.

Conceptually, a linear new district within Stellenbosch is envisaged adjacent to and straddling (in places) Adam Tas Road, the R44, and railway line. Overall, development should be mixed, high density and favour access by pedestrians and cyclists.

A central movement system (with an emphasis on public transport and NMT) forms the spine of the area, and is linked to adjacent districts south

and west of the corridor. The corridor retains west-east and north-south vehicular movement (both destined for Stellenbosch town and through movement) as well as the rail line. Remote parking facilities will form part of the corridor concept, with passengers transferring via public transport, cycling and walking to reach destinations within the town of Stellenbosch. The R44 and rail line specifically could be bridged in parts to enable integration across the corridor to access adjacent areas.

The corridor is not envisaged as homogenous along its length, with uses and built form responding to existing conditions and its relationship with surrounding areas. Conceptually, three areas could be defined, each linked through a sub-district.

- The southern district comprises the disused sawmill site, Droë Dyke, and the Adam Tas complex. It can accommodate a mix of high density residential and commercial uses, as well as public facilities (including sports fields).
- The central district is the largest, including Bosman's Crossing, the Bergkelder, and the Van der Stel Sports complex. Here, development should be the most intense, comprising a mix of commercial, institutional, and high density residential use. The "seam" between this district and west Stellenbosch is Die Braak and Rhenish complex. The southern and central districts are linked through Oude Libertas. Oude Libertas remains a public place, although some infill development (comprising additional public/ educational facilities) is possible.
- The northern district focuses on the southern parts of Kayamandi. The central and northern districts are linked through George Blake Road. This area effectively becomes the "main street" of Kayamandi, a focus for commercial, institutional, and high density residential use integrated with the rest of the corridor and western Stellenbosch town.

Along the corridor as a whole – depending on local conditions – significant re-use of existing

buildings is envisaged. This is seen as a fundamental prerequisite for diversity, in built character and activity (as reuse offers the opportunity for great variety of spaces). Aspects of the industrial use history of the area should remain visible. A range of housing types, in the form of apartments should be provided, accommodating different income groups and family types.

Redevelopment in terms of the concept offers the opportunity to:

- Grow Stellenbosch town – and accommodate existing demand – in a manner which prevents sprawl, and create conditions for efficient, creative living and working.
- Stimulate and act as a catalyst for the development of improved public transport and NMT
- Rethink and reconstruct infrastructure, and particularly the movement system, including the possible partial grade separation of east- west and north-south movement systems, in turn, integrating the east and west of town and releasing land for development.
- Integrate Kayamandi and Stellenbosch town seamlessly.
- Shift new development focus to the west of town, with Die Braak and Rhenish complex forming the center and seam between the new west and east of Stellenbosch town.
- Accommodate the parking of vehicles on the edge of town whilst the corridor provides for and promotes a greater focus on pedestrianism and cycling into the core town.
- Accommodate uses which meet urgent needs, specifically higher density housing and university expansion, also assisting in establishing a compact, less sprawling town, public transport, and pedestrianism.
- Increases land value east of the R44 and in the area between Kayamandi and the Bergkelder complex. Existing manufacturing enterprises can gradually

relocate to the north, closer to the N1 logistics corridor (as planned by Distell for their operations).

A spatial plan for the corridor is needed. This plan should spell out – in broad terms – what activities should ideally happen where (and in what form), where to start, and what infrastructure is anticipated by when. However, a spatial plan is not enough. The preparation of the plan has to be situated within a broader surround of development and transport objectives, institutional arrangements and agreements, and parallel professional work streams.

Institutional arrangements are critical. It would include broad agreement between land owners and the municipality to pursue the corridor development, the objectives to be sought, how to resource the work, and associated processes.

It would appear that the private sector is best situated to lead the initiative. Land owners – unlike the municipality – have the resources to undertake planning.

Parallel work streams should explore:

- Economic modelling of development options.
- Corridor access and mobility planning and scenario modelling.
- How ordinary citizens with limited material wealth can benefit from the development.
- The nature of efficient, “smart” infrastructure to support living, services, and business.

Critically, development of the corridor needs to be supported by broader strategies impacting on Stellenbosch town as a whole. These include:

- Focusing University functions on the town (as opposed to decentralisation).
- Private vehicle demand management (specifically to curtail the use of private vehicles for short trips within the town).

Critical also, both for the Adam Tas Corridor and the broader Baden Powell-Adam Tas-R304

development corridor is to explore the feasibility of introducing a more reliable and frequent rail service along the Eerste River-Stellenbosch-Muldersvlei-Klapmuts rail line. The aim should be to have a more frequent passenger service along the corridor, and connected larger and smaller settlements. Safe crossing of rail infrastructure also requires specific attention.

At the time of submission of the MSDF, considerable progress has been made by and owners, the municipality, WCG, and the University, to prepare for joint planning of the Adam Tas Corridor.

The Adam Tas Corridor is a significant opportunity, similar in potential scope and impact over generations to the establishment of the university, the Rupert-initiated drive to save and sustain historic precincts and places, and the declaration of core nature areas for preservation. It is a very large project, some five times the extent of the successful Victoria & Alfred Waterfront (V & AW) in Cape Town.

It involves more stakeholders and land owners than the V & AW did, and similarly challenging obstacles. It will require sustained, committed work over a prolonged period of time, trade-offs, and a departure of current norms.

Given the scope and complexity of the project, the immediate focus is to understand what it will take to achieve mindful redevelopment of the corridor. Its feasibility, dependencies, and risks need to be fully understood with a view to making recommendations to land owners and other parties involved as to how to proceed in the most responsible way.

Part 7.

CAPITAL EXPENDITURE FRAMEWORK

CAPITAL EXPENDITURE FRAMEWORK

Introduction

SPLUMA requires that MSDFs “determine a capital expenditure framework for the municipality’s development programmes, depicted spatially”. SPLUMA does not provide further detail on what this Capital Expenditure Framework (CEF) should include and there is currently no specification for a SPLUMA-compliant CEF. The intention appears to more effectively link the Municipality’s spatial development strategies to one of the primary means with which to implement these strategies, namely the Municipality’s budget and the budgets of other government stakeholders. By providing more specific guidance on what investments should be made where, in what order of priority, alignment between the Municipality’s strategies, plans and policies and development on the ground is better maintained and the risk that budget allocations undermine or contradict the MSDF are mitigated.

The Capital Expenditure Framework (CEF) has become a key tool supporting government’s initiatives to achieve national settlement development and management objectives. The Integrated Urban Development Framework (IUDF), approved by Cabinet in 2016, sets out the national policy framework for transforming and restructuring South Africa’s urban spaces, guided by the vision of creating “livable, safe, resource efficient cities and towns that are socially integrated, economically inclusive and globally competitive”. In addition the IUDF proposes an urban growth model premised on compact and connected cities and towns. With the acceptance of the IUDF as policy, the emphasis has now shifted to implementation.

The IUDF is coordinated by the Department of Cooperative Governance (DOCG), which has set up the institutional arrangements for the coordination of activities across government departments and agencies, under the overall management of an IUDF Working Group on which partner organizations such as National Treasury, organized local government and the World Bank are represented. Within the IUDF, the Intermediate City Municipality Programme (ICM), which includes 39 municipalities, is intended to provide support for the cities in the middle size and density range of the continuum. Stellenbosch Municipality is part of the ICM.

The purpose of the ICMs support strategy is to help translate IUDF policy into practical programmes of action in the ICMs. In so doing the initiative aims to give impetus to achieve the main IUDF goals, which are forging new integrated forms of spatial development; ensuring that people have access to social economic services, opportunities and choices; harnessing urban dynamism to achieve inclusive and sustainable growth; and enhancing the governance capacity of the state and citizens in ICMs.

One element of the implementation of the IUDF is the introduction of a consolidated infrastructure grant and all 39 ICMs are all eligible for the Integrated Urban Development Grant (IUDG) from 2019/ 20. The business plan for the IUDG is a three- year capital programme that is aligned with a long- term CEF. There are a number of key intentions in introducing the CEF as the basis for monitoring the IUDG:

- To ensure that priorities identified in the spatial development framework are translated into capital programmes.

- To promote long-term infrastructure planning.
- To promote infrastructure planning that is better integrated across sectors and spheres and within space.
- To promote a more integrated approach to planning within municipalities that brings together technical, financial and planning expertise.

The DCOG recently prepared a “Guide to preparing a Capital Expenditure Framework (Draft Document)” to provide ICMs with guidance with regard to what a CEF is, what it should include for the purposes of the IUDG, and how to go about a CEF. The Guide defines a CEF as “a consolidated, high-level view of infrastructure investment needs in a municipality over the long term (10 years) that considers not only infrastructure needs but also how these needs can be financed and what impact the required investment in infrastructure will have on the financial viability of the municipality going forward.”

Stellenbosch Municipality has updated the CEF in 2022/2023, in parallel with the MSDF amendment. The updated CEF is incorporated into the SDF as Appendix G. Work on the CEF is on-going, including its alignment with the MSDF.

APPENDICES

B. DEVELOPMENT PROPOSALS RECEIVED DURING PUBLIC COMMENT (2022)

The proposal to amend the SM SDF, 2019 was advertised during September 2022. The public and all interested and affected parties were invited to register as I&AP. In addition the public was provided an opportunity to submit comments to be included in the review of the MSDF, as well as the submissions for development proposal to inform the proposed amendment process of the MSDF. Five (5) development proposals were submitted by the public, of which four (4) were resubmissions from the previous MSDF process, and only one (1) was new.

During this time the CPF initiated the CEF amendment process (2022/2023) and various discussion were held with each of the Directorates around projects that require alignment with the MSDF. During this strategic and spatial alignment phase only two (2) development proposals were submitted for consideration as amendments to the MSDF.

Private and public submissions received are summarised in Tables 51.

Table 51. Summary table of first round comments received as well as associated responses

SUBMISSION	DEVELOPMENT PROPOSAL	COMMENTS/RECOMMENDATIONS
PRIMARY SETTLEMENT SUBMISSIONS		
<p>SM: INTEGRATED HUMAN SETTLEMENTS</p> <p>STELLENBOSCH</p>	<p>JAMESTOWN PHASE 4</p> <ul style="list-style-type: none"> Portion 3 of Farm No 527, Stellenbosch forms part of the IRDP & FLISP housing programme as noted in the adopted Housing Pipeline (Council resolution 25/05/2022) and forms part of the greater Jamestown development proposed. An estimated 1500 – 2000 service sites and top structures is proposed. 	<ul style="list-style-type: none"> The project is forms part of the Municipality’s Housing Pipeline and is incorporated in the Municipal 5-year IDP (dated 2022 – 2027). The project is located within the proclaimed Stellenbosch PHDA and will provide new housing opportunities in the GAP Market which is a strategic objective of the Integrated Human Settlements Directorate. The proposal is consistent with the inclusive development supported by the approved SDF and from a strategic spatial alignment perspective, the project falls within the spatially targeted areas i.e. the functional area and priority development area. <p>Recommendation: Include Portion 3 of the Farm No 527 earmarked for urban infill within the urban edge.</p>

SM: WASTE SERVICES

SM: ORGANIC WASTE TRANSFER STATION

- A Portion of Farm 279, Stellenbosch is currently being used as vineyards, an oxidation pond from the WWTW and the Stellenbosch Material Recovery Facility and Recycling.
- The municipality has adopted the IWMP and the SM Organic Waste Diversion Plan (2021) and subsequently appointed a service provider to conduct all the necessary basic assessments (environmental, visual, heritage, civil & traffic) for the submission of a subdivision and rezoning application to urban services.
- Environmental Authorisation has been granted by DEA&DP in April 2021.
- SM Engineering Services Department proposes to expand and cluster the current and proposed waste services, to accommodate the current and future development pressures within Stellenbosch, and Klapmuts.

- The proposal is in line with the adopted Council policies (i.e. IWMP and Organic Waste Diversion Plan) and will assist the municipality to reach its target as set by DEA&DP to reduce the organic waste stream by 50% in 2022 and complete diversion (100%) by 2027.
- The municipality owns the property and the proposed land uses is an extension of the current WWTW, landfill and associated uses.
- The project is incorporated in the Municipal 5-year IDP (dated 2022 – 2027).

Recommendation: Include the proposed subdivided portion of Farm 279, Stellenbosch for urban services within the urban edge.

STELLENBOSCH

Friends of Stellenbosch
Mountain

STELLENBOSCH

JAMESTOWN WATER ERVEN

- Proposes the exclusion of the water erven from the urban edge on the northern edge of Jamestown due to its high heritage status and to reinforce the planning principles in the MSDF. This will reinforce the municipal administrations assessments on urban developments on these erven and ensure policy coherence and consistent decision-making.
- FSM suggests that the urban edge should be returned to its pre-2010 alignment to run along the edge of Webersvallei Road. All the cadastral units between Webersvallei Road and the Blaauwklippen River which lie east of La Clemence should be excluded from the urban edge.

- This comment was strongly supported by the Jamestown community during the public participation process with regards to the urban development approved on Portions 52, 53, 54, & 71 of Farm 510, Stellenbosch. The spatial trend of high-density, up-market, gated residential urban development on these water erven are noted and has since increased significantly. To ensure policy coherence with the intent set out by the MSDF to protect the most significant cultural and heritage element of the settlement as identified by the Stellenbosch Heritage Inventory, and to ensure consistent decision making the comments are supported.

Recommendation: Exclude the Jamestown water erven from the urban edge

EMILE VAN DER MERWE
TOWN PLANNING
CONSULTANTS

- Inclusion of the total extent of Remainder Farm 284 within the western urban edge boundary of Stellenbosch Town.
- The site is strategically situated and adjacent to the Adam Tas Corridor with the Techno Park/R310 link alignment currently being proposed (SM MSDP & the SM Roads Master Plan) over the property, rendering the site not viable for the continued use of agricultural purposes.

LOCATION OF THE PROPERTY IN RELATION TO THE STELLENBOSCH TOWN URBAN EDGE

- The road is currently in the pre-planning feasibility phase and the exact location is not finalised and the project timeline falls in the medium to long term. In addition, the first phase for the implementation of the ATC over the next 10-years does not include precinct 1 – i.e. Droee Dyke and the proposed development application at this stage is premature based on the capital expenditure focus over the next 10-years for the ATC.

Recommendation: Do not include this portion within the urban edge.

STELLENBOSCH

STELLENBOSCH

TV3 ARCHITECTS, TOWN
PLANNERS & URBAN
DESIGNERS

BRANDWACHT

- A portion of Farm 1049, Stellenbosch.
- Site specific deviation from the approved Stellenbosch Municipality's Spatial Development Framework, 2019 to initiate an urban infill development outside the approved urban edge of Stellenbosch is currently being circulated for public comment.

- Spatial transformation to create a more balanced and inclusive town, is currently the focus from the Municipality as identified in the MSDF implementation plan, ATC LASDF, and CEF. The intention of the development is for an up-market, low-density gated estate located on agricultural land and an open space system provided for in the MSDF. In terms of the Heritage Inventory the site has been graded within the area of green transition conservation system, which values agricultural land and the rural character as high and safeguards this area from urban sprawl. Due to the inconsistency with the principles contained in the MSDF regarding maintaining the natural environment (SPLUMA spatial sustainability development principle), and pursuing balanced communities the development deviates from the policy intentions of the municipality and should not be considered.

Recommendation: Do not include this portion within the urban edge.

KLAPMUTS

TV3 ARCHITECTS, TOWN
PLANNERS & URBAN
DESIGNERS

ARRA

- Portion of Portion 7 of Farm 744, Klapmuts.

- No new studies, market support or a formal application has been received with regards to the Arra development as previously commented on in the public participation response table in the MSDF 2019. The Klapmuts urban edge has been considerably adjusted in 2019 to accommodate the Stellenbosch Bridge development and the timeframe for development falls within the medium to long term (10 – 20 years) with no visible progress at this stage. Accordingly this southern urban expansion into agricultural land is not supported.

Recommendation: Do not include this portion within the urban edge

KLAPMUTS

TV3 ARCHITECTS, TOWN
PLANNERS & URBAN
DESIGNERS
TV3 &
FRANCOIS KLOMP

BRAEMER FARM MIXED USE DEVELOPMENT

- Portion 2 of Farm 742, Klapmuts and Portion 2 of Farm 748, Klapmuts.

Portion 2 of Farm 742 and Erf 2183,
Klapmuts

-

- No new studies, market support or a formal application has been received with regards to the Arra development as previously commented on in the public participation response table in the MSDF 2019. The Klapmuts urban edge has been considerably adjusted in 2019 to accommodate the Stellenbosch Bridge development and the timeframe for development falls within the medium to long term (10 – 20 years) with no visible progress at this stage. Accordingly this southern urban expansion into agricultural land is not supported.

Recommendation: Do not include this portion within the urban edge

SM: SPATIAL PLANNING &
DEVELOPMENT
MANAGEMENT

ANURA LIFESTYLE ESTATE

- Portion 41 of Farm 748, Paarl
- Approval was given for the rezoning, subdivision, departure, amendment of conditions, and Site Development Plan – with an extension of these land use rights approved in June 2019.

-

Recommendation: Determine and delineate an urban edge only around this approved development.

SECONDARY SETTLEMENT (RURAL NODE) SUBMISSIONS

VLOTTENBURG

EMILE VAN DER MERWE
TOWN PLANNING
CONSULTANTS

- The inclusion of Portions 16 & 22 of Farm 390, Stellenbosch within the south western urban edge boundary of the approved Vloottenburg node. Currently the properties are functioning as residential smallholdings (3ha and 2.9ha) and not suited to be farmed as viable economic agricultural entities.

LOCATION OF THE PROPERTY IN RELATION TO THE VLOTTENBURG URBAN EDGE

- The settlement character of Vloottenburg as defined by the Heritage Inventory is that of an agri-industrial node within a rural agricultural landscape. In terms of the MSDf the development of Vloottenburg should not be prioritised until a well-functioning public transport system to Stellenbosch town is functioning to address the envisaged transport requirements.
- The development criteria for Vloottenburg as stated in the Heritage Inventory is to promote densification within the urban node and to contain sprawl into the rural area and agricultural land.
- The land consist of good agricultural land and the development thereof should not be considered due to the size of the land units. The proposed inclusion of the property into the urban edge constitutes urban sprawl which should be resisted.

Recommendation: Do not include within the urban edge.

F. HOUSING PIPELINE

[PLACEHOLDER]

The most recent housing development pipeline will serve at Council simultaneously as the proposed amended MSDF and after this process, it will be included and consolidated for public comment. The type and number of units may change as relevant studies are concluded.

G. CAPITAL EXPENDITURE FRAMEWORK

[PLACEHOLDER]

CEF will serve as a separate item and it will be included and consolidated for public comment.

Property Rates is considered a more stable income source for the municipality and has annually grown by an average of 8% between 2011 and 2018 to R 309.99 million.

Equitable Share income increased from R 36.78 million to R 110.63 million in 2018. However, the total grants/revenue ratio decreased from 16% in 2016 to 13% in 2018, mainly driven by significant decreases in capital grants received.

Figure 14: Contribution per income source

Capital Expenditure Framework Cash Generated from Operations / Own Source Revenue

Figure 15: Cash Generated from Operations/ Own Source Revenue

Staff Cost, Electricity Bulk Purchases and Depreciation represent 53% of Total Operating Expenses. The annual increases in staff costs were generally high, with an average increase of 11% in the past 7 years.

Electricity Services, being the largest contributor to Total Operating Income, represents the second largest expense after staff costs. The surplus margins from this service remained high although decreasing from 41% in 2011 to 38% in 2018.

Over the short term, expected steep increases in bulk electricity prices may narrow historic margins, lead to increased electricity theft and cause both businesses and higher income households to consider alternative energy sources. This will further reduce electricity sales

decrease in interest received in 2018 is due to a decrease in cash and cash equivalents. The 1% interest paid to total expenditure ratio is very low, highlighting Stellenbosch's limited utilisation of external borrowing and its minimal debt levels. As a consequence a healthy scope exists for taking up borrowing for service delivery and development in the future.

Table 4: Contribution per Key Income Source (Rm)

	2011	2012	2013	2014	2015	2016	2017	2018
Property Rates	205.1	213.5	229.8	233.6	281.9	303.0	324.0	310.0

4.7 Cash Flow

The increased financial performance and the positive R 270.47 million cash generated by Stellenbosch (excluding capital grants) in 2018, puts the municipality in a strong position to maintain and increase capital expenditure and timeous investment in capital asset replacement.

Interest received from external investments exceeded interest paid on external borrowings throughout the assessment period; resulting in R 36.33 million accumulated net interest inflow. The

Total capital expenditure for the past 8 years was R 2.08 billion.

It's been characterised by a sharp and sustained increase of almost 150% from 2014-2018 with minimal external financing. The Capital Funding Mix of Stellenbosch, over the review period, has been reliant on the municipality's own Cash Reserves (66.4%). The other funding sources were Capital Grants (23.6%), Borrowings (9.6%) and Sale of Fixed Assets (0.4%). Noteworthy is that external borrowings were not utilised since 2016.

Figure 17: Total Operating Income vs Capital Expenditure

Figure 189: Annual Capital Funding Mix

Total cash and cash equivalents increased from R 325.0million in 2011 to R 528.7 million in 2018. This level of cash sufficiently covers the minimum liquidity requirements which includes Short Term Provisions of R 47.9 million, Unspent Conditional Grants and Receipts of R 101.6 million, Cash-backed reserves of R 48.6 million and Working capital provision (including one month's opex) of R 89.0 million. The cash surplus was R 241.6 million at the end of the 2018 financial year, decreased from the highest level of R 326.6 million in 2015.

Figure 1910: Minimum Liquidity Required

The cash coverage ratio (including working capital) remained positive at 1.8 as at the end of the 2018 financial year.

	2011	2012	2013	2014	2015	2016	2017	2018
Unspent Conditional Grants	-	-	-	33.7	37.1	46.0	74.4	101.6
Short Term Provisions	5.4	11.5	16.8	53.1	81.7	46.1	48.5	47.9
Funds, Reserves & Trust Funds (Cash Backed)	125.1	173.5	141.0	113.5	93.8	219.9	108.6	48.6
Total	130.5	185.0	157.8	200.4	212.6	312.0	231.5	198.1
Uncommitted Cash	325.0	376.2	438.4	504.7	609.2	607.9	621.7	528.7
Cash Coverage Ratio (excl. Working Capital)	2.5	2.0	2.8	2.5	2.09	1.9	2.7	2.7
Working Capital Provision (1 Month's Opex)	49.4	52.9	63.3	66.6	69.9	83.3	89.7	89.0
Cash Coverage Ratio (incl. Working Capital)	1.8	1.6	2.0	1.9	2.2	1.5	1.9	1.8
Minimum Liquidity Required	179.9	237.9	221.1	266.9	282.5	395.4	321.2	287.1
Cash Surplus/(Shortfall)	145.2	138.3	217.3	237.7	326.6	212.6	300.5	241.6

Stellenbosch Local Municipality remained in a profitable position during the past 8 years of assessment. This was demonstrated by an Accounting Surplus of R 263.58 million posted at the end of the 2018 financial year, which increased from R 70.28 million in 2011.

Positive to note is that the municipality still managed to generate an operating surplus of R 186.10 million compared to R 33.63 million in 2011 when capital grants are excluded.

The municipality's strong financial performance, together with a healthy collection rate of 96%, enabled the municipality to generate R 270.47 million in cash from its operations (excl. capital grants). This was R 122.40 million higher than the cash generated from operations in 2011.

In 2018, the municipality spent R 433.68 million on capital infrastructure programs utilising most of its cash generated from operations (R 354.79 million) as well as Capital Grants to the value of R 77.48 million. The funding structure was similar during the previous financial year.

In absence of new external loan liabilities taken during the past two years, the municipality maintained a healthy lower level of gearing of 11%, which is also the average level for the 8 years of assessment. The debt service coverage ratio was high in 2018 (8.49), mainly as a result of higher repayment capability brought about by the positive cash generated by operations. These ratios are an indication that Stellenbosch still has the potential to increase gearing and obtain a more balanced funding mix.

Current Assets exceeded Current Liabilities by R 509.09 million in 2018. The gap between Current Assets and Current Liabilities remained positive during the assessment period. The healthy liquidity position was represented by a Liquidity Ratio of 2.19:1 in 2018 (2.19:1 at the end of the 2017 financial year). The ratio remains strong at 2.01:1 should debtors older than 30 days be excluded. This is underlined by the cash coverage ratio (including 1 month's working capital) of 1.8 at the end of the 2018 financial year.

The cash and investments balance of R 528.7 million (2017/18: R 621.7 million) was sufficient to cover minimum liquidity required. This comprised of Short Term Provisions of R 47.9 million, Unspent Conditional Grants and Receipts of R 101.6 million, Cash-backed reserves of R 48.6 million and working capital provision (including 1 month's opex) of R 89.0 million, resulting in a cash surplus of R 241.6 million at year end (2017: R 300.5 million).

Cognisance is taken of the increase in unspent conditional grants, especially in the last two financial periods.

Table 3: Investment Strengths and Weaknesses

Strengths	Weaknesses
-----------	------------

<ul style="list-style-type: none"> Strong balance sheet & liquidity position; 	<ul style="list-style-type: none"> Own cash reserves decreasing due to heavy reliance on own cash resources to fund its capital programme and the low reliance on utilisation of external borrowing
<ul style="list-style-type: none"> Low gearing 	<ul style="list-style-type: none"> Urban limits & difficulties to densify
<ul style="list-style-type: none"> Investment-grade credit rating 	<ul style="list-style-type: none"> Repairs and Maintenance – below National Treasury Norm
<ul style="list-style-type: none"> Strong cashflows from own operations and limited reliance on transfers from national and provincial treasuries 	<ul style="list-style-type: none"> High levels of unspent conditional grants since 2017
<ul style="list-style-type: none"> High collection rate of 96% 	<ul style="list-style-type: none"> Declining GVA growth rate
<ul style="list-style-type: none"> Accelerated capex since 2014 	
<ul style="list-style-type: none"> Diversified economy with educational infrastructure 	
<ul style="list-style-type: none"> Aggressive addressing of backlogs 	
<ul style="list-style-type: none"> High-quality financial and institutional governance evidenced by among others, clean audits 	

4.8 Future Capital Investment

The total affordable capital expenditure for the 10-year planning period amounts to R 4 129 million.

This 10-year amount was calculated by the Long Term Financial Model:

- by relying on and maintaining the capital programme and funding mix over the MTREF period up to 2020/21 (3 years), as contained in the latest approved MTREF budget of Stellenbosch; and
- forecasting the optimal capital programme and funding mix, taking several indicators and parameters into account, for the next 7 years of the forecast period.

The annual affordable envelope, which entails the forecast capital expenditure and proposed funding mix per annum is dealt with in detail in the next section of this report, alternatively in the 2019/20 Capital Expenditure Framework.

4.9.1 MTREF Funding Mix

Stellenbosch Municipality's MTREF budget 2018/19 – 2020/21 expects a capital budget amounting to ±R1.4 billion. With the 2019/20, 2020/21, and 2021/22 financial years totalling to the amount of R558 276 528, R414 612, 759 and R426 337 700 respectively.

The Long Term Financial Model accommodated the increased Borrowing of R340m, Internally Generated Funding of R789 m and Capital Grants of R219m for the MTREF period of 3 years to 2020/21 and allowed the model to calculate the future funding mix. Here we note the potential impact of the strong liquidity position on capital expenditure. Following sustained increases in the capital expenditure since 2014, this now declines over the MTREF-period to about R414m in 2020/21. To keep pace with anticipated population growth and ongoing investment in new infrastructure as well as upgrading and renewal projects,

we increased the capital expenditure from 2020/21 over the planning period. The municipality has both sufficient own resources and capacity to borrow, allowing it to accelerate capital investment, despite the decreased grant transfers. (Fluctuations in grant amounts due to the allocation of housing grants for top structures and for infrastructure in different years.)

The capital expenditure budget of the municipality is financially feasible. Due to the healthy liquidity position, the budgeted capital expenditure can be implemented. Cash available is sufficient to cover the minimum recommended liquidity level to cater for unspent conditional grants, short term provisions, and working capital. These findings are illustrated in the graphs below.

The municipality's mainly relies on own reserves to fund the capital expenditure. The strong financial and liquidity position of the municipality allows it to accelerate the capital investment programmes which can further be supported by borrowing.

Table 9: 10-Year Capital Funding Mix

Table 9: 10-Year Capital Funding Mix

Source	Rm	%
Public & Developers' Contributions	0	0%
Capital Grants	897	22%
Financing	1 529	37%
Cash Reserves and Funds	1 703	41%
Cash Shortfall	0	0%
Capital Expenditure	4 129	100%

Due to the prevailing national fiscal constraint, reliance on grant funding in future is probably is not recommendable and the amount of capital transfers in this latest estimate, when compared to previous estimates, has declined.

A balanced funding mix, incorporating a conservative level of external borrowing, will preserve Stellenbosch's own cash resources and will improve long term financial sustainability. Equally important is the average duration at which external borrowing are obtained in the market and the impact that this may have on liquidity and gearing levels. The most optimal average duration for loans is forecast at 13 years, to avoid breaching liquidity and/or gearing levels. Stellenbosch will breach minimum liquidity levels should an average duration of 10 years be achieved, while an average duration of 15 years may result in a breach of the upper gearing limit of 35%. Even at this upper gearing limits, these levels remain affordable and sustainable.

4.9.2 10-Year Capital Funding Mix

1. AFFORDABILITY ENVELOPE

The affordability envelope, or otherwise stated, the funding envelope is the result of the Long Term Financial Strategy. The aim of the Long Term Financial Model is to define a set of parameters to which the municipality can roll out capital expenditure projects. The key parameter of interest for the budget fit process to continue is the total capital expenditure that is deemed as affordable per year.

The purpose of this section is therefore to take the results of the Long Term Financial Strategy and to indicate what should be actively used to guide capital investment through the budget fit template – better defined as the total available capital expenditure budget per year.

1.1 Sustainable Funding Mix

The annual funding mix proposed by the model, given the approved budget and optimal forecast thereafter, is illustrated by the graph below.

Noteworthy though, is the decrease in liquidity over the MTREF period. Sufficient cash remains available to fund capital projects required with further potential for borrowing. The municipal bank balance recovers above the minimum required in later years of the Capital Expenditure Framework period.

Figure 21: Bank balance vs Minimum Liquidity Required and Proposed Cash Backed Reserves

1.2 Borrowing

Stellenbosch Local Municipality has a debt policy which sets the gearing-level to 35%. The model forecast that gearing increases from 2019 and peaks at 35% during 2028, but never breaches this level. This level of gearing is within both its policy and National Treasury guidelines.

A summary of the capital need and affordability envelope by year is presented in the table below:

The amount of annual external financing is estimated to be distributed as follows:

Table 104: Capex Investment Need

Year	2019/20	2020/21	2021/22	2022/23	2023/24	2024/25	2025/26	2026/27	2027/28	2028/29	Total
Capex Need	R1 155 145 272	R599 878 659	R740 192 900	R740 017 754	R433 019 619	R458 314 256	R393 318 130	R419 737 630	R245 045 909	R198 933 462	R5 743 603 591

The table above includes all capital projects captured by departments projected for the 10 year period of the Capital Expenditure Framework.

It is apparent that whilst good progress has been made to plan ahead over a longer period, more careful upfront planning,

extension of master plan periods and upfront capturing of pending and approved projects must bear relevance. It is important to note that capital expenditure demand fluctuates annually in line with the needs identified.

Table 115: Affordability Envelope (R'000 000)

Year	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029
Public & Developers' Contributions	0	14	0	0	0	0	0	0	0	0	0
Capital Grants	92	59	68	81	86	91	96	101	108	115	123
Financing	160	100	80	160	163	166	170	173	177	180	184
Cash Reserves and Funds	277	309	204	122	124	128	131	134	136	138	139
Capital Expenditure	528	468	352	363	374	385	397	408	421	433	446

Figure 12: Estimate of Future External Financing

Whereas the current approved MTREF reflect a decrease in capital expenditure until 2021, the total capital spend over the

next 10 years come to R4.1 billion, which is affordable to Stellenbosch LM.

The LTFM indicates that should there be a need for Stellenbosch to accelerate the capital spend over the MTREF, but still within an affordable envelope over the next ten years, such an acceleration would be possible with increased external borrowing.

2. BUDGET SCENARIO & PROJECT PRIORITISATION

The **budget scenario** methodology can be summarised in a schematic diagram shown in the figure below. Essentially the budget fit methodology is a systematic application of a set of rules and parameters which will result in a project either being added to the draft budget or rejected from the draft budget portfolio. The **affordability envelope** is the sustainable and financially tested total budget that should be maintained by the municipality. If the capital budget exceeds this total, the municipality could encounter some unforeseen circumstances in future that will compromise its financial sustainability.

Figure 8: Budget Scenario Methodology

All internally generated capital budget funding is determined through financial modelling undertaken by the Stellenbosch Local Municipality as part of their submissions to National Treasury on the Municipal Budget Reporting Regulations templates. Internal capital budget funding typically comprises the following funding sources:

- **Own Municipal Funding:** Funding generated from municipality revenue (i.e. rates and taxes).
- **Public Contributions and Donations:** Donations and bulk services contributions for capital expenditure to provide additional bulk capacity to service new developmental demand.
- **Capital Replacement Reserves (CRR):** Savings by the municipality for deferred capital expenditure to maintain the existing municipal asset base.
- **Borrowings:** External loans from the financial markets or bonds issued by the municipality to the financial markets.

It is important to note that not all projects are eligible to utilise all funding sources. For example, the PTIS grant is only applicable to infrastructure directly supportive of public transport and the INEP grant is only applicable to electrification programmes and projects. Therefore, although the budget template cap for the municipality is equal to the sum of the DORA publication and all internal capital funding sources, a funding source balancing exercise should be undertaken prior to publishing the final budget in order to ensure that only projects eligible for certain grants are funded by those grants.

The Stellenbosch Long Term Financial Modelling also results in a Long Term Financial Strategy which evaluates amongst others the Stellenbosch Local Municipality financial position and calculate what the optimal funding mix should be per annum, in order to maintain a desirable financial situation.

The project budget requests are used to compile a MTREF budget, and is captured across the total lifecycle of the

project. Before new project requests are considered, it is important for the model to consider committed funds and projects that must be provisioned in. **Committed projects** are those projects which formed part of either the approved capital budget or the adjusted capital budget of the municipality for the previous financial year, and which are contractually committed as assets under construction. Commitments made on these projects by the municipality, the budget fit methodology regards these projects as non-negotiable. **Provisioned projects** are those projects which formed part of either the approved capital budget of the municipality for the previous financial year, but which are not contractually committed as assets under construction. Termination of any provisioned projects will not result in either legal or financial liability for the municipality. The budget fit methodology regards these projects as having a higher priority than normal projects in the list (given their status received during previous MTREF budget publications) however their implementation timeframes are negotiable to an extent.

6.2 Budget Scenario Outcome

The table below depicts the capital budget's demand after the budget scenario process has been applied.

Table 147: 2019/2020 – 2028/2029 CEF – Total Capital Expenditure per Fit Status

Budget Scenario Status	Total during analysis period	Total %
Fitted	R162 020 500	3%
Fitted with delay	R1 365 360 044	29%
No Fit	R425 945 000	9%
No Fit - Zero Budget	R-	0%
Project Committed	R2 766 813 047	59%
Total	R4 720 138 591	100%

The budget fit results indication that 3% of the capital demand has been assigned in the same year as it requests. 59% Of the capital demand however is Committed, due to the fact that the MTREF budget was a fixed variable in the budget scenario, which means it “committed” projects were firstly eligible to the funding envelope, followed by projects with the highest score. Once the funding envelope is saturated, projects are being “fit with delay”, until the 10 year funding envelope is saturated. Thereafter projects are allocated a “no fit” status. Only 9% of capital demand has not been fit over the 10 years – which implies they will fit in a year after the frameworkhorizon.

The budget-fit results can be interpreted as follows:

Table 15: Budget-Fit Definitions

Category	Description
Committed	In the first year, project that are currently under construction, still has contractual commitments and cannot be fit at any other stage without having a negative impact on the municipality. These projects therefore are allocated budget in the first year, and not over the 10 year period.
Provisioned in	These projects receive the most budget in the first years as they are already declared on the MTREF. As time

		continues, these commitments decrease, and so does the capital requirement of these projects over time.
Fitted		Between the first and Second financial year there is a sharp increase in capital demand fitted. This is because of the finalisation of projects with a committed status. Once the commitments has been served, the funding envelope opens up capacity to fit new projects.
Fitted with delay		Projects that do not fit are projects with the lowest score. This means that projects with higher score was fitted with delay. Once the funding envelopes has been depleted, these projects – the no fit projects – are not included in the budget scenario. It has a high proportion of the Capital demand in the first year, as the low scoring projects in this year compete with high capital demand assigned to statuses such as committed and provisioned in. It decrease sharply as more capital is fitted with delay.
No Fit		Zero Budget: Even though these projects do not ask for any Capital Demand, they have been conceptualised and will reach a point of maturity in the next ten years where the will have a Capital Demand. It is therefore important to have sight of these projects on one single platform, together with the rest of the project pipeline.
No Fit – Zero Budget		Even though these projects do not ask for any Capital Demand, they have been conceptualised and will reach a point of maturity in the next ten years where the will have a Capital Demand. It is therefore important to have sight of these projects on one single platform, together with the rest of the project pipeline.

2019/2020 Stellenbosch Capital Expenditure Framework
 Budget Fit Statuses - Spatial Distribution

Analysis of Budget Fit i.r.t. Priority Development Area:

- **Klapmuts:** Most projects in this area either has no budget requested or are fit with delay. This highlight the fact that this future expansion node of Stellenbosch will enjoy capital expenditure, but the majority thereof will realise later on.
- **Koelenhof:** The Koelenhof node development is still in concept phase. One this area has a clear spatial vision, the municipality can respond with capital projects required to facilitate such expansion.
- **Vlottenburg:** The potential that boasts within this area is unprecedented. It is for that reason that most of the capital projects within the Vlottenburg area has been fit as per the budget fit module of CP3.
- **Stellenbosch Central:** It is clear from the figure above that Stellenbosch central is house of a variety of projects, and so a variety of fit statuses is assigned to this part of the municipality.
- **Franschoek:** Small capital projects within the Franschoek area has been fitted to the Capital Expenditure Framework. The majority has been fitted with delay which means that other projects across the municipality has been prioritised and fitted to the budget first.

The investment paradigm of Stellenbosch is also informed and based on a spatial vision, namely the Draft Spatial

Development Framework. The key spatial structuring elements of the draft Spatial Development Framework includes:

- **Urban nodes:** The primary urban nodes, firstly includes Klapmuts as this is the identified area of expansion – based on development potential and the larger regional framework. Secondly is Stellenbosch central as this is the core of Stellenbosch and is deemed the area of compaction. Thirdly, is Franschoek – which is a major role player in terms of the current space economy in the region. Stellenbosch cannot disregard this area and so prioritise maintenance investment in this area.
- **Rural nodes:** Rural nodes on their own are deemed as areas which should only enjoy maintenance expenditure in order to preserve the character of these areas. However, in the event where such a rural node is effected by the Adam Tas corridor, the investment paradigm shifts from a maintenance oriented approach to an investment oriented approach, in order to stimulate a specific need for compaction and densification.
- **Rural Area:** The rural areas represent the agricultural and tourism sector that plays a major role in the financial sustainability of Stellenbosch. Capital demand in these areas are usually of low intensity.
- **Adam Tas Corridor:** Capital Investment in the Adam Tas Corridor is vital in terms of the IUDF and the aims identified therein. The Corridor is deemed as a catalytic spatial structuring element that not only serves a local function, but

also a regional function and, if enforced, will capture a critical mass with the potential to attract incredible potential for economic development spatial reform.

3. CAPITAL EXPENDITURE IMPLEMENTATION FRAMEWORK – 2019/2021

MTREF

Once the ten year Capital Expenditure Framework has been set up as a result of the prioritisation and budget fit process, a three year Capital Expenditure Implementation follows. In order to manage Capital Expenditure Implementation, National Government, through the MFMA has established the Medium Term Revenue and Expenditure Framework (MTREF). The MTREF is a rolling three-year expenditure planning tool and defines the expenditure priorities for a period of three years.

4. SUMMARY

4.1 Socio-Economic Base and Future Revenue

- Strong economic base and diversified economy, but rapid increase in migration to the municipal area placing pressure on existing infrastructure;
- However – national conditions also impact on the municipality – with only moderate growth forecast over the forecast period;
- A key structural weakness can now be identified: as economic growth rates slow, which might have a negative effect on revenue collection to extract additional revenue for ever-growing needs;
- To pursue and sustain progressive / redistributive / pro-poor policies – it is essential that the economic base expands and critically, job creation (especially at entry-level) accelerates, and;
- Over the forecast period – we still see scope for tariff increases (broadly aligned with CPI) and for more progressive tariff structures.

4.2 Capital Investment

- Stellenbosch embarked on an aggressive capex programme since 2014 – largely funded from own resources;

- As the population continues to increase, the municipality needs to deal with normalising historic settlement patterns to accommodate new migrants and improve access to and mobility within the municipal area;
- Although the total budgeted investment returns to the R350 million p.a. level over the MTREF period, we envisage a moderate growth-rate in capex over the forecast period. This is to ensure capital investment keeps pace with population growth and continues to address backlogs;
- We have introduced a conservative borrowing programme which remains well within the prudential limits;
- Even though the municipality has used spatial prioritisation as an input to capital investment, the CEF is one of the first documents of the municipality that show how it is done on a technical level. Successful weaving between the latest thinking regarding the spatial structure of Stellenbosch and the prioritisation model was achieved when considering the capital expenditure allocated to the Priority Development Areas.
- Detailed, precinct level designs should be done, in order to result in a quantified and phased implementation plan that will then be subjected to the prioritisation and budget fit methodology of the municipality in order for projects within these areas to participate in the budget allocation process of the Municipality.
- In order to deliver the said detailed precinct level designs, more spatial and economic modelling is required for a comprehensive perspective on the long-term corridor

development and spatial settlement patterns in the municipal area, and;

- Despite continued use of own resources and a depletion of cash reserves, the liquidity metrics remain positive over the forecast period.

4.3 Institutional Arrangements

- Stellenbosch Local Municipality is one of the municipalities who has developed a Capital Expenditure Framework, and one of the only municipalities. The ease with which the CEF could be developed is largely attributable to the levels of institutional maturity which enabled an integrated mechanism of planning as intended by the IUDF.
- Regardless of the institutional maturity, the municipality still identified areas of improvement that can be worked on towards the next version of the Capital Expenditure Framework.

Institutional Arrangements of note to this extract includes:

- **Volume based data collection:** This CEF is financially oriented. In order to ensure that the service delivery needs within the municipality are met, it is necessary to have a better understanding of the asset quality within the municipality and what the volumes are that will be obtained after spending the capital as expressed in the CEF. This will lead to a CEF that not only look at whether the municipal budget is sustainable, but also meet the potential needs that is facing the municipality as identified in the demand quantification chapter of this document.

- **Update master plans:** The CEF is reports on an ongoing cycle of project conceptualisation, planning budgeting and implementation. Part of this process is to update master plans – alternatively referred to as sector plans. This will then feed into the Integrated Infrastructure Investment Framework (IIIF). Stellenbosch is in process of updating various master plans which, once updated, will result in a project list which will then feed into the CEF, and so ensure that the CEF remains current and relevant.
- **Clear set of performance indicators:** During the process of developing the CEF, various indicators were provided and discussed. The first round CEF's should show which metrics could assist in measuring performance towards the IUDF. Two such indicators include the Poor versus Non-Poor capital expenditure ratio, as well as the % of capital expenditure that is spatially targeted, and;
- **Adjustment of submission dates:** There is a call for better alignment between municipal and national planning processes in terms of submission dates of critical document such as the MTREF budget, SDF review, IDP update and a CEF. What makes this even more critical of a call, is the fact that the said documents are all intertwined, which calls for stronger coordination within the municipality.

11.9	LOCAL ECONOMIC DEVELOPMENT AND TOURISM:(PC: CLLR R DU TOIT)
11.9.1	APPROVAL TO COMMENCE WITH THE PUBLIC PARTICIPATION PROCESS FOR THE ECONOMIC DEVELOPMENT STRATEGY FOR THE STELLENBOSCH MUNICIPALITY IN TERMS OF THE LOCAL GOVERNMENT: MUNICIPAL SYSTEMS ACT, NO 32 OF 2000 AND REGULATIONS

Collaborator No:

IDP KPA Ref No:

Good Governance and Compliance

Meeting Date:

22 March 2023 & 29 March 2023

1. SUBJECT: APPROVAL TO COMMENCE WITH THE PUBLIC PARTICIPATION PROCESS FOR THE ECONOMIC DEVELOPMENT STRATEGY FOR THE STELLENBOSCH MUNICIPALITY IN TERMS OF THE LOCAL GOVERNMENT: MUNICIPAL SYSTEMS ACT, NO 32 OF 2000 AND REGUALTIONS

2. PURPOSE OF REPORT

To obtain approval from Council to commence with the public participation process for the draft Economic Development Strategy in line with The Local Governement: Municipal Systems Act, No 32 of 2000 and Regualtions, to obtain comment on the draft Economic Development Strategy that will enable the Directorate Planing and Economic Development to finalise the Economic Development Strategy and submit the strategic document to Council for consideration.

3. DELEGATED AUTHORITY

Council

4. EXECUTIVE SUMMARY

The purpose of the Economic Development Strategy is to enable economic development and build up the economic capacity of a local area to improve its economic future and the quality of life for all. It is a process by which public, business and non-governmental sector partners work collectively to create better conditions for economic growth and employment generation.

Therefore to enable this strategy in terms of the The Local Governement : Municipal Systems Act, No 32 of 2000 and Regulations Section 26C requires that the council's development priorities and objectives for its elected term, including its local economic development aims and its internal transformation needs.

5. RECOMMENDATIONS

- (a) that Council take note of the draft Economic Development Strategy attached as **APPENDIX 1** to the agenda;
- (b) that Council gives approval for the commencement of the public participation process in respect of the draft Economic Development Strategy subject to the following conditions:
 - a. The public participation phase of the project will take place over 60 days (2 months).
 - b. The draft Economic Development Strategy will be advertised in the local newspaper, municipal web page and notice boards within two weeks after the decision by Council.

-
- (c) that after the public participation process is concluded, the draft Economic Development Strategy must be resubmitted to Council together with all comments received for consideration.

6. DISCUSSION /CONTENTS

The Economic Development Strategy starts by highlighting key factors of how Stellenbosch Municipality should approach economic development.

It then looks at how the population in Stellenbosch has grown over the past years and evaluates to what extent service delivery has managed to keep up.

Next, it considers trends in regional output and employment to identify which sectors contribute most to the area's economy as well as the role and importance of tourism in the economy of Stellenbosch.

The last section covers the implementation plan which covers the integration of various long-term strategies of the municipality such, but not limited to:

- Competitive Strategies
- Infrastructure Strategies
- Inclusion Strategies
- Trade Promotion and Sector Development Strategies
- Sustainable Growth Strategies
- Tourism Development and Resilience Strategy

7. FINANCIAL IMPLICATIONS

No financial implication.

8. LEGAL IMPLICATIONS

The recommendations in this report comply with Council's policies and applicable legislation.

9. STAFF IMPLICATIONS

None

10. RISK IMPLICATIONS

None

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.9.1

- (a) that Council take note of the draft Economic Development Strategy attached as **APPENDIX 1** to the agenda;
- (b) that Council gives approval for the commencement of the public participation process in respect of the draft Economic Development Strategy subject to the following conditions:
- i) The public participation phase of the project will take place over 60 days (2 months).

- ii) The draft Economic Development Strategy will be advertised in the local newspaper, municipal web page and notice boards within two weeks after the decision by Council.
- (c) that after the public participation process is concluded, the draft Economic Development Strategy must be resubmitted to Council together with all comments received for consideration.

Introduction

"The purpose of local economic development (LED) is to build up the economic capacity of a local area to improve its economic future and the quality of life for all. It is a process by which public, business and non-governmental sector partners work collectively to create better conditions for economic growth and employment generation." (The World Bank, 2006)¹

Stellenbosch Municipality has asked the BER to provide an overview of local economic development within the municipal boundaries. To this end, this report is not a LED Strategy but can be used as a basis from which a LED Strategy might be developed. It draws from existing publications by Stellenbosch Municipality and the Province, to highlight aspects that are relevant to economic development.

Stellenbosch² is one of 39 Intermediate City Municipalities (ICMs) in South Africa. Smaller cities can have distinct advantages over larger metros. They can benefit from a high level of local connectivity and identity, efficiencies that result from operating at a manageable scale, and often have a defined economic heritage. Some municipalities also have unique cultural, recreational, and tertiary education assets, that can help to stabilise the local economic base, make social capital available and support innovation.³

Stellenbosch is fortunate to be characterised by all of the above and has access to a unique set of social, economic, political and natural resources that it can use to shape its development path.⁴ These conditions determine the region's ability to attract and retain investment. The municipality's role is to create an environment that enables business and citizens to make use of the opportunities that these resources offer. The broad aim of local economic development (LED) is therefore to build the capacity of a municipality in a way that improves its economic future and better the quality of life for its citizens.

To develop a LED Strategy, a municipality needs to understand current levels of economic activity in its region. To this end, this report gives an overview of economic development within the boundaries of Stellenbosch Municipality. It focuses on longer-term trends and does not specifically look at the impact of the COVID-19 pandemic.

¹ The World Bank (2006). **Local Economic Development: A Primer Developing and Implementing Local Economic Strategies and Action Plans.**

² The municipal area includes the towns of Stellenbosch and Franschhoek, as well as several rural hamlets: Wemmershoek, La Motte, De Novo, Kylemore, Pniël, Johannesdal, Langedoc, Groot Drakenstein, Muldersvlei, Klapmuts, Elsenburg, Raithby, Jamestown, Koelenhof and Vlorentburg.

³ <https://www.sacities.net/wp-content/uploads/2020/03/Rethinking-LED-Local-Economic-Development-in-Intermediate-Cities.-Released-2019.-pdf.pdf>

⁴ <https://www.sacities.net/wp-content/uploads/2020/03/Rethinking-LED-Local-Economic-Development-in-Intermediate-Cities.-Released-2019.-pdf.pdf>

The report starts by highlighting key factors of how municipalities should approach economic development. It then looks at how the population in Stellenbosch has grown over the past years, and evaluates to what extent service delivery has managed to keep up. Next, it considers trends in regional output and employment to identify which sectors contribute most to the area's economy. The final section delves deeper into the role of tourism in the economy of Stellenbosch.

*Note: Throughout the report, any references to Stellenbosch refer to the **Stellenbosch Municipal area** and, unless otherwise stated, do not mean the town of Stellenbosch.*

What role should local government play in economic development?

Why should municipalities contribute to LED?

The National Development Plan highlights the critical capabilities that are needed to transform South Africa's economy and society to eliminate income poverty and reduce inequality by 2030. The Constitution (section 152) requires local government to contribute to these objectives by providing democratic and accountable governance for local communities; ensuring the provision of services in a sustainable manner; promoting social and economic development as well as a safe and healthy environment; and encouraging the involvement of communities in the matters of local government.⁵ It further mandates a municipality to "(a) Structure and manage its administration and budgeting and planning processes to give priority to the basic needs of the community, and to promote the social and economic development of the community; and (b) Participate in national and provincial development programmes." When municipalities focus on these activities, they help to achieve the objectives of the NDP, as well as the Economic Reconstruction and Recovery Plan (ERRP) launched in October 2020 to combat the social and economic impacts of the COVID-19 pandemic.

In promoting social and economic development through LED, municipalities play an important role in South Africa's national economic performance and trajectory. The spatial differences and imbalances that are brought on by increased global competition, population mobility and technological advances make LED even more critical.⁶ An effective approach to LED can address income disparities between areas, grow the number of locally generated jobs and firms, increase private sector investment, boost information flows between investors and developers, and improve the coherence and confidence with which a local economic strategy is pursued.⁷

⁵ Constitution of the Republic of South Africa, 1996 – Chapter 7: Local Government

⁶ OECD, Smarter Local Economic Development. Available online: <https://www.oecd.org/cfe/leed/local-development.htm>

⁷ OECD, Smarter Local Economic Development. Available online: <https://www.oecd.org/cfe/leed/local-development.htm>

How should municipalities contribute to LED?

The Draft National Framework for Local Economic Development highlights six core pillars that municipalities should focus on in pursuing economic development:

It is worth highlighting two important themes that run through these six pillars: (1) involvement of the local community, and (2) the responsibility of a municipality to create an enabling environment.

The local community should be involved

COGTA summarises LED as "an approach towards economic development which allows and encourages local people to work together to achieve sustainable economic growth and development thereby bringing economic benefits and improved quality of life for all residents in a local municipal area" (own emphasis). In this context, a municipality is responsible to create an environment that enables local people to work together. LED therefore speaks to how local government and the community manage their resources, sometimes through forming partnerships with the private sector and with each other, to create jobs and stimulate economic activity.

The involvement of local stakeholders in the developmental process, through e.g., participatory decision-making, is an important component of sustainable growth. It builds trust and creates social networks – all of which encourages innovation and decreases the potential for conflict. When communities understand and are involved in the LED process, they are in a better position to improve their quality of life, make use of new economic

opportunities, fight poverty, and adapt to changing market conditions⁸ like those described in the previous section.

Successful LED also requires close involvement of the local business community. Municipalities should create an enabling regulatory and institutional environment for these activities. In many ways this lies at the core of LED. To achieve this aim, different departments of a municipality need to work together and not operate in silos.

The focus should be on creating an enabling environment

An effective LED Strategy creates an environment that is conducive to entrepreneurship and makes it as easy as possible for businesses to be established. This is especially important for micro, small and medium enterprises that operate at a local level. To that end, processes that are managed by the municipality need to be efficient, fast, and free from unnecessary 'red tape'.

Municipalities also have a vital role to play in the provision of infrastructure for basic services like sewerage, water and sanitation, refuse removal and electricity. These services are at the core of creating an enabling environment for economic development. Economic development can be severely curtailed without the basic services and infrastructure that a municipality should provide. As the examples in the Box show, municipal failure not only affects large businesses; it also impacts on households, small, medium and micro-enterprises (SMME), and other investors in local economies.

Box: Two examples of how municipal failure can have a direct impact on LED⁹

The first example is Clover, who in June 2021 announced that it would close its cheese processing facility in Lichtenburg in the North West province and move this to an existing plant outside of Durban.¹⁰ It attributed the decision to ongoing problems with service delivery by the Ditsobotla Local Municipality – specifically water and electricity outages as well as

⁸ The World Bank (2006). **Local Economic Development: A Primer Developing and Implementing Local Economic Strategies and Action Plans.**

⁹ BER Research Note 2021, Number 6. *SA's municipal challenges and their impact on local economic development.*

the poor quality of roads. The move is estimated to lead to 330 job losses within the Lichtenburg economy.¹¹

Another example is Astral foods – one of South Africa's largest poultry producers – who own a processing plant in Standerton in the Lekwa municipality. In 2018, Astral took legal action against the municipality due to severe supply disruptions caused by disintegrating infrastructure. Load-shedding and water shortages reportedly cost the company around R62 million in its latest financial year. Following a court order, the municipality had to submit a long-term plan about how they were going to repair and improve the infrastructure. This did not lead to improved outcomes. A new court order was issued in 2021, requiring national government and Treasury to intervene and prepare a financial recovery plan for the municipality.¹²

Is service delivery keeping up with population growth?

Population and household growth

The population of the Western Cape is growing at a higher rate than in the rest of South Africa (see figure below). Over the 2016 to 2020 period, there were a total of 292,521 net-migrations to the Western Cape. This might increase further as remote work becomes even more common¹³. Already, there is anecdotal evidence that more people are trading the busy city hubs of Gauteng for the airy Western Cape. Net migration has implications for the economic landscape of the Western Cape and its towns, placing additional pressure not only on physical infrastructure but also on the composition of the jobs market. The MERO identifies that one of the salient risks to economic development over the next few years will be an uptick in service delivery demands due to net in-migration to the province.

Figure 1: Annual population growth in the Western Cape compared to SA

Source: Quantec

Population growth in Stellenbosch exceeded the national average for most of the past two decades, but has slowed in recent years. Stellenbosch's population has, on average, been growing at a slower rate than the rest of the Western Cape since 2011 (Figure 2).¹⁴

Figure 2: Annual population growth in Stellenbosch Municipality

Source: Quantec

¹⁴ Over the past five years, the municipalities of Witzenberg (2.3%) and Drakenstein (2.0%) have, on average, experienced faster annual population growth than Stellenbosch (1.8%).

In line with comparatively slower population growth, the growth in the number of households living in Stellenbosch has also tapered over the past decade. A greater number of households were added to Stellenbosch Municipality between 2000 and 2010 than over the past decade. Breede Valley, Drakenstein and Witzenberg municipalities saw a opposite trend, with the number of households increasing faster since 2010. A factor that might have influenced this trend is the relatively higher cost of owning or renting property in Stellenbosch, compared to other regions in the Cape Winelands Municipality.

Figure 3: Number of households at the start of each decade per Cape Wineland Municipality

Source: Quantec

In 2020 (most recent data available), 183 773 people lived within the boundaries of Stellenbosch Municipality. Based on average population growth over the last decade, we estimate that the population reached 185 698 in 2021.¹⁵ Despite Stellenbosch's slower rate of population and household growth, it remains the most densely populated Local Municipality in the Cape Winelands. It has an estimated 232 people per square kilometre (compared to Drakenstein municipality with 189 people per square kilometre).¹⁶

Population density has implications for per capita spending on infrastructure and services. Holcombe and Williams (2008) find that for cities smaller than 500 000 (like Stellenbosch),

¹⁵ Estimated by applying the previous year's annual population growth rate. This estimate does not account for the effect of the COVID-19 pandemic.

¹⁶ Stellenbosch Socio-Economic Profile 2020.

infrastructure expenditure *per capita* declines as population density increases, whereas per capita expenditure on services increase.¹⁷ Mattson (2021) similarly finds that *per capita* expenditure on the operational and construction costs associated with streets and highways, parks and recreation, sewerage and water declines with higher population density.¹⁸ These studies suggest that, given the current size of the municipality, Stellenbosch can achieve greater economies of scale than less densely populated municipalities by investing in important components of economic infrastructure.

Service delivery performance

The majority of households in Stellenbosch (73%; 36.6 thousand) live in formal dwellings (2020) and one of the municipality's main functions is providing basic services¹⁹ to these homes. Over the 2010-2020 period there has been a steady increase in the proportion of households with access to basic service delivery in Stellenbosch, consistent with the trends in the Cape Winelands region and the rest of the Western Cape (see Table 1).

Overall, the proportion of households with access to the four key categories of basic services are on par, if not better, than the Cape Winelands' and Western Cape averages. Table 1 shows service delivery across the municipalities in the Cape Winelands. Stellenbosch and Drakenstein Municipalities outperform the other three municipalities in terms of electricity provision, refuse removal, and sanitation. Stellenbosch Municipality however underperforms in the provision of water to households at least 200m from a dwelling.

¹⁷ Holcombe RG, Williams DW. The Impact of Population Density on Municipal Government Expenditures. *Public Finance Review*. 2008;36(3):359-373. doi:10.1177/1091142107308302

¹⁸ Mattson, J. Relationships between density and per capita municipal spending in the United States. *Urban Science*. 2021, 5, 69. <https://doi.org/10.3390/urbansci5030069>

¹⁹ These include electricity (as the main source for lights), refuse removal (at least once a week), the provision of a flush or chemical toilet and access to water at least 200m from the house.

Table 1 Basic Service Delivery across Cape Wineland Municipalities (% of households)

		Breede Valley	Drakenstein	Langeberg	Stellenbosch	Witzenberg
Electricity as Main Light Source	2010	88.0	90.5	91.1	91.5	88.3
	2015	87.9	93.9	93.5	92.3	92.2
	2020	87.5	94.7	94.1	92.2	93.2
Refuse removal at Least Once a Week	2010	70.8	82.1	67.9	83.8	62.6
	2015	73.9	85.2	70.7	86.1	68.2
	2020	74.5	85.9	71.6	86.7	69.8
Access to Flush or Chemical Toilet	2010	87.1	91.1	86.2	89.5	87.1
	2015	88.3	93.0	88.6	90.9	90.8
	2020	88.4	93.5	89.0	91.1	91.7
Piped Water at Least 200m From Dwelling	2010	94.4	94.8	95.2	91.1	96.5
	2015	95.9	97.7	97.2	93.8	98.0
	2020	96.2	98.5	97.8	94.4	98.4

Source: General Household Survey

The data show that the proportion of households with access to electricity as its main source of lighting is 92.2% in 2020, the proportion of households with access to refuse removal at least once a week is 86.7%, the proportion of households with access to a flush or chemical toilet is 91.1% (and finally, the proportion of households with running water at least 200m from their dwelling is 94.4%.

Another important indicator of the extent of service delivery of the municipality is the provision of free basic services to indigent households. For the 2022/23 municipal financial year, the criteria for a household to qualify as 'indigent' is for the main breadwinner(s) to earn less than R6 500 per month.²⁰ A total of 6 817 households within the municipal boundaries benefited from free electricity, free water, free sanitation and free refuse removal services in 2019 (latest available), compared to 5 242 in 2014. Although the data is not yet available, employment losses caused by the COVID-19 pandemic likely increased the demand for free basic services since March 2020.

Figure 4: Number of households in Stellenbosch benefiting from free basic services for water, electricity, sewerage and sanitation, and solid waste management.

Source: Statistics South Africa - P9115

Based on its Top Layer Service Delivery Budget and Implementation Plan 2022/23, Stellenbosch Municipality is achieving and, in many cases, exceeding its service delivery targets (Table 2). This is a vital component of creating an enabling environment for citizens and businesses alike.

Table 2: Summary of Stellenbosch Municipality service delivery targets

	Baseline	5-year target
Limit unaccounted electricity to less than 9% annually	8.86%	<9%
Limit unaccounted water to less than 25%	14.9%	<25%
Registered indigent formal households with access to free basic water	100%	100%
Registered indigent formal households with access to free basic electricity provided by the municipality	71%	65%
Registered indigent formal households with access to free basic refuse removal	100%	100%
Registered indigent formal households with access to free basic sanitation	100%	100%
Formal households with access to water, electricity, refuse removal, and sanitation	26 588	26 000

Source: Top Layer Service Delivery Budget and Implementation Plan 2022/23

Which sectors are the main contributors to economic output and employment?

Aside from creating an enabling environment through infrastructure and service delivery, other important components of LED are enterprise development and support, strengthening local innovation systems, developing learning and skilful economies, building diverse and innovation-driven local economies and developing inclusive economies. To this end, it is necessary to understand the key drivers of economic output within the municipality and how these are affected by global and national dynamics.

The global economic outlook has come under severe pressure in the last four months. Most recently, in the IMF's April forecast the global economic outlook was lowered by 0.8pp to 3.6% in 2022, and with no reacceleration expected for 2023. The slightly more depressed growth rate comes on the back of Russia's invasion of Ukraine, the expectation of slower Chinese growth due to its zero-Covid policy stance, and further policy rate hikes in the Eurozone and the USA. Slower growth abroad may lower demand for South African exports (including tourism).

Domestically, economic growth prospects are also muted, with the BER expecting national GDP growth around 2.4% this year²¹ (of which much of the gain was already realised in quarter 1) and slightly lower growth of 2.0% over the medium-term. In the Municipal Economic Review and Outlook (MERO) Stellenbosch Municipality is forecast to reach 2.5% economic growth in 2022, with the finance and trade sectors as predominant drivers.

The impact of the university on economic development in Stellenbosch should also not be underestimated. The presence of a university or higher education institution can be a catalyst for economic growth in a region (PriceWaterhouseCoopers, 2009). The role as a growth catalyst is not limited to the direct expenditure-based benefits, but also impacts the economy through human capital development. For example, one study²² found that in the

²¹ BER April 2022 forecast

²² Abel & Gabe, Cited in Appleseed (2012). Building Rhode Island's Knowledge Economy. The Economic Impact of Brown University. Available online: <https://www.brown.edu/web/documents/brown-economic-impact-2012.pdf>

USA, a one percentage point increase in the proportion of residents with college degrees can be associated with a 2.3% increase in metropolitan GDP per capita. Similarly, another study²³ was able to show that a 1% increase in the percentage of workers who have degrees can be associated with a 1.6% increase in the earnings of workers that only have high school diplomas.

Contribution of different sectors to GDPR

Stellenbosch Municipality has the highest Regional Gross Domestic Product (GDPR) per capita within the Cape Winelands district. This indicates that the area generates a lot of value-adding economic activity per person, mostly driven by finance, insurance, real estate and business activity, followed by manufacturing (Figure 5). Together, these two sectors account for half of economic output generated within Stellenbosch Municipality.

Figure 5: Output by sector in 2020 (Rand million, 2015-constant prices)

Source: Quantec

Besides the size of different sectors, it is necessary to know which sectors are growing and which are in decline. For example, while manufacturing accounts for a large share of output, it has not been growing as rapidly as e.g. communication, or finance and insurance. In fact, food, beverages and tobacco (which accounts for a large share of manufacturing) has

²³ Moretti, Cited in Appleseed (2012). Building Rhode Island's Knowledge Economy. The Economic Impact of Brown University. Available online: <https://www.brown.edu/web/documents/brown-economic-impact-2012.pdf>

been in decline. Between 2010 and 2019²⁴, *communication* experienced the most rapid

average annual growth among the different subsectors of the economy. This was followed by *finance and insurance*, and then *wholesale and retail trade*. Economic activity in the municipality seems to be pivoting from a manufacturing economy to one which is becoming more service oriented.

Figure 6: Annual growth rate between 2010 and 2019 of the largest subsectors in Stellenbosch (2015-constant prices)

Source: Quantec (*Total manufacturing excluding Food, beverages and tobacco)

The MERO identifies the business services subsector, as well as finance and insurance as strengths of Stellenbosch Municipality. This is partly because Stellenbosch is already home to the headquarters of large firms like Capitec, Mediclinic International, CompuScan and Reutech Radar Systems.²⁵ The associated commercial activity also has a positive impact on other subsectors, like communication and even construction (see Figure 6).

The *business services* sector may benefit further from the trend towards more business process outsourcing (BPO). In 2021, South Africa was voted “most favoured offshore Business Process Outsourcing destination”²⁶ with Cape Town currently at the forefront with regards to

²⁴ We end the analysis in 2019 to observe the longer-term trends that prevailed prior to the COVID-19 pandemic, and which we expect to continue going forward.

²⁵ MERO p. 366

²⁶ PERO p. 73

employment creation in this sector. Technopark in Stellenbosch is an already-existing hub that could be used for BPO services.

A slightly different tendency of consequence to national and local economic development is the number of individuals working-from-home, a trend that escalated since the onset of the Covid-19 pandemic and is likely to stay, at least in part. Globally, 1 in 4 people are working from home, up from 1 in 12 before 2020.²⁷ Work-from-home jobs tend to be concentrated in the *finance, insurance, real estate & business services sector*, which may be of importance to Stellenbosch given the size of the sector in the region.

Food, beverages and tobacco accounts for the largest share (31%) of manufacturing in Stellenbosch Municipality, but as mentioned earlier has also been responsible for most of the decline in the sector. The decline can likely be attributed to drought conditions which negatively impacted agricultural output and hence agro-processing input, as well as the already battling wine industry.²⁸ The agricultural sector weighs strongly on the *manufacturing* sector since a large share of activity in this sector derives from agro-processing.²⁹ The alcohol bans on sales and international trade during the hardest lockdown of the Covid-19 pandemic gave another blow to development in manufacturing, and especially the wine industry of Stellenbosch. There is now a trend towards consolidation of wine makers and wine grape producers in the region, since it has become far less feasible to operate on small scale in the industry.³⁰ Nevertheless, since 2014, agro-processing has been a priority sector in the Western Cape. Stellenbosch is well positioned to develop this subsector given its proximity to agricultural land and ports.

The *agricultural sector* within the boundaries of Stellenbosch Municipality performed well in 2020 (Figure 5) on the back of good weather conditions and favourable commodity prices. And although this is a relatively small sector, the good performance in 2020 boosted fixed investment in the sector in 2021. This puts the sector in a relatively good position going forward, especially as the decline in the global demand for South African exports may have negative implications for the agricultural sector in the country.

²⁷ PERO p. 12

²⁸ MERO p. 287

²⁹ MERO p. 317

³⁰ MERO p. 319

The provision of housing is a top priority for the municipality. The construction of new housing has the added benefit of boosting the construction sector. Initiatives like the envisioned Adam Tas Corridor and other housing projects in the municipality's housing pipeline will provide a necessary boost to the sector.

Box: What was the impact of the COVID-19 pandemic on economic output?

Of the five local municipalities in the Cape Winelands District Municipality, Stellenbosch Municipality experienced the most severe dip in output in 2020. This can likely be attributed to the area's reliance on tourism and the decline in visitors during the COVID-19 pandemic.

Figure 7: Annual GDP growth rate within the Cape Winelands District Municipality (2015-constant prices)

Source: Quantec (own calculations)

When comparing 2020 output to 2019 to illustrate the impact of the pandemic on different sectors, we find that the finance, insurance, real estate and business services sector proved relatively resilient. Agriculture also had a good year, despite the pandemic. For this reason the Witzenberg Municipality, predominantly driven by its agricultural sector, had a positive growth rate in 2020 compared to negative growth rates in all the other Cape Winelands municipalities (shown in Figure 7).

Employment trends and inequality

Not all sectors contribute equally to employment. As shown below, most low-skilled employment in Stellenbosch is generated by agriculture, forestry and fishing, followed by community, social and personal services, and wholesale and retail trade. The growth or contraction of these sectors could therefore have a substantial impact unemployment within the region as it may be more difficult for low-skilled individuals to find alternative jobs. Another

trend is an increase in mechanisation, which can reduce the rate at which jobs are created/replaced in the manufacturing sector³¹ as well as in agriculture.

Figure 8: Number of people in formal employment by skills level (2020)

Source: Quantec

Close to three quarters of those employed in Stellenbosch (of ±74 000) work in the formal sector. Stellenbosch however has a smaller workforce and a smaller share of people working in the formal economy compared to the Drakenstein Municipality, for example. This is likely to place additional strain on the municipality's budget through less taxable income. One factor that the municipality might consider as part of its LED strategy is how a greater share of the informal workforce might be incorporated into formal employment.

³¹ MERO p. 293

Figure 9: Share of formal and informal employment, 2020

Source: Quantec

The average annual growth rate in the number of formal jobs between 2015 and 2019 in Stellenbosch was 1.5%. While this is above the rate of job creation in South Africa, it is slightly below the Western Cape's average, and also lower than the Cape Winelands' average. While it is not the role of the municipality to create jobs, it does have a responsibility to create an environment that is conducive to entrepreneurship and doing business, and in doing so is an important enabler of job creation.

Figure 10: Average annual rate of job creation in the formal sector (2015-2019)

Source: Quantec

The unemployment rate in Stellenbosch remains far below the national average (29.2% in 2020; 34.5% in 2022) as well as that of the Western Cape (20.8% in 2020). One of the reasons why Stellenbosch has a lower unemployment rate may be due to higher levels of educational attainment. Stellenbosch residents have, on average, a higher level of educational attainment compared to the provincial and national level. This is particularly true for tertiary education. According to the 2011 Census data from Stats SA, 3.9% of Stellenbosch residents have a degree, compared to 2% at a national level. Furthermore, 1.2% of residents has a post-graduate degree, compared to a national average of 0.4%.³²

Despite these dynamics, unemployment in Stellenbosch it has been trending upwards with the rest of South Africa since 2015. Stellenbosch has the second highest unemployment rate within the Cape Winelands District Municipality (Figure 11). Witzenberg in the only municipality within the District where the unemployment rate was not considerably higher in 2020 than it was in 2010. In Stellenbosch, unemployment was 13.4% 2020, compared to 10.1% six years prior. In 2020 there were ±11 500 unemployed people living in Stellenbosch, up from ±8 500 in 2015.

Figure 11: Unemployment rates in the Cape Winelands (%)

Source: Quantec

The higher level of educational attainment is also reflected in taxable income. Stellenbosch has comparatively high monthly taxable income compared to the other municipalities in the

³² BER (2018). Stellenbosch University Economic Impact Assessment.

Cape Winelands. In addition, Stellenbosch experienced an average annual growth rate of 2.5% in taxpayers, compared to a rate of 1.1% in the Western Cape in general, suggesting that the region continues to attract high net-worth individuals.

Figure 12: Average monthly taxable income per taxpayer (2020, current prices)

Source: Quantec (own calculations)

The growth of the finance, insurance, real estate and business services sector likely contributes to this trend. By creating an enabling environment for this sector to flourish, the municipality can be expected to continue to attract comparatively high net worth individuals, which will further strengthen its financial position.

The comparatively high monthly taxable income in the Stellenbosch municipal area, combined with a relatively large share of people working in the informal economy and a comparatively high unemployment rate, results in high income inequality. This number became even larger between 2017 and 2020 (presumably aggravated by employment losses during the COVID-19 pandemic). As a result, Stellenbosch has the highest level of income inequality in the Cape Winelands region.

Figure 13: Income inequality as measured by the Gini-coefficient³³

Source: IHS Markit, 2020 (MERO)

The rise in income inequality combined with the increase in the unemployment rate in Stellenbosch may put additional pressure on the municipality to provide support for local households. It also highlights the need for more job creation in the region.

Prospects for the tourism sector

Historical perspective on Stellenbosch tourism

A downward trend in output generated by catering and accommodation services (which captures the tourism sector) within Stellenbosch Municipality seemed to emerge long before the pandemic. Between 1997 up until around 2005, Stellenbosch experienced a rapid increase in economic activity generated by catering and accommodation services (Figure 14). This plateaued until the Global Financial Crisis, after which the sector has been in decline. The COVID-19 pandemic caused economic activity in this subsector to contract by 59% in Stellenbosch.

³³ The Gini coefficient is an indicator of income inequality and ranges between 0 and 1, with 0 representing complete equality and 1 representing complete inequality.

Figure 14: Output in catering and accommodation services (2015-constant prices, rand million)

Source: Quantec

The downward trend in output generated by catering and accommodation services is not unique to Stellenbosch: the figure below shows that Mosselbay, George and Knysna have also been experiencing a decline. Relative to the level at which it was in 2010, however, the drop in activity in Stellenbosch was more pronounced.

Figure 15: Output in catering and accommodation services, indexed to 2010 (2015-constant prices)

Source: Quantec (own calculations)

Despite the decline, the sector remains an important source of job creation within the municipal area – especially through providing formal employment opportunities. The COVID-

19 pandemic notwithstanding had a severe downward impact on employment in the sector, as can be seen in the figure below.

Figure 16: Employment in catering and accommodation services in Stellenbosch Municipality

Source: Quantec

Impact of COVID-19 on tourism

While there is no doubt that the global economy is being hit by severe shocks, the impact could have been worse if not for the strong countervailing force of reopening in many countries as mobility restrictions were eased. The reopening of international travel has begun to bounce back in South Africa, albeit still far below pre-Covid levels. Overall, the total number of international arrivals over the January to February 2022 period (excl. SADC) were around 354 thousand persons, far below the 1.06 million that visited over the January to February (pre-pandemic) period in 2020.

Figure 17: Inbound trips (number of foreign visitors (excl. SADC))

Source: Stats SA

Visit Stellenbosch started collecting information about tourist accommodation and restaurants in October 2019. Although the data in Figure 18 are self-reported by the members of *Visit Stellenbosch*, it still gives an idea of the business cycle of the sector over the past two-and-a-half years. The data shows an encouraging bounce-back in both revenue and occupancy during the most recent tourist season. Compared to the low number of *foreign* visitors that still prevailed at the start of 2022 (Figure 17), it suggests that the recovery in Stellenbosch's tourism sector – at this stage – seems to be driven by domestic tourists.

Figure 18: Stellenbosch Accommodation Data (self-reported)

Source: Visit Stellenbosch

Despite the positive momentum, the recovery in tourism is likely to be counterweighed by slower global growth, especially growth in European and North American countries. Together, these regions accounted for close to a fifth of international arrivals to South Africa in 2019.³⁴ Of consequence also is the global trend for shorter ("closer to home") trips. Several initiatives to create a better enabling environment for tourism, including medical tourism, sport tourism and eco-tourism are specified in the Stellenbosch Municipality's Draft Tourism Plan of 2020.

³⁴ Stats SA

Conclusion

Municipalities play an important role in South Africa's economic performance and development trajectory, and so also in Stellenbosch. The spatial differences and imbalances that are brought on by increased global competition, population mobility and technological advances make LED even more critical. The emphasis should be on creating an enabling environment within which businesses and citizens can flourish.

Infrastructure and delivery of basic services are among the most important components of creating an enabling environment. Basic service delivery in Stellenbosch is on par with the provincial standards and more than six thousand households benefit from free basic services. Other important factors such as road infrastructure also help the city appear appealing to entrepreneurs and investors. The town has, moreover, seen potential being realized in areas such as the finance and communication sectors. The agriculture and agro-processing sectors were under pressure during the late 2010s but has seen an uptick in activity in more recent years.

Weaknesses remain, and the COVID-19 pandemic has certainly exposed some thereof. The most pressing is a reliance on the tourism sector. Output from this sector has been in decline, which has placed strain on small businesses and especially the individuals who depend on the sector for employment. Given Stellenbosch's unique natural and cultural resources, it is important that the municipality continues to create an enabling environment for this sector to thrive.

Finally, the growth of other tertiary sectors, like finance and insurance, has been substantial and creates positive multiplier effects for many of the other sectors, like communication, construction, and trade. At the simplest level, the key imperative of the municipality's LED strategy should be to create an enabling environment for these subsectors to continue to thrive. It can do this through providing the necessary physical infrastructure and basic services, and creating a favourable business environment through efficient municipal processes.

Implementation plan

Competitive Strategies

Strategy 1: Develop and Implement a consolidated Business Investment Desk

Strategy 2: Develop and Implement a Business Incentives Programme

Strategy 3: Prioritise and Implement an "Ease of Doing Business" Programme

Strategy 4: Institutionalise Economic Intelligence

Strategy 1: Develop and Implement a consolidated Business Investment Desk

- Develop and implement a consolidated Business Investment Desk.
- Economic development ministries and agencies are seeking to reduce the barriers faced by small business owners by reducing the procedures, time and costs associated with starting a business.
- One of the key strategies used is the establishment of Business Investment Desk, where entrepreneurs can receive business and financing advice, and receive regulatory compliance advice such as completing building, land use planning and permitting applications, and pay the necessary fees.
- Stellenbosch currently supports several small business and entrepreneurship programmes, notably entrepreneur training through Ranyaka and Stellenbosch Network.

- These will be consolidated into a standardised Business Investment Desk model – Monitored and evaluated according to strict performance targets and up-to-date business intelligence.

Strategy 2: Develop and Implement a Business Incentives Programme

Roll-out a business incentives programme. Incentives are special interventions designed to influence the location decisions of businesses. Standard incentives packages range from financial rewards (such as tax holidays) to non-financial inducements (such as regulatory exemptions or information provision).

In order to leverage the full range of incentive tools available to the Stellenbosch to attract investment, the administration will formulate comprehensive incentives programme incorporating:

- An appropriate approach to ad hoc financial incentives such as rates rebates and tariff discounts), incorporating a fair and transparent application and assessment system.
- Regulatory inducements (such as special zoning and fast-track processes)
- Information provision

Strategy 3: Prioritise and Implement an “Ease of Doing Business” Programme

- Prioritise Municipal competitiveness in ‘Ease of Doing Business’ initiatives.
- This will span the administration’s governance and oversight programmes, reporting standards, financial planning, and human resources management programmes.

- Review, Revise and simplify Stellenbosch's regulatory regime.
- Accelerate decision-making processes for planning and building approvals, notably by moving more functions online and by improving capacity.
- Achieving better coordination between economic development, transport, and land-use priorities.
- Significant progress has been made toward making the organisation more responsive to citizens' needs, for example, through the Municipality's Let's Fix It notification system.
- The next step is to gear the Municipal business improvement initiatives towards recognising their consequences for the broader economy of Stellenbosch and amending them appropriately. This will be achieved via the following interventions: Implementing an online customer interface tool as part of the Municipality's recently launched planning portal.

Strategy 4: Institutionalise Economic Intelligence

- Economic intelligence is a tool used to gain knowledge, which can be used to influence the following:
 - our environment
 - optimize decision-making
 - improve the municipality's positioning strategies to ensure economic and tourism growth, prosperity and public safety and security.
- Hence, economic development, if informed and done effectively, should retain and grow jobs and investment within a community.

SUMMARY OF COMPETITIVENESS STRATEGIES

	STRATEGY	DETAILS	LEAD ACTORS
STRATEGY 1	Attract Investment into the broader Stellenbosch Economy	Develop and operationalise a Business Investment Desk	Planning and Economic Development
		<ul style="list-style-type: none"> • Provide a business advisory service. • Provide a central location where applications can be accessed and submitted, and fees paid. • Provide financing information (DTI, Seda, IDC Support) • Training and development of SMME's. • Youth skills development programme / partnerships. 	Financial Management
STRATEGY 2	Business Incentives Program	Non-financial incentives programme, incorporating <ul style="list-style-type: none"> • Special zoning. • Targeted marketing. • Fast track approvals. • Urban upgrading / site preparation. • Release strategic land parcels. 	Planning and Economic Development
			Infrastructure Department
STRATEGY 3	Red Tape Reduction Program / Ease of doing business programme	<ul style="list-style-type: none"> • Red tape reduction • Accelerate decision making processes • Ensure strategic alignment and prevent regulatory build – up. • Roll out electronic customer interface tool (Informal Trading) • Roll out development application (GIS / Planning) 	Planning and Economic Development Corporate Services

STRATEGY 4	Institutionalise Economic Intelligence	<ul style="list-style-type: none"> • As the saying goes, 'you cannot manage what you don't measure'. Collecting and analysing economic and tourism data at the municipal level requires a collective effort among stakeholders. • Devise a half-yearly barometer of economic and tourism performance based on indicators like: <ul style="list-style-type: none"> - airport passenger arrivals - visitor figures at key attractions - hotel occupancy and revenue figures - conducting regular visitor profiling and satisfaction surveys - monitoring the spatial dispersion of visitors - conduct event impact studies, feasibility studies and other research studies to inform the development of various sectors. Infrastructure Strategies

Strategy 1: Leverage underutilised Municipal assets to maximise economic benefits

Strategy 2: Maintain and upgrade basic service infrastructure

Strategy 1: Leverage underutilised Municipal assets to maximise economic benefits

- Leverage underutilised Municipal assets to maximise economic benefits. Investigating all the Municipality's existing and potential strategic assets and articulating how they may be leveraged to encourage economic activity and generate revenue, therefore presents a significant, and hitherto largely unrealised opportunity.
- In order to realise the economic potential of underutilised Municipal-owned assets, the administration will: -
- Accelerate the investigation of strategic assets as mandated by IDP objective

Strategy 2: Maintain and upgrade basic service infrastructure

- Maintain and upgrade basic service infrastructure to ensure sustainability.
- Basic service or 'bulk' infrastructure is fundamental to the Municipality's role as the primary provider of essential services such as electricity, water and waste removal. Without these, achieving other strategic goals, notably economic growth and job creation, would be impossible. 'Getting the basics right' is therefore central to the Municipality's strategy. However, there are numerous challenges when it comes to maintaining and upgrading basic infrastructure. Rapid urbanisation is putting pressure on the Municipality's existing stock, while at the same time financial, capacity and environmental considerations place limits its options going forward. In order to maximise the strategic benefits of basic infrastructure, the Municipality will:
 - Develop a public infrastructure plan that will coordinate future infrastructure development with its broader long-term social and economic planning priorities to ensure fiscal sustainability while maximising positive economic impact.

SUMMARY OF INFRASTRUCTURE STRATEGIES

	STRATEGY	DETAILS	LEAD ACTORS
STRATEGY 1	Leverage underutilised municipal assets	<ul style="list-style-type: none"> Investigate underutilised assets such as our informal trading hubs (Kayamandi Corridor, Idas Valley Informal Trading Hub and Cloeteville Informal Trading Hub) 	Property Management Planning and Economic Development
STRATEGY 2	Maintain and upgrade basic services infrastructure to ensure sustainability	<ul style="list-style-type: none"> Annual review of all infrastructure plans Implement and annually review the Capital Investment Program to ensure investments are made in the needed infrastructure that enables growth. 	Planning and Economic Development Corporate Services - Property Management Infrastructure Services

Inclusion Strategies

Strategy 1: Coordinate Local Development Programmes to Enhance the Informal Economy.

Strategy 2: Broaden Job Opportunities and Alleviate Poverty via the Expanded Public Works Programme.

Strategy 1: Coordinate Local Development Programmes to Enhance the Informal Economy.

- Entrepreneurial activity in the greater Stellenbosch area is not limited to the formal business activities of small and medium enterprises or new ventures undertaken by established firms. Increasingly, the informal sector is playing a crucial role as a generator of income and jobs - indicators suggest that the informal sector could make a more substantial contribution to employment in the future, particularly for low and semi-skilled people.
- However, past efforts to facilitate the development of informal enterprises were hampered by a lack of business intelligence and poor inter and intra - departmental coordination. In order to address this, the Municipality will:
 - Integrate the functions of Economic Development and Tourism, Community and Protection Services and Infrastructure

Strategy 2: Broaden Job Opportunities and Alleviate Poverty via the Expanded Public Works Programme.

- The Stellenbosch economy displays trends that it will continue to shift toward higher - value skills in line with regional and national trends, the socioeconomic situation in Stellenbosch remains one in which a large proportion of the population has limited access, skills training and little or no formal work experience.
- This group risks further marginalisation unless initiatives are extended to help people access low - skill and semi-skilled employment. Through the Expanded Public Works Programme (EPWP), the Municipality creates short - term work opportunities for unemployed low - skill and semi - skilled people. This enhances the future employability of EPWP beneficiaries by helping people gain practical skills and work experience.
- It also forms a critical part of the Municipality's broader poverty alleviation efforts by providing direct cash injections into poor households and communities.

- In order to further enhance the utility of the EPWP as a tool for facilitating inclusive economic growth, the Municipality will:
- Develop / review the policy that will further facilitate the inclusion of EPWP into the operations of the organisation's line directorates
- Align the EPWP programme with the Municipality's broader skills development and infrastructure development goals
- Meet the full-time equivalent targets set by the national Department of Public Works (DPW)

SUMMARY OF POVERTY ALLEVIATING STRATEGIES

	STRATEGY	DETAILS	LEAD ACTORS
STRATEGY 1	Coordinate local development programmes to enhance the informal sector	<ul style="list-style-type: none"> • Simplify the informal trading application process (online application) 	Planning and Economic Development
STRATEGY 2	Broaden Job Opportunities via the Expanded Public Works Programme	<ul style="list-style-type: none"> • Review EPWP policy • Align EPWP with the Municipality's skills and infrastructure goals. • Open Jobseekers (EPWP) database to private sector to enhance beneficiary's future employability. 	Planning and Economic Development Finance Department Corporate Services

Trade Promotion and Sector Development Strategies

Strategy 1: Utilise external relations to attract investment and promote growth sectors

- Utilise external relations to attract investment and promote catalytic growth sectors. External relations are gaining momentum in strategic significance as municipal governments begin to play increasingly proactive roles as regulators and facilitators of economic development.
- The Municipality needs to articulate a new approach to managing inter - governmental relations in a manner that promotes Stellenbosch as a competitive global hub for economic, social and cultural activity that builds on its strategic location.
- Attracting investment in Stellenbosch's catalytic growth sectors, namely, agro - processing, financial services, corporate head offices, green industries, tourism and events and business process outsourcing.
- Future external relationship agreements and memberships of forums will be evaluated on the basis of the strategic value they bring to the Municipal area.

SUMMARY OF TRADE AND SECTOR STRATEGIES

	STRATEGY	DETAILS	LEAD ACTORS
STRATEGY 1	Utilise external relations to attract investment and promote catalytic growth sectors	<ul style="list-style-type: none"> • Develop a Strategic External Relations Policy. • Utilise external relations to promote Stellenbosch economic interests by prioritising: <ul style="list-style-type: none"> - Investment attraction in catalytic growth sectors 	Planning and Economic Development Wesgro DEDAT CoCT

			- Promote Stellenbosch based businesses	Cape Winelands District Municipality
			- Attract visitors	
			- Attract large strategic events	

Sustainable Growth Strategies

Strategy 1: Develop and Implement a Comprehensive Green Economy Programme

Strategy 2: Promote and Implement Water Resilience (manage water conservation, supply, and demand)

Strategy 3: Promote and Implement Energy Resilience

Strategy 1: Develop and Implement a Comprehensive Green Economy Programme

- Develop and implement a comprehensive green economy work programme.
- Given the currently open-ended nature of the term 'green economy', one of the first tasks of the municipality will be to develop a working definition that is tailored to the local government context, and specifically, the socioeconomic and environmental conditions and priorities of Stellenbosch.
- Work with municipal departments to ensure compatibility between the terms 'green economy' and 'sustainable development' to ensure consistency in policy development and reporting.
- Develop a core position paper that can further refine related concepts and outline the municipality's key deliverables together with realistic targets.

Strategy 2: Promote and Implement Water Resilience

- Manage water conservation, supply and demand to ensure sustainability. Ensuring sustainable water utilisation that at the same time meets current needs in an equitable manner requires a multi-pronged approach that includes protecting and conserving existing freshwater supplies; expanding, upgrading and maintaining water distribution infrastructure; reducing loss by retrofitting and repairing existing facilities and replacing meters and water management devices.
- In addition, significant opportunities exist to augment supply via alternatives sources and reuse. In this regard, the municipality:
 - Promote rainwater harvesting using collection tanks –
 - Promote borehole extraction by small consumers for domestic gardening (only in non-sensitive groundwater areas)
 - Promote grey water re-use
- Ensuring sustainability of supply is one side of the coin. The other is managing demand to reduce wasteful consumption and encourage efficient use.
- The Municipality has paid attention to its own infrastructure and has successfully taken steps to decrease water demand within the organisation.
- Initiatives to manage water demand by citizens and consolidate conservation involve:
 - Rolling-out a consumer education programme focussing on the importance of conservation and the options available for end-use savings.

Strategy 3: Promote and Implement Energy Resilience

- Investigate options for an:
 - energy diversification program
 - promote energy efficiency program
- Electricity supply is dominated by the national grid, which relies predominantly on coal - fired electricity to provide for the country's needs.
- Opportunities also exist to explore alternative energy sources such as solar, wind and expanded gas power capacity. In a context of rising electricity prices. It is thus imperative that the municipality facilitates a shift towards greater energy efficiency in the Stellenbosch economy while also investigating options for diversifying the municipality's power sources to ensure the energy security needed to fuel economic growth in the future.
- To this end, the Municipality continue to implement the Energy and Climate Change Action Plan through a range of initiatives such as retrofitting with more efficient technologies (for example, energy-efficient public lighting) and continue to develop practical proposals to pursue alternative energy sources at scale. This may include engaging private project developers for large - scale electricity generation projects.

SUMMARY OF SUSTAINABLE GROWTH STRATEGIES

	STRATEGY	DETAILS	LEAD ACTORS
STRATEGY 1	Develop and Implement a Comprehensive Green Economy Programme	<ul style="list-style-type: none"> • Lay groundwork for programme by completing the following tasks: <ul style="list-style-type: none"> - Finalise working definition - Develop a position paper - Develop financing plan 	Infrastructure Department

		<ul style="list-style-type: none"> • Develop a programme of work, focusing on: <ul style="list-style-type: none"> - Green manufacturing - Other green industries 	
STRATEGY 2	Promote and Implement Water Resilience (manage water conservation, supply and demand)	<ul style="list-style-type: none"> • Develop two sub – program within this segment, with specific focus on: <ul style="list-style-type: none"> - <u>Water conservation program</u> where the focus here will be, promotion of rainwater harvesting, promotion of responsible borehole extraction, promotion of grey water re – use and lastly, expansion of treated effluent operations. - <u>Water supply and demand management program</u> where the focus will be on expanding, upgrading and maintenance of water distribution infrastructure as well as retrofitting, repairing and / or replacing of meters • Manage water demand and consolidate conservation: <ul style="list-style-type: none"> - Consumer education programme 	Infrastructure Department
STRATEGY 3	Promote and Implement Energy Resilience	<ul style="list-style-type: none"> • Develop two sub – program within this segment, with specific focus on: <ul style="list-style-type: none"> - Energy diversification program, where our focus is on large scale alternative energy sources. - Energy efficiency program, where the focus will be on energy efficiency within Stellenbosch. • Develop and implement an Energy and Climate Change Action Plan • Roll – out energy savings communications campaign 	Infrastructure

Tourism Development and Resilience Strategies

Stellenbosch Municipality will develop its tourism sector anchored in the following key principles:

- a) Responsible Tourism Development
- b) Maximising Partnerships
- c) Whole Government Approach

Through these development principles our aim will be focused on the following:

- Renew focus on domestic markets
- Improve the ease of doing business for tourism businesses
- Raise the global profile of Stellenbosch as a preferred destination
- Identify and develop tourism infrastructure
- Drive geographic spread of tourism benefits throughout the municipal area
- Grow visitor number and yield
- Prioritise tourism development growth within the various towns in Stellenbosch

- Improve customer experiences (quality and service excellence)
- Develop industry partnership programmes through action platforms

Drawing from the NTSS of 2017, the Western Cape Government through its Tourism Blueprint 2030 have the following five components on which the Tourism Strategy is built on:

Strategy 1: Visitor Experience:

The business of providing services to visitors, for example, hotels, and restaurants, safety and security, banking, visitor information centres, etc.

Strategy 2: Tourism Infrastructure:

Infrastructure comprises of essential services, buildings and service institutions.

Strategy 3: Destination Marketing:

This is a form of marketing in which the destination is promoted to a potential visitor to increase the number of trips taken and revenue per trip.

Strategy 4: Tourism Product Development:

Product development focuses on the development and provision of experiences, services and infrastructure that exceeds customer expectations.

Strategy 5: Institutional Arrangement and Regulation:

This component governs the ecosystem concerning policy, as well as providing the model for clustering activities, and roles and responsibilities from both the private and public sector role players.

Below is a Top Layer summary of the Tourism Strategy.

NTSS STRATEGY	PROVINCIAL STRATEGIC OBJECTIVE (BLUEPRINT 2030)	GOAL	PROGRAMME	ACTIONS / PROJECTS
1. VISITOR COMFORT, EXPERIENCE AND SERVICES	VISITOR SERVICES: The business of providing services to visitors, for example, hotels and restaurants, safety and security, banking, visitor information centres.	ENSURING VISITOR COMFORT	Tourist Safety Program	<ul style="list-style-type: none"> Develop secure tourism activity zones in higher – risk areas Launch a rent a cop initiative Establish tourist victim support initiative Establish community tourism safety forums in local tourism areas (this could be an EPWP linked initiative).
			Tourist Information Mobility Program	<ul style="list-style-type: none"> Provide free Wi- Fi access at key tourist sites and congregation points. Expanding special photographic points. Leverage on unique selling points i.e. history, culture, cuisine and diversity of the municipality. Launch a Mobile Visitor Information Centre (VIC). Expand and maintain road signage.

				<ul style="list-style-type: none"> Continuously improving functionality and content of LTO websites.
2. FACILITATE EASE OF ACCESS	TOURISM INFRASTRUCTURE: Infrastructure comprises of essential services, buildings and services institutions.	IMPROVING AND DIVERSIFYING ATTRACTIONS AND EXPERIENCES	Iconic Sites Improvement Programme	<ul style="list-style-type: none"> Assessing tourism conditions at and around existing iconic and historical sites and sites with iconic potential, e.g. Kylemore trails and waterfalls, Ida's Valley trails and the Pniel Tea Garden. Devising improvement plans for each site. Continuous monitoring of conditions at iconic and historic sites.
			Make Stellenbosch Sustainable - Program	<ul style="list-style-type: none"> Strengthen the Universal Access in tourism initiatives, for example ensuring that the disabled and aged are accommodated in destination planning approaches such as ablution facilities, walkways, parking etc. Ensure that Universal Access requirements are included in Municipal by – laws for tourism nodes.
			Spatial Planning Program	<ul style="list-style-type: none"> Integrating spatial tourism concepts with the Municipal SDF.
3. DESTINATION MANAGEMENT PRACTICES –	DESTINATION MARKETING	DESTINATION MARKETING	Joint Leisure Marketing Expansion Program	<ul style="list-style-type: none"> Formulating a collective Marketing Strategy.

ORGANISING EFFECTIVELY FOR GROWTH	This is a form of marketing in which the destination is promoted to a potential visitor to increase the number of trips taken and revenue per trip.		Expanded MICE and Events Marketing Program	<ul style="list-style-type: none"> Expanding MICE (Meetings, Incentives, Conventions and Exhibitions) marketing focus and resources. Build a strong partnership arrangement with Cape Town International Convention Centre (CTICC) and the University of Stellenbosch to promote pre – and – post business packages. Leveraging maximum tourism value from sport and cultural events.
	TOURISM PRODUCT DEVELOPMENT Product development focuses on development and provision of experiences, services and infrastructure that exceeds customer expectations.	GENERATING COMMUNITY INVOLVEMENT, BENEFITS AND SUPPORT	Cultures of Stellenbosch Development Program	<ul style="list-style-type: none"> Launching local areas cultural initiative Setting up local Tourism Forums Implementing various capacity development programs in selected local areas. Packaging and marketing cultural experiences.

11.10	RURAL MANAGEMENT: (PC: CLLR J WILLIAMS)
11.10.1	FEEDBACK ON THE PUBLIC PARTICIPATION PROCESS ON THE REQUEST TO LEASE ERF 502 BH 1 AND 2, LYNEDOCH, STELLENBOSCH TO STELLENBOSCH UNIVERSITY FOR A EUROPEAN UNION FUNDED RESEARCH ENDEAVOUR

Collaborator No: 746264
 IDP KPA Ref No: Good Governance
 Meeting Date: 22 March 2023 & 29 March 2023

1. SUBJECT: FEEDBACK ON THE PUBLIC PARTICIPATION PROCESS ON THE REQUEST TO LEASE ERF 502 BH 1 AND 2, LYNEDOCH, STELLENBOSCH TO STELLENBOSCH UNIVERSITY FOR A EUROPEAN UNION FUNDED RESEARCH ENDEAVOUR

2. PURPOSE

To provide feedback to Council on the notice that was published to inform the public of the municipality's intention to lease Erf 502 for the purposes of European Union (EU) funded Research Endeavour, in Partnership with Lynedoch Farmers, to Stellenbosch University.

3. DELEGATED AUTHORITY

In terms of Delegation EM85 the Executive Mayor, in consultation with the Executive Mayoral Committee, has the delegated authority to "*Approve Lease Agreements on Council properties for a period shorter than 10 years and a contract value of less than R5M*".

4. EXECUTIVE SUMMARY

The item deals with the outcomes of a public participation process that was followed in terms of the Policy on the Management of Council-owned Properties allow for direct negotiations (private treaty) in specific circumstances, *inter alia* for the purpose of Agricultural Purposes, with the intention of following an appropriate process for the consideration of the application from Stellenbosch University for a lease period of 3 (three) years.

The ownership of Erf 502 vests with the Municipality. The Policy on the Management of Council-owned properties allow for direct negotiations (private treaty) in specific circumstances, *inter alia* for the purpose of agricultural purposes.

A copy of the request is attached as **APPENDIX 1**.

5. RECOMMENDATIONS

- (a) that Council take note of the fact no submissions were received on the notice published to express the municipality's intention of following an appropriate process for the consideration of the application from Stellenbosch University for a short-term lease agreement for Erf 502, Lynedoch where they are involved in a project assessing the potential value of seven technologies to enhance the productivity of emerging farmers;

-
- (b) that the Municipal Manager be authorized to conclude the contract or agreement after above is finalized in terms of the applicable Act/Regulation;
 - (c) that the Municipal Manager be mandated to determine the monthly rental amount;
 - (d) that farm No.502BH, Stellenbosch Division, be identified as land not needed for Municipal Services;
 - (e) that the importance of the study be noted as it will enhance the sustainability of emerging farmers; and
 - (f) that Stellenbosch University enter into an agreement with the Municipality and be responsible for the payment of all services.

6. DISCUSSION / CONTENT

6.1 Background

Ownership of Erf 502, Lynedoch, Stellenbosch

Ownership of erf 502, Lynedoch vests with Stellenbosch Municipality.

6.2 Discussion

6.2.1 Application for short term lease

Hereto attached as **APPENDIX 1** is a self-explanatory letter/application received from Stellenbosch University.

They intend investigating the potential value of seven technologies to enhance the productivity of emerging farmers. The initial phase will test the technologies as a pilot site at the Welgevallen Experimental Farm, and then towards the end 2022, the emerging Lynedoch Farmers will join the team to co-design and adapt the technology. The project budget has money allocated for the technology to be demonstrated on the farms, after piloting at the university.

Given the above, Council resolved on 26-10-2022, the Municipal Manager to start a Public Participation process appropriate of the municipality's intention of following an appropriate process for the consideration of the application from Stellenbosch University for a short-term lease agreement for Erf 502, Lynedoch where they are involved in a project assessing the potential value of seven technologies to enhance the productivity of emerging farmers.

Council furthermore resolved that such a process be followed in line with the applicable legislation, regulations and policies.

Lastly it authorises the Executive Mayor to conclude the contract or agreement after the appropriate process has been completed terms of the applicable Act/Regulations.

To achieve the above, a notice (21-11-2022) was placed in the Eikestad Nuus (**APPENDIX 2**), and on the municipal website, expressing the municipality's intention of following an appropriate process for the consideration of the application from Stellenbosch University for a short-term lease agreement for erf 502, Lynedoch. At the closing date for submissions were (21 days), no submissions were received.

6.2.2 Location and context

The property is situated on Erf 502 BH 1 & 2, Lynedoch, Stellenbosch.

Property description

Erf 502 BH, measuring 5.229Ha in size, is zoned for farming purposes.

6.2.3 Policy on the Management of Council owned property

In terms of paragraph 3.1.11 of the Policy for Management of Municipal Agricultural Land reserves the right to entertain unsolicited bids for the lease of viable immovable property for agricultural uses to create an enabling environment to users of the land to participate meaningfully in agricultural activities to:

- a) Promote Entrepreneurship
- b) Contribute to Food Production and Economic Opportunities
- c) Leverage the expertise and markets of existing commercial farmers to assist emerging farmers through strategic partnerships and/or shareholding especially new entrants.
- d) Provide access to agricultural land and security of tenure

6.3 Financial Implications

There are no financial implications that is invoked by this request.

6.4 Legal Implications

That the Municipal Manager be authorized to conclude the contract or agreement with Stellenbosch University and declaring the University will be responsible for the payment of all services.

6.5 Staff Implications

There are no additional staff implications.

6.6 Previous / Relevant Council Resolutions**8th COUNCIL MEETING:2022-10-26: ITEM 11.10.1****RESOLVED (NEM CON)**

- (a) That farm No.502BH, Stellenbosch Division, be identified as land not needed for Municipal Services
- (b) That the importance of the study be noted as it will enhance the sustainability of emerging farmers.
- (c) That Council in-principle agrees to make the property available to the Stellenbosch University as they will deliver a function in Lynedoch for the benefit of the emerging farmers;
- (d) That the intention of Council to lease the property to the Stellenbosch University for a period of (3) three years be advertised for public comment/ input;
- (e) That the item be returned to the Executive Mayor, in consultation with the Mayoral Committee, for a final decision, once the public participation process has been completed;
- (f) That the Municipal Manager be mandated to determine a monthly rental amount; and
- (g) That Stellenbosch University enter into an agreement with the Municipality and be responsible for the payment of all services.

RECOMMENDATIONS FROM THE EXECUTIVE MAYOR, IN CONSULTATION WITH THE EXECUTIVE MAYORAL COMMITTEE, TO COUNCIL: 2023-03-22: ITEM 7.10.1

- (a) that Council take note of the fact no submissions were received on the notice published to express the municipality's intention of following an appropriate process for the consideration of the application from Stellenbosch University for a short-term lease agreement for Erf 502, Lynedoch where they are involved in a project assessing the potential value of seven technologies to enhance the productivity of emerging farmers;
- (b) that the Municipal Manager be authorized to conclude the contract or agreement after above is finalized in terms of the applicable Act/Regulation;
- (c) that the Municipal Manager be mandated to determine the monthly rental amount;
- (d) that farm No.502BH, Stellenbosch Division, be identified as land not needed for Municipal Services;
- (e) that the importance of the study be noted as it will enhance the sustainability of emerging farmers and other farmers as far as possible; and
- (f) that Stellenbosch University enter into an agreement with the Municipality and be responsible for the payment of all services.

APPENDIX 1

15 August 2022

Mr. Anthony Barnes

Chief Director: Planning and Economic Development

Stellenbosch Municipality

Request for access to Municipally Owned Agricultural Land at Lynedoch for a EU-funded Research Endeavour in Partnership with Lynedoch Farmers

Dear Mr. Barnes

A team of Stellenbosch University (SU) researchers, with collaborators from four African and five European countries are involved in a project assessing the potential value of seven technologies to enhance the productivity of emerging farmers. The initial phase will test the technologies at a pilot site at the Welgevallen Experimental Farm, and then towards the end 2022, the emerging Lynedoch Farmers will join the team to co-design and adapt the technology. The project budget has money allocated for the technology to be demonstrated on the farms, after piloting at the university.

The impact of the project is expected to go beyond the transfer of technology and will also involve introducing the farmers to market opportunities and building management capacity through training and workshops. The attached project synopsis describes the anticipated outcomes of the project.

The SU team is aware that land was leased to 11 farmers at Lynedoch, one of whom is deceased. Permission is hereby requested to work with the farmers to use the deceased person's land, or any other appropriate land in Lynedoch, to test the most appropriate seven technologies, as revealed during the pilot phase. We seek permission to lease the land for a period of 3 years, starting in September 2022 and ending in July 2025, to demonstrate and optimize the technologies. We undertake to pay rent, if needed, as well as the related cost for water usage on the property for the duration of the assignment, and to hand it back in good faith after the project has come to a close. The assets installed on the property that are funded by the project will ultimately be transferred to the management co-operative of farmers at the Lynedoch site. As indicated, the farmers will co-develop and run the demonstration technologies with the university team. The farmers have a dormant co-operative, and are in the process of re-establishing it. The farmer community of practice has been in conversation with the DIVAGRI team since 2021.

Thanking you in advance for considering our request

Sincerely

Gideon Wolfaardt, Prof. Dept of Microbiology
ERWAT Chair in Water Research and Rand water Chair in Public Health

DIVAGRI**Revenue DIVersification pathways in Africa through bio-based and circular AGRicultural innovations****PROJECT DURATION:** June 2021 – May 2025**PROJECT SUMMARY:**

Over 20 international project partners will test and adapt simple technologies to local conditions that will turn farmers' waste materials into valuable products, thereby creating new business opportunities and reducing input costs. The project is being implemented in South Africa (Stellenbosch and Pretoria), Ghana, Namibia, Botswana and Mozambique.

In short, the technologies will aim to do the following:

1. **Produce clean water for irrigation from brackish water and wastewater** with a desalination greenhouse and artificial wetland
2. **Use waste materials to produce fertiliser and energy** – a biogas digester will turn wastes into gas for energy use and digestate for fertiliser; and a mobile kiln can be used for cooking while producing charcoal
3. **Improve farming techniques** with a highly efficient, clay-based drip irrigation system (SLECI) and ethnobotanical intercropping
4. **Add value to farming residues** with a mobile biorefinery

The aim is to use the waste outputs of one technology (and/or farmers' daily operations) as input for another technology, to thereby create circularity and save costs.

The technologies exist already, but will be adapted in a co-creation process with local small-scale farmers and broader industry stakeholders to make it economically beneficial to the small-scale farmers. In addition to installing and testing these technologies with a community, the international project team will work on creating new business opportunities and value chains for the farming communities participating in the project.

At Stellenbosch, the small farming community at **Lynedoch** was selected as the demonstration site.

The technologies are in the process of being set up at the University's experimental farm, Welgevallen. This will be completed by November 2022. From there, the community and a wide range of industry stakeholders will be involved in the piloting phase to adapt the technologies to local circumstances. By the end of 2023, the technologies will be installed on a piece of municipal land in Lynedoch, to be further adapted and used to the benefit of the participating farmers.

Revenue **DIV**ersification pathways in Africa through bio-based and circular **AGR**icultural innovations
